

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE NEW ENCYCLOPEDIA OF SOCIAL REFORM

INCLUDING

ALL SOCIAL-REFORM MOVEMENTS AND ACTIVITIES, AND THE ECONOMIC, INDUSTRIAL, AND SOCIOLOGICAL FACTS AND STATISTICS
OF ALL COUNTRIES AND ALL SOCIAL SUBJECTS

EDITED BY

WILLIAM D. P. BLISS, EDITOR-IN-CHIEF

AND

RUDOLPH M. BINDER, PH.D., ASSISTANT EDITOR

WITH THE COOPERATION OF MANY SPECIALISTS

INCLUDING AMONG OTHERS

PREFACE

THIS edition of the *ENCYCLOPEDIA OF SOCIAL REFORM* is not a revision of the old edition, but a completely new book, save for a few purely historical or economic articles, the subjects of which need no new treatment—altho many even of these are either revised or completely rewritten. All else is absolutely new and it is believed that the work is very much more comprehensive and complete.

The two main requisites of an encyclopedia are reliability and serviceableness. The first of these has been sought in this encyclopedia by having every article written by some specialist on its particular subject. Statements of reform have been written by a believer in the reform; together with this, however, or by reference to a corresponding article on the opposing side, a statement of the opposing view will be found. Historical, bibliographical, biographical, and statistical articles have been prepared and carefully revised by adequate authorities, mainly university professors and economic specialists.

Biographical articles, in the case of all living persons, have been, wherever possible, submitted to those persons. Articles on foreign countries have been either written by or submitted for revision to residents in those countries.

Serviceableness has been sought by making the work, while, as shown above, accurate and scholarly, yet popular and not technical. The encyclopedia is for general workers and students. It has been prepared by specialists for those who are not specialists. Its references to books are therefore in the main only to books available to English readers. Articles have been arranged as to length and quality with this idea of serviceableness in view. Articles upon the best-known men are therefore often the shortest and sometimes such men are even omitted. This is not because they did not contribute to social reform, and often to a much larger degree than many who are considered, but because the general reader does not need the story of their life. The space allotted to articles, therefore, has considered the needs of the reader more than the absolute importance of the subject.

To the more important articles are appended brief bibliographies of the best available books upon the subject. There has been no attempt to make these exhaustive, but they will serve to guide the student in his search for more complete information.

The subject of social reform is so vast, and may be made so inclusive, that almost any subject might have been included here; but the encyclopedia aims to distinguish sharply between subjects that belong mainly to the individual and those that belong mainly to society. A few subjects, such as religion, science, etc., that concern both the individual and society, are treated only in their social aspects. The aim, however, has been to give on all the broad range of social reform the experience of the past, the facts of the present, the proposals for the future. The biographical portions will be found to be especially full. Of living persons the encyclopedia treats only those having national recognition, and has thus been compelled to pass by many earnest and often more useful and successful workers in local fields. In statistics we have gone to the best sources, but it must be remembered that statistics and statements in social reform are somewhat like the endeavor to count blossoms in springtime. Even while the count is going on, new blossoms are continually appearing, while not seldom a sudden chill wind carries some blossoms which have been counted, to the ground before the tally is made. It is springtime in social reform, and spring can never be put into any book.

It is possible we have made use of governmental and official figures, even while figures more recent, but less reliable. In cases like those of political returns, not only are we indebted to year books, such as "The Statesman's Year Book," "The World Almanac," the "Reformer's Year Book," "The Daily Mail Almanac of Australia and New Zealand," to German, French, and

other year books. To the large number of economic and sociological magazines, books, and sources quoted in this work we give credit in the text.

We desire to express our great indebtedness to the very large number of writers, scholars, and authorities who have contributed valuable articles, or have done the sometimes equally valuable work of revision. For the large majority of these it has been a gratuitous labor of love which alone has made this work financially possible. The names of our main contributors and revisers we give below, but the list is not a complete one. To a much longer list of society secretaries and others we are indebted for valuable assistance and material.

Especial acknowledgment is due to our assistant editor, **RUDOLPH M. BINDER, Ph.D.**, and to **FRANK H. VIZETELLY** for valued aid and suggestion, both in the preparation of material and in seeing the work through the press.

W. D. P. BLISS.

THE ENCYCLOPEDIA OF SOCIAL REFORM

A

ABANDONED FARMS: The growth of modern commercial centers, the development of factory towns, the increasing part played in economic life by the railroad, the general drift of population from the country to the cities (see **CITIES**) have led in certain sections of the country, to the abandoning of farms. The extent to which this has taken place has been by some exaggerated, and the prominence given to the subject a few years ago led to investigations which have shown the exaggeration; nevertheless, the number of abandoned farms, at times at least, has not been small, and the fact has a significance of the most serious character.

ABBOTT, LYMAN: Editor-in-chief of *The Outlook* (New York); born at Roxbury, Mass., 1835. He was graduated from the University of the City of New York in 1853 (D.D., New York and Harvard; LL.D., Western Reserve University) and in 1860 was ordained Congregational minister. From 1860-65 he officiated as pastor in Terre Haute, Ind., and 1865-69 at the New England Church in New York. For three years (1865-68) he was secretary of the American Union Commission (Freedmen's). In 1869 Dr. Abbott resigned from his pastorate, and for several years edited the "Literary Record" of *Harper's Magazine*. He was associate editor of *The Christian Union* with Henry Ward Beecher, and in 1888 succeeded the latter as pastor of Plymouth Church, Brooklyn, resigning in 1898. In 1881 Dr. Beecher sold out his interest in *The Christian Union*, and Dr. Abbott became its editor-in-chief. Later its name was changed to *The Outlook*. Dr. Abbott believes that the problem of political economy is to seek a more equitable distribution of wealth, rather than to promote a larger accumulation of wealth; that social reform calls for a recognition of partnership relations between labor and capital, and the extension of the industrial functions of government. He holds that the principles of the spirit of Jesus Christ applied to social problems would furnish their solution. Among his works may be mentioned, "Christianity and Social Problems" (1897); "The Rights of Man" (1901); "Industrial Problems" (1905). *Address:* *The Outlook*, 287 North Avenue, New York.

fare of the people, and so far as she has been able, both in Scotland, and in Ireland and Canada, during her husband's viceroynalties, she has given of her wealth, her influence, and her personal service to the improvement of the conditions under which the people, especially women, live. She has been at various times president of the International Council of Women, the Women's Liberal Federation, Scottish Women's Liberal Federation, and the Women's Industrial Council. In 1900 she edited the "Report of the International Congress of Women." She is the author of "Through Canada with a Kodak." *Address:* Vice Regal Lodge, Dublin, Ireland.

ABOLITION MOVEMENT: Abolitionist is a term used in the United States specifically for those who favored and sought to effect the abolition of slavery. We here consider the subject simply in the United States. (For the general history of the abolition of slavery, see **SLAVERY**.) It should not be forgotten, however, that the abolition movement in the United States was but a part of this more general movement.

Two tendencies, one from Christianity, the other from French naturalism and revolutionism, contributed mainly to the abolitionist movement in America. Its first open expression was among the Society of Friends or Quakers. As early as 1671 George Fox, in England, had spoken against slavery, and in 1696 the Pennsylvania Quakers advised their members against the slave trade. In 1774 all persons engaged in the traffic, and in 1776 all who would not emancipate their slaves, were excluded from membership among the Friends. John WOOLMAN (1720-73) and Anthony Benezet (1713-84) were prominent in this stage of the movement. In 1774 a Pennsylvania Society for the Abolition of Slavery was formed by James Pemberton and Dr. Benjamin RUSH, and in 1787 was reconstructed under the presidency of FRANKLIN.

The arguments of these earliest antislavery writers and workers were drawn mainly from general philosophic, humanitarian, and Christian principles. With Washington, Jefferson, Madison, Patrick Henry, and other Southerners, all of whom deplored and often spoke against, altho most of them practised, slavery, other reasons entered in. While not insensible to the humanitarian arguments, they based their position largely on the above-mentioned French political principles then spreading through this country, and thus regarded slavery as a giant evil, inconsistent alike with the principles of the Declaration of Independence and the spirit of Christianity. Other abolition societies were organized. In New

ABERDEEN, ISABEL MARIA, COUNTESS OF: Born 1857. Throughout her varied life the countess has always been interested in the wel-

York (1785); Rhode Island (1786), Maryland (1789), Connecticut (1790), Virginia (1791), New Jersey (1792). The abolition of the slave trade by Great Britain in 1807, and by the United States in 1808, was a great advance. In 1777 Vermont formed a constitution abolishing slavery, and was soon followed by Massachusetts and other states, while many others gradually abolished it.

In 1819-20, the opponents of slavery made a stern resistance to the admission of Missouri as a slave state, but were defeated. The struggle, however, resulted in the so-called Missouri Compromise (1820), whereby slavery was legalized to the south of 36° 30' N. Lat., and prohibited in all states that might be formed north of it (Mason and Dixon's line). California, however, tho lying partly south of this line, was admitted as a free state (1850), the Southern party obtaining in compensation the amendment of the Fugitive Slave Law, making it penal to harbor runaway slaves or to aid in their escape. But this is to anticipate. From 1801-47 there were various efforts participated in by Jefferson, Henry Clay, and James Madison, in the South, and Bishop Hopkins, Rufus King, President Harrison, and Dr. Channing in the North, to colonize the blacks in Africa. Liberia was declared independent in 1847. In 1831-32 the insurrection of Nat Turner in Virginia excited a strong desire for gradual abolition.

The first leader in *immediate* abolition was William Lloyd GARRISON, a Massachusetts printer who (1829-30) worked with LUNDY on his "The Genius of Universal Emancipation," published at Baltimore. In 1831 he began publishing *The Liberator* in Boston, and by 1832 the New England

Antislavery Society was formed. In 1833 Garrison visited England and secured from Wilberforce, Zachary Macaulay, Henry Brougham, and others, a condemnation of the colonization societies. Garrison's principles were, in his own words—and they soon became the principles of all abolitionists, however they differed in method—that "the right to enjoy liberty is inalienable"; that "to invade it is to usurp the prerogative of Jehovah"; that "every man has a right to his own body, to the products of his labor, to the protection of law, and to the common advantages of society." He said: "We plant ourselves upon the Declaration of our Independence and the truths of Divine revelation as upon the everlasting rock. We shall send forth agents to lift up everywhere the voice of remonstrance, of warning, of entreaty, and of rebuke. We shall circulate unsparingly and extensively anti-slavery tracts and periodicals. We shall enlist the pulpit and the press in the cause of the suffering and the dumb. We shall aim at a purification of the churches from all participation in the guilt of slavery. We shall spare no exertions nor means to bring the whole nation to speedy repentance." Such were the principles, and such, at least in the earlier stages, were the methods of the abolitionists. Garrison was a firm believer in Christ. He proclaimed himself a follower of the Prince of Peace. Human life he came to regard as sacred above all things. Capital punishment and war, as well as slavery, were to him and to most abolitionists an abhorrence. Viewing the subject thus from the standpoint of morals rather than of any political expediency, slavery was to him a sin not to be gradually

abolished, but to be left. In *The Liberator* (vol. i., No. 1, Saturday, Jan. 1, 1831), he wrote: "I will be as harsh as truth and as uncompromising as justice. On this subject I do not wish to think or speak or write with moderation. No, No! Tell a man whose house is on fire to give a moderate alarm; tell him to moderately rescue his wife from the hands of the ravisher; tell the mother to gradually extricate her babe from the fire into which it has fallen, but urge me not to use moderation in a case like the present! I am in earnest; I will not equivocate; I will not excuse; I will not retreat a single inch; and I will be heard."

From the beginning, Garrison had declared for no union with slaveholders, and proclaimed the Constitution "a covenant with death and an agreement with hell." In Dec., 1833,

The American Anti-Slavery Society

the American Anti-Slavery Society was formed, with Beriah Green as president and Lewis Tappan and John G. Whittier, secretaries. Theodore D. Weld, Samuel J. May, and Wendell Phillips began lecturing.

In 1833, Miss Prudence Crandall, in Connecticut, opened her school to negro girls. She was ostracized, the legislature forbade such schools, and she was imprisoned. Riots against abolitionists became frequent. Prices, ranging from \$3,000 to \$20,000, were reported to be set by the South on the heads of several of the leading abolitionists. The latter sum was offered by six Mississippians for Garrison's head, and the same amount, made up publicly in New Orleans, was offered for the person of Arthur Tappan. In 1837 a slave was burned to death over a slow fire in St. Louis; and for his words in denouncing this, Rev. Elijah P. Lovejoy, a Presbyterian minister who had established an abolitionist newspaper in Alton, Ill., was mobbed and killed. Garrison, in Boston, was seized by a mob, dragged by a rope half naked through the streets, and was only rescued by a *posse comitatus* and conveyed to the mayor's office. Abolitionist lecturers and sympathizers were denounced from the pulpit and subjected to every indignity. Judge BIRNEY declared that "the American churches were the bulwarks of American slavery." Such were some of the obstacles that abolitionist "apostles" had to contend with. Yet while the majority of pulpits either denounced the Garrisonian agitation or else were silent on the subject of slavery, there were ministers in all denominations who were outspoken in their denunciation of this great wrong, and valiantly espoused the cause of the slave. In the Unitarian denomination alone 170 ministers signed a protest against slavery, many of them preaching fearlessly against it, and willingly sacrificing favor and popularity in the cause of freedom.

As a not unnatural result of the popular prejudice and indifference, the Garrisonian wing now became very radical. They were accused of advocating every kind of innovation, from woman's rights to free love, and were freely denounced as "come-outers" and "infidels." Birney, the Tappans, Gerrit Smith, Whittier, John Jay, Edward Beecher, Thomas Morris, and others left the original organization of the Garrisonians, and in 1840 organized the American and Foreign Anti-Slavery Society. They felt that the time was come for the organization of a new political party, while the Garrisonians continued to radically urge their doctrines through all parties. As a result, in 1840, the LIBERTY PARTY

was organized, and in 1840 J. G. Birney was nominated for president, and Thomas Earle, of Pennsylvania, vice-president, polling 7,059 votes. In 1844 Birney and Morris polled 62,300 votes. These were drawn mainly from voters for Clay. As a result, Polk was elected, Texas annexed, and a vast amount of slave soil added to the United States. The policy then began to prevail in the North of advocating limitation of the slave area, and thus led to the formation of the **FREE SOIL PARTY**. In this the Liberty Party was mainly merged, tho a few continued to vote a Liberty Party ticket to a much later date. In 1856 President Van Buren was nominated as president by the Free-Soilers, and polled 291,363 votes.

Meanwhile, the agitation over the Fugitive Slave Law was coming to a head. The Constitution having recognized slavery by Art. iv., Sec. 2 of that document, it was declared that persons held to service or labor in one state under the laws thereof, and escaping to another, should be delivered up on claim of the party to whom such service or labor might be due. To this was added the amendment referred to above on the admission of California as a free state. The demand was made by the Free-Soil Party that this be repealed; yet in 1852 it polled a diminished vote. The same year Harriet Beecher Stowe published her "Uncle Tom's Cabin," which at once produced a remarkable effect in enlightening the people and arousing in them a sense of the injustice and evil of slavery. In 1855 Captain John Brown went to Kansas to vote, and to fight as well, against the efforts of Missouri border ruffianism and squatter sovereignty to establish slavery in Kansas. The leading abolitionists were eagerly engaged in helping slaves to escape to Canada by means of the "underground railroad," or a series of houses whose inmates were willing to shelter and aid slaves in their secret flight to the North. In 1856 the Free-Soil Party was largely merged in the newly formed Republican Party, with Gen. John C. Fremont as standard-bearer. He polled, however, only 114 electoral votes to 174 by James Buchanan, the Democratic candidate.

In 1856, May 10th and 20th, Charles Sumner delivered his speech in the United States Senate on "The Crime Against Kansas." The speech was an exposure of the cruel injustice of the government of the United States toward the free citizens of Kansas, and was strong and fearless both in its argument and its invective. Whittier said that "it was the severe and awful truth which the sharp agony of the national crisis demanded." It caused intense excitement among the pro-slavery members of the Senate. After the adjournment of the Senate, as Sumner sat writing at his desk, he was assaulted by Preston S. Brooks, of South Carolina, and was so severely injured that it was four years before he could again take his place in the Senate, tho Massachusetts left it unfilled during his absence; he suffered from the effects of the murderous assault as long as he lived.

In 1857 the validity of the Missouri Compromise was rejected by the Supreme Court in the Dred Scott decision. (See **DRED SCOTT**.) In 1859 John Brown made his effort to rouse the slaves at Harper's Ferry, was captured, and on Dec. 21, hanged.

In 1860 the success of the Republican Party led to the firing upon Fort Sumter (April 12, 13, 1861) and the opening of the war. The war was

not begun to abolish slavery, but simply to put down the rebellion. But the antislavery feeling grew. The fugitive slave laws were abolished in 1864. On Jan. 1, 1863, Lincoln issued, as a war measure, his emancipatory proclamation; and finally, in 1865, Congress passed the amendment to the Constitution abolishing slavery in the United States. On April 9, 1870, the American Anti-Slavery Society disbanded, believing its work fully done. (See **NEGRO; SLAVERY; PHILLIPS; GARRISON**, etc.)

B. Stowe; *The Slave Power—Its Character, Career, and Probable Designs*, by John E. Cairnes; *Acts of the Anti-Slavery Apostles. Biographies of Garrison, Phillips, and Brown*, by Parker Pillsbury.

ABORIGINES PROTECTIVE SOCIETY, THE:

An English society which is active on the CONGO QUESTION against the employment of the CHINESE in South Africa, and kindred questions. Secretary, H. R. Fox Bourne, Broadway Chambers, S. W., London, England.

ABRAHAM, WILLIAM: British member of Parliament; born 1842 in Wales; educated in the national schools at Carnarvon. Son of a miner, the lad was early put to the same work. Already in 1873 he was made the miners' agent to conduct their affairs and to mediate when necessary in all questions and disputes between the miners and the operators. He is known everywhere throughout Wales by the name "Mahon." In 1885 he was elected to Parliament to represent the radical interests in the Rhondda Valley, Glamorganshire, a seat he still occupies. He is also president of the Miners' Federation of Southern Wales. Address: Bryn-y-Bedw, Pentre, Rhondda, Glamorganshire, Wales.

ABSENTEEISM: The practise of absenting oneself from one's country, station, estate, etc. In sociology it is used mainly of landlords absenting themselves from their lands and letting them out to tenants, the landlords giving no time nor care to their possessions except to receive the rents, which they spend in other places and communities. It has been an especial evil in Russia, France, and Ireland; but it is becoming common also in the United States, where wealthy investors live on their rents, perhaps themselves residing in London or in Paris.

The evils of absenteeism are not hard to discover. There is, first, the loss of interest which a resident is apt to take in the things and persons about him. "It is not the simple amount of the rental being remitted to another country," says Arthur Young, "but the damp on all sorts of improvements." The absentee is also less likely to take account of circumstances (e.g., tenant's improvements), which render rack-renting unjust. He is less likely to make allowance for calamities which render punctual payment difficult. "Miseries of which he can see nothing, and probably hear as little of, can make no impression" (A. Young). He is glad to get rid of responsibility by dealing with a "middleman" or intermediate tenant. Without the softening influence of personal communication between the owner and the cultivator of the soil, the "cash nexus" is liable to be strained beyond the limit

of patience. There can be little doubt but that absenteeism has been one potent cause of the misery and disturbances in Ireland. The cruellest oppressors of the French peasantry before the Revolution were the *fermiers*, who purchased for an annual sum the right to collect the dues of absentee seigniors; and this evil it is not hard to trace in American life. The proverbial hardness and harshness of the agent who collects rents for absent owners is not invariable, but is frequent. There is, too, the not-to-be-forgotten effect upon the absentee himself of collecting rents from strangers to whom he pays no duties. Sometimes it may be indeed for the good of a community that a rich and luxurious, and perhaps immoral, landlord be absent from it, but this brings us to another subject. (See LUXURY.)

Perhaps the safest generalization is that made by Senior, that "in general the presence of men of large fortune is morally detrimental, and that of men of moderate fortune morally beneficial, to their immediate neighborhood." It must be remembered, however, that to those who hold that land should be held only by those who use it, or that all land should be taxed to its full rental value, absenteeism is an evil incident to the present system that is to be overcome

only by the overthrow of the present system. To others it is an evil to be overcome by the greater insistence upon the *duties* as well as the *rights* of wealth. A strong statement of a different but very real form of absenteeism we quote from a suggestive report of the Church League of Lowell, Mass., Oct. 9, 1893:

"It is largely true that the labor of Lowell earns the dividends, but they are mostly spent elsewhere, because the stock of the mill corporations is owned elsewhere. Thus we are confronted by the worst kind of absenteeism. The profits earned here go from here, while the mass of poverty, want, and vice that accumulates in every large manufacturing center is dumped on the charity of our churches and the hospitality of our poorhouse. We see the dreary dwellings of the earners of scanty wages; we see the premature age and disability of those broken down by the rapidly increasing speeding of machinery; we confront the intemperance and vice that follow from the hard conditions and hopeless despair of their bettering. The notebooks of our ministers are filled with sad, sad cases of destitution, sickness, and death, made peculiarly sad by the life history of the mill operative."

Professor Hadley, in his "Railroad Transportation" (1886), p. 133, has some pertinent remarks on absentee shareholders.

ABSTINENCE, REWARD OF: An expression in political economy, first used by SENIOR to denote the profits which he considered to be the "natural" reward of the capitalist for the use of capital which he had abstained from using in immediate consumption. The phrase is called "well chosen" by Mill, and has been widely adopted, and undoubtedly contains some element of truth; but it is, nevertheless, considered to be inapt by most economists to-day, since it is at least in great danger of misleading. Thus, when Jevons says, in his "Political Economy Primer," that "Capital is the result of saving or abstinence," he either expresses a mere truism, or states what is very frequently not the fact. If he means that capital is wealth that has not been consumed in other ways, he says what goes without saying; but if he means that capital is the result of saving and abstinence, so that the capitalist deserves to be rewarded because of his self-sacrifice, he implies what is very often not the case. All capital is by no means the result of

careful saving and economy. It is notoriously very often the result of shrewd and fortunate investment by those who have lived at the same time in the utmost luxury and self-indulgence. It is made frequently by speculation and financing in the "bulling" and "bearing" of stocks, in the engineering of some corner or combination in the market, in land speculation, and in a hundred other similar ways. Many fortunes have been begun as the result, perhaps, of abstinence and economy at the start, but after this, have been made by the bold, shrewd, and fortunate investment of the little sum. If the reliance had been simply on abstinence and economy, there would have been no fortune. G. Bernard Shaw, in the "Fabian Essays," calls "reward of abstinence" that "gleam of humor which still enlivens treatises on capital."

ACADEMY OF POLITICAL AND SOCIAL SCIENCE, THE: See AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE.

ACCIDENT INSURANCE: Insurance against accidents is a recent growth, tho the Hanscatic League seems to have developed a form of mercantile insurance in 1541, and England against the casualties of warfare in 1665. Modern accident insurance was planned in England in 1845, and the Railway Passengers Assurance Company began business there in 1849. Two years earlier (1847) four health-insurance companies had been formed in Massachusetts. In 1863 James G. Batterson formed a Railway-Passengers Insurance Company in Hartford. To-day accident insurance in the United States protects at least a million men and their families, and pays \$20,000,000 a year in claims. (See also INDUSTRIAL INSURANCE, and INSURANCE.)

REFERENCES: *A Study of Accidents and Accident Insurance*, by George E. McNeill, Boston, 1900; *Accident Preventing*, in *Cassier's Magazine*, July 1905; *The Outlook*, Dec. 31, 1904.

ACCIDENTS IN INDUSTRY: The number of persons who are annually killed or injured in the United States as the result of industrial accidents is only approximately ascertainable in the present state of our vital and labor statistics. It is, however, a factor of such economic and social importance that in many other countries careful and comprehensive inquiry is made into the subject through factory inspectors, or other departments specifically charged with the duty of investigating causes and conditions detrimental to health and life in industry. The vital statistics of the United States census for the registration area contain, it is true, a statement of the number of deaths caused by accidents among occupied males; but there is no conclusive information available as to how many of the accidents reported under death certificates are specifically chargeable against industry or occupations on account of inherent or removable hazards or circumstances dangerous to human life. The nearest approach to an answer to the question as to the number and degree of frequency of accidents and injuries in American industry, is an estimate of the number of deaths occurring annually among all occupied males in the United States generally and in manufacturing and mechanical employments in particular. This, however, does not answer the equally important questions as to the probable number of workmen injured or incapacitated and

the degree of injury sustained, which require separate consideration, and regarding which our present state of statistical information is exceedingly unsatisfactory.

An approximate estimate of the annual loss of life from accidents among occupied males in the United States may be arrived at by the following method. Estimating the male population, ages fifteen and over, for the middle of 1906 as 28,322,000, and applying to this number the accident death-rate for occupied males, returned by the last census as 1.13 per 1,000, the resulting

General Estimate

total is 32,004 fatal accidents in the mortality of the entire adult male population of the United States in 1906. In other words, it would appear to be safe to hold, upon the basis of this estimate, that from 30,000 to 35,000 fatal accidents occur annually in the United States among males of ages fifteen and over. An equally useful method is to first estimate the probable total mortality from all causes and then apply the normal percentage of deaths from accidents as determined by the last census for occupied males generally. For illustration, in the male population, as given above, at an annual normal rate of 15.0 per 1,000, as determined by the census, there occur approximately 424,830 deaths from all causes. Since in the mortality for occupied males 7.53 per cent are deaths from accidents, the probable number of such deaths is 31,990 per annum, or about the same as determined by the previous method.

In these estimates I have considered the adult male population as a whole and made no distinction between accidents in general and occupation accidents in particular. It is possible, however, to arrive at an approximate estimate as to the probable number of deaths properly chargeable to industry by the following method. In mercantile employments in which there are practically no occupation accidents, properly to be considered as such, the general accident rate is 0.46 per 1,000, as compared with 1.13 per 1,000 for males in gainful occupations generally. The excess or difference of 0.67 per 1,000 may be assumed to constitute the extra risk from accident in industry in general. If, upon the basis of the population as previously given, we estimate the number of accidents at the rate of 0.46 per 1,000, the annual number of deaths from accidents is 13,028. If this number is deducted from the total previously given, there remains an actual difference of 18,976 deaths from accidents, which would represent the result of employment or exposure in occupations or industries more or less hazardous and detrimental to human life. So that, restating the conclusion, it would appear to be a safe and conservative assumption that in the aggregate American adult male population there occur annually from 30,000 to 35,000 fatal accidents, and that of this number from 18,000 to 20,000 are the probable result of dangerous or hazardous employments.

Accidents, thus defined, comprehend the whole field of injury to men engaged in gainful occupations. *Industrial accidents* proper affect almost entirely those who are employed in factories and workshops or manufacturing and mechanical industries generally, including under this term all the trades and employments of a more or less mechanical nature, at which men work for wages and which require skill and ability beyond the grade of common labor. The number employed

in this group, upon the result of the last census, is estimated for 1906 at 5,603,100. The general accident rate of this group, according to the census, was 0.88 per 1,000; and if this rate is applied to the number given, the probable annual accident mortality among adult males in industrial occupations generally is 4,931. Estimated by the percentage method, upon the basis of 6.44 per cent of fatal accidents among deaths from all causes among men in manufacturing and mechanical employments, the probable annual mortality from fatal accidents is 4,980, or almost the same.

In other words, approximately from 5,000 to 5,500 deaths from accidents occur among men in industrial occupations, and the remainder of the accident mortality among occupied males is generally chargeable chiefly against transportation, mining, shipping, fishing, and other dangerous employments.

Annual Average

Since the accident mortality of men in mercantile employments is only 0.46 per 1,000, the probable excess in the accident death-rate of men employed in industrial occupations is 0.42 per 1,000, which, applied to the number employed, gives a total annual mortality of 2,353. So that, among men in strictly industrial employments in the United States, the average annual mortality from accidents is about 5,000 to 5,500, of which approximately 2,400 to 2,600 are chargeable against industry as a causative factor materially increasing the mortality from this group of causes.

For an estimate of the probable total number of accidents and injuries in American industry, only fragmentary data are available. The word "accident" has never been defined with sufficient accuracy, so that returns of one state are not strictly comparable with the returns of another. There is even less uniformity in this respect in the returns of different countries. The experience of accident insurance companies is also not useful for the end in view, in that for the protection of the companies against imposition and fraud the word "accident" is more strictly limited in the usage of accident insurance companies than in the returns of factory inspectors or bureaus of labor statistics. For this reason, the fact that, for illustration, the percentage of fatal cases to all accidents is about 1.3 in the experience of a large and representative company would not warrant the use of this figure in estimating the probable number of all injuries in American industry. Then, again, the experience of an accident company includes a large proportion of non-industrial risks on the one hand, and of extra-hazardous risks on the other.

Perhaps the most useful data are the accident statistics for the State of New York, which have been collected and published for the last four years. In the aggregate there have been reported 18,176 accidents during this period, of which 438, or 2.4 per cent, were fatal. If this figure is applied to the estimated number of deaths in industry, previously given as 5,000 to 5,500, the probable total number of accidents of all kinds in American industry upon this

New York

basis is from 200,000 to 250,000 per annum. It may be argued, of course, that the data for New York State are not sufficiently comprehensive and representative of American industry in general and that, therefore, the preceding estimate of approximately 250,000 accidents per annum is an overestimation of the facts. This may possibly be so, but, as I have previously pointed out, there is so wide a difference of opinion as to what properly constitutes an accident or injury of sufficient importance to come within the statutory requirements for reporting such accidents and injuries in industry generally, that no two estimates, upon whatever basis they may be adopted, are likely to agree. The New York State returns are in a large measure sustained by the corresponding data for Massachusetts, Wisconsin, and the United Kingdom. In Massachusetts, of the total number of reported industrial accidents, 2.46 per cent were fatal; in Wisconsin, 2.1 per cent; and in the United Kingdom 2.0 per cent. It would, therefore, appear to be a safe assumption that of all accidents in American industry 2.5 per cent are fatal; and if this figure is applied to the previous estimate of the accident mortality in industry, the resulting total is 208,300 industrial accidents per annum. This estimate includes all accidents of sufficient importance to cause at least a temporary loss of earnings, a loss of industrial efficiency, or a temporary suspension of labor.

The data for New York are for twelve groups of industries, including metals and machinery, stone and clay, wood-work-

ing plants, leather and rubber, chemicals and explosives, paper and pulp, printing, textiles, clothing and laundry, food, tobacco and liquors, water, gas and electricity, and building. The space is not available for discussing these industries in detail, but the following table shows, first, the number of accidents in New York State during the four years 1901-4, according to degree of disability, and second, the estimated number of such accidents in American industry generally (5,600,000 male employees).

ESTIMATE OF ACCIDENTS IN AMERICAN INDUSTRY
1906
(Upon the Basis of the Data for New York State)

| DEGREE OF INJURY | NEW YORK STATE (1901-4) | | UNITED STATES (1906) (5,600,000 male employees) |
|---------------------------------------|----------------------------|-------------|--|
| | Number | Per cent | Number |
| Temporary disable- ment: | | | |
| Lacerations..... | 3,315 | 18.2 | 37,911 |
| Burns..... | 1,136 | 6.2 | 12,915 |
| Cuts..... | 3,491 | 21.9 | 45,618 |
| Bruises..... | 3,277 | 18.0 | 37,494 |
| Sprains..... | 671 | 3.7 | 7,707 |
| Fractures..... | 1,219 | 6.7 | 13,956 |
| Other injuries..... | 1,069 | 5.9 | 12,290 |
| Total temporary dis- ablement..... | 14,678 | 80.6 | 167,891 |
| Permanent disable- ment: | | | |
| Partial loss of | | | |
| Eyes..... | 94 | 0.5 | 1,042 |
| Limbs..... | 79 | 0.4 | 833 |
| Hands, feet..... | 136 | 0.7 | 1,458 |
| Other parts..... | 2,624 | 14.4 | 29,995 |
| Total..... | 2,933 | 16.0 | 33,328 |
| Complete loss of | | | |
| Eyes..... | 1 | 0.1 | 208 |
| Limbs..... | 3 | 0.1 | 208 |
| Hands, feet..... | 6 | 0.1 | 208 |
| Internal injuries..... | 66 | 0.4 | 833 |
| Total..... | 76 | 0.7 | 1,457 |
| Total permanent dis- ablement..... | 3,009 | 16.7 | 34,785 |
| Deaths..... | 413 | 2.4 | 4,909 |
| Not reported..... | 51 | 0.3 | 625 |
| Grand Total..... | 18,170 | 100.0 | 208,300 |

I have every reason to believe that the foregoing estimate is conservative, and that the facts of actual experience will conform to the theory. In round figures, according to the preceding table, there occur annually some 200,000 accidents in American industry and industrial pursuits. Of this number some 5,000 are fatal and some 38,000 are of sufficient seriousness to cause either total or partial disability to perform remunerative labor. From an economic point of view, the problem of industrial accident, in the light of these statistics, is a most serious one. The loss in industrial efficiency alone represents a vast sum of money, to which must be added the cost of illness, nursing, etc. How much of this waste of life and health is preventable cannot be discusst without a lengthy consideration of the facts of each industry and occupation. In a not inconsiderable degree the solution of the problem lies with the workmen themselves, while much of it falls properly within the scope of preventive legislation and state control. Some industries are naturally more dangerous than others, while some are practically free from serious risk.

As a brief illustration of the degree of variation in risk, I have made an analysis of the Rhode

Island occupation mortality statistics for the decade 1895-1904, and in outline the result is as follows:

According to the Rhode Island returns for the ten years 1895-1904, there occurred among occupied males generally 18,403 deaths from all causes, of which 1,520, or 8.3 per cent, were deaths from accidents. Among women employed in industrial pursuits, there occurred during the same period 1,251 deaths, of which 43, or 3.4 per cent, were deaths from accidents. The difference in the percentages is chiefly the result of a more general exposure of men to hazardous conditions detrimental to life and health. A discussion in detail of the Rhode Island statistics would far exceed the available space. I can only briefly touch upon the more important employments.

In general *mechanical industries* the percentages of deaths from accidents in the mortality from all causes were 7.1 for tool-makers, 6.8 for machinists, and 6.8 for mechanics generally. In the iron and steel industries the percentage was 7.6 and among molders 6.7.

In *general trades and industrial occupations* the information is available for seventeen different groups, in which the percentages of deaths from accidents vary between 20.0 for steamfitters and 1.3 for printers. For the separate groups the percentages are as follows: Steamfitters, 20.0; painters, 12.8; boiler-makers, 9.7; masons, 9.0; tanners, 8.7; bakers, 7.6; stone-cutters, 7.5; tailors, 6.1; butchers, 6.0; rubber workers, 5.7; jewelers, 5.5; tin-workers, 5.1; plumbers, 4.7; barbers, 3.8; plasterers, 3.8; shoemakers, 2.9; printers, 1.3.

In the *textile industry* detailed returns are available for seven occupations, regarding which the respective percentages are as follows: Dyers, 11.4; carders, 10.5; weavers, 9.4; operators generally, 9.3; superintendents and overseers, 8.7; spinners, 3.1; wool-sorters, 2.6.

Among men engaged in *driving, teaming*, and allied occupations the percentages of deaths from accidents were: Teamsters, 14.7; hostlers, 14.3; cab and hack drivers, 14.3; drivers generally, 8.5; expressmen, 7.9; coachmen, 7.6; livery and stable keepers, 2.9.

Among men engaged in *contracting and construction work*, the percentages of deaths from accidents were: House-movers 60.0; roofers, 33.3; slaters, 25.0; carpenters and joiners, 9.2; and contractors and builders, 5.7.

The preceding occupations include most of the more important industrial pursuits. If the comparison were extended to include men employed in railway transportation, shipping, mining, etc., the less serious character of industrial pursuits would be more apparent.

In four selected groups of mercantile occupations the percentages of deaths from accidents were: For manufacturers, 2.0; merchants, 3.8; clerks and salesmen, 4.5; and storekeepers, 5.7. All these percentages are considerably below the general average, and this is equally true for farmers, with a percentage of 5.4, and gardeners with only 3.6.

While this analysis is limited to the mortality statistics of the State of Rhode Island, it is quite probable that the conditions in manufacturing states or industrial sections generally are about the same. The facts stated emphasize the necessity and social duty of a more qualified and scientific system of factory inspection and the rendering of uniform reports regarding accidents and injuries among persons employed in American industry. (See DANGEROUS TRADES; INDUSTRIAL INSURANCE; MINING; RAILWAY ACCIDENTS.)

FREDERICK L. HOFFMAN.

Dr. Josiah Strong has made some startling but significant comparisons in regard to accidents. He says in a tract, "Safety and Security for American Life and Labor" (1906):

Our peaceful vocations cost more lives every two days than all that we lost in battle during our war with Spain. It has been pointed out that the Pennsylvania coal-fields alone furnish "an industrial Bull Run" annually.

In these piping times of peace, we in the United States kill in four years some 80,000 people more than all who fell in battle and died of wounds, on both sides, during the four years of our Civil War. Records of the War Department show 67,058 killed in action, and 43,012 who died of wounds in the Federal armies, total, not including those who died from sickness, 110,070. Confederate records were largely destroyed, but it is believed that their losses were proportionately severe. Total number of enlisted men in the Union Army, 2,800,000. The War Department estimates total Confederate force at something over 1,000,000 men. This would make total Confederate killed and dead from wounds about 40,000—total, both sides, 150,000.

The number who died by accidents and violence in the United States in 1900 was 57,513. (See Census Bulletin No. 83.) That is, in the same length of time, we are now killing 53 per cent more people than two great armies could destroy equipped with all the weapons of death that ingenuity could then devise, and making destruction their eager business.

We are killing more than twice as many every year as perished by violence in both the French and English armies during the Crimean War. There are more killed and wounded on our railroads every year than the entire losses of the Boer War on both sides in three years.

The perfection of modern firearms rendered the late conflict in Asia exceptionally bloody. The entire losses of the Japanese in killed and wounded were 153,652; those of the Russians 180,134—a total of 333,786. This estimate was made by Gen. Tarker H. Bliss, of the United States General Army Staff, and is officially described as very nearly accurate. The above figures do not include the losses by sea fights, which, however, add only a few thousand.

The casualties of our industrial army are, without doubt, at least fifty per cent greater every year. Of course, the losses of war include many deaths from sickness. These are not considered here because we have no means of estimating the number of corresponding deaths in our industrial army, caused by death-producing occupations. There is, however, a long list of trades which cause premature death, none the less surely because gradually.

A record kept during a part of last year showed 2,555 fatalities in New York City in nine months, which was at the rate of 3,406 for the year—an average of more than nine violent deaths a day.

Without any increase of the annual rate reported by the government in 1900, there will be 575,000 killed every ten years, besides some 5,000,000 injured, even if our proportion of accidents to the population should prove to be no greater than that of France. This is like massacring every inhabitant in three cities the size of Indianapolis, Kansas City, and Denver, every ten years, and at the same time maiming and mangling every man, woman, and child in Washington, Oregon, California, Nevada, Utah, New Mexico, Arizona, Colorado, Wyoming, Idaho, Montana, and Oklahoma, and doing it every ten years.

Is it not time for the public to know the magnitude of these perils of peace? Is it not time to learn that this wounding and killing—more frightful than that of war—is largely unnecessary? Is it not high time to take some active measure to stop it?

Comparing accidents abroad with these in the United States, Dr. Strong says:

Among a given number of coal miners there are more than twice as many fatalities in this country as in Great Britain; the proportion being 2.64 here to 1.27 there. Of a given number of railway employees we kill nearly three times as many, and injure more than five times as many as Great Britain; we kill two and a half times as many, and injure five times as many as Germany; we kill more than three times as many, and injure nearly nine times as many as Austria-Hungary.

Nor must we imagine that accidents have been reduced to a minimum abroad. An investigation of 15,970 accidents in Germany showed that 53 per cent of them were avoidable. If among a given number of employees we have more than twice as many accidents as Germany, and if more than half of Germany's accidents are avoidable, it would seem probable that more than three-quarters of our accidents are avoidable.

ACCUMULATION OF WEALTH: See WEALTH.

ACTORS' CHURCH ALLIANCE: A society founded in 1899 by Rev. Walter E. Bentley, for the purpose of establishing closer relationship between the theater and the church. It appoints chaplains of all denominations to minister to the needs of the dramatic profession and agitates against Sunday performances and other evils of the stage. It has some 3,000 members, about half of these being of the dramatic profession. It is established in more than 400 towns of the United States and Canada, with local chapters in the larger cities, and is affiliated with the Actors' Church Union of England. President, Rt. Rev. H. C. Potter, D.D.; Secretary, Miss O. D. Drescher, 1431 Broadway, New York.

Mr. Bentley says:

One of the strangest facts in our complex civilization is that two of our greatest institutions, the Church and the theater, have been so far apart in sympathy and interest for so many centuries, and with the exception of a few feeble, spasmodic efforts, have not even tried to understand each other. This unhappy divorce has been injurious to both. The stage has lost the guidance and direction of the organized conscience of the community, while the Church in ignoring this great department of social action has lost that touch of nature which the stage supplies, and to that extent its grip on daily life. The Alliance seeks to correct this. It recognizes the stage as one of the greatest educational and ethical forces in society, potent to humanize, even while seeming but to amuse, and contributing so vitally for weal or for woe, to the character and destiny of the nation. It seeks to aid the Church at large in establishing closer relations with men and women following the dramatic profession, by making special provision for their needs and aiding them in any and every way conducive to their welfare. Clergymen of all denominations, Jewish and Christian, are appointed in every theatrical center, their duty being to visit members of the profession as temporary parishioners and to render them every service in their power. They also enlist the sympathies of local managers, and post Alliance calendars giving their names, churches, and services near the call board on the stage of every theater, signifying their willingness to care for any one who may be left sick in their town. Weekly notices are posted to the chaplains from the New York headquarters, giving, in advance, the arrival of the dramatic members, and thus the two are brought into immediate contact and are mutually introduced simultaneously all over the United States and Canada.

Another great aim of the Alliance is the effort to abolish Sunday performances, especially in the West. This is done not only on religious grounds, but also in justice to the actor, who, through this custom, is compelled to work seven days a week for six days' pay. Special Sunday services are provided by the chaplains, where the exigencies of traveling prevent the actor from attending the regular service; and social receptions are held whenever opportunity affords. Thus every effort is made to promote mutual good fellowship. Local chapters, consisting of the clergy, actors, and the public have been organized in about thirty-five of our largest cities, and everything possible is done to encourage and increase the support of the more wholesome drama and to bridge the chasm of misunderstanding between these two great departments of social life.

WALTER E. BENTLEY.

ACTORS' CHURCH UNION: A union formed in England, in connection with the State Church, at about the same time and along the same lines as the ACTORS' CHURCH ALLIANCE (which see). It is now established in about twenty-three metropolitan and 137 provincial counties in Great Britain. The Bishop of Southwark is its president. Honorary secretary, Rev. Donald Hole, 20 Woodview Gardens, Highgate, N. London, England.

ADAMS, FRANCIS: Writer in the cause of labor; born in Malta, 1862. He was educated for the civil service, but instead became a teacher and writer, issuing a volume of verse in 1884. In the same year he went to Australia for his health, and threw himself into the labor movement, issuing his "Songs of the Army of the Night," in 1887. In 1890 he returned to England, broken in health, yet continued to write for the cause of labor to the last, in *The Fortnightly Review* and elsewhere, and issued "The New Egypt" just before a final hemorrhage. On Sept. 4, 1893, he calmly and deliberately shot himself in the presence of his wife, and was buried "with clenched hands" in Margate Cemetery.

ADDAMS, JANE: Head of Hull House in Chicago; born at Cedarville, Ill., 1860; daughter of State Senator J. H. Addams. She was graduated from Rockford College in 1881, whereupon she traveled in Europe for two years. Together with Ellen G. Starr she founded Hull House in 1889, and has continued as its head ever since, developing its steady growth and large success and usefulness. Miss Addams has taken a promi-

ment part in almost every reform movement in Chicago, and even in the United States, especially in all that concerns women, children, and the tenement population. She was at one time appointed inspector of streets and alleys in the Hull House district, and introduced many reforms; and she has served also on numerous municipal and other public committees as well as on innumerable private ones. She has constantly been called upon to deliver commencement and other addresses, mainly upon some subject in social reform, from the standpoint of ethics and democracy; and she has written a large number of articles in magazines and elsewhere. Miss Adams is neither an avowed Socialist nor a Tolstorian, tho friendly to both those views and an active worker for many of their proposals. Her emphasis is upon the ethical side of the social movement, coupled with an insistence upon the democratic organization of industry, largely on socialist and trade-union lines. Among her writings may be mentioned: "The Subjective Necessity for Social Settlements" and "The Objective Value of a Social Settlement," in a volume entitled "Philanthropy and Progress," 1893; a contribution to "Hull House Maps and Papers," 1895; "Democracy and Social Ethics," 1902; "Newer Ideals of Peace," 1907. Address: Hull House, 335 S. Halsted Street, Chicago, Ill.

ADDERLEY, Hon. and Rev. JAMES GRANVILLE: Born 1861; educated at Oxford; first head of Oxford House, in East London. During the great dock strike he aided the dockers, raising £800 for them. He has officiated as curate or vicar in the parishes of Barking, Plaistow, Mayfair, and Marylebone, and since 1904 as vicar of Saltley, Birmingham; and he is on the Council of the Christian Social Union. Among his writings are: "Stephen Remarx" (1893), a Christian Socialist novel; "The New Floreat" (1895); "Christ and Social Reform"; "Looking Upward" (1896); "Francis of Assisi" (1901); "A New Earth" (1903); and "Behold the Days Come" (1907). Address: The Parsonage, Saltley, Birmingham, England.

ADLER, FELIX: Leader of the Society for Ethical Culture; born at Alzey, Germany, 1851; came to the United States in 1857; was graduated from Columbia College in 1870 (Ph.D., Berlin); professor of Semitic languages and literature at Cornell, 1874-76. In 1876 he founded the Society for Ethical Culture in New York City, and in 1879, under the name of the Workingman's School, he established the Ethical Culture School, which he still directs. Dr. Adler was a member of the Tenement House Commission in 1883, and in 1900 of the Committee of Fifteen. In 1902 he became professor of social and political ethics at Columbia University, the chair being especially created for him. He is chairman of the National Child Labor Committee, and gives much of his time to the work for children. Dr. Adler believes in democracy and in voluntary collectivism, but not in Socialism; in the sacredness of each person's individuality; and that the right democratic spirit will have been attained when the relations to equals, to those in the higher ranks, and to those in the lower ranks of life have been adjusted on an ethical basis. He is the author of: "Creed and Deed"; "Moral Instruction for Children"; "Life and Destiny"; "The Religion of Duty"; and "The Essentials of Spirituality";

and he was one of the founders of *The International Journal of Ethics*. Address: 152 West Street, New York City.

ADLER, VIKTOR: Physician; Socialist; born in Prague, 1852. Educated a physician, he gave up his profession for Socialist propaganda. In 1866 he started the *Gleichheit*, and succeeded in uniting the divided Austrian Socialist Party. He is now editor of the *Arbeiter Zeitung*, the organ of the Austrian Social Democratic Party; and is author of many Socialist tracts and short books on labor chambers, universal suffrage, etc.

ADMINISTRATIVE NIHILISM: A phrase first used by Professor Huxley in an address before the members of the Midland Institute, 1871, to describe the doctrine (which he opposed) of those who believe that the state should be limited in its functions to the protection of its subjects from aggression. The address has since been published under this name of "Administrative Nihilism." Professor Huxley quotes approvingly Locke's maxim, that "the end of government is the good of mankind," and defines the good of mankind as "the attainment by every man of all the happiness which he can enjoy without diminishing the happiness of his fellow men."

ADULTERATION OF FOOD: In political economy this means "the act of debasing a pure or genuine article for pecuniary profit by adding to it an inferior or spurious article, or taking one of its constituents away." In England, as early as the thirteenth century, the legislature attempted, tho with but partial success, to strike a blow against it, showing that it existed even then; but it is modern invention and still more modern commercialism that has mainly produced it. Between 1851 and 1854 in England a sanitary commission, instituted in connection with *The Lancet* newspaper, and most ably conducted by Dr. Arthur Hill Hassall, made revelations of so startling a character that parliamentary action took place; and this, tho at first ineffective, has been improved, till it is now somewhat effective, and has been followed by legislation in other countries.

I.—In the United States

It is in the cheaper grades that adulteration of food is commonly found. The greater temptation would naturally lie in debasing the dearer commodities, but those who buy the dearer commodities have obviously the means to make effective their demand for good qualities, and will not take the poorer. It is thus upon the working class that the burden of debased commodities mainly falls. Not all such deceptions are harmful to health; but they are all swindles, whether harmful or not.

The United States Bureau of Labor in 1904 analyzed the household budgets of 2,567 working-class families. They are not typical budgets, it must be said, but exceptional ones, since these families, averaging 5.31 persons each, had an average yearly income of \$827.19. The average working-class family in America has nothing like this income. Fifty-one per cent of the unskilled shoe-workers of the nation receive less than \$300 yearly. The general run of textile operatives receive but little more. The Pennsylvania bituminous-coal miners receive but \$418.15, and the anthracite miners \$684.78 (1904). The 2,300,000 railway workers (including all the salaried officials, average but \$631 (1903-4), while the highly paid steel workers receive but \$710 (1905). The normal working-class family, even allowing two bread-winners to

Food Budget

each, will probably not average more than \$600 a year. The figures are of the utmost importance in considering the relation of household budgets to deceptive and debased foods; for the lower the income the more the family is rendered the prey of adulterations—the more it is forced to renounce the solid and nutritious foods wherein adulteration is least, and the more it is forced to have recourse to the less nutritious foods, including stimulants, condiments, and the like, wherein adulteration is the greatest.

Meat, salt and fresh, furnishes 28.45 per cent of the value of the food consumed by these families. This is a high percentage, the actual one for all working-class families being more likely in the neighborhood of 20 or 23. Meat is not yet subject to substitution. But it is, in no slight degree, subject to debasement. If the reports of the special correspondent of the *London Lancet*, of Mr. Upton SINCLAIR, and of many other investigators are to be believed, meat slaughtered in the great packing-houses does not, by a large margin, meet the standard requirements. (See PACKING-HOUSES.)

Lard, which claims 2.86 per cent of the value of the food budget, may be mentioned here, by reason of its supposed kinship to meat. It is very generally adulterated. Forty-nine per cent of the samples reported examined in the Connecticut report for 1903 were "grossly adulterated" with cotton-seed oil. There is also a thing called "compound lard"—tho it is not likely that the qualifying word is generally revealed by the dealer to the average consumer—which is made almost wholly of cotton-seed oil, the occasionally paraffin shares its company. "Real lard," says the report, "is a minor constituent."

Adulterated Articles

Milk, butter, and cheese form the second highest number in the food budget, 16.13 per cent of the total. The adulterations and debasements in this category are both so extensive and so intensive that space cannot be given for enumerating them. In spite of laws for the inspection of milk in most of the states, its "dosing" with formaldehyde and its adulteration are general. The cheaper grades of condensed milk are almost all frauds. Cheese is rarely the thing it pretends to be. Oleomargarin is still sold for butter, and a thing known as "renovated butter," temporarily transformed, according to Commissioner Blackburn of Ohio, from "unsalable butter in various degrees of putrefaction," is sold in large quantities. But a new process of "faking" butter, which is no more than the solidifying of skimmed milk, threatens an overflow of the markets, particularly in Canada, where it is now being unloaded.

Vegetables count for 9.72 per cent of the food budget. In their native form they are, of course, impossible to substitute. The canned goods, however, are very generally "freshened" or colored with chemical salts and preserved with boracic or salicylic acid. Peas, string beans, asparagus, corn, and tomatoes are all subject to this manipulation.

Sugar and molasses count for 5.34 per cent. Crystallized sugar is generally pure, but pulverized sugar is very liberally adulterated; and most, if not all, of the popular brands of maple sugar and sirup are substitutions. Molasses and fancy sirups are chiefly glucose.

Eggs count for 5.14 per cent and poultry for 2.90. Despite the apparent difficulty of fabricating eggs, the thing is said to have been done with a fair degree of success, tho it is believed that the business has declined. As for real eggs, the deception to the consumer is largely one of pretense as to comparative freshness. But "egg flake" and "bottled egg," which are, or until very recently have been, largely used by confectioners and bakers, are the product of putrid eggs deodorized by boracic acid.

Flour and meal claim 5.13 per cent, and bread 3.81. Not much can be alleged against the purity of ordinary flour and meal, altho the so-called gluten flour, which is generally sold, has been shown by repeated investigations to be largely fraudulent. The case against baker's bread is a much stronger one. Many of the grosser impurities have been reformed out of it, tho it is still freely "dosed" with alum.

Fruit comes to 5.05 per cent. Here is another commodity which in its ordinary form defies "doctoring." Canned or dried, however, it suffers a fate similar to that previously related of vegetables; while in the form of fruit-spreads it is subject to the most brazen and wholesale debasement or substitution.

Coffee and tea claim 4.90 per cent, of which tea represents about one-third. Virtually all sales of coffee to the consumer are fraudulent in one way or another. The average person who thinks he knows what he wants will almost invariably, when purchasing, ask his dealer for Mocha and Java, and it would be a queer sort of dealer who should reply that he had none. And yet, as 98.9 per cent of all coffee imported into the United States comes from Latin America, it is evident that very few persons in this country have ever tasted either Mocha or Java. In addition to this wholesale deception, coffee, especially when ground or pulverized, is very generally adulterated with beans, peas, barley, and other and less wholesome substitutes, while coffee "essence" and "coffee compounds" are almost invariably fraudulent. Tea is carefully inspected at the ports, and only a small quantity of really doctored leaves find their way here from abroad. But there is considerable "touching up" with graphite, adulterating, and even substituting within the country.

Fish is listed at 2.45 per cent. There is a good deal of seizing and destroying of superannuated fish by the health authorities (385,690 pounds in New York City in 1905), a good deal of transforming of one kind of fish into another by our restaurant keepers, and perhaps a certain amount of "touching up" for rejuvenating purposes by our market keepers.

Vinegar, pickles, and condiments are listed at only 1.56 per cent. No one acquainted with the food of the poor in a great city would accept these figures as typical. The real percentage—among the city poor at least—is considerably higher. The stinting of nourishing food develops an abnormal craving for acids, spices, and peppers, which the poor buy in large quantities. This whole class of commodities is subject to the most shameless adulteration and substitution.

A wide range of edibles is comprised in the final entry, "other food," with 6.24 per cent, or, including rice, 6.87 per cent. This total doubtless includes cocoas and chocolates, candy, cake, and ice-cream, breakfast foods and a host of articles such as baking-powders and cream of tartar. Cocoas and chocolates are very frequently adulterated, sometimes with no more than an excess of starch, wheat flour, or maize, but in other cases with foreign fats and insoluble matter. Candy, and particularly cheap candy, is largely adulterated. Said Dr. Lederle two years ago:

"It is, or was, hard to get pure candies. Years ago we found candies actually colored by poisonous colors, one of which was chrome yellow. Then terra alba, a white mineral, was used for 'loading' candy and cheapening it. So far as flavors are concerned, natural flavors have been almost entirely replaced by artificial compounds made by the chemist in the laboratory."

Much of the cake in the cheaper bakeries is unfit to eat, and as for the ordinary ice-cream it would be more appropriately named frozen starch and skimmed milk. Cream of tartar and baking-powder are variously adulterated or substituted, much of the former being nothing more than plain bicarbonate of soda. A report of the New York State Board of Agriculture in 1904 declared eight of seventeen samples to be substitutes.

For something like seventeen years strong efforts had been made to induce Congress to pass a pure-food bill. Several minor measures, affecting a few commodities, had been passed, but it was not until the summer of 1906 that a comprehensive bill was enacted. This act, approved by the president June 30, 1906, provides for the fixing of standards in foods, drugs, medicines, and liquors, and prohibits after Jan. 1, 1907, the manufacture of debased or misbranded goods in the territories, the insular possessions, and the District of Columbia, and the introduction of such foods into any state, territory, or possession of the Union. The Secretary of the Treasury, the Secretary of Agriculture, and the Secretary of Commerce and Labor are designated to fix the standards and to "make uniform rules and regulations for carrying out the provisions" of the act.

Pure-Food Legislation

Under the provisions of the act an article of food is deemed to be adulterated in any of the following circumstances:

- (1) If any substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength.
- (2) If any substance has been substituted wholly or in part for the article.
- (3) If any valuable constituent of the article has been wholly or in part abstracted.
- (4) If it be mixed, colored, powdered, coated, or stained in a manner whereby damage or impurity is concealed.
- (5) If it contain any added poisonous or other added deleterious ingredient which may render such article injurious to health.

A proviso, however, exempts certain commodities artificially preserved in cases where the preservative is removable by the consumer, and when instructions are given for its removal. The general tendency of the act will be toward compelling manufacturers to state the character of their goods by proper labels. Dealers who can establish a guaranty from wholesalers, jobbers,

or manufacturers, that goods handled by them are unadulterated or properly labeled, are exempt from prosecution.

W. J. GHENT.

II.—In Great Britain

There was practically no effective legislative control over the purity of the food supply in Great Britain until the year 1875, when the Sale of Food and Drugs Act came into operation. This act provided for the appointment by local authorities of public analysts whose duty it was to examine samples submitted to them by an official acting under the direction of a committee representing what was known as a vestry, a body of local administrators which has now given place to a borough or county council. The appointments are referred to the Local Government Board which to some extent controls the operations of the act. Before the act came into force the practise of adulteration was not merely fraudulent in kind but was fraught also with the gravest risks to the public health. People were not only cheated, they were poisoned.

Sale of Food and Drugs

This state of affairs was exposed in a remarkable series of articles which appeared in *The Lancet* from 1851 to 1860, and the appalling conditions soon came to the notice of Parliament, chiefly by the efforts of the founder of *The Lancet*, Mr. Wakley, M.P. for Finsbury. Acts were passed in 1860 and 1872, but these were inefficient. However, since the Act of 1875 was passed, the condition of the food supply has steadily improved, till at last the adulteration of food was confined merely to fraudulent practises, while the use of poisonous substances was virtually stamped out. At the present time it is seldom that cases are brought to notice of poisonous substances having been found in the foods submitted to the public analyst. The Act of 1875 was further strengthened in 1879 and again in 1890.

Meanwhile, however, adulteration has become a fine art, and every conceivable opportunity is taken to deceive the public analyst.

Food is "faked" so cleverly as to defy detection by the ordinary methods of analysis, and this is particularly true in regard to butter. The criterion of genuine butter is a certain proportion of volatile fatty acids, a criterion which is readily satisfied by substituting foreign fats which yield volatile acids in quantity compensating for the poor percentage of genuine butter, if indeed any is present at all. The chief article of food examined in England is milk, and the result shows generally an amount of adulteration equal to 10 per cent of the samples examined. Milk showing less fat than 3 per cent is regarded as having had part of its cream abstracted. Drugs form but a small proportion of the articles examined, but on the whole the results of examination prove satisfactory. The standard for drugs is generally held to be the British Pharmacopoeia. It must be confessed that analysts in England do not give that attention which ought to be given to substances which involve an arduous examination. For this, however, the analyst can hardly be blamed, since as a rule the fees which he is paid do not compensate him for any special work. The average fee received by the public analyst is usually less than half a guinea per sample. This fee may remunerate him satisfactorily in the case of the analysis of milk or of coffee, but such a fee would not be consistent with a complete analysis of spirits or water.

Clever Adulterations

Recently proceedings have been taken under the Food and Drugs Act against the sale of brandy and whisky, the composition of which did not accord with that of the genuine articles made entirely from grape and malt. Standards for genuine brandy and whisky have been laid down, which depend upon the amount of by-products of fermentation and distillation other than alcohol found in genuine brandy and whisky. Convictions have thus been obtained under the operations of the Food and Drugs Act. The fact that it can be

proved by analysis that both brandy and whisky are frequently nothing but spirit derived from grain in the patent still, has thrown the spirit trade into a condition nothing short of alarm. There is no doubt that substitution has been practised by this industry for a long time; and the general opinion is that a clear and accurate description of the spirit sold for consumption should be declared on the label.

There is no immediate prospect of any serious fresh legislation of a general kind being made in England in regard to the adulteration of food. It is probable, however, that extra steps will shortly be taken in order to protect the public from the extensive watering of butter that goes on, and also its sophistication with foreign fats. Under the name of milk-blended butter, a good deal of that article is sold which contains

Legislation

no less than 25 per cent of water, and this retailed at 1 shilling per pound. It is a clever ruse on the public, and will probably be dealt with by a special statute. The samples of food and drugs examined annually by public analysts number about 50,000, and generally a third of this number consists of samples of milk. The rate of adulteration for all samples is approximately 10 per cent, a figure which year by year has shown slight reduction. The extent of adulteration, however, is probably greater than this, since when samples are obtained in an unofficial way the percentage of adulterated ones rises considerably. In past years the penalties have been too trifling to deter offenders from repeating the offense; but recently the fines inflicted have been much heavier, and with a salutary effect.

It is to be regretted that England is still without any definite statutes concerning the use of preservatives and coloring-matters. A special departmental Committee was appointed several years ago to consider this question, and its members issued in 1901 a report containing their recommendations. These recommendations have never become law, altho the opinion of the public analysts has been guided by this report, and prosecutions have succeeded on the strength of the conclusions of the Departmental Committee. Briefly, these conclusions were that preservatives and coloring-matters should be absolutely prohibited from being used in milk and all other articles of food intended for infants or the sick, that formaldehyde be prohibited altogether, that borax compounds be allowed in limited quantity in cream and in butter, and salicylic acid in wines, etc., to the extent of one grain per pint. The use of copper salts for greenening vegetables was condemned.

On the whole it may be said that the Sale of Food and Drugs Act is working well, and certainly since its inception the quality of the food supply has greatly improved; but evidence is not wanting that the act requires amendment in several directions, and public attention is being drawn to the fact. Perhaps the weakest section in the act is that which allows a dealer to sell any adulterated goods so long as he declares the fact. There is little doubt that this disclosure is publicly made by a notice in the shop or on the label of the goods, the public in many instances are careless and pay little regard to such declarations, or else the announcement escapes their attention on account of its being printed in small letters or in an obscure place. Of course, when the inspector appointed under the act gets samples in this way, the defense is that the fact that the goods were not genuine was

Effects of the Act

disclosed at the time of the purchase in one of the ways indicated. In most of the public houses in England a notice commonly hangs in the bar pointing out that the spirits are diluted with water "in compliance with the requirements of the Food and Drugs Act"!!! In some restaurants it is even declared that the milk sold cannot be guaranteed to contain its full complement of cream. Such methods are calculated to defeat the aim of the act, which is to provide the public with food of good quality and to protect them against fraud.

S. ARCHIBALD VASEY.

ADVERTISING: In the early and middle ages signs and criers were used for this purpose, and the public crier gradually became a necessary and important officer. The first advertisement in the United States appeared in *The Boston News Letter*, a two-page paper (8 inches by 12), in 1704. The first number of advertisements appeared in *The New England Weekly Journal* (Boston, 1828), and pertained to books, coffee, runaway slaves, sale of negro girls, etc. The *New York Sun*, established in 1833, contained advertisements of various kinds, tho not as numerous as at the present time. The first newspaper advertising agency was established in Philadelphia in 1840, by Volney B.

000,000 annually. Mr. Post spends \$600,000 annually in advertising his food products. \$1,000,000 was spent in 1893 in advertising the breakfast food known as "Force," and more than \$1,000,000 is spent annually in advertising "Peruna." A soap firm gave a three-years' contract to a magazine for a one-page advertisement at \$4,000 per month.

Socialists believe that much of the money spent in advertising is an economic waste due to competition; but \$95,000,000 expended on newspaper and periodical advertising is less than 1 per cent of the commerce of the country, spent for making it known. Movements and societies have recently been started, making propaganda against the abuse of advertising in beautiful and historic places, as well as against immoral and indecent advertising. The best known of these is the London "Society for Checking Abuses in Public Advertising" ("Scapa"), 1, Camp View, Wimbledon Common, S. W. London. Some cities have passed ordinances on the subject. For the United States, see AMERICAN CIVIC ASSOCIATION.

Palmer. To-day there are over fifty. Magazine advertising began with *Scribner's Monthly* in 1870.

GROWTH OF ADVERTISING IN NEWSPAPERS AND PERIODICALS IN THE UNITED STATES

| YEAR | Subscriptions and sales | Advertisements | Per cent |
|------|----------------------------|----------------|----------|
| 1880 | \$49,000,000 | \$39,000,000 | 44 |
| 1890 | 72,000,000 | 71,000,000 | 49 |
| 1900 | 77,000,000 | 95,000,000 | 54 |

It is this advertising which makes possible the educational work (good and bad) of the daily press and of the weekly and monthly magazines. The amount expended in newspaper and periodical advertising in the United States was put by the census (1900) at \$95,861,127. Advertising on bill-boards, fences, etc., has been estimated at \$1,250,000 annually; street-car advertising at \$2,000,000; lithographing (folders, etc.) at \$15,000,000. These estimates are probably far too low. The total has been estimated at \$600,-

There are 14,178 miles of railroad in Africa, distributed as follows: Algiers and Tunis, 3,039; British Possessions, 3,671; Egypt, 2,885; Orange Free State, 596; other countries, 3,987. (See also CAPE COLONY.)

AGAPE: A love-feast, or feast of brotherhood and social communion, in the early Christian Church. The name comes from the Greek word *agape*, signifying love. At these feasts the rich Christians presented their poorer brethren with gifts, and all sat around the tables and ate together as a token of their equality before God. The utmost harmony and fellowship prevailed. Prayer opened and closed the meeting, and a bishop or presbyter presided. A portion of Scripture was read, expounded, and discusst; and during the feast spiritual songs were sung. If any communication had been received from another church, or from an absent member or bishop, it was publicly read. Money was collected for widows, orphans, prisoners, the poor, and those who had suffered shipwreck. (At the close the members embraced, and a "philanthropic prayer" was pronounced. A spirit of practical sympathy

and benevolence prevailed. The participators did not seek for private spiritualities nor for personal enjoyment, but acted as "members one of another." In the second century persecutions checked the agape, and in the third and fourth centuries they degenerated into a kind of banquet, where the deaths of relatives and martyrs were commemorated, and where the clergy and the poor were guests. The increase of wealth at last rendered their original purpose abortive, and transformed them into positive evils, and too often scenes of iniquity. Councils denounced them for their riotousness and debauchery, and finally banished them altogether.

The agape have been revived by the Moravians, who hold solemn feasts where wheat bread and tea are set before the participants, and where prayer and praise are offered up. (See GILDS.)

AGE OF CONSENT: The "age of consent" is the age of the female below which carnal connection, either with or without consent, is declared rape, and the male is liable to punishment therefor. In all the states of the Union and in sections under government control, as the territories and the District of Columbia, as well as in all civilized foreign countries, legislators have recognized the fact that innocence should be protected from the designs of vicious men. Therefore the statutes provide that below an age varying in different localities no maiden may legally consent to carnal connection with a male of an age of discretion, which is placed usually at seventeen years. Tho the maiden may consent, the law holds that the male is liable to punishment just as if she had resisted, provided she is below the age limit set.

According to the common law of England, a female becomes a woman at twelve years of age. Until the year 1885, the age of consent in Great Britain, therefore, was the end of the twelfth year. In 1885, by the Criminal Law Amendment Act, carnal intercourse with a female under the full age of thirteen years, was made a *felony*, punishable by penal servitude for life or for any term not less than three years, or by imprisonment for any term not exceeding two years, with or without hard labor. The act further provides that carnal intercourse with a female between thirteen and sixteen years shall be deemed a misdemeanor, punishable at the discretion of the court by imprisonment for any term not exceeding two years, with or without hard labor.

As the laws of the United States are based on the English statutes, it follows that in all of the original states the age of consent was held to be twelve years. In one or two of them, however, it was fixed as low as seven years.

These facts, coming to the notice of earnest people whose hearts had been stirred by the agitation for moral purity, started and sustained by Mrs. Josephine Butler, Wm. T. Stead, and others, in England, efforts were put forth in several states to raise the age of consent from seven or twelve years to an age where greater experience and knowledge of the world would constitute more adequate protection.

This movement has become general; and in nearly every state the age of consent has been raised to sixteen or eighteen years, and in one state—Wyoming—to twenty-one years. The greater number have placed the age at sixteen years; and in some of these states it is not likely

to be raised higher, as in them a girl of sixteen is allowed to marry without the consent of her parents; and legislators are not inclined to raise the age of consent above this point.

**In the
United
States**

According to a careful canvass the age of consent in each of the different states is as follows:

TEN YEARS: Georgia; Mississippi.

FOURTEEN YEARS: Alabama; Missouri; Nevada; North Carolina; South Carolina; Virginia; West Virginia.

FIFTEEN YEARS: Texas.

SIXTEEN YEARS: Arkansas; California; Connecticut; Illinois; Indiana; Iowa; Kentucky; Louisiana; Maine; Maryland; Massachusetts; Michigan; Minnesota; Montana; New Hampshire; New Jersey; Ohio; Oregon; Pennsylvania; Rhode Island; South Dakota; Vermont.

EIGHTEEN YEARS: Colorado; Delaware; Florida; Idaho; Kansas; Nebraska; New York; North Dakota; Tennessee; Utah; Washington; Wisconsin; the District of Columbia (Washington City), and territory under government control.

TWENTY-ONE YEARS: WYOMING.

Two States, Alabama and Delaware, have followed the method adopted in Great Britain of making the punishment more severe when the female is under ten or twelve years, and lighter between that age and fourteen or sixteen years. One State (Georgia) is reported to have no statute which exactly covers the case.

It is greatly to be desired that those states in which the age limit is below sixteen years will speedily amend their code so as to place the limit at sixteen or, better, eighteen years.

At present there are not sufficient data obtainable to accurately describe the conditions that exist in foreign countries relative to the age of consent. As legislation abroad is quite conservative and governed largely by precedent, it is not to be expected that the same advance has been effected as in this country.

O. EDWARD JANNEY.

AGRARIAN PARTY: A German political party, formed in 1869, under the leadership of M. A. Niendorf and Elsner von Gronow, to represent the interests of the landlords. The party has endeavored to abolish taxes on land, and to limit the importation of foodstuffs. Its influence is considerable, as it has largely dominated the conservative interests in the Reichstag.

AGRICULTURAL COLLEGES AND EXPERIMENT STATIONS: The first agricultural school was founded by Fellenberg at Hofwyl, Switzerland, in 1806, and endured thirty years, educating 3,000 pupils. The Albert Institution, a great agricultural college, was founded at Glasnevin, near Dublin, Ireland, in 1838. In England, a private experimental station was started at Rotham in 1843. The Royal College of Agriculture at Cirencester, England, was commenced in 1845, and a college of agriculture at Downton, in 1880. Various English colleges and universities have now agricultural departments. Grants of money in aid of agricultural education are made through the Board of Agriculture. Traveling-schools with dairy apparatus have been started. In Canada there is a successful agricultural college at Guelph, Ontario. Most of the Australasian colonies have agricultural colleges.

France has an elaborate system of agricultural

education under the national government, with the Institut National Agronomique at the head. There are three national schools of agriculture, with many secondary schools. Since 1879 instruction in agriculture, horticulture, and natural history has been obligatory in normal and primary schools. Belgium has developed a similar system. Denmark is giving much attention to this work, with an agricultural college at Copenhagen and numerous agricultural schools. Germany has no developed system, but many universities and industrial schools have agricultural courses. Italy, Sweden, Norway, and Russia are developing schools and colleges. Traveling instructors are employed in Norway and elsewhere. Germany has more than 100 experiment stations; France has 70; Austria 41.

In the United States the first agricultural college was established at Cleveland, Ohio, in 1855. Under the provisions of the acts of Congress of July 2, 1862, and Aug. 30, 1890, colleges having courses in agriculture are in operation in all the states and territories. In 1857 a bill was introduced by Senator Merrill of Vermont, who became a leader in the movement, and in 1862 a bill was passed donating land in each state for agricultural colleges. In 1887 Congress also appropriated \$15,000 in each state for agricultural experiment stations. To-day there are sixty-six agricultural colleges, and there are experiment stations in nearly all the states and territories. Wisconsin started the first dairy school.

The total number of students in all departments of these institutions during the year ended June 30, 1904, was 53,101, of which number 6,726 were enrolled in institutions for colored students.

Of the students in the college departments, there were enrolled in regular four-year courses, as follows: Agriculture, 2,096; horticulture, 209; forestry, 26; mechanical engineering, 3,767; civil engineering, 3,222; electrical engineering, 2,936; mining engineering, 922; chemical engineering, 285; railway engineering, 3; sanitary engineering, 32; textile engineering, 95; general engineering, including unclassified first-year engineering students, 746; architecture, 227; household economy, 674; chemistry, 444; general science, 1,707.

There were enrolled in short courses as follows: Agriculture, 3,651; horticulture, 69; dairying, 673; mechanic arts, 1,145; household economy, 647; mining, 93.

The total income of the institutions, excluding the amount received for experiment stations, was \$10,885,550, of which amount the several states and territories contributed \$5,654,758, and the amount received from federal sources was \$2,045,963.

The total value of all property amounts to \$74,564,424, of which sum \$28,388,826 is invested in interest-bearing securities.

The total income of the experiment stations in 1905 was \$1,515,734, and they employed 845 persons. Of this work the Secretary of Agriculture says (1906):

The farmer will not fail the nation if the nation does not fail the farmer. He will need education to know the powers of the soil which are now hidden from him. The prospective yearly expenditure of \$10,000,000 for educational and research work by nation and states, with such increases as may come from time to time, must have enormous effects. There may be agricultural schools for the small children, and agricultural high schools for the larger ones, and their education will be continued in the colleges.

The work of the Department of Agriculture has already had results which are valued at hundreds of millions of dollars annually, and yet the department feels that it has barely crossed the threshold of its mission of discovery and education. Cooperating to the same ends are 60 experiment stations in 51 states and territories, the 63 agricultural colleges, thousands of farmers' institute meetings yearly, many excellent agricultural periodical publications and new instructive books. Then there is a new line of work which is so productive of results that it is constantly extending, and that is the demonstration farm, the encouragement of individual farmers to change their agriculture so as to multiply their yields and their profits, and thus afford object-lessons to other farmers.

Thus it appears that forces are now at work which will very

considerably increase the production of the farms within a generation, and which promise to continue the increase indefinitely.

In 1905 the secretary said:

Recent years have also witnessed the development of a great system of popular agricultural education for the adult farmer through the farmers' institutes which are now held throughout the country and annually attended by about a million men and women engaged in agricultural pursuits. With the growth of the research work of this department and the experiment stations it has become very evident that publications alone would not meet the demand for information regarding improved methods of agriculture and the ways in which the results of scientific investigation may be applied to agricultural practice. The absence of agricultural instruction in the schools and the coming on to the farms of millions of people from foreign lands, together with the wide-spread interest in the results of agricultural research, have made it necessary that means be devised for giving agricultural people instruction by word of mouth which will enable them to understand and utilize the information so largely given out in the publications of this department and the stations.

For this purpose the farmers' institutes established under public authority in the states and territories furnish an agency of great usefulness. It has therefore seemed highly desirable that this department should ally itself closely with the farmers' institutes, and make them efficient instruments for the wide diffusion of the knowledge gained by the department and other agencies for agricultural research. With this end in view a farmers' institute specialist was appointed two years ago in the Office of Experiment Stations, and efforts have been made to place at the disposal of the institute lecturers the information gained by the department in many lines.

AGRICULTURAL LABORERS: See AGRICULTURE; WAGES.

AGRICULTURAL ORGANIZATION SOCIETY, THE: Founded in England in 1901, by the amalgamation of the British Agricultural Organization Society with the National Agricultural Union. Its object is education and the development of cooperation in British agriculture. The society (a) advises with regard to the preliminary steps to be taken in the formation of a society; (b) supplies model rules giving societies a legal constitution without trouble or expense; (c) gives information concerning the working of other societies, with the object of mutual help and experience; (d) is in a position to negotiate with firms in a manner impossible for a local society; (e) institutes systematic methods of administration in order to secure good management. The number of societies affiliated with the Agricultural Organization Society in 1906 was 140. Secretary, J. Nugent Harris, Dacre House, Dacre Street, Westminster.

The Irish Agricultural Organization Society has 718 societies affiliated with it (see IRELAND) with 76,334 members. Secretary, R. A. Anderson, 22 Lincoln Place, Dublin.

AGRICULTURE: The importance of the part played by agriculture in the economic, commercial, and industrial life of man, and the gravity of the economic problems involved, it is impossible to overestimate. In most countries more people are engaged in agriculture than in any other class of occupation. In the United States (1900) it was 35.7 per cent; in Hungary (1900), 68; in Italy (1901), 59; in Russia (1897), 58; in Austria (1900), 58; in Sweden (1900), 49; in Denmark (1901), 48; in France (1896), 44; in Ireland (1900), 44; in Norway (1900), 41; in Germany (1895), 37; in Switzerland (1888), 37; in Holland (1899), 30; in Belgium (1900), 21; in Scotland (1901), 12; in England and Wales (1901), 8. These figures include those engaged in fishing.

This, however, shows only the direct importance of agriculture. Indirectly it influences all

occupations. If the agricultural population is prosperous, it must affect every other class, and vice versa. This is not only because every man

Indirect Influences

and woman and child must consume the products of agriculture, but because the size of the farm population makes it the one great market for almost all manufactured articles which relate to the necessities of life, and because the agricultural element affects politics and furnishes the great bulk of materials of commerce. It was not until the tribes of the world first commenced agriculture and gave up their nomadic habits that civilization can be said to have really commenced. On the other hand, there is probably no occupation so affected by the varying social and political conditions of man as agriculture, because no occupation so depends for its life on settled habits, peaceful life, and general prosperity.

Yet, important as it is, agriculture to-day faces the most serious problems in the greatest countries of the world: the U. S., Russia, Germany, to a less extent in France, but in Great Britain most of all. The drift of population to the city, and of industry to manufacturing and trade, has meant to a serious extent the decline of agriculture. Mr. James J. Hill (see below) says: "Agriculture, in the most intelligent meaning of the term, is something almost unknown in the U. S." In Great Britain the agricultural problem has been acute for the last thirty years. In Russia a changing political condition, commencing with the freeing of the serfs, has driven millions from their former feudal tenures of land, without economic ability to get land or maintain independence. In other countries, tho less seriously, agriculture has also suffered by the movement toward the city and toward manufacturing and trade. In most countries, too, especially in the U. S., all that the farmer buys, and the transport and marketing of his crop, are passing under the control of the monopolist and organizer of trade, while agriculture itself is the most difficult occupation to organize, so that often the agriculturist seems to have to cope single-handed with a market under the bond of combination. To-day there is, however, a wide-spread revival of interest in agricultural development, and a very general effort at agricultural education. The farmers are beginning to cooperate in many ways, but theories of reform differ.

Early political economy, especially among the Romans, had much to say about agriculture. Cato, Cicero, Seneca, Pliny, Varro, and Colomella treat agriculture in a half patronizing, half dilettante way, but yet give some good suggestions and teach the importance of all men having something to do with agriculture, and recommend small farms and free labor. It is a sad comment on their lack of earnestness that Rome fell largely on account of its large farms, tilled by slave labor.

The period of the Middle Ages was too stormy to develop much thought on agricultural lines, tho many of the monasteries and some of the greatest monks and bishops gave good examples of Christian cooperation and community life in the tilling of fields with their own hands and for the common good.

It is, however, the French Physiocrats, headed by Quesnay and Gournay, who have placed the greatest importance on agricultural production. With them agriculture (including mining, as, in a sense, the cultivation of the soil) is the only industry that produces wealth. Commerce and manufacture, they held, only change the form and place

Physiocrats

of wealth. All taxes, therefore, they taught should be placed on land; hence they are the true progenitors of the single tax. Their doctrine, too, fell in with the tendency to revert to nature and simplicity, taught by Rousseau and the "natural" school. Adam Smith brought thought back to more balanced views; but the rising industrialism, developed by the invention of machinery and steam power, drew men

away from agriculture. There was a rush into industry, and agriculture was neglected. The land, in England especially, fell under the control of great landowners, who leased their farms out at will, usually to tenants, and left the agricultural laborer often as poorly paid and less cared for than the slave. Slaves cost money; laborers could be had for the asking. The chain-gang and the lash were common sights on English fields, and the homes of the English laborers were more rotten than slave pens. The more balanced views of Adam Smith were forgotten in carrying out his principles into the doctrinaire position of Ricardo and the orthodox school. Malthus's conclusion as to the law of population, that it was necessary that the poor perish, stilled England's conscience. To buy in the cheapest and to sell in the dearest market was considered a law of God. Labor was a commodity that must obey this "natural" law. The repeal of the Corn Laws marked an epoch in the development of agriculture and in the world.

J. S. Mill is the first writer to treat the agricultural question from both a moral and an economic basis; yet, in his economic teachings, as contrasted with his socialistic philosophizings, he scarcely departs from the orthodox position. He

compares the English system of large farms owned by lords (*la grande culture*) with the French, Flemish, and Rhenish systems of peasant proprietorship, or small farms owned and operated by peasants, and draws a strong argument in favor of the latter, saying, "Give a man the secure possession of a bleak rock, and he will turn it into a garden; give him a nine years' lease of a garden, and he will convert it into a desert." He shows also that small farms owned by their operators increase production, because more labor and more fertilizing are expended upon each farm than would be on the same land less divided. Following Mill, economic writers have taken one side or other of this question, either favoring *la grande culture* or peasant proprietorship, but, until very recently, for the most part conforming to the view of Mill. *Metayage* (see METAYER), or the system of the peasant leasing and operating a farm on the condition of giving the landlord half of the produce—a system prevailing mainly in Italy and other southern European countries—has had some advocates, but not many.

Facts, however, are leading many minds to-day in another direction. It is being found that small farming does not pay. Mr. D. A. Wells said as early as 1889, "*La Grande Culture*" "that the only possible future for agriculture, prosecuted for the sake of producing the great staples of food, is to be found in large farms, worked with ample capital, especially in the form of machinery, and with labor organized somewhat after the factory system, is coming to be the opinion of many of the best authorities, both in the U. S. and Europe" ("Recent Economic Changes," p. 466). Mr. Wells adds in a note:

An American practical farmer, the owner and manager of 7,000 acres (Mr. H. F. of Nebraska), to whom the writer is indebted for many items of information, communicates the following additional review of this subject from the American (Western) standpoint: "The average Western farm is now recklessly managed, but capital will come in greater volume and set up processes which will displace these wasteful methods. The revolution is certain, even if the exact steps cannot now be precisely indicated. At present the hay, and much of the grain, and nearly all of the tools and implements are unsheltered; and more than 50 per cent of the hay is ruined for a like reason, while the animals themselves (I do not mean now on the wild-stock ranges, but even on the trans-Missouri farms) have no roof over their heads, except the canopy of heaven, with the mercury going occasionally 20° and even 30° below zero. These wasteful methods in farming are in part promoted by the U. S. Homestead law and the occupation of the hitherto inexhaustible expanse of cheap lands. When the ignorant, degraded, and impecunious can no longer acquire 160 acres upon which to employ their barbarous methods, and when the land already taken up

shall have risen from the low prices at which it now stands to \$50 or more per acre, a new dispensation will arrive. Neither the cattle nor the food which the cattle consume will then be raised by any such methods as now prevail; neither will they be exposed to the elements in winter. True enough, the opening up of other virgin fields in Australia, South America, Africa, and elsewhere may retard this rise in the value of the land in the western part of our continent, and thus to a certain extent delay the passing of the land exclusively into the hands of larger capitalists and better managers; but it must be considered that not all climates are suitable for energetic, capable farming populations, and likewise that the best forage plants are restricted to temperate latitudes."

Already the process of displacing the small farms by large farms, operated by capitalistic labor, is far along in the U. S. (See HOMES.) Says a writer in the "Fabian Essays":

Even agriculture, that one occupation in which old-fashioned individualism might be supposed safe, is being subjected to capitalism. The huge farms of Dakota and California, containing single fields of wheat miles long, are largely owned by joint-stock corporations and cultivated exclusively by machinery.

Capitalism

These huge farms, combined with the wheat "corners" in New York and Chicago and the great railway corporations of America, have played havoc with many of the small farmers of the Mississippi valley, as the statistics respecting mortgaged farms will show. And when it is remembered that the American farmer will be more and more obliged to meet the growing competition of the wheat of India, produced by the cheapest labor in the world, his prospects do not appear very bright.

For several years past, however, general trade conditions, connected with unusually large crops, have prevented disaster to the farmer in the U. S. He has been enjoying a period of unexampled prosperity, and has been paying off his mortgages, and accumulating wealth. Said Mr. James Wilson, U. S. Secretary of Agriculture, in his report for 1906:

Economic revolution in the art and science of agriculture, which became noticeable in this country half a dozen years ago, has continued during 1906, with tremendous effect upon the nation's prosperity. Crops so large as to be beyond any rational comprehension have strained the freight-carrying ability of railroads. Directly and indirectly the farmer has set up a demand for iron and steel that has exceeded the productive power of the chief producer among nations. His contribution to the supply of loan capital has been beyond calculation and recalls the fact that the depression in the loan and investment market of 1903 was cleared away by the following crop.

Official Report, 1906

Meanwhile the farmer has been a generous consumer, and has given powerful support to the market of the industrial producer, to the trade of the merchant, and to the wages of the workman. The farmer has become aware of the importance of the place that he occupies in the republic, and in the pride of his occupation he is ready to offer this yearly account of himself to the people.

Taken at that point in production at which they acquire commercial value, the farm products of the year, estimated for every detail presented by the census, have a farm value of \$6,794,000,000. This is \$485,000,000 above the value of 1905, \$635,000,000 above 1904, \$877,000,000 above 1903, and \$4,077,000,000 above the census for 1899. Farm products continue to be so far beyond the national requirements that the farm still overshadows the mill, the factory, and the workshop in providing exports. With his surplus beyond the nation's need, the farmer has loaded the fleets of oceans. These products were exported to the value of \$976,000,000 during the fiscal year ending June 30, 1906—enough to build a high-class railroad half-way around the earth. This is the largest amount ever reached by agricultural exports for this or any other country, and exceeded by \$24,000,000 the extraordinary value of 1901, which had previously been the record year.

Principal among the items that make the increase over the fiscal year 1905 are grain and its products, chiefly wheat and flour, for which the gain was \$79,000,000; packing-house products, for which the gain was over \$37,000,000; cotton, \$19,600,000; various seeds, \$6,355,000; dairy products, \$2,900,000; and live animals, \$2,400,000. Products exhibiting a decrease were mostly inconsiderable. In hope, the decline was \$1,355,000; tobacco, \$995,000; vegetable oils, \$756,000; fruits, \$440,000.

Cotton maintains its long lead over other chief exports, with a value of \$401,000,000 for 3,634,000,000 pounds, so that the latest year was exceeded only by 1898, 1899, and 1905 in

quantity exported; but in value of exported cotton the figures for 1906 are \$19,600,000 higher than for 1905, which was previously the record year, and \$29,000,000 higher than for 1904, which was third in order in the value of these exports.

In his report for 1905 the secretary said:

Every sunset during the past five years has registered an increase of \$3,400,000 in the value of the farms of this country; every month has piled this value upon value until it has reached \$102,000,000; that portion of the national debt bearing interest is equalled by the increased value of farms in nine months, and this increase for a little over a year balances the entire interest- and non-interest-bearing debt of the United States.

Nevertheless, the problem remains. Mr. James J. Hill, president of the Northern Pacific and Great Northern Railroads, said in an address delivered at the Minnesota State Fair at St. Paul, 1906:

There must be a national revolt against the worship of manufacture and trade as the only forms of progressive activity and the false notion that wealth built upon these at the sacrifice of the fundamental form of wealth production can endure. The first requisite James J. Hill is a clear recognition on the part of the whole people, from the highest down to the lowest, that the tillage of the soil is the natural and most desirable occupation for man, to which every other is subsidiary and to which all else must in the end yield. . . . Within forty-four years we shall have to meet the wants of more than 200,000,000 people. In less than twenty years from this moment the United States will have 130,000,000 people. Where are these people, not of some dim, distant age, but of this very generation now growing to manhood, to be employed and how supported? When the search-light is thus suddenly turned on we recognise not a mere speculation, but the grim face of that specter which confronts the unemployed, tramping hateful streets in hope of food and shelter. . . .

In the year 1950, so far as our own resources are concerned, we will approach an ironless age. For a population of 200,000,000 people our home supply of iron will have retreated almost to the company of the precious metals. There is no substitute whose production and preparation for practical use is not far more expensive. . . . Not merely our manufacturing industries, but our whole complex industrial life, so intimately built upon cheap iron and coal, will feel the strain and must suffer readjustment. The peril is not one of remote geologic time, but of this generation. And where is there a sign of preparation for it? Only one half of the land in private ownership is now tilled. That tillage does not produce one half of what the land might be made to yield, without losing an atom of its fertility. Yet the waste of our treasure has proceeded so far that the actual value of the soil for productive purposes has already deteriorated more than it should have done in five centuries of use. There is, except in isolated and individual cases, little approaching intensive agriculture in the United States. There are only the annual skimming of the rich cream, the exhaustion of virgin fertility, the extraction from the earth by the most rapid process of its productive powers, the deterioration of life's sole maintenance. And all this with that army of another hundred million people marching in plain sight toward us, and expecting and demanding that they shall be fed.

Every farm properly cared for should be worth more money for each year of its life. The increase of population and demand, the growth of the cities and markets, and the development of diversified farming with density of settlement should assure a large increment. Even where large quantities of new and fertile land are opened, these influences, together with the lowest cost of transportation in the world, should make the growth of values steady.

Within the twenty years between 1880 and 1900 the aggregate value of farm lands and improvements, including buildings, declined in every one of the New England and Middle States, except Massachusetts alone. The total decrease in value for these ten states of the first asset of a civilized people is more than \$300,000,000. Nor is the attempted explanation by the Census Bureau of this shrinkage either adequate or convincing. Even the great and fertile State of Ohio, in the Middle West, showed a decline of more than \$60,000,000. On the new lands of the West, where once the wheat yield was from twenty to thirty bushels an acre, it is now from twelve to eighteen. . . .

In manufactures we have come to consider small economies so carefully that the difference of a fraction of a cent, the utilization of a by-product of something formerly consigned to the scrap heap, makes the difference between profit and bankruptcy. In farming we are satisfied with a small yield at the expense of the most rapid soil deterioration. We are satisfied with a national average annual product of \$11.38 per acre, at the cost of diminishing annual return from the same fields, when we might just as well secure from two to three times that sum. . . . If a process for extracting metallic wealth from rocks were to be discovered to-morrow,

such as to assure the country an added volume of \$1,000,000,000 in wealth every year, the nation would talk of nothing else. Yet these things would be but a trifle when compared with the possibilities of agricultural development in the United States.

The government should establish a small model farm on its own land in every rural congressional district, later perhaps in every county in the agricultural states. The new crusade should be proclaimed everywhere, from the executive chamber, from the editorial office, from the platform, and above all from every college class room and from every little schoolhouse in the land.

In Great Britain the problem confronting agriculture is at least as serious as it is in the U. S., and more acute. Says Mr. E. A. Pratt ("The Transition in Agriculture," 1906): "The opening up of vast expanses of virgin soils in the U. S., Canada, Argentina, Australasia, and elsewhere, to the production of wheat on a scale to which there could be no possible approach in the United Kingdom; the quick transport of these and other foreign or colonial supplies by ocean steamers at rates which were so low that they became almost a negligible quantity; the invention of refrigerating processes which nullified climate, as steam had already annihilated distance, and opened up British markets to the almost limitless supplies of meat, butter, and other perishables from distant lands; the steady fall in the price of wool, owing to the magnitude of the flocks raised in our colonies—these and other causes, apart from the advent of a succession of unfavorable seasons, were sufficient in themselves to disturb the very foundations of British agriculture, and to show that the old order of things in regard thereto was passing away."

A report of the Agricultural Committee of the Fabian Society (July, 1905) comments as follows:

The decline of agriculture in Great Britain began about thirty years ago. The bad harvests of 1876-82 caused widespread ruin, while in the same period the introduction of very cheap ocean transport and the extension of agriculture in America and elsewhere led to a tremendous fall in prices. According to the Board of Trade figures, the fall in 1898-1902, compared with 1871-75, has been 37.7 per cent in corn, and 18.1 per cent in meat, bacon, and dairy produce. The effect on incomes derived from land has been catastrophic. The landlord's share, the gross annual value of lands assessed to income tax under Schedule A (including tithe rent charge, ornamental gardens, gardens exceeding one acre, farmhouses and buildings, etc.) fell in Great Britain from £59,568,253 in 1879-80 to £42,507,895 in 1902-3. The average reduction in rent has thus been 28.5 per cent, but in some localities the fall has been as much as 60 per cent. The fall in the value of the fee simple is about the same, and small and encumbered owners have suffered most. Farmers' capital was largely swept away in the early years of the decline, and even now they have to live close and can save but little. The estimated amount of farmers' profits fell in Great Britain from £28,405,086 in 1879-80 to £14,288,974 in 1902-3, or one half. Agricultural laborers alone have gained during the last thirty years; but also the average weekly earnings in England are now 18s. 3d., there is, according to the estimates made by Mr. Wilson Fox, of the Labor Department of the Board of Trade, "a deficit of 2s. 0½d., if the value of food, the cost of rent, firing, light, clothes, and club is compared with the earnings of the head of the family (without allowing for any expenditure on beer, tobacco, and household requisites). The balance must be made good from the earnings of wife and children, from the garden, the poultry, or the pig."

Between 1871 and 1904 arable land in Great Britain has decreased by 3,122,000 acres, and permanent pasture has increased 4,668,000 acres. There has been a great change from corn-raising to cattle-rearing and dairy-farming, with less employment of labor. Simultaneously imports have increased enormously, not only in grain and meat, but also in dairy produce, eggs, poultry, etc., where we might have hoped to hold our own.

The landlord system must bear a large share of the blame for the decay of agriculture. The bad times found many landlords with burdened estates and no reserve, saved in prosperous times, wherewith to keep their property in a state of efficiency. Placed in the position of the social and economic leaders of the rural districts, they have, as a class, largely devoted themselves to drawing their rents and try-

ing to escape public burdens. They have not compelled their tenants to be good farmers; in fact, by obstructive rules and by annual tenancies, they have often prevented improvements. They have not stood between the agricultural laborers and their employers; on the contrary, by neglecting to provide a sufficient supply of sanitary cottages, they have powerfully contributed toward the rural exodus. Locally they have misused their economic strength for political and sectarian ends; while nationally they have set up a false ideal before the nation. To-day they still draw about £43,000,000, or three times the farmers' profits, from the land of Great Britain, with, as the evidence before the Royal Commission on Agriculture showed, disastrous results to the nation.

The evidence goes to show that overruling (1) has been a chief cause of depression in bringing farmers to ruin, and in deteriorating the condition of the land; (2) is even now very general; and (3) that the opinion that further reductions are necessary and inevitable, is among farming witnesses, practically universal. There is much evidence to show that reductions are by no means universal, and that, in many districts and on many estates the system of temporary remissions or abatements, sometimes wholly insufficient to meet the times, is still common. In many cases, even in districts where depression is general, there would seem to have been neither reductions nor abatements of any kind." (Royal Commission on Agriculture Minority Report, F. A. Channing, M.P.) The main work of administration is done by a private service of estate agents, bailiffs, and foremen; and the landlord is a mere parasite on the industry of the country. Farmers, as a body, have shown a great lack of that capacity and adaptability with which men in other occupations have met bad times. They have clung to the old idea that wheat-growing was their only duty, and stubbornly resisted every attempt to persuade or coax them into better business methods.

Between 1851 and 1901 the number of adult males engaged in agriculture has fallen from 1,904,687 to 988,340, altho one would have expected that the practical elimination of female labor (where there was a fall from 436,174 to 53,459) and the great decline in the employment of males under twenty (from 327,615 to 186,076)—both of these being healthy developments—would have to be compensated by an increase in the number of men.

The weakest point in the present system is the marketing of farm products, and before we can tackle reconstruction, we must find the cause of this weakness. Our butter comes from Denmark, Russia, France, Australia, New Zealand; cheese from Canada, United States, Holland, New Zealand; eggs from Russia, Denmark, Germany, Belgium, France; vegetables from France and Germany.

Much thought has recently been given to measures that would tend to remedy this state of affairs. There may even be said to be a "new agricultural movement." Efforts have been made to develop small holdings; and to accomplish this was the especial aim of the Small Holdings Act of 1892.

By this act county councils were authorized to acquire land, divide it into small holdings of from one to fifty acres, erect buildings thereon, and provide roads, fences, water-supply, and drainage; but the main idea was to sell such holdings, on an instalment system, to the persons wanting them. A council was authorized to let the land only when "of opinion that any persons desirous of themselves cultivating small holdings were unable to buy on the terms fixed by this act, or where the land had been hired by the council on lease or otherwise"; and even then the size of the holding so let must not exceed fifteen acres, or be of a greater annual value than £15. The county councils were also authorized to advance a would-be tenant four fifths of the purchase money on the security of the building. The results thus far have not been large. The procedure has been so costly and complicated, and so hampered by formalities and restrictions of every kind, that County Councils have, as a rule, hesitated to take in hand a great amount of trouble, without any corresponding guaranty of permanent success; and in 1905 a Parliamentary Committee was appointed to inquire into the workings of the act. Too often the small freeholder has had to sink

The Land-lord System

Agricultural Decline in Great Britain

Small Holdings

all his available capital in securing the land, has had to satisfy many legal demands, has consequently found himself encumbered with the burden of a heavy mortgage. The report of the committee mentioned above calls the act "a complete failure."

More has been accomplished by agricultural cooperation. An AGRICULTURAL ORGANIZATION SOCIETY was established in 1901, and five years later it had 140 other societies affiliated with it. The Fabian report calls cooperation the "secret of success." It says:

Cheap railway transport and better conditions of sale can be obtained if the farmers will combine. What has hitherto been lacking is the desire for combination, tho in a few localities that defect is being slowly overcome.

Cooperation

What characterizes the agriculture of the Continent is the prevalence of combination. Alike in Denmark, Germany, France, Italy, Holland, Belgium, Switzerland, Hungary, Finland, Poland, Servia, we find a network of cooperative societies all over the country—societies for the cooperative purchase of seeds, manures, implements and machinery, cooperative creameries for the production of butter and cheese, egg-collecting societies, societies for the sale of fruit or grain, export societies, mutual insurance societies, and so on. This voluntary cooperative movement is generally fostered by the State, and has received much aid from landlords and religious bodies.

E. A. Pratt, in his "The Transition in Agriculture" (1906), argues in favor of allotments to the working classes in the towns, to prepare them to become freeholders; and he instances the successful experience of Aylestone, a suburb of Leicester. He says:

The Aylestone solution of the problem here presented is: The cooperative tenancy, under the most economical conditions, of allotments which will (1) give a factory worker healthy recreation; (2) enable him to supplement wages and decrease household expenses by the production of fruit and vegetables, which will, at the same time, give his family a better food-supply than would otherwise be possible; (3) afford him an opportunity, while still engaged in a factory, of gaining such experience of, and acquiring such taste for, market-gardening work that, when the factory failed him, he would still be able to contribute to the support of his family, if not keep them and himself altogether, by becoming a market-gardener, instead of having to depend on such odd jobs as he might be able to pick up as one of the unemployed.

Another and most important contribution to the means of solving the problem, is the Garden City idea, combining the best in city life with the advantages of the country. (See GARDEN CITY.) Socialists of the Fabian type, as evidenced in the report of their committee, would have a large policy of State intervention and control. Says the report:

The breakdown of private enterprise in agriculture has left us with landlords and farmers impoverished, with agricultural laborers earning less than, or just over, subsistence wages. Much capital has been lost, the agricultural population has declined to a dangerous degree. There is no organization for the supply of our growing town markets, everywhere is chaos, while the foreign producer every day gains ground by superior organization. It is necessary for the State to interfere, partly to secure the better utilization of our national resources, partly to increase our agricultural population. We must look forward to five and twenty years of resolute effort; prosperity cannot be restored in a day. The class most needing protection, the laborers, must be dealt with first, in order to raise them to a decent level of comfort. A living-wage must be secured to them and, as a consequence, the farmers' rents must be fixed at a fair level. An Agricultural Court must be set up in each county to regulate wages and fix rents. Continental success in agriculture depends on cooperation, and that in turn is associated with the peasant proprietor system. That system for sundry reasons cannot be adopted here, but its advantages can be obtained through security of tenure. The small farm system should, therefore, form the basis of our reconstruction, free play being left for a graded system of farms where possible. In each county an Agricultural Committee should have compulsory power to acquire land and let it out to tenants, chiefly small holders. It should have power to advance capital to individuals on the collective guaranty of its tenants,

and it should be its duty to organize the collection of farm produce and its disposal in the market.

Meanwhile there is progress. A Board of Agriculture for Great Britain was established by Parliament in 1889; and was constituted in 1903 as a Board of Agriculture and Fisheries. It has divisions on animals, intelligence, land, and fisheries. In Ireland a Department of Agriculture and Technical Institution was created in 1899.

Program

(See IRELAND.) Agricultural education has also been much advanced. Some eighteen institutions may now be classed as AGRICULTURAL COLLEGES. The Rothamsted Experimental Station, and numerous local societies contribute to the advance. Wise effort in certain directions and in certain quarters has produced satisfactory results. The breeding of high-class live-stock of all types has undergone great expansion, partly in order to provide good dairy cattle and the best qualities of meat, and partly as a separate commercial enterprise, to supply the requirements of countries which have looked to Great Britain as the land whence the best of breeding-stock could be obtained. The production of fruit in Great Britain is said to have doubled during the last thirty years. Flour production is likewise largely increased. Market-gardening, potato-raising, and vegetable-raising have also grown. It is along such subsidiary lines that many people believe that England's agricultural future will develop.

Ever since the time of Young, the agricultural system of France has been the classic form of small proprietorship. Nearly half the people are engaged in agricultural pursuits; but one generation having succeeded another, and the individual plots of land having been still further divided, the *morcellement* has gone so far that some of the holdings are of the most diminutive proportions. Again, a property of twenty or twenty-five acres may be represented by thirty, forty, or fifty small patches and parcels of land scattered over an entire commune. The caring for such minute parcels of land involves an amount of labor akin to slavery. In his "Relèvement de l'Agriculture," Lafargue wrote:

France

The condition of agriculture brought about by our subdivision of land, and the distance from each other of the morsels belonging to one owner, condemn a man to work such as animals and machines ought to execute, and not only reduce him to the level of a beast, but curse the soil with sterility.

Léonce de Lavergne says in "L'Économie Rurale de l'Angleterre, d'Écosse et de l'Irlande":

Altho the French laborer is frequently proprietor of the land, and thus adds a little profit to his wages, he does not live as well as the English farm-laborer. He is not so well fed, not so well clothed, and is less comfortably lodged. He eats more bread, but it is generally made of rye with the addition of maize, buckwheat, and even chestnuts. . . . He rarely eats meat. I am acquainted with parts of France where people live on seventy centimes (fourteen cents) a day.

Mr. Pratt, in his "The Transition in Agriculture," speaks of these conditions as follows:

Nor have the results of peasant proprietorship in France been more satisfactory from a financial standpoint. "Proprietors" they may be in name, but few of the peasants hold their land free of mortgage and many of them are heavily indebted besides. They not only cultivate the soil under the most laborious of conditions, but they must meet, as best they can, the demands of the State, the usury of the money-lender, and also the fees of the lawyer who fattens alike on the land transfers and on the quarrels and lawsuits. "Of the 8,000,000 proprietors in France," wrote M. Lecouteux, when professor of rural economy at the Institute, "3,000,000

are on the pauper roll, exempt, that is, from personal taxation"; while of the remainder, at the period of which this authority speaks, 600,000 proprietors paid contributions to the State amounting to only five centimes each. "Getting rid of one order of landlords and their rents," adds M. Lecouteux, "they have subjected themselves to another, tho invisible, order—the mortgagees, and to their heavier and more rigid rents."

Nevertheless, there is a brighter side. Agricultural cooperative societies or syndicates have taken a deep hold in France, and are gradually accomplishing many beneficent reforms. France devotes some 5,000,000 acres to the cultivation of the vine, and is in many ways one of the leading agricultural countries of the world.

The system of land tenure and the condition of agricultural population is very different in different portions of the German Empire. Generally, small

Germany

estates and peasant proprietorship prevail in the West-German states, while large estates prevail in the Northeast. In the Prussian provinces of Pomerania, Posen, and East and West Prussia, estates of 250 acres and more are the rule. In Westphalia and Oldenburg the agricultural laborer rents a small plot of ground from his employer on condition of giving him a certain number of days' work in return for a lower rate of wages than would otherwise be paid in the district. The laborer is a small cultivator on his own account, not as a rule rich enough to possess a team of horses, but allowed the use of his employer's team when necessary, and receiving other assistance in kind. The relations between the two parties are reported to be more favorable than in any other part of Germany. In Southern Germany small holdings prevail, but here the laborer is himself a small freeholder, who ekes out the scanty resources of his own property by performing service for the farmers who have more land than they can cultivate themselves. This becomes the more necessary, because on the death of the small freeholder any land which he has accumulated does not pass intact to his appointed heir, as in Westphalia. It is, as a rule, subdivided among his children, who must recommence the laborious process of saving, if they are ever to be in a position of independence.

Mid-Germany—i. e., the district between the Weser and Elbe—is the home of the different classes of peasant farmers and of what are known as free laborers. These are drawn from different classes of the village population, possessing larger or smaller plots of land held on different systems of tenure handed down from feudal times, and known as *Kötter*, *Brinksitzer*, *Häusler*, or *Anbauer*. To the larger farmer (*Bauer*), or to the large landed proprietor (*Gutsbesitzer*), they are all merely day-laborers in the strictest sense of the term.

In the wide expanse of territory east of the Elbe the contract between the agricultural laborer and his employer takes a great variety of forms; but in what Professor Knapp calls the most typical districts, where great estates (*Rittergüter*) are numerous and settlements of peasant farmers (*Bauerndörfer*) few, the most usual form has hitherto been that known as socage tenancy (*Instenwesen*). Here the landowner enters into a contract for a lengthened period, which assures him of the services not of an individual merely, but of a family. The family is settled in a cottage upon the landlord's estate, and must be prepared to provide a man and an assistant—a so-called socager (*Scharwerker*)—to perform the agricul-

tural labor required on the estate. A very small daily wage is paid in return; the socage tenant generally receives a portion of garden-ground for his own use in addition to his house, and a few acres of land are cultivated for him within the estate; whatever these produce, whether corn, other kinds of produce, or potatoes, belongs to the socage tenant (*Instle*). Finally, the socage tenant has a right to thrash his landlord's corn during the winter in return for a certain proportion of the yield. This remuneration in kind is often more than he can use, but he is at liberty to sell it, and the proceeds, together with a very small daily wage, represent the extent of his pecuniary resources. As a rule he owns a cow or a few sheep, and in all cases he keeps one or two pigs. As far as health and good nourishment are concerned, the condition of such a laborer leaves little to be desired, and lately much has been done to remedy the miserable character of the cottages. Germany now produces one third of the world's output of sugar beets, and is the leading potato-producing country. Vineyards along the Rhine sometimes give a net return of \$1.00 per acre.

In Belgium, Holland, and Denmark peasant proprietorship has gone very far, the individual holdings being very small. This very fact has, perhaps, been one of the main factors in promoting cooperation. For details, see those countries.

Agriculture has been called "the backbone of Italy." Very few parts of the civilized world, indeed, have a more distinctly agricultural character than this country, where "the rural laborers may be counted by millions, while the industrial operatives are only numbered by thousands." Great as is the importance of the agricultural

Italy

question, however, it is extremely difficult to grasp, owing to the extraordinary complexity and variety of the conditions of Italian land tenure. It includes the medieval manor (*latifondo*), cultivated on the most primitive extensive system, the most perfect system of intensive cultivation on a large scale; "petite culture" pushed to the extreme of specialization, and the same methods applied to the most heterogeneous mixture of products; rents varying from 5 lire to 2,000 lire per hectare; peasant proprietorship, "metayer" farming, feudal tenancies, and hired labor. In every separate district the phenomena of rural economy have special, exclusive, characteristic features, arising from an infinite diversity of local circumstances.

There are three typical forms of agrarian contract in Italy—the "metayer" system (*mezzadria*, *mezzeria*, *colonia*), in which the principle of profit-sharing finds its simplest expression; the leasehold system (*affitto*), and the system of home cultivation by means of hired laborers (*salario*). Each of these systems has given rise to innumerable deviations in practice, and each passes by insensible gradations into the other. Many agriculturists cultivate part of their land as metayers, part as leaseholders, and part as the farm servants of a landlord. Agriculture, however, generally is in a very primitive condition. Lombardy is the garden of Italy, with 1,600,000 acres of irrigated land, and its intensive culture. Italy has over half a million people engaged in raising silkworms.

In Switzerland industry and agriculture are very closely connected. "The peasant when unoccupied by his land easily finds some useful employment in a multiplicity of other labors,

varying from tree-felling and wood-carving to the manufacture of watch-springs. The artizan or factory hand is, on the other hand, generally half a peasant, possessing some few square yards of land, with a cow or a few goats."

Switzerland
The Swiss system of land tenure, which is favorable to the formation of small freeholds, also contributes to the prosperity of the agricultural population. By far the greater part of the land is held in farms varying in size from two to five hectares, and in many industrial districts an innumerable quantity of minute holdings are to be found cultivated by members of the working class. The question of rent is an unimportant one in Switzerland, as it is rare to find a farm which is not worked by the owners; but owing to the continual subdivision of property the land is in many cases heavily mortgaged.

The existence of large areas of common land (*Allmend*) in Switzerland is of great benefit to the agricultural classes. These lands are said to be a survival from the times when the whole soil of the country was held by the nation in common. The first departure from this custom was made by the Romans, who granted lands to veteran soldiers; gifts of land to religious foundations—to the Abbey of St. Gall, for example, in the eighth century—did still more to establish the principle of private property; but even as late as the thirteenth and fourteenth centuries by far the greater part of the soil of Switzerland was held in common. In 1803, under the influence of ideas which found expression in the French Revolution, the common lands were to a great extent sold by the communes to private persons. It was believed that private ownership would lead to better cultivation and to the eventual decrease of poverty, but the results showed that in most cantons the step had led to the increase of pauperism. The common lands now existing include (1) gardens, orchards, and vineyards, situated for the most part in valleys or on hillsides; (2) pasture lands both in the lowlands and on mountains; (3) forests, where the inhabitants of the commune have the right of gathering firewood; (4) marshes, ponds, peat bogs, and the shores of lakes.

Where farms are large enough to absorb more labor than the family of the owner can supply, they are cultivated by permanent laborers, who live with their employer and practically form part of his family. These laborers are engaged for long periods, and the best relations exist between them and their employers. Day-laborers, on the other hand, find themselves in a very unstable position, as the demand for extra labor is not continuous, but confined to certain seasons of the year, such as the hay harvest.

Of the remaining countries of Europe, Austria and Russia, which are the most important agriculturally, present sharp contrasts with modern methods on some farms, and most primitive methods generally. For the division of the land, see the article on the respective countries, and for statistics as to crops, see the last division of this article. Spain has few advanced methods, in spite of her extensive cultivation of vines, oranges, and olives. In South America the Argentine Republic is taking a large place in the world's agricultural market with wheat, wool, cattle, and wine. Brazil holds a leading place with coffee. In Mexico the raising of cattle and sheep is the main agricultural

interest. For Canadian conditions, see CANADA. In Africa, Egypt under English administration and Fellah labor produces large amounts of sugar and high-grade cotton. China and India, in spite of ancient methods and rude implements, produce important crops by irrigation and garden-like culture. For Australia, see AUSTRALIA.

| 1903..... | 9,904,493 | 3,555,064 | 42,901,530 | 7,873,385 |
| 1904..... | 10,060,762 | 3,804,828 | 36,287,192 | 6,936,003 |
| 1905..... | 9,606,827 | 3,699,882 | 48,323,353 | 6,546,502 |

The hay harvest in 1905 was 26,265,411 tons. There were also produced 487,068 tons of spelt and 2,921,953 tons of barley. The following figures show the proportions between the areas of cultivated land under the different crops in 1905: Rye, 15.6; wheat, 19.2; spelt, 14.6; barley, 17.9; potatoes, 14.7; oats, 15.7; hay, 44.1.

In the entire German Empire there were, in 1900, 52,332,000 apple-trees; 25,116,000 pear-trees; 69,436,000 plum-trees, and 21,548,000 cherry-trees. Total fruit-trees, 168,438,000. In 1905 there were 39,511 hectares of land under hops, the total harvest being 58,513,800 pounds. The wine production in 1905 amounted to 3,555,978 hectoliters (about 102,000,000 gallons), to a total value of 109,000,000 marks. The total area of land under tobacco was in 1904, 15,883 hectares, yielding 68,761,800 pounds of tobacco.

* Flour included, being converted into grain at the rate of four and a half bushels to the barrel.

† Not including free ports.

‡ Preliminary figures excluding the trade over the Asiatic frontier (excepting the Black Sea ports of the Caucasus).

§ Estimated.

GENERAL NOTE.—It should not be expected that the world's export and import totals for any year will agree. Among sources of disagreement are these: (1) Different periods of time covered in the "year" of the various countries; (2) imports received in year subsequent to year of export; (3) want of uniformity in classification of goods among countries; (4) different practices and varying degrees of failure in recording countries of origin and ultimate destination; (5) different practices of recording re-exported goods; (6) opposite methods of treating free ports; (7) clerical errors, which, it may be assumed, are not infrequent.

The exports given are domestic exports and the imports given are imports for consumption, as far as it is feasible and consistent so to express the facts; no statement is for net exports or net imports. While there are some inevitable omissions from such a table as this, on the other hand, there are some duplications because of reshipments that do not appear as such in official reports.

WINE

The following table shows estimates of wine production in gallons by the principal wine-producing countries according to the French publication *Monsieur Vinicole*, and is for the year 1903:

| COUNTRY | Gallons | Per cent of world product (approximate) |
|-------------------------|---------------|---|
| France..... | 935,223,510 | 30 |
| Italy..... | 898,178,000 | 28 |
| Spain..... | 396,255,000 | 12 |
| Algeria..... | 157,806,625 | 5 |
| Austria..... | 124,159,900 | 4 |
| Portugal..... | 92,459,500 | 3 |
| Russia..... | 73,967,600 | 2 |
| Chile..... | 60,759,100 | 2 |
| Turkey and Cyprus..... | 55,475,700 | 2 |
| Hungary..... | 55,475,700 | 2 |
| Bulgaria..... | 52,834,000 | 1 |
| Germany..... | 50,192,300 | 1 |
| United States..... | 44,908,900 | 1 |
| Rumania..... | 34,342,100 | 1 |
| Greece..... | 34,342,100 | 1 |
| Argentine Republic..... | 26,417,000 | .. |
| Switzerland..... | 15,850,200 | .. |
| Serbia..... | 11,887,650 | .. |
| Brazil..... | 7,204,675 | .. |
| Australia..... | 6,604,250 | .. |
| Tunis..... | 6,604,250 | .. |
| Other countries..... | 21,363,661 | .. |
| Total..... | 3,162,371,721 | .. |

HOPS

| COUNTRY | 1901 | 1905 | Per cent of world crop (approximate) |
|------------------------|-------------------|-------------------|--------------------------------------|
| United States..... | Pounds 38,800,000 | Pounds 51,200,000 | 20 |
| Austria-Hungary..... | 33,426,000 | 40,005,000 | 15 |

* Cows.

ALADYIN, ALEXIS: Political leader of the Russian peasant party, "the Group of Toil," in the first Russian Duma. Born in 1873 of extremely poor peasant parents, he worked in the fields and attended local schools till he decided to become a physician, when he worked his way into the University of Kazan. He remained there three years, but was finally expelled because of doubtful propensities and free speech. He went at once to the outskirts of Kazan and labored among the workmen, organizing trade-unions. Arrested in 1895 he was liberated on \$500 bail pending the delivery of the verdict; but on learning that he was to be sentenced to four years of solitary confinement and eight of exile in Archangel, he managed to cross the frontier, and lived a precarious life in Brussels, Paris, and London, acquiring many languages and much information. He lectured for a while at Toynbee Hall. Upon the issuance of the manifesto of October, 1905, however, Aladyin returned to Russia via Finland. Taking part in a strike in St. Petersburg, he had to leave and went to Sembersk where he found his family. He was obliged to leave this place, but was, nevertheless, elected by the villagers to the Duma. He immediately formed all the peasant and labor deputies into a party of which he became the effective leader. His economic ideas are those of an opportunist socialism adapted to Russian conditions.

ALASKA: A territory of the United States, bought from Russia in 1867. It has an area of 590,889 sq. m. Of the 368,103,680 acres of land, 367,983 are unappropriated and unreserved. The population in 1900 was 63,592, of whom 30,507 were whites (27,307 males); 29,536 natives (Indians, Eskimos, Aleuts, etc.); 3,116 Chinese. It has probably decreased since then. The town of Nome had 12,468 inhabitants; Skagway, 3,117; Juneau, 1,864; Sitka, the seat of administration, 1,396. Alaska has neither legislature nor constitution, but is governed by Congress and administered by a governor and other officials appointed by the president. There are three judicial districts and three courts. Education is directed by an agent of the U. S. Commissioner of Education. In 1903 there were 47 public schools with 2,108 pupils. Numerous missions carry on educational as well as religious work.

The chief industries are seal and salmon fisheries and mining. The gold produced in 1904 was valued at \$9,160,500; the silver at \$256,900. Gold is found mainly in southeast Alaska (low grade), at Cape Nome, and on the Yukon River. The seal fisheries of the Pribilof or Seal Islands are leased to an American company under restrictions. The number of skins shipped from these islands in 1904 was 14,368. Besides this there is pelagic seal-hunting off the northwest coast and in the Bering Strait by Canadians and Indians who caught 12,791 seals in 1903. But this industry is in danger of being exhausted. The annual catch of the salmon fisheries is valued at over \$8,000,000. There are thirty companies with thirty-five canning and twelve salting plants. Agriculture is possible in some parts of the territory during the brief summer, but is little developed. The U. S. government has made some experiments along that line. The exports to the U. S. in 1904 (besides gold) were valued at \$10,698,694, and to Canada \$1,001,990. The imports from the U. S. amounted to \$11,227,698, and from Canada \$1,034,401. There is a railway

from Skagway (near Sitka) toward the Yukon, of a total length of 112 miles. There are seventy-five post-offices, and telegraphic connection with the U. S. and Canada. Labor conditions are so uncertain as to render it impossible to state them briefly. There has been "claim jumping" and trouble over mining-laws.

ALBRECHT: An early communist and so-called "prophet," who, with WEITLING, spread through Germany the gospel of communism. On account of his utterances he was put in prison for six years, where his only reading was the Bible; but in 1841 he escaped to Switzerland. Thenceforward he devoted himself to preaching, often in Old Testament prophetic language, the gospel of Bible communism. He wrote numerous tracts, among others: "Die Wiederherstellung des Reiches Zion" ("The Restoration of the Kingdom of Zion"); "Das baldige Wiedersehen am Alter der Freiheit"; "Herausforderung der Priesterwelt," etc.

ALBRECHT, THEODOR C.: German privy councillor; chief of the Imperial Geodetic Institute; born in Dresden, Aug. 30, 1843; studied at the technical high school of Dresden, and at the universities of Berlin and Leipsic (Ph.D., 1868). In 1875 he received the title of professor, and in 1898 was appointed privy councillor. He is an authority on housing, settlements, and kindred questions in Germany, and is the author of various scientific works. Address: Burggrafenstrasse 25, Potsdam, Germany.

ALCOHOL: See LIQUOR, CONSUMPTION OF.

ALDEN, PERCY: British social reformer, author, and Member of Parliament; born in Oxford, 1865; educated at Balliol College, Oxford. He was warden of the Mansfield House University Settlement from 1891 to 1901, being elected honorary warden upon his retirement. From 1892 to 1901 he was councillor of the borough of West Ham, and in 1898 officiated as deputy mayor. Mr. Alden has lectured on social and labor problems in the United States, New Zealand, and Australia. He was coopted a member of the London School Board in 1903; and he is a member also of the Fabian Society. In 1906 he was elected to Parliament as a "Liberal," tho in favor of most of the measures adopted by labor and evolutionary socialists; and he is prepared to work with any man proceeding in the right direction. The social problem has become the deep abiding interest in his life. Author of "The Unemployed: A National Question." Address: 1 Woburn Square, W. C. London, England.

ALLAN, WILLIAM: Labor organizer; born in Ulster, Ireland, 1813. His father removing to Glasgow, William became a piecer in a cotton factory there, and later was apprenticed to an engineering firm in that city. In 1835 he began working as a journeyman engineer at Liverpool. He became the general secretary of his union in 1847, and retained this office even after the society was merged in the Amalgamated Society of Engineers, being reelected annually for more than twenty years. William Allan was the originator of the "new unionism" of his time. Remarkable for executive ability, he built up, out of the fragments of organization in the engineering trade, a great national society. He died in 1874.

ALLEMANE, JEAN: French Socialist; compositor; founder of the Cooperative Printing Association; editor of *Le Parti Ouvrier*; born 1843. He was arrested as a communist in 1871 and suffered penal imprisonment eight and one half years, being released by amnesty in 1880. He has been an active Socialist leader ever since.

ALLEN, CHARLES GRANT BLAIRFINDIE: Novelist; born in Kingston, Canada, 1848; was graduated from Merton College, Oxford; taught in Jamaica. He was the author of popular scientific works on evolution. His first novel was "Philistia" (1884). Allen became a Socialist, and introduced many radical views into his novels: "The Woman Who Did" (1895), and "A Bride from the Desert" (1896). He died in London in 1899.

ALMSHOUSES: See **POORHOUSES**.

ALTGELD, JOHN P.: Governor of Illinois; born in Prussia, 1848, but early emigrated to the United States with his parents, who settled on a farm near Mansfield, O. He attended the district school, but at the age of sixteen enlisted and participated in the closing campaign of the Civil War. The next few years he spent in teaching, studying, and working as a farm-hand. He read law in St. Louis and then opened an office in Savannah, Mo. In 1874 he was elected prosecuting attorney of Andrew County, but in October, 1875, he removed to Chicago. In 1884 he ran for Congress on the Democratic ticket, but was defeated. In 1886 he was nominated for Superior Judge of Cook County, which at that time gave a Republican majority of about 12,000, and was elected by a large majority, the laboring men being especially active in his interests. He was on the bench nearly five years, being Chief Justice of the Superior Court for one year. A multiplicity of private interests compelled him to resign this position in August, 1891. He became wealthy principally by the buying and selling of real estate in Chicago and investments in street-railways. He designed and built a number of the finest business blocks in Chicago. He was nominated for Governor of Illinois in the Democratic Convention of 1892, and was triumphantly elected, to the surprise of even his own party. For over thirty years Illinois had been considered safe for a Republican plurality of 25,000 to 50,000.

Altgeld gained the hostility of many of the wealthy classes through his pardoning, on June, 1893, of the so-called CHICAGO ANARCHISTS. Whether right or wrong, there was no question among those who knew him that Governor Altgeld acted from conscientious principles and contrary to his political interests. In the great Pullman strike of 1894 he publicly addressed President Cleveland, protesting against the sending of United States troops to keep the peace in Illinois when not requested to do so by the Governor, he believing that Illinois was abundantly able to protect her own citizens, and asserting that such action on the part of the Federal Government overrode the Constitution, and set up what might easily lead to a military absolutism. In politics a Democrat, Altgeld became in his views increasingly radical, and he took active part in various radical political movements. He died March 12, 1902.

ALTRUISM: A term used in sociology and philosophy to denote the benevolent instincts and emotions in general, or action prompted by them; and more specifically used of that theory of life which would make the living for others the central thought of life and the essence of religion. It was first employed by Comte, but has passed into general use. Herbert Spencer says: "If we define *altruism* as being all action, which, in the normal course of things, benefits others instead of benefiting self, then from the dawn of life altruism has been no less essential than egoism." (See **INDIVIDUALISM**; **SOCIALISM**.)

ALTRUIST COMMUNITY: A small attempt at community life, with office in St. Louis, Mo. It was first organized in 1868 in Jasper County, Mo., with ten members. Unable to meet its payments for land, it has made various other attempts, and now owns eight and a half acres near Sulphur Springs, and is engaging in the poultry and gardening business. It has also a headquarters in St. Louis, where it publishes a monthly, *The Altruist*, and a book of 424 pages containing a full explanation of its principles and organization. From the beginning Mr. A. Longley has been the organizer and head. Address: 2711 Franklin Avenue, St. Louis, Mo.

AMALGAMATED ASSOCIATION OF IRON, STEEL, AND TIN WORKERS, THE: An important trade-union of the United States; organized in Pittsburg, 1878, by the amalgamation of the United Sons of Vulcan (organized 1858), the Associated Brotherhood of Iron and Steel Heaters, Rollers, and Roughers of the United States (organized 1872), and the Iron and Steel Roll Hands Union (organized 1873). Joseph Bishop was the first president of the association, but John Jarrett, who was elected in 1880 and served till 1883, was largely instrumental in shaping it. In 1881 the association took a prominent part in the formation of the AMERICAN FEDERATION OF LABOR; but in the following year it left the latter because of the dropping by the federation of its plank favoring protection. The association has always been a fighting organization and has had numerous strikes, notably the great HOMESTEAD STRIKE. The association has opposed arbitration by third parties, but has been a leader in developing a sliding scale and other agreements with employers. The first sliding scale in the United States was formed by conference between the employers and the United Sons of Vulcan in 1865; and wage agreements with employers have been characteristic of the association; tho it has also had, mainly at the times of renewal of agreements, severe industrial struggles, strikes, and lockouts. At the annual meetings the president generally appoints a committee of forty members which meet the committees of manufacturers in conjunction with whom it fixes the rate of wages. The average monthly membership of the association in 1905 was reported as about 10,000.

AMANA COMMUNITY: A German religious community in Iowa, reached at the station of Homestead, on the Chicago and Rock Island Railroad. The community numbers some 1,800 souls, owns about 25,000 acres, is rated at over \$1,000,000 in capital, and is in every way an

economic and industrial success. Mainly agricultural, it has herds of blooded cattle, sheep, hogs, and a large number of fine horses. It also does a growing manufacturing business. The two largest woolen mills in Iowa are owned and operated by the community. The famous colony blue prints are made here; 80 pieces of these, containing 45 yards each, are turned out in a day. The community has, moreover, two large flouring mills, with full roller process and elevators, manufacturing pearl barley and hominy. There are three machine-shops where the machinery used by the community is repaired. Besides these there are dye-shops, blacksmith shops, sawmills, a printing-office, and other lesser industries. Their business is growing, because their patrons are well treated. Their goods are honest goods, the Amana brand telling its own story.

The community lives in eight villages, two or three miles apart, Amana being the center, and Homestead the most important railroad office.

Organisation Each village has its own doctor, school, post-office, store, hotel, and place of meeting. The government of the community is vested in a president—now Dr. Jacob Winzenried—and a board of thirteen directors, elected annually by the community. Family life is preserved inviolate, each family living alone, except where two or three prefer to live in the same house. They come together, however, for common meals in little boarding-houses, one for every thirty to forty persons. The fare is simple, but abundant and healthy. The houses are pleasant and homelike, tho unpainted, being covered in summer with vines and surrounded by little flower gardens. The communism is absolute, all the necessities of life being provided freely for all, and the industries being operated for the equal advantage of all. The life is simple and quiet, there being few amusements and little variety; national holidays and memorial days, however, are observed. The community is very religious. A

Belief prayer-meeting is held in each village every night of the week, where the men sit on one side and the women on the other, and quietly sing their German Lutheran chants, or pray, or read from the Bible or the books of their prophets or leaders. They call their communities True Inspiration Congregations, and believe in the Trinity, justification by faith, the resurrection of the dead, the gradual purification of the impenitent by fire, the communism of all saints as a necessary part of Christianity. They believe that an era of inspiration began in the eighteenth century, the Holy Ghost speaking to their founder, Erasmus Gruber, and other "prophets." They drink wine made by their own labor, formerly brewing the best beer of the state, and deriving quite a profit from this, which practise, however, they quietly ended when Iowa became a prohibition state, doing this out of respect to the law and the opinions of their neighbors. Wine, however, they give to their employees in harvest time as freely and generously as to themselves. The life being so simple and quiet, and without great educational advantages, many of the young people leave, and are allowed to do so, but often are glad to come back to the peace and quiet plenty of the communal home. They do not seek new members, but elect to membership those who come and after trial prove themselves of the right spirit. The universal language

is German. The beginning of the sect was in Württemberg, Germany, where it was founded in 1714 by Erasmus Gruber. Later Christian Metz became their leader, and he brought them to the United States in 1843. First settling in Ebenezer, Erie County, N. Y., they moved to their present site in 1855-64.

AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE, THE: An academy organized in Philadelphia, Dec. 14, 1889, with the object of furnishing a platform for the discussion of the various problems of modern life, paying particular attention to those which were not adequately represented in the work of other learned societies. The academy holds four scientific sessions each year, in addition to the annual meeting of two days' duration, which is held in April. The proceedings of the academy are published in the form of a bi-monthly periodical called *The Annals of the American Academy of Political and Social Science*.

In earlier years the numbers of *The Annals* contained papers upon many topics, but more recently the policy has been to devote each number to some special topic. Recent issues have been devoted to such subjects as City Life and Progress, Child Labor, Philanthropy and Penology, Insurance and Commercial Organization, and Business Management and Finance. From time to time monographs on special topics have been published as supplements. Among these may be mentioned "Housing Conditions in Jersey City," by Miss Mary B. Sayles. Bound copies of the various numbers are sold at \$1.25 each.

Any person interested in the general purposes of the academy may become a member, if approved by the council, by paying the annual membership fee of \$5.00 or a life fee of \$100.00. Life members are exempt from annual fees. Members receive all the publications of the academy and are entitled to submit papers and communications and to attend and participate in all scientific meetings. The members (1906) number 3,713, of whom 116 are life members. The list embraces a large number of the prominent thinkers and writers on political, economic, and social topics in America, with an increasing representation from Mexico, South America, and Europe.

During the last sixteen years more than 500 of the more important articles appearing in *The Annals* have been reprinted and sold at low price. Among these may be mentioned: "The Development of Park Systems in American Cities," by Andrew W. Crawford; "Principles of Reform and Penal Law," by Charlton T. Lewis; "Recent Tendencies in American Legislation," by Samuel J. Barrows; "Supervision of Charities in New York," by Robert W. Hebbard; "World Currents in Charity, Theory and Practice," by Charles R. Henderson; and "The Theory of Social Forces," by Prof. S. N. Patten.

All meetings of the academy are held in Philadelphia, and the active executive officers are largely connected with the University of Pennsylvania. Secretary, Carl Kelsey, University of Pennsylvania, Philadelphia, Pa.

AMERICAN ASSOCIATION FOR LABOR LEGISLATION, THE: Formed 1906. Objects: (1) To serve as the American branch of the International Association for Labor Legislation (q. v.); (2) to promote the uniformity of labor legislation in the United States; (3) to encourage the study of labor legislation.

Dues: \$1.00 annually; \$3.00, including receipt of the monthly bulletin of the international association. President, Prof. R. T. Ely, University of Wisconsin. Secretary, A. F. Weber, New York

History

State Department of Labor, Albany, N. Y. Executive Committee, president, and secretary, *ex-officio*: A. J. Boulton, H. W. Farnam, C. P. Neill, H. R. Seager, and C. R. Woodruff.

AMERICAN CIVIC ASSOCIATION, THE: Formed June 10, 1904, by the amalgamation of the American Park and Outdoor Art Association and the American League for Civic Improvement. Object: civic improvement. It represents cooperation on a national scale for the promotion of a more beautiful America in every city, village, and hamlet in the country. It serves as a clearing-house for improvement work, bringing the local workers into helpful contact with one another and placing the experience of all at the command of each. Members, 2,200. Annual meeting, October. Reports and pamphlets. Annual subscription, \$3.00. President, J. Horace McFarland, Harrisburg, Pa.; secretary, Clinton Rogers Woodruff, 703 North American Building, Philadelphia, Pa.

AMERICAN ECONOMIC ASSOCIATION, THE: Founded in 1885 "for the encouragement of economic research . . . and of perfect freedom of discussion." It has no creed. Persons of all shades of economic opinion are found among its 1,000 members, and widely different views are given a hearing at its annual meetings and in its publications.

Every member receives all current reports and publications of the association. The publications, begun in 1886, contain nearly a hundred of the most important economic monographs that have been published by American students, besides a large number of papers and discussions by leading experts in practical and in academic life. A list of doctoral dissertations in progress in American universities is now annually prepared by the Publication Committee. Annual dues, \$3.00. President, Prof. Jeremiah W. Jenks, of Cornell University. Secretary, Prof. W. M. Daniels, Princeton, N. J.

AMERICAN FEDERATION OF LABOR, THE: Organized (in its present form), 1886. Prior to the Civil War, and even till 1881, national trade-unions in the United States multiplied without any corresponding success in the formation of enduring alliances.

Labor federations, in so far as they existed, were local in character. Thus, the General Trades Union of the City of New York, active in the labor field as early as 1833, was a federation composed of twenty-one trade societies of that city. The General Trades Union of Boston was organized in 1834 upon the same general lines. A constitution adopted at the convention was later ratified by the sixteen local unions in the federation. Similar unions were formed in other cities, notably Baltimore and Philadelphia. The Industrial Congress of the United States, which met in New York, Oct. 12, 1845, represents a nearer approach to a national federation of labor. The convention was called together mainly through the efforts of the New England Workingmen's League and the National Reform Association of New York, elected officers, adopted a declaration of principles. The second Industrial Congress, which met in New York, June 10, 1847, in representatives from the states of New York, Massachusetts, Pennsylvania, Delaware, Illinois, and Kentucky. It was attempted and less achieved in labor federation national scale between 1850 and 1864; but as soon as the Civil War had closed, interest in this direction rapidly waned. The twelfth annual session of the National Graphical Union in 1864 adopted a resolution instructing delegates present to recommend to the local unions of the and towns the formation of central federations "for mutual protection and support of the workmen of all trades." In 1865 twelve men, independently of any trade-

unions to which they belonged, met in Louisville for the purpose of discussing plans to further the interests of the labor movement, and issued a call for a general convention to be held in Baltimore the following year.

On the 26th of March, 1866, the presidents of various national trade-unions met in New York City and decided to hold a national convention in Baltimore during the month of August. This was supplemented a little later by a call addressed to the workmen of the United States in the interest of the eight-hour working-day. All trade-unions were invited to participate in the coming convention, with representation upon the basis of two delegates for each trades assembly and one for every local organization.

On Aug. 20, 1866, the National Labor Union, the name given to the new organization, met in Baltimore, elected a full set of officers, and adjourned without adopting a formal platform or making any provision for raising revenue.

The National Labor Union reassembled in 1867 at Chicago, and again in 1868 at New York, displaying considerable vigor in agitating the national eight-hour law. Other important questions discussed in the different conventions were labor leagues, apprentices, cooperation, convict labor, public lands, taxing bonds, national banks, money, and political organization. Although conventions were held in 1869, 1870, and 1871, the membership steadily dwindled until in 1872 a final effort to revive interest resulted in the nomination of an independent candidate for President of the United States. Active participation in the national campaign of that year created internal dissensions which hastened the downfall of the organization.

In response to a call sent out in 1881, delegates from various trade and labor organizations met in Pittsburgh, Nov. 15, 1881, and formed the Federation of Organized Trades and Labor Unions, with John Jarrett, president of the Amalgamated Association of Iron and Steel Workers, as temporary chairman.

A National Federation

The platform of the federation set forth the objects of the organization as follows: The passage of laws in state legislatures and in Congress for the incorporation of trade-unions and similar labor organizations; compulsory education of children; prohibition of children from working under the age of fourteen; uniform apprentice laws; an effective national eight-hour law; restriction of the "order" or "truck" system; a mechanics lien law; repeal of all conspiracy laws against organized labor; a bureau of labor statistics; protection to American industry; a law to prevent the importation of foreign laborers under contract; and proper representation of all trades and labor organizations in law-making bodies.

For several years after 1881 the history of the general federation movement in the United States centers largely in the struggle between the Knights of Labor and the trade and labor unions, turning mainly on the question of the autonomy of each trade. Keen rivalry developed. The most prominent leaders of the two parties were Mr. Powderly, Grand Master Workman of the Knights of Labor, and Mr. George E. McNeill. That a feeling of antagonism was present from the beginning is suggested by a communication issued by the federation to the trade-unions. In this address the federation declared: "Open trade-unions, national and international, can and ought to work side by side with the Knights of Labor, and this would be the case were it not for men either overzealous or ambitious who busy themselves in attempting the destruction of existing unions to serve their own whims." *The Cigar-Makers' Journal* referred to the federation movement of 1881-82 as in "a chaotic state pulled and dragged in all directions. Some advise us," the article continues, "to adopt new systems of organizations defying practical experience and common sense. If the representatives of the bona-fide trade-unions, not of so-called labor clubs, are true to their mission, they will make a bold stand against all inferior systems of organization."

Struggle with Knights of Labor

The year 1886 marks an important period in the history of labor federation. Not only did the Knights of Labor in that year reach their greatest numerical strength, but at the same time the movement toward the national federation

Early History

of trades gained new vigor in the transition of the Federation of Organized Trades and Labor Unions into the American Federation of Labor. The Federation of Trades and Labor Unions as then constituted did not satisfy the more energetic and ambitious among the labor leaders of the time, who were desirous of reaching some agreement with the Knights of Labor whereby the friction between that organization and the trade-unions should cease. In response to a call issued by P. J. McGuire (general secretary of the Brotherhood of Carpenters and Joiners), A. Strasser (president of the Cigar Makers' Union), P. J. Fitzpatrick (president of the Iron Molders' International Union), Josiah Deyer (secretary of the Granite Cutters' International Union), and W. H. Foster (secretary of the Federation of Trades and Labor Unions), a trade-unions' conference met in Philadelphia on May 17, 1886, and agreed upon certain proposals to be submitted to the special session of the General Assembly of the Knights of Labor soon to be held at Cleveland, O. Contrary to the wishes of the trade-unionsists, no definite action on "the treaty" was taken at the meeting of the General Assembly, and a further effort to arrive at a permanent understanding with the Knights of Labor was made later in the year.

When the General Assembly of the Knights of Labor assembled at Richmond in October, 1886, the trade-union officials offered a further protest against the attitude of the Knights toward the unions, and asked for some assurance that the trade-unions thereafter would not be interfered with by the organizers of the order. The response of the General Assembly was to adopt a resolution compelling all employees in the cigar trade, who were members of both the Knights of Labor and the Cigar Makers' International Union, to withdraw from the union or leave the order, and adjourned without making further advances toward a peaceful settlement of the difficulties.

Throughout this controversy between the Knights and the trade-unions, the Federation of Trades had exerted its influence steadily in favor of the latter. Accordingly, when the representatives of various trade-unions arranged to meet in Columbus, O., the first week in December, 1886, the legislative committee of the federation decided to hold its annual convention at the same time and place for the purpose of cooperating with the conference of the trade-union officials.

The two conventions met on Dec. 7th and 8th, respectively, and the members of the Federation of Trades and Labor Unions attended the sessions of the trade-union conference in a body. On the third day of the conference, the committee of the whole reported to the federation that its committee had attended the conference and that all the delegates had been admitted as members thereof. The legislative committee also reported that the trade-union conference had formed

Final Organization

a new organization known as the American Federation of Labor, with a constitution designed to protect the interests of trade-unions. It was agreed that all moneys, papers, and effects of the old federation should be turned over to the officers of the new organization, and that all per capita tax due the old federation should be collected by the new federation. From this time the Knights of Labor steadily declined in membership and power while

the American Federation advanced with rapid strides. At the present time (1907) the Knights play an inconsiderable part in the labor movement, while the American Federation is steadily gaining in influence. The conventions of 1886, 1887, and 1888 were called respectively the first, second, and third convention of the American Federation; but by order of the convention of 1889 the origin of the federation in all official documents is dated from 1881.

The American Federation of Labor, upholding the principle of trade autonomy, favors the local trade-union composed of members following a single vocation, and attached to a national trade-union. Where the local union is not affiliated with a national organization, it receives a charter directly from the American Federation and becomes known, for instance, as "Ship Carpenters' Union, No. 6,976." On the other hand, the organizers of the federation often find it necessary to form into one local union workers of miscellaneous crafts. Hence federal labor-unions exist in those localities where separate trade-unions are impracticable. As soon as a sufficient number of a craft is admitted, a new local trade-union, recruited from the membership of the mixed union, is formed. This trade "local" in turn joins the national union of its craft wherever possible. According to the report for November 1906, there were 27,500 local unions and 759 local trade- and federal labor-unions directly affiliated with the national federation.

Local federations, commonly known as central labor-unions, aim to embrace all local unions in a given area, and at the same time to maintain the strict autonomy of each trade or industry. Altho in general, representation, membership, etc., are left by the American Federation to local regulation, the national constitution provides that "no central body affiliated with the American Federation shall reject credentials presented by a duly elected or appointed delegation of a local union, chartered by a national or international union having affiliation with the American Federation."

Next in gradation to the local federation is the state federation of representatives from the various labor organizations in the state. State branches meet annually and seek to exercise functions analogous to those carried on by the national federation in its larger field of activity.

As a fourth form of organization, the American Federation recognizes as its most important subdivision the national union of workmen engaged in a single calling. In May, 1904, there were 118 international unions having complete jurisdiction over their own trades, with a membership approximating 2,000,000 work-people affiliated with the American Federation of Labor. Structurally, the most important feature of the national federation is the representative convention which

meets in annual session. The constitution provides: "The basis of representation in the convention shall be: From national and international unions, for less than 4,000 members, one delegate; 4,000 or more, two delegates; 8,000 or more, three delegates; 16,000 or more, four delegates; and so on. From central bodies, state federations, federal labor-unions, and local unions having no national or international union, one delegate."

In this scheme of representation, a compromise has been sought between equal representation and proportional representation. Proportional representation seemed to give an unfair advantage to the larger unions, and, on the other hand, equal representation placed undue power in the hands of the smaller unions. A system has therefore been adopted by which a part of the membership is represented according to a progressive ratio, and the other part—many of whom

are also represented through their respective national and international unions—by one delegate from each organization.

Strict adherence to this progressive ratio avoids the chief defect of proportional representation; as applied by the American Federation, however, it succeeds in keeping the number of delegates within proper limits rather than in giving each union a measurable weight in legislation. The following law, adopted in 1887, neutralizes any restraint placed on the strong unions by progressive representation: "Questions may be decided by division or a show of hands, but if a call of the roll is demanded by one tenth of the delegates present, each delegate shall cast *one vote for every one hundred members*, or major fraction thereof, he represents, but no city or state federation shall be allowed more than one vote." Thus the power is retained by the large unions with the additional consideration, it is claimed, of harmful centralization in the hands of the few. Where proportional representation prevails, it is difficult to unite the numerous delegates for common action. Under the American Federation's plan of progressive representation, the limited number of men who exercise a controlling voice based on the total membership of their respective unions, are in a position to form a combination at any time to rule the convention.

The chief administrative body of the American Federation is the Executive Council, composed of the national officers: a president, eight vice-presidents, a secretary, and a treasurer. The Executive Council supervises the work and decides questions of policy between conventions. The most important single official is the president. He is elected by the annual convention and holds office for one year. Owing to the voluntary nature of the American Federation, its executive head has comparatively slight official power; but as the recognized leader of the American trade-union movement, he exerts considerable influence over the activities of national and international unions. He receives a fixed annual salary of \$3,000. The remaining officers are paid as follows: the secretary and the treasurer, an annual salary of \$2,500 and \$200 respectively; the vice-presidents, \$4 per day and expenses when attending council meetings.

The receipts and expenditures of the American Federation from 1881 to 1905 were as follows:

| YEAR | Receipts | Expenditures | YEAR | Receipts | Expenditures |
|------|----------|--------------|------|----------|--------------|
| 1881 | \$174 | \$136 | 1894 | \$15,346 | \$17,302 |
| 1882 | 125 | 252 | 1895 | 13,751 | 15,612 |
| 1883 | 690 | 352 | 1896 | 16,290 | 15,452 |
| 1884 | 357 | 543 | 1897 | 18,639 | 19,113 |
| 1885 | 584 | 450 | 1898 | 18,894 | 19,197 |
| 1886 | 474 | 510 | 1899 | 36,757 | 30,599 |
| 1887 | 1,939 | 2,074 | 1900 | 71,125 | 68,373 |
| 1888 | 4,512 | 3,933 | 1901 | 115,220 | 118,708 |
| 1889 | 6,838 | 6,578 | 1902 | 144,498 | 119,086 |
| 1890 | 23,849 | 21,070 | 1903 | 247,802 | 196,015 |
| 1891 | 17,702 | 13,190 | 1904 | 280,995 | 203,991 |
| 1892 | 17,834 | 18,324 | 1905 | 207,417 | 196,170 |
| 1893 | 20,864 | 21,383 | | | |

Starting in 1881 with an annual tax of three cents per member of the affiliated unions, the "Federation of Organized Trades and Labor Unions" reduced this sum to one cent per member the following year. In 1883 provision was made

that each national union should pay into the central treasury for 1,000 members or less, \$10; 1,000 to 4,000, \$20; 4,000 to 8,000, \$25; 8,000 to 12,000, \$30, etc. When the American Federation was formed in 1886, an annual tax of six cents per member was placed on national and local unions. The following year this tax was reduced to three cents a year for national and local organizations, with a tax of \$25 a year on central labor-unions and state federations. After various changes from time to time, the present rate was fixed as follows: "From international or

national trade-unions a per-capita tax of one half of one cent per member per month; from local trade-unions and federal labor-unions, ten cents per member per month, five cents of which must be set aside to be used only in case of strike or lockout; from local unions, the majority of whose members are less than eighteen years of age, two cents per member per month; from central and state bodies \$10 per year, payable quarterly."

The objects of the American Federation, as stated in the Preamble and Article II. of the Constitution, are as follows:

WHEREAS, a struggle is going on in all the nations of the civilized world, between the oppressors and the oppressed of all countries, a struggle between the capitalist and the laborer, which grows in intensity from year to year and will work disastrous results to the toiling millions if they are not combined for mutual protection and benefit;

It therefore behooves the representatives of the trade- and labor-unions of America, in convention assembled, to adopt such measures and disseminate such principles among the mechanics and laborers of our country as will permanently unite them to secure the recognition of the rights to which they are justly entitled.

We therefore declare ourselves in favor of the formation of a thorough federation, embracing every trade and labor organization in America, organized under the trade-union system.

ARTICLE II., Sec. 1. The objects of this federation shall be the encouragement and formation of local trade- and labor-unions, and the closer federation of such societies through the organization of central trade- and labor-unions in every city, and the further combination of such bodies into state, territorial, or provincial organizations, to secure legislation in the interest of the working masses.

Sec. 2. The establishment of national and international trade-unions, based upon a strict recognition of the autonomy of each trade, and the promotion and advancement of such bodies.

Sec. 3. An American federation of all national and international trade-unions, to aid and assist each other; to aid and encourage the sale of union-label goods; and to secure national legislation in the interest of the working people, and influence public opinion, by peaceful and legal methods, in favor of organized labor.

Sec. 4. To aid and encourage the labor press of America.

Aside from the more general activities involved in the closer association of trades, certain typical activities are displayed by the American Federation in (a) the use of the union label, (b) boycotts and strikes, (c) the introduction of the eight-hour day, and (d) politics and legislation.

(a) The American Federation has made no attempt to control the labels of its national and international unions, merely indorsing and advocating those already adopted by the different trades. Local and federal unions directly attached to the American Federation, however, receive their labels from national headquarters.

The federation calls upon all union men to demand goods bearing the union stamp, and urges the formation of active labor leagues to aid in educating the consuming public to the nature, appearance, and value of trade labels. In order to gain uniformity and more particularly to prevent counterfeiting, a universal label has from time to time been suggested. In 1900 the officials of the American Federation obtained a legal opinion to the effect that counterfeiting could be better punished if all unions would surrender their labels and adopt that of the Federation of Labor. Inasmuch as this would involve the surrender by each union of some part of the very trade autonomy for which the federation has always contended, and the recognition of the federation as one organization, at least for the purpose of "issuing, controlling, protecting, and defending the universal label," the step has not been taken. The secretary reported to the

twenty-fifth convention (1905) that there were fifty-six labels and ten cards issued by national unions which had received the indorsement of the American Federation.

(b) The federation has paid considerable attention to the exercise of the boycott as a national function. The method usually employed is as follows: Local or national unions with grievances against certain firms send resolutions to the headquarters of the American Federation of Labor. The committee of the Federation whose duty it is to investigate the justice of the complaint, reports to the executive council, or to the annual convention if in session.

Strike Policy

In case the complaint is deemed just, a boycott is declared on the products of the firm or firms involved, and the names of the manufacturers are published monthly in the "unfair list" of *The American Federationist*, the official journal of the American Federation of Labor. In addition to placing the firms on the "unfair list," circulars are sent to the unions in the federation, requesting all union men to cease purchasing the products of the boycotted firms. At the present time the national officials exercise considerable care in the use of the boycott, and concentrate attention upon a small number of firms.

The American Federation of Labor has regarded the strike as the best means to gain trade-union ends under a system of capitalistic production, and has advocated thorough organization along trade lines as the strongest protection to labor. Being merely an advisory center, and depending upon the voluntary loyalty of trade-unionists working through their respective nationals, the federation has been unable to act positively or directly with respect to strikes. It can recommend and urge certain policies, but it lacks the centralized control, and has in consequence followed a conservative course through the various conflicts between employer and employee. The secretary of the American Federation before the fifteenth annual convention, 1895, declared that sympathetic strikes were not opposed and assistance would be given wherever it was needed; nevertheless, he added, as there is a limit to the assistance exacted of one union in support of another union, the safest plan is to allow the individual organization itself to be the judge. This position, when strictly adhered to, limits the federation in its activity to a convenient center from which moral and financial aid may be distributed.

(c) In 1882 the platform of the Federation of Organized Trades and Labor Unions declared: "The National Eight-Hour Law is one intended to benefit labor and relieve it partly of its burdens. We therefore demand the enforcement of said law in the spirit of its designers."

Eight- Hour Movement

A resolution of the third session in 1883 stated that the federation "considers the question of shortening the hours as paramount to all other questions at present"; and in the secretary's report to the convention of 1884, a plan to shorten the hours of labor was strongly urged. In consequence of this agitation it was suggested that the unions be canvassed as to the desirability of a universal strike not later than May 1, 1886, at which time all branches should simultaneously demand the eight-hour day. Realizing that the federation was weak in authority and numerical strength, the officials

asked the cooperation of the Knights of Labor. The latter organization failed to support the movement, and the plan did not reach serious proportions. The next attempt came in 1888, when a resolution passed the annual convention of the American Federation of Labor, fixing May 1, 1890, as the day for a general strike, and arranging for preparatory mass-meetings to be held in various cities and towns. Renewed efforts to form a temporary alliance with the Knights of Labor failed, but circulars and pamphlets were scattered widely, and prominent speakers were sent by the American Federation to different parts of the country to prepare trade-union members for the proposed universal strike.

Warned by the complete failure of previous general strikes, the more advanced leaders agreed that the struggle could be carried on more successfully if certain trades were selected to make the fight, supported by the combined strength of the other unions working through the federation. Consequently a series of individual trade strikes was determined upon, in which one trade after the other would be selected to strike for shorter hours until all trades had obtained the eight-hour day. In the eight-hour strike of 1890, the Brotherhood of Carpenters and Joiners was selected by the federation to make the fight. A special assessment was levied, and every effort made to win the strike, with the result that the carpenters and joiners established the eight-hour day in several large cities. Finally, at the twenty-fourth annual convention, the American Federation indorsed the eight-hour movement of the International Typographical Union, and promised to levy the constitutional assessment on the membership if, at any time after Jan. 1, 1906, the Typographical Union needed further assistance.

(d) The American Federation thus far has successfully resisted all attempts to engage the organization in political activity. Freedom from political affiliation has not been maintained without a struggle on the part of the more conservative element in the federation.

Political Attitude

The first convention held in Pittsburgh declared, "that we recommend all trades and labor organizations to secure proper representation in all lawmaking bodies by means of the ballot, and to use all honorable measures by which this result can be accomplished." At almost every convention of the American Federation, and invariably at meetings of local, state, and national unions, the same question has arisen in some form or other. Particularly have the political Socialists endeavored to commit the federation to political socialism, but thus far without success. So long as the pressure upon the federation to declare for independent action did not become annoying, a positive declaration of principles was withheld. But when the Socialist Labor Party as a member of the Central Labor Federation of New York City sought admission into the Federation of Labor, the application was rejected on the ground that no political party as a party has the right to be represented in the councils of trade-unions. With most immediate socialistic proposals, the federation, however, is in sympathy.

Among the important subjects before the convention of 1893 was the following "political program," which was referred to the affiliated unions to be voted upon during the year:

WHEREAS, the trade-unionists of Great Britain have, by the light of experience and the logic of progress, adopted the

principle of independent labor politics as an auxiliary to their economic action; and

WHEREAS, such action has resulted in the most gratifying success; and

WHEREAS, such independent labor politics are based upon the following program, to wit:

1. Compulsory education.
2. Direct legislation.
3. A legal eight-hour work-day.
4. Sanitary inspection of workshop, mine, and home.
5. Liability of employers for injury to health, body, or life.
6. The abolition of the contract system in all public work.
7. The abolition of the sweating system.
8. The municipal ownership of street-cars, and gas and electric plants for public distribution of light, heat, and power.
9. The nationalization of telegraphs, telephones, railroads, and mines.
10. The collective ownership by the people of all means of production and distribution.
11. The principle of the referendum in all legislation.

Therefore, RESOLVED, that this convention hereby indorses this political action of our British comrades; and

RESOLVED, that this program and basis of a political labor movement be, and is hereby, submitted for the consideration of the labor organizations of America, with the request that their delegates to the next annual convention of the American Federation of Labor be instructed on this most important subject.

At the fourteenth convention, 1894, the first nine planks of this political platform were adopted with little discussion and with substantially no change. Plank 11 was incorporated with plank 2, making that plank read: "Direct legislation through the initiative and referendum." Plank 3 was made to read "a legal work-day of not more than eight hours." In plank 8 the words "water-works" were substituted after the words "street-cars." The great discussion came on plank 10. After a long debate it was defeated, and three resolutions substituted for it, as follows: (1) The abolition of the monopoly system of landholding, and the substitution thereof of a title of occupancy and use only (carried by a vote of 1,217 to 913). (2) The repeal of all conspiracy and penal laws affecting seamen and other workmen, incorporated in the federal and state laws of the United States. (3) The abolition of the monopoly privilege of issuing money, and substituting thereof a system of direct issuance to and by the people. Subsequent efforts on the part of radical trade organizations became so persistent that the New York convention of 1895 declared: "Party politics, whether they be Democratic, Republican, Socialistic, Populistic, Prohibition, or any other, shall have no place in the conventions of the American Federation of Labor." Succeeding attempts to commit the organization to a definite political program have been defeated, so that at the present time the American Federation stands independent of party affiliation.

As the American Federation wields little authority over the national unions, and has no way to secure unity of sentiment on any political issue, the probable result of independent political action would be internal strife with danger of complete disruption. Accordingly, the federation has chosen to advocate labor legislation and to take an active part in any move leading to the betterment of labor conditions rather than to participate as an organization in national and state elections. Each convention directs attention to special reforms, whereupon the executive council frames a bill embodying the necessary provisions, and champions its course. The legislative committee maintained at Washington is especially helpful in promoting this work. Among the chief reforms so advocated in recent years have been: The national eight-hour law, Chinese exclusion, the initiative and referendum, trust legislation, anti-injunction laws, and the

abolition of convict and imported contract labor. In addition to these efforts, the federation has sought to prevent legislation considered harmful to the working classes in general, such as anti-scalping laws, compulsory arbitration, and compulsory union incorporation.

Thus in the general activities of the American Federation are reflected something of that prudence and moderation which characterize the present industrial life of the East. It has advocated the individual trade strike in preference to the general or sympathetic strike; it has repeatedly placed itself on record as opposed to political action; it has advanced the principle of organization according to trades; and lastly, by guaranteeing to each national or international union complete jurisdiction over its own trade, has gained to a large extent the good-will of the individual members. So long as efficient leadership maintains this traditional conservatism there is every reason to predict that the American Federation will remain an important factor in the American labor movement. Much credit for this must be given to its president, Mr. Samuel Gompers, one of its founders, elected its first president, and so continuing with the exception of one year (1895) down to the present time.

The organization in October, 1906, had an enrolment of 119 international unions consisting of approximately 27,500 local unions, 36 state federations, 538 central labor-unions, and 759 local trade- and federal labor-unions. It is claimed that the unions represent a membership of over 2,000,000.

Some 250 monthly or weekly periodicals are published by the unions, but *The Federationist*, edited by Mr. Gompers and published monthly, is the official organ.

The officers of the federation are: President, Samuel Gompers, Washington, D. C.; secretary, Frank Morrison, Washington, D. C.; treasurer, John B. Lennon, Bloomington, Ill.; first vice-president, James Duncan, Boston, Mass.; second, John Mitchell, Indianapolis, Ind.; third, James O'Connell, Washington, D. C.; fourth, Max Morris, Denver, Col.; fifth, Denis A. Hayes, Philadelphia, Pa.; sixth, Daniel J. Keefe, Detroit, Mich.; seventh, William D. Huber, Indianapolis, Ind.; eighth, Joseph F. Valentine, Cincinnati, O.

The headquarters of the organization are at 423 G Street, N. W., Washington, D. C.

The growth of the central organization of the principal national trade-unions since 1896 is set forth in the following table compiled from the secretary's report to the convention of 1904:

| YEAR | CHARTERS ISSUED | | | | Gains in Membership | Net Gain in Membership | Total Membership | National Unions affiliated | Receipts | Expenditures. |
|-----------|-----------------|----------------------------|--------------|-------------------|---------------------|------------------------|------------------|----------------------------|----------|---------------|
| | National Unions | State and City Federations | Local Unions | All Organizations | | | | | | |
| 1897..... | 8 | 20 | 189 | 217 | 62,292 | 7,490 | 264,825 | 55 | \$18,640 | \$19,114 |
| 1898..... | 9 | 12 | 182 | 203 | 34,280 | 14,791 | 278,016 | 67 | 18,894 | 19,107 |
| 1899..... | 9 | 36 | 405 | 450 | 141,390 | 71,406 | 349,422 | 73 | 36,757 | 30,591 |
| 1900..... | 14 | 101 | 734 | 849 | 300,446 | 198,899 | 548,321 | 82 | 71,126 | 68,373 |
| 1901..... | 7 | 127 | 782 | 916 | 361,410 | 239,216 | 787,537 | 87 | 115,221 | 118,708 |
| 1902..... | 14 | 138 | 877 | 1,024 | 283,827 | 236,862 | 1,024,399 | 97 | 144,498 | 119,087 |
| 1903..... | 20 | 174 | 1,139 | 1,333 | 615,731 | 441,401 | 1,465,800 | 113 | 247,803 | 196,016 |
| 1904..... | 12 | 104 | 328 | 443 | 253,485 | 209,600 | 1,675,400 | 120 | 220,996 | 203,991 |

In 1906 the executive council of the federation, moved somewhat by the political successes of the English Labor Party (see GREAT BRITAIN), determined, not indeed to change the non-partizan policy of the federation, but to urge upon all unions and members affiliated with it to make a strenuous political effort, irrespective of party, to defeat candidates for Congress and others who were opposed to the views of labor, and to elect those friendly thereto. A committee of the federation reported a list of those candidates for Congress who should be supported, as well as a list of those who were to be defeated, and Mr. Gompers and others undertook a strenuous campaign against the latter. The council embodied its demands in the following Bill of Grievances:

HONORABLE THEODORE ROOSEVELT, *President of the United States*;

HONORABLE WILLIAM F. FRYE, *President pro tempore, United States Senate*;

HONORABLE JOSEPH G. CANNON, *Speaker, House of Representatives, United States*.

GENTLEMEN: The undersigned Executive Council of the American Federation of Labor, and those accompanying us in the presentation of this document, submit to you the subject-matter of the grievances which the workmen of our country feel by reason of the indifferent position which the Congress of the United States has manifested toward the just, reasonable, and necessary measures which have been before it these past several years, and which particularly affect the interests of the working people, as well as by reason of the administrative acts of the executive branches of the government and the legislation of the Congress relating to these interests. For convenience the matters of which we complain are briefly stated, and are as follows:

Bill of Grievances

Eight-Hour Law.—The law commonly known as the Eight-Hour Law has been found ineffective and insufficient to accomplish the purpose of its designers and framers. Labor has, since 1894, urged the passage of a law so as to remedy the defects, and for its extension to all work done for or on behalf of the government. Our efforts have been in vain.

Without hearing of any kind granted to those who are the advocates of the Eight-Hour Law and principle, Congress passed, and the president signed, an appropriation bill containing a rider nullifying the Eight-Hour Law and principle in its application to the greatest public work ever undertaken by our government, the construction of the Panama Canal.

The Eight-Hour Law in terms provides that those intrusted with the supervision of government work shall neither require nor permit any violations thereof. The law has been grievously and frequently violated. The violations have been reported to the heads of several departments, who have refused to take the necessary step for its enforcement.

Convict Labor.—While recognizing the necessity for the employment of inmates of our penal institutions, so that they may be self-supporting, labor has urged in vain the enactment of a law that shall safeguard it from the competition of the labor of convicts.

Immigration.—In the interest of all of our people, and in consonance with their almost general demand, we have urged Congress for some tangible relief from the constantly growing evil of induced and undesirable immigration, but without result.

Chinese Exclusion.—Recognizing the danger of Chinese immigration, and responsive to the demands of the people, Congress years ago enacted an effective Chinese exclusion law; yet, despite the experience of the people of our own country, as well as those of other countries, the present law is fla-

grantly violated, and now, by act of Congress, it is seriously proposed to invalidate that law and reverse the policy.

Seamen's Rights.—The partial relief secured by the laws of 1895 and 1898, providing that seamen shall not be compelled to endure involuntary servitude, has been seriously threatened at each succeeding Congress. The petitions to secure for the seamen equal right with all others have been denied, and a disposition shown to extend to other workmen the system of compulsory labor.

Ship Subsidy.—Under the guise of a bill to subsidize the shipping industry, a provision is incorporated, and has already passed the Senate, providing for a form of conscription, which would make compulsory naval service a condition precedent to employment on privately owned vessels.

Having in mind the terrible and unnecessary loss of life attending the burning of the *Slocum* in the harbor of New York, the wreck of the *Rio de Janeiro* at the entrance to the Bay of San Francisco, and other disasters on the waters too numerous to mention—in nearly every case the great loss of life was due to the undermanning and the unskilled manning of such vessels—we presented to Congress measures that would, if enacted, so far as human law could do, make impossible the awful loss of life. We have sought this remedy more in the interests of the traveling public than in that of the seamen, but in vain.

Having in mind the constantly increasing evil growing out of the parsimony of corporations, of towing several undermanned and unequipped vessels, called barges, on the high seas, where, in case of storm or stress, they are cut loose to drift or sink, and their crews to perish, we have urged the passage of a law that shall forbid the towing of more than one such vessel unless they shall have an equipment and a crew sufficient to manage them when cut loose and set adrift; but in vain.

Trusts and Interstate Commerce.—The antitrust and interstate commerce laws enacted to protect the people against monopoly in the products of labor, and against discrimination in the transportation thereof, have been perverted, so far as the laborers are concerned, so as to invade and violate their personal liberty as guaranteed by the Constitution. Our repeated efforts to obtain redress from Congress have been in vain.

Anti-Injunction Bill.—The beneficent writ of injunction, intended to protect property rights, has, as used in labor disputes, been perverted so as to attack and destroy personal freedom, and in a manner to hold that the employer has some property rights in the labor of the workmen. Instead of obtaining the relief which labor has sought, it is seriously threatened with statutory authority for existing judicial usurpation.

Committee on Labor.—The Committee on Labor of the House of Representatives was instituted at the demand of labor to voice its sentiments, to advocate its rights, and to protect its interests. In the past two Congresses this committee has been so organized as to make ineffectual any attempt labor has made for redress. This being the fact in the last Congress, labor requested the speaker to appoint on the Committee on Labor members who, from their experience, knowledge, and sympathy, would render in this Congress such service as the committee was originally designed to perform. Not only was labor's request ignored, but the hostile make-up of the committee was accentuated.

Right of Petition Denied Government Employees.—Recently the president issued an order forbidding any and all government employees, upon the pain of instant dismissal from the government service, to petition Congress for any redress of grievances or for any improvement in their condition. Thus the constitutional right of citizens to petition must be surrendered by the government employee in order that he may obtain or retain his employment.

Redress for Grievances.—We present these grievances to your attention because we have long, patiently, and in vain waited for redress. There is not any matter of which we have complained but for which we have, in an honorable and lawful manner, submitted remedies. The remedies for these grievances proposed by labor are in line with fundamental

law, and with the progress and development made necessary by changed industrial conditions.

Labor brings these, its grievances, to your attention because you are the representatives responsible for legislation and for failure of legislation. The toilers come to you as, your fellow-citizens, who, by reason of their position in life have not only with all other citizens an equal interest in our country, but the further interest of being the burden bearers, the wage-earners of America. As labor's representatives we ask you to redress these grievances, for it is in your power so to do.

Labor now appeals to you, and we trust that it may not be in vain. But if, perchance, you may not heed us, we shall appeal to the conscience and the support of our fellow-citizens.

(Signed) *Executive Council, American Federation of Labor.*

AMERICAN FORESTRY ASSOCIATION, THE:

Organized 1882; incorporated 1897. Objects: (1) The promotion of a business-like and conservative use and treatment of the forest resources of this country. (2) The advancement of legislation tending to this end both by the states and the Congress of the United States, the inauguration of forest administration by the Federal Government and by the states, and the extension of sound forestry by all proper methods. (3) The diffusion of knowledge regarding the conservation, management, and renewal of forests, the proper utilization of their products, methods of reforestation of waste lands, and the planting of trees.

The association enrolls all who realize the importance of the preservation of forests, and in particular appeals to owners of woodlands, to lumbermen and foresters, as well as to engineers, professional and business men who have to do with wood and its manifold uses, and to persons concerned in the conservation of water supplies for irrigation and other purposes. The dues are \$2 per year. The association has more than 5,000 members, residents of every state in the Union, Canada, and foreign countries. It has its own organ, *Forestry and Irrigation*, which is sent free to all members each month. President, Hon. James Wilson, United States Secretary of Agriculture. Secretary, Prof. Thos. E. Will, 1311 G Street, Washington, D. C.

AMERICAN INSTITUTE FOR SOCIAL SERVICE, THE:

Organized in New York City in 1902, as the outgrowth of the League for Social Service, which was founded in 1898 by Drs. Josiah Strong and Tolman. Objects: (1) To gather from all possible sources facts of every kind which bear on social and industrial betterment. (2) To interpret these facts by ascertaining their causes and effects, thus gaining their real significance; and (3) To disseminate the resulting knowledge for the education of public opinion, which is the generic social reform.

The membership is limited to forty, but the constitution provides that men and women distinguished for public service or deeply interested in industrial and social betterment may be elected associates. Distinguished students of social subjects are elected collaborators.

The institute has a large number of foreign collaborators, and has been influential in starting similar institutes in Great Britain, Sweden, and elsewhere; while it is in active communication with societies of a similar nature in other countries. In this way a considerable international exchange of information has resulted, and has been published in *Social Progress*, edited by Dr. Strong and others. The institute has made noteworthy sociological exhibits at the expositions of Paris (1900), St. Louis (1904), Liège (1905), and Milan (1906); and it arranged for

an Exposition of Safety Devices in New York (December, 1906.) Out of this has grown a movement for a permanent museum of Safety Devices in New York City, to which the Institute is now giving its main efforts, and for which quarters are opened at 231-241 West Thirty-ninth Street. See *MUSEUMS OF SECURITY*. The institute makes special investigations, at cost only, for students and others desiring such services; and it disseminates the information it collects to its members in all countries. Annual dues: Members, \$2; Societies, \$5. President, Josiah Strong. Director, Wm. H. Tolman, 231-241 West Thirty-ninth Street, New York City.

AMERICAN PEACE SOCIETY, THE:

The oldest and strongest of the associations in this country devoted exclusively to the promotion of international peace; organized in New York in 1828. Through the influence of William Ladd, the American "Apostle of Peace," the various state and local peace societies, which had been at work since 1815, were induced to unite and thus establish a national organization.

The society moved to Hartford, Conn., in 1835, and then to Boston in 1837, where its headquarters have been ever since. As early as the "thirties" the society advocated the general adoption of arbitration, and the establishment of a permanent congress and court of nations. The monthly journal of the society, *The Advocate of Peace*, first published at Hartford by William Watson, for the Connecticut Peace Society, has appeared since 1834. The society, before taking over this paper, had previously published *The Harbinger of Peace* and *The Calumet*.

The purpose of the society was from the first declared to be to "diffuse light respecting the evils of war and the best means of effecting its abolition." This twofold aim has been its object ever since. It has been among the foremost of the agencies advocating a permanent system of arbitration for the settlement of all international controversies. In 1840 the Society published, in a book of 700 pages, "Prize Essays on a Congress of Nations." It has since published and distributed many millions of pages of books and pamphlets, on all phases of the subjects of peace and war. Through its agency many valuable contributions have been made to the literature of international peace, including Sumner's oration on the "War System of the Commonwealth of Nations," Emerson's "Essay on War," Channing's "Lecture on War," Judge Jay's "Review of the Mexican War," etc.

The society was the first to take up, at the suggestion of Joseph Sturge of England, in 1841, the idea of holding international peace congresses. The result was the first great congress held in Exeter Hall, London, in 1843, organized by the London Peace Society. Out of this first congress grew the remarkable series of congresses from 1848 to 1851, in which the American Peace Society had large delegations. In 1872, through the efforts of Dr. James B. Miles, then secretary of the society, the International Law Association was organized, and held its first meeting in Brussels the following year. Twenty-three conferences of this association have been held, the last of which was at Berlin in October, 1906. This association has done much for the promotion of arbitration, the improvement of international law, and better relations in general between the nations.

Beginning in 1837 with a petition to the Legislature of Massachusetts, the society has been active with both the state and national governments with a view to practical legislative action toward permanent international arbitration and peace. It was the first to suggest, in the "eighties," the holding of a Pan-American conference, for the purpose of promoting greater friendship and better trade relations between the American states.

The American Peace Society has been represented in nearly all of the international peace congresses held since 1889, as well as in the national arbitration conferences held at Washington; and many of its members have been prominent in the work of the Mohonk Arbitration Conference, organized in 1895 by Mr. Albert K. Smiley.

In the spring of 1903 a resolution, prepared by the secretary of the society, and supported by a considerable number of individuals outside, was unanimously voted by the Massachusetts Legislature, urging the Congress and Government

of the United States to take steps toward the establishment of a periodic congress of nations. This proposal has met with unexpectedly strong and wide approval, has been made a leading feature of the program of the INTERPARLIAMENTARY UNION, and will probably be one of the foremost subjects of discussion at the second Hague conference.

The society is stronger, more active, and more influential to-day than ever before in its history. It has a growing membership in all parts of the United States. By means of committees it is promoting interest in the peace movement among business men, among workmen, among ministers and churches, etc. President, Hon. Robert Treat Paine. Secretary, Benjamin F. Trueblood, 31 Beacon Street, Boston, Mass.

AMERICAN POLITICAL SCIENCE ASSOCIATION, THE: Founded 1903. Object: The encouragement of the scientific study of politics, public law, administration, and diplomacy. It meets annually in December. Dues, \$3. President, Albert Shaw, New York. Vice-presidents: Albert Bushnell Hart; F. N. Judson; H. A. Garfield. Secretary and treasurer, W. W. Willoughby, Johns Hopkins University, Baltimore, Md.

AMERICAN PROPORTIONAL REPRESENTATION LEAGUE, THE: Organized (1893) to promote the reform of legislative assemblies, by abandoning the present system of electing single representatives on a majority or plurality vote in limited territorial districts, and by substituting the following provisions:

(1) That all representatives be elected "at large," on a general ticket either without district divisions or in districts as large as practicable.

(2) That the election be in such form that the several parties or political groups shall secure representation in proportion to the respective number of votes cast by each. President, William Dudley Foulke, Richmond, Ind. Secretary, Robert Tyson, 10 Harbord Street, Toronto, Can.

AMERICAN PROTECTIVE ASSOCIATION, THE: A secret association, commonly called the A. P. A. It was organized in 1887 against the asserted attack of Roman Catholicism upon the American public school and other American institutions. In 1890 or thereabouts it became very active, published an outspoken organ in Boston, Mass., and created widespread agitation and excitement. The association was organized by H. F. Bower, and rapidly grew in strength, claiming in 1895 a membership of 2,000,000, and extending into Canada, Great Britain, and Australia. Its influence, however, soon disappeared, and has now practically passed away.

The reasons given for the existence of the order were stated by one of its members to be as follows:

(1) The Roman Catholic attack on our public-school system. (2) The attempted foreignizing, by force, of whole communities, in language and religion, by Romish priests. (3) The complete control of our great cities by Romanism. (4) The fact that our army and navy are almost wholly Romanized. (5) The remarkable increase of untaxed church property. (6) The frequent desecration of the American flag by priests. (7) The Jesuit control of the heads of the government at Washington. (8) The well-known public declaration of the Pope that the United States is his one bright hope for the future.

As a proof of the need of the order, the Rev. James B. Dunn, secretary of the Committee of

One Hundred, of Boston, in a tract published by the committee, quotes from the papal encyclical of Jan. 10, 1890, where the Pope states that Roman Catholics are:

Even in politics, always to serve first the interests of Catholicism, and to submit themselves in obedience to the will of the pontiff as to God himself, and that the civil laws are binding on them only so long as they are conformable to the Roman Catholic religion. In that same encyclical the Pope says it is a duty to resist all civil laws hostile to anything ordered by the Church, and a crime to obey them. These being the facts, is it not quite certain that whatever his private or personal opinion and feelings may be as an American citizen, every good Roman Catholic must support the Church as against the State? . . .

That cases happen in which the State demands one thing from the citizen, and religion the opposite from Christians, and this undoubtedly for no other reason than that the heads of the State pay no regard to the sacred power of the Church, or desire to make it subject to them. No one, however, can doubt which is to receive their preference. . . . It is an impious deed to break the laws of Jesus Christ for the purpose of obeying the

magistrates, or to transgress the laws of the church under the pretext of observing the civil law. . . .

If the laws of the State are in open contradiction with the divine law, if they command anything prejudicial to the Church, or are hostile to the duties imposed by religion, or violate in the person of the supreme pontiff the authority of Jesus Christ, then indeed it is a duty to resist them and a crime to obey them—a crime fraught with injury to the State itself. . . .

Furthermore, in politics, which are inseparably bound up with the laws of morality and religious duties, men ought always and in the first place to serve, as far as possible, the interests of Catholicism. As soon as they are seen to be in danger, all differences should cease between Catholics. Since the fate of states depends principally on the disposition of those who are at the head of the government, the Church cannot grant its patronage or favor to men whom it knows to be hostile to it, who openly refuse to respect its rights, who seek to break the alliance established by the nature of things between religious interests and the interests of the civil order. On the contrary, its duty is to favor those who, having sound ideas as to the relations between Church and State, wish to make them both harmonize for the common good. These principles contain the rule according to which every Catholic ought to model his public life.

Dr. Dunn also quotes one of Cardinal Manning's sermons, representing the Pope as saying:

I acknowledge no civil superior; I am the subject of no prince; and I claim more than this. I claim to be the supreme judge on earth, and director of the consciences of men; of the peasant that tills the field, and the prince that sits on the throne; of the household that lives in the shade of privacy, and the legislature that makes laws for kingdoms. I am the sole last supreme judge on earth of what is right and wrong.

Of these and other similar quotations Dr. Dunn says:

In view of such declarations and teachings, we ask, Can a good Romanist be at the same time a loyal American citizen? Many Romanists, no doubt, mean to be loyal citizens of the republic, and honestly think they are; yea, we are quite willing to believe that the great body of them have no wish to interfere with the liberties and institutions of America, and that if called upon to choose between serving our government and the power at Rome, they would abjure Rome. But it must be remembered that they belong to a system in which free agency is impossible. As we have seen, the Vatican claims absolute and supreme authority in all things, civil as well as spiritual, and every member of that Church is bound to render to the pontiff absolute and unquestioning obedience. . . . Can any person who is loyal to Romanism be true to republicanism? Can a Romanist be a good citizen of America? . . .

(For an answer from the Roman Catholic standpoint to the statements of the A. P. A., see ROMAN CATHOLIC CHURCH AND SOCIAL REFORM.)

But Romanists are by no means the only ones who criticize and oppose the attitude of the A. P. A. H. K. Carroll wrote in *The Methodist Review*, 1895, a plea for Protestants to conquer their prejudices and to be reasonable in the matter. Concerning the assertion

Arguments
against the
A. P. A.

that Roman Catholics cannot be good citizens, Dr. Carroll says:

Are Catholics disloyal? I do not remember ever to have seen the affirmative of this question supported by the citation of any act. It is commonly argued from the doctrine of papal supremacy. Catholics, it is urged, know no higher law than obedience. The people obey the priests implicitly, the priests are in complete subjection to the bishops, and the bishops are bound to do whatever the Pope tells them. This Pope is a foreign potentate who assumes to be superior to kings and governments; and he would, if he could, subordinate the State to the Church. In answer let me ask, Is it not obvious that he could not if he would? Where is there a state over which he exercises even a shadow of sovereignty?"

Concerning the relation of the Roman Catholic Church to our public schools, Dr. Carroll says:

Does the Church of Rome desire to destroy our public-school system? "Destroy" is a strong word. I doubt whether it is right to apply it even to the most hostile opinion that prevails among the hierarchy. The most any Catholic has asked for is exemption from payment of the public-school tax or division of the school funds. In neither case would the system be destroyed. If the first alternative were adopted it would impair the integrity of the system and limit it. It would not be for all the people as it is now, but only for the larger part of them. If the second proposal were accepted we should have in this country the conditions that prevail in England and elsewhere. We should have both the secular and religious elements represented in our public schools. The system would be greatly changed and impaired, but it would not be destroyed. It would not be fair, I think, to say that the hierarchy would destroy our public school; but it is fair to say that they are not satisfied with it as it is.

AMERICAN PURITY ALLIANCE, THE: Incorporated under this name in 1895, as the continuation of the New York Committee for the Prevention of State Regulation of Vice, which commenced its work in 1876 and has held thirty annual meetings.

Objects: The repression of vice, the prevention of its regulation by the State, the better protection of the young, the rescue of the fallen, the extension of the White Cross among men, and to maintain the law of purity as equally binding upon men and women.

The chief present work of the alliance consists in organizing methods for the instruction of the young in schools and colleges, for the information of teachers, parents, and physicians in sexual hygiene; the distribution of purity literature, of which a supply of thirty-four pamphlets is kept on hand at its headquarters; and the publication of *The Philanthropist*. It is the American branch of the International Federation for the Suppression of State Regulation of Vice, and is actively interested in the suppression of the "White Slave" traffic. It is constantly at work to prevent attempts at state or city regulation of prostitution. Annual dues, \$1. President, O. Edward Janney, M.D., Baltimore, Md. Secretary, Percy Russell, 93 Crooke Avenue, Brooklyn, N. Y. Office, 400 West Twenty-third Street, New York City.

AMERICAN RAILWAY UNION, THE: A union organized in Chicago in 1893 under the leadership of Eugene V. Debs. It played a large part in the PULLMAN STRIKE, and virtually ceased to exist after the failure of that strike. The report of the Commission on the Pullman Strike said of this union:

The theory underlying this movement is that the organization of different classes of railroad employees (to the number of about 140,000) upon the trade-union idea has ceased to be useful or adequate; that pride of organization, petty jealousies, and the conflict of views into which men are trained in separate organizations under different leaders, tend to defeat the

common object of all, and enable railroads to use such organizations against each other in contentions over wages, etc.; that the rapid concentration of railroad capital and management demands a like union of their employees for the purpose of mutual protection; that the interests of each of the 850,000 or more railroad employees of the United States, as to wages, treatment, hours of labor, legislation, insurance, mutual aid, etc., are common to all, and hence all ought to belong to one organization that shall assert its united strength in the protection of the rights of every member.

AMERICAN SECULAR UNION AND FREE-THOUGHT FEDERATION, THE: Organized 1876. Object: "To propagate the nine demands of liberalism as specified in our constitution. To effect a total separation of Church and State, not only in name as it now is, but as an actual fact. Taxation of church property, the elimination of all religious teaching in the public schools, and the abolition of all those clearly unconstitutional measures which are wrongly called Sunday laws." Annual report, \$1. Secretary, E. C. Reichwald, 141 South Water Street, Chicago.

NINE DEMANDS OF LIBERALISM

- (1) We demand that churches and other ecclesiastical property shall be no longer exempt from taxation.
- (2) We demand that the employment of chaplains in Congress, in the legislatures, in the navy and militia, and in prisons, asylums, and all other institutions supported by the public money, shall be discontinued.
- (3) We demand that all public appropriations for educational and charitable institutions of a sectarian character shall cease.
- (4) We demand that all religious services now sustained by the government shall be abolished; and especially that the use of the Bible in the public schools, whether ostensibly as a textbook or avowedly as a book of religious worship, shall be prohibited.
- (5) We demand that the appointment, by the President of the United States or by the governors of the various states, of all the religious festivals and feasts shall wholly cease.
- (6) We demand that the judicial oath in the courts and in all other departments of the government shall be abolished, and that simple affirmation under the pains and penalties of perjury shall be established in its stead.
- (7) We demand that all laws directly or indirectly enforcing the observance of Sunday as the Sabbath shall be repealed.
- (8) We demand that all laws looking to the enforcement of "Christian" morality shall be abrogated, and that all laws shall be conformed to the requirements of natural morality, equal rights, and impartial liberty.
- (9) We demand that not only in the Constitution of the United States and of the several states, but also in the practical administration of the same, no privilege or advantage shall be conceded to Christianity or any other special religion; that our entire political system shall be founded and administered on a purely secular basis; and whatever changes shall prove necessary to this end shall be consistently, unflinchingly, and promptly made.

AMERICAN SOCIAL SCIENCE ASSOCIATION, THE: Founded 1865 in Boston, Mass., at a meeting called by Drs. S. G. Howe, Nathan Allen, R. T. Davis, and F. B. Sanborn, and presided over by Gov. John A. Andrew. Its first president was Prof. W. B. Rogers, founder of the Boston Institute of Technology; and its first secretaries Dr. Samuel Eliot and F. B. Sanborn. Ensuing presidents have been Dr. Samuel Eliot, George William Curtis, Prof. B. Peirce, President Gilman of Baltimore, President A. D. White of Cornell, Gen. John Eaton, Carroll D. Wright, Prof. Francis Wayland, F. J. Kingsbury, Oscar S. Straus, and other eminent scholars and publicists. It conducts its work under the five departments of Education, Finance, Health, Jurisprudence, and Social Economy. Heads of these departments have been David A. Wells, Dr. Francis Lieber, George S. Boutwell, President Woolsey, Charles L. Brace, Robert Treat Paine, John Graham Brooks, Edward Atkinson, Dr. Walter Channing, Dr. Stephen Smith, Judge S. E. Baldwin, Rev. H. L. Wayland, Robert C. Winthrop, Judge

Emory Washburn, and many others. Mr. Sanborn remained secretary from 1865 until 1898, and was succeeded by Rev. F. S. Root, who died in 1906, and was succeeded by Prof. I. F. Russell of New York, the present secretary. Meetings have been held annually for forty-two years, and hundreds of addresses and papers have been read, many of them afterward published in *The Journal of Social Science*, edited in turn by S. Eliot, Henry Villard, F. B. Sanborn, and F. S. Root. From the Social Science Association have sprung the National Prison Association, the National Conference of Charities, and numerous branch societies, clubs, etc. Its main office was for years in Boston, then in New Haven, Conn., and is now in New York. It numbers some 600 members in all parts of the United States, but chiefly in New York and New England. Secretary, Prof. I. F. Russell, 120 Broadway, New York City.

AMERICAN STATISTICAL ASSOCIATION,

THE: This association was organized in 1839, and has a membership of about 600. A quarterly publication was begun in 1888, by means of which special statistical monographs are being presented to the public, and in addition this journal contains a record of current statistical literature, which is intended to inform the members concerning the most important and recent statistical inquiries made in foreign countries. This publication has reached (March, 1906), its seventy-third number, and is recognized as a valuable record of statistical work. The present constitution of the association is as follows:

ART. I. This association shall be denominated the American Statistical Association.

ART. II. The objects of the association shall be to collect, preserve, and diffuse statistical information in the different departments of human knowledge.

ART. III. The association shall be composed of fellows and honorary members.

ART. IV. All members shall be chosen by the board of directors, the affirmative votes of four-fifths of the members of said board being necessary to a choice. Each fellow shall pay annually \$2, or \$20 at some one time.

ART. V. Fellows only shall be entitled to vote, but honorary members shall have the right to sit and deliberate in all the meetings of the association.

(ARTS. VI., VII., and VIII. omitted.)

NOTE.—Each member shall be entitled to receive all reports and publications of the association.

The association's presidents have been: Hon. Richard Fletcher, A.M., LL.D.; George C. Shattuck, M.D., LL.D.; Edward Jarvis, A.M., M.D., and Francis A. Walker, Ph.D., LL.D. Its present officers are: President, Carroll D. Wright, LL.D.; Vice-presidents, Horace G. Wadlin, Litt.D.; Henry C. Adams, Ph.D.; Henry Gannett; S. N. D. North, LL.D.; Walter F. Willcox, Ph.D. Corresponding secretary and librarian, Horace G. Wadlin, Litt.D., Public Library, Boston, Mass. Treasurer, S. B. Pearmain, 53 State Street, Boston, Mass. Recording Secretary, Carroll W. Doten, A.M., Institute of Technology, Boston, Mass. Councilors, Cressy L. Wilbur, M.D.; F. L. Hoffman; Chas. Edward A. Winslow. Committee on Publication, Davis R. Dewey, Ph.D.; John Koren; Edward M. Hartwell, M.D. Committee on Finance, Osborne Howes; Walter C. Wright; S. B. Pearmain. Committee on Library, Hon. Julius L. Clarke; Rev. Samuel W. Dike, LL.D.; W. Z. Ripley, Ph.D. (See also AMERICAN SOCIAL SCIENCE ASSOCIATION and INTERNATIONAL STATISTICAL INSTITUTION.)

-ANABAPTISTS: A religious community that arose principally in Germany in the sixteenth

century, opposing the baptizing of infants (whence their name), but better known for their revolutionary and communistic social efforts. Thomas Munzer (1520), the leader of a set of enthusiasts called the prophets of Zwickau, did much to spread the beliefs of Anabaptism through Saxony and Switzerland. Waldshut became one of their centers of propagation. Revolted from the rigid rule of the state and from the false formalism of the Church, they carried their principles too far, and it is certain that in some places the movement, guided by ambitious and licentious men, broke into lawlessness and lust. But for the most part the Anabaptists have been a maligned and misrepresented class of people, who earnestly desired and sought for a greater fulness of truth and brotherhood than any institutions under the then existing conditions provided. Their doctrines were: The equality of all Christians, the community of goods, the baptism of the Spirit, adult baptism, and the establishment of the kingdom of heaven on earth. About 1525 the "Peasant War" broke out, partially caused and largely supported by these doctrines. The laboring classes were at this time cruelly oppressed by the government, and the teachings of Anabaptism spread rapidly through Holstein, Westphalia, and the Netherlands. Again and again they were checked, and scattered, and persecuted even to death; but traveling preachers continued the agitation, and organizations sprang up wherever persecution turned its back.

In 1534 they became masters of Münster; they destroyed churches and appointed twelve judges to rule over the city. A tailor named Jan van Leiden had himself crowned king, and for a year the city was given over to every kind of madness and

History

licentiousness. At the end of that time several Protestant princes conquered the city and restored peace and order by executing the ring-leaders of the uproar. In Amsterdam and other cities, however, Anabaptists, who had little in common with the lustful fanaticism of Buckhold, spread their doctrines. The Revelations of St. John was their chief source of doctrine; and their main desire was to found a new kingdom of pure and primitive Christianity. David Joris (1501-56), one of the chief of these, united liberalism with anabaptism, introduced much mystical theology, and strove to unite the different Christian sects. Another prominent leader was Menno Simons. In spite of dangers and persecutions he gathered together the scattered and disheartened Anabaptists of Germany and the Netherlands, known in the United States as "Mennonites." He explained his belief in a book published in 1556, "Elements of the True Christian Faith," which is still an authoritative book among the Mennonites. His adherents believe in strictly following the teachings of Scripture, in rejecting the taking of oaths, every kind of revenge, war, divorce (except for adultery), infant baptism, and the undertaking the work of a magistrate. Their belief is that while magistracy is necessary for the present time, it is foreign to the kingdom of Christ. The education and theology of the colleges they set very little value upon. Menno called his adherents "God's congregation; poor, unarmed Christian brothers." In Germany the Mennonites are called *Taufgesinnte*, and in Holland, *Doopsgezinden*.

The church is a literal communion of the saints, which must be kept pure by strict discipline.

They celebrate the rite of feet-washing. Their bishops, elders, and teachers serve gratis. They are split into many divisions, mainly the strict and the mild Mennonites. The latter are known as Waterlanders, from a place in Holland. Some of their divisions take names from the peculiarities of their dress—Buttoners, Hook-and-eye-ers, etc. The purity of their lives, however, commands respect, and their industry makes them prosperous.

ANARCHISM (Gr. *an*, privative, and *arché*, government): The social doctrine of the abolition of government of man by man, and the constitution of society without government. In this article the subject is considered under three heads: (1) Individualist or Philosophical Anarchism; (2) Anarchist Communism; and (3) Arguments against Anarchism.

Under the general definition there are two schools of anarchists, totally distinct and even opposed in their doctrines, methods, and in their general characteristics. The two schools are those of the individualist anarchists (often called in this country philosophical anarchists), and, secondly, the school of anarchist communists, a school which, however, is gradually dying out, and which the more thoughtful anarchists deny to be anarchism at all. The individualist anarchists, tho the fewer in number, are, in this country especially, the abler body of thinkers, and carry to their fullest logical results the principles which a great many individualists accept but do not carry out. Individualist anarchists do not believe in the use of force—not because they hold that it is wrong to use it, but because they are aware that the use of force never truly liberates, while their aim is absolute liberty—their motto being "Liberty, not the daughter, but the mother of order." They start from the philosophy of individual sovereignty, and apply it to the problems of social science with relentless logic. By no means objecting to organization and cooperation, provided it be voluntary, they would have all organization spring from the individual.

Anarchist communists, on the other hand, form a wholly different school of thought. They do not believe in government, and they do believe in overthrowing it by force. On its ruins they would plant a communal life, whose ideal is very little different from that of the Socialists, except that it is not to be realized through the state. Most of the men who are called anarchists in the press, particularly of Europe, and almost all the bomb-throwers and dynamiters of recent years on either continent have been anarchist communists. This school is mainly European, while individualist anarchism is mainly American. Anarchist-communism counts among its followers names favorably known to science and letters, such as Krapotkin and Réclus, while many, even of the dynamitards, have been men of education and sometimes refinement. Nevertheless, it is mainly a movement among the working classes, particularly of France, Italy, Spain, and to a less extent, Germany and Austria. In England there are but few anarchist communists. In America they are found only in a few cities. The so-called Chicago anarchists were anarchist communists. Individualist an-

archism, on the other hand, is not a class movement, but almost purely intellectual, naturally drawing its strength largely from the classes possessed to-day of intellectual advantages. It will thus be seen that in philosophy, method, and general characteristics the two classes of anarchists are carefully to be distinguished. Both are distinctly revolutionary and opposed to the state; but the one starts from the individual, and advocates a revolution through ideas; the other starts from the community, and advocates a revolution through force. We print a statement of individualist anarchism by Victor S. Yarros, former associate editor of *Liberty*, and a statement of anarchist communism by Pierre Krapotkin, perhaps its most distinguished representative. Mr Yarros writes:

I.—Individualist or Philosophical Anarchism

The individualistic or philosophical anarchists favor the abolition of "the state" and government of man by man. They seek to bring about

a state of political freedom—anarchy. To comprehend the precise import of this statement it is essential to grasp and bear in mind the definitions given by the anarchists to the terms employed in their expositions.

The current misconceptions of the anarchistic doctrines are chiefly due to the persistent, tho largely unconscious, habit of interpreting them in the light of the popular definitions of the terms "state," "government," etc., instead of in the light of their own technical use of these terms. The average man on being told that the anarchist would abolish all governmental restraints, not unnaturally concludes that the proposition involves the removal of the restrictions upon criminal conduct, the relinquishment of organized defense of life, liberty, and property. Those who are familiar with the doctrine of non-resistance to evil, preached by the early Christians and by the modern Tolstoians, generally identify anarchism with it. But such interpretations are without any foundation. The anarchists are emphatically in favor of resistance to and organized protection against crime and aggression of every kind; it is not greater freedom for the criminal, but greater freedom for the non-criminal, that they aim to secure; and by the abolition of government they mean the removal of restrictions upon conduct intrinsically ethical and legitimate, but which ignorant legislation has interdicted as criminal. "The anarchistic principle of personal liberty is absolutely coincident with the famous Spencerian "first principle of human happiness," the principle of "equal freedom," which Mr. Spencer has expressed in the formula, "Every man is free to do what he wills, provided he infringes not the equal freedom of any other man."—It is, in fact, precisely because the anarchist accepts this principle without reservation, and insists on the suppression and elimination of all aggression or invasion—all conduct incompatible with equality of liberty—that he declares war upon the "state" and "government." * He defines "state" as "the embodiment of the principle of invasion in an individual or band of individuals, assuming to act as representatives or masters of the entire people within a given area." * Government he

* The definitions here given are those formed and consistently used by Benjamin R. Tucker, the editor of *Liberty*, the organ of the philosophical anarchistic movement.

defines as "the subjection of the non-invasive individual to an external will"; and "invasion" as conduct violative of equal freedom.

Perhaps the clearest way of stating the political program of the anarchists will be to indicate its relation to other and better-known theories of government. The anarchists, agreeing with the view of the true Jeffersonian Democrats, that the best government is that which governs least,

Program

sympathizing with the position of the old Manchester individualists and *laissez-faire-ists*, who believed in a minimum of government interference, as well as with the less vague doctrines of the more radical modern individualists of the Spencerian school, who would limit the state to the sole function of protecting men against external and internal invaders, go a step farther and demand the dissolution of what remains of "government"—viz., compulsory taxation and compulsory military service. It is no more necessary, contend the anarchists, that government should assume the protective military and police functions, and *compel* men to accept its services, than it is that government should meddle with production, trade, banking, education, and other lines of human activity. By voluntary organization and voluntary taxation it is perfectly possible to protect liberty and property and to restrain crime. It is doubtless easy to imagine a society in which government concerns itself with nothing save preservation of order and punishment of crime, in which there are no public schools supported by compulsory taxation, no government interference with the issue of currency and banking, no custom-houses or duties on foreign imports, no government postal service, no censorship of literature and the stage, no attempt to enforce Sunday laws, etc. The *laissez-faire-ists* of the various schools have familiarized the thinking public with such a type of social organization. The anarchists simply propose to do away with the compulsory feature of the single function reserved for government by the radical *laissez-faire-ists*. In other words, they insist on the right of the non-aggressive individual to "ignore the state," to dispense with the protective services of the defensive organization and remain outside of it. This would not prevent those who might desire systematic and organized protection from combining to maintain a defensive institution, but such an institution would not be a government, since no one would be compelled to join it and pay toward its support. Anarchy, therefore, may be defined as a state of society in which the non-invasive individual is not coerced into cooperation even for the defense of his neighbors, and in which each enjoys the highest degree of liberty compatible with equality of liberty.

With regard to the question of putting down aggression, the jurisdiction of the voluntary defensive organization would of course extend to outsiders, and not be limited by its membership. The criminal are not to secure immunity by declining to join defensive associations. As the freedom of each is to be bounded by the equal freedom of all, the invader would be liable to punishment under anarchism no less than under government. Criminals would still be tried by juries and punished by executive officers. They would not be allowed to set up ethical standards for themselves and to do what is right in their own eyes. Such a doctrine involves not the abolition of government, but the widest possible

extension of it. It repudiates all ethical principles and abandons all attempts at enforcing justice and protecting rights. Every man is allowed under it to govern his fellows, if he has the will and the power, and the struggle for existence in the simplest and crudest form is revived. Anarchism, on the other hand, posits the principle of equal liberty as binding upon all, and only insists that those who refrain from violating it should not be interfered with in any way, either by individual governors or combinations of would-be rulers.

Anarchists reject governmentalism because they find no ethical warrant and no practical necessity for it. It appears to them self-evident

Arguments for Anarchism

that society, or the community, can have no greater claims upon the individual than the component members of it have. The metaphysical and misleading analogies between society and organism, upon which is usually founded the governmentalists' theory of the prerogatives of the state, anarchists reject with undisguised contempt. "The community," or "the state," is an abstraction, and an abstraction has neither rights nor duties. Individuals, and individuals only, have rights. This proposition is the corner-stone of the anarchistic doctrine, and those who accept it are bound to go the full length of anarchism. For if the community cannot rightfully compel a man to do or refrain from doing that which private and individual members thereof cannot legitimately force him to do or forego, then compulsory taxation and compulsory cooperation for any purpose whatever are wrong in principle, and government is merely another name for aggression. It will not be pretended that one private individual has the right to tax another private individual without his consent; how, then, does the majority of the members of a community obtain the right to tax the minority without its consent? Having outgrown the

No Ethical Warrant for Government

dogma of the divine right of kings, democratic countries are unconsciously erecting the dogma of the divine right of majorities to rule. The absurdity of such a belief is apparent. Majorities, minorities, and any other combinations of individuals are entitled to insist on respect of their rights, but not on violating the rights of others. There is one ethical standard, not two; and it cannot be right for government to do that which would be criminal or immoral when committed by individuals. Laws of social life are not made at the polls or in legislative assemblies; they have to be discovered in the same way in which laws of other sciences are discovered. Once discovered, majorities are bound to observe them no less than individuals.

As already stated, the anarchists hold that the law of equal freedom, formulated positively by Spencer and negatively by Kant, is a scientific social law which ought to guide men in their various activities and mutual relations. The logical deductions or corollaries of this law show us at once our rights and our duties. Government violates this great law not only by the fact of its very existence, but in a thousand other ways. Government means the coercion of the non-invasive, the taxation of those who protest against being forced to join the political organization set up by the majority. It enacts statutes and imposes restraints which find no sanction in

the law of equal freedom, and punishes men for disobeying such arbitrary provisions. It is true that governments profess to have the public welfare in view, and to enforce nothing save what morality and justice dictate. Justice, however, is invariably confounded by governments with legalism, and by the enforcement of justice they often mean the enforcement of the very laws which they enact in violation of justice. Thus laws in restraint of trade and of exchange are enforced in the name of justice, whereas justice demands the fullest freedom of trade and exchange. Strictly speaking, the enforcement of justice cannot be undertaken by government at all, since a government that should attempt to enforce justice would have to begin by signing its own death-warrant. A government that would enforce equal freedom and let the inoffensive alone would be, not a government, but a voluntary association for the protection of rights.

In republican countries men loosely speak of their "free government," their "government by consent." In reality there is no such thing as government by consent. Majorities rule, and the minorities are forced to acquiesce. The principle of consent is clearly fatal to governmentalism, for it implies the right of the non-invasive to ignore the state and decline to accept its services. Ethically a man has a perfect right to do this, for the mere refusal to join the political organization (which is merely an insurance association) is not a breach of the principle of equal freedom. Our "free governments" deny this right, hence they are immoral. They cannot become moral except by ceasing to be governments and becoming purely voluntary associations for defense.

Apart from the question of compulsory taxation and compulsory military service, on the abolition of which anarchists alone lay stress (al tho they readily admit that the police functions of government will be the last to disappear), there is little, if any, difference between anarchists and Spencerian individualists, on the question of government interference. The cessation of such interference with economic relations—with the issue of money, banking, wages, trade, production, etc.—is advocated on the ground that the solution of the social problems is to be found in liberty rather than in regulation, in free competition rather than in state monopoly. Anarchists are opposed to trusts and monopolies, but they would not substitute public for private monopoly. All monopoly rests on legal privilege, on injustice, on violations of equal opportunity, and therefore the anarchist demands equality of opportunity and free competition rather than restrictive, paternalistic regulation of industry and commerce. On the subject of public education, postal service, poor laws, sanitary supervision, etc., anarchists, in common with advanced individualists, hold that government interference is as pernicious practically as it is unwarranted ethically. Corruption and inefficiency are evils inseparable from government management, and there is nothing which government does that could not be done better by private enterprise under free competition.

In short, the anarchists object to government-alism because it is unethical, as well as unnecessary and inexpedient. Government is either the will of one man or the will of a number of men, large or small. Now, the will of one or many is not a criterion of right and justice, while for the adjustment of the conflicting interests of the

members of society such a criterion is an absolute necessity. Majority rule, and even the rule of a despot, may be, under certain conditions, preferable to a state of civil chaos; but as men advance and study the facts of their own development, they begin to realize the truth that there is no relation whatever between right and numbers,

Majority Rule Discredited

justice and force. Majority rule is discredited along with despotic rule, and ethical science becomes the sole guide and authority. The social laws need to be applied and enforced as long as predatory instincts and invasive tendencies continue to manifest themselves in human relations, and this necessitates the maintenance of associations for the protection of freedom and the punishment of aggression. But the governmental method is not adapted to the promotion of this end. Government begins by coercing the non-invasive individual into cooperation for defense and offense, regardless of the fact that a benevolent despotism is not a whit more defensible than a selfish despotism.

In general, it may be stated that any methods not in themselves invasive are regarded as legitimate by the anarchists in the furtherance of their cause. But they rely chiefly, if not entirely, on the methods of education—theoretical propaganda of their views—and of passive resistance to government. In violence, so-called

Methods

propaganda by deed and subterranean plotting against existing institutions, they do not believe. Political changes may be brought about by revolutions, and possibly also such economic changes as are contemplated by the state Socialists. But freedom can rest only on ideas and sentiments favorable to it, and revolutionary demonstrations can never abolish ignorance and the spirit of tyranny. Freedom cannot be forced on those who are not fit for it. The emancipation of the people from the aggression of government must come through their own deliberate choice and effort. Anarchists can but disseminate true political teachings and expose the nature and essence of governmentalism. Anarchists, however, do not believe that it is necessary to convert the whole people in order to carry their principles into practice. A strong and determined minority could, while remaining passive, successfully resist the attempt of government to tax them and otherwise impose its will upon them. Public opinion would not approve of a government campaign of violence against a number of intelligent and perfectly honest individuals banded together for the sole purpose of carrying on their legitimate activities and asserting their right to ignore injunctions and prohibitions having no authority from an ethical point of view.

Even if anarchists believed in the use of violent methods—and if they thought that violent resistance to government would hasten their emancipation, they would certainly resort to it, since it is not immoral or invasive to use force against invaders—there would be one important difference between them and other schools of reformers. Anarchists would not prevent others from living under government side by side with them, while other reformers seek to impose their schemes on the whole community in which they live. Thus the state Socialists, in pursuance of their program of state monopoly of capital, intend to suppress all competition and all rivalry on the part of individual owners of

capital. The anarchists, on the other hand, if allowed to remain outside of the governmental organization, would force no one to join them or follow their example. Still, as a matter of fact, anarchists abjure violence even in their own interests, vividly realizing the truth that the progress of justice and freedom is arrested in a state of war. Peace is an essential condition to the spread of rational ideas and the growth of the sentiment of toleration. Appealing as they do to the ideas and feelings of justice, it would be suicidal for anarchists to encourage violence and excite the lowest passions of men by revolutionary tactics.

To reform by ordinary political methods the anarchists are also opposed, at least under present conditions. As they do not seek any new positive legislation, they can expect nothing from politics. They demand the repeal of the legislation which improperly restricts men's freedom of action, and such repeal they cannot secure while being in a minority. Whether they would cooperate with other parties in attempting to carry specific measures of repeal, would depend largely on circumstances. It is to be remembered that, while the anarchists are strenuous in their opposition to every vestige of government, they do not expect to realize their entire program at one stroke. They are prepared for very slow and gradual reform, and would welcome the success of any single libertarian proposal. They would rejoice in the triumph of the free-trade idea, the repeal of the laws perpetuating land monopoly and monetary monopoly, and the abolition of special privileges. If they do not form themselves into a political party for the purpose of attaining one or more of these objects, it is because they can do more by other methods. Moreover, to enter into the political arena is to recognize, by implication, the principle of government. To vote is to coerce or to threaten coercion. Behind the ballot is the bullet of the soldier, ready to force the defeated minority into submission. The voter does not merely assert his right to self-government; he sets up a claim to govern others. The anarchist cannot employ a method which would put him in such a false light.

Thus the anarchist is neither a government bomb-thrower nor a revolutionary bomb-thrower. He objects to the use of violence by the government as well as against it. He restricts himself to the method of education and such passive resistance as is exemplified by a refusal to pay taxes or rent or import duties on commodities purchased in foreign countries.

HISTORICAL SKETCH OF INDIVIDUALIST ANARCHISM

Philosophical anarchists usually regard Proudhon as the founder of their school of social science; but there were in America, also far less widely known, men entertaining anarchistic views before Proudhon's time. We will, therefore, first notice the anarchist movement in America, and then consider it in other countries. America, or at least the United States, with its early extreme individualism and fear of the state (see CENTRALIZATION), was the fitting birthplace of anarchistic thought.

Joseph WARREN, a plain and only moderately educated New Englander, but a man of unusually independent and earnest spirit, was probably the first to enunciate precise anarchistic conceptions. He had become interested in the social views and plans of Robert OWEN, at this time first taking root in the land; had joined the Owenite community at New Harmony; had carefully studied its principles and mused upon its failure, till finally, about 1828, he reached the conclusion that its principles were exactly the opposite of the true ones, and that instead of the communistic idea of each working for all, as Owen taught, the true way to produce order, harmony, and well-being was

for each to live, in his own way, absolutely untrammelled by others, so far as he did not intrude upon the similar privileges of others. His thoughts took especially a financial turn, and he came to the conclusion that cost was the true limit of price; that usury and profit in all their forms were, therefore, economically wrong, and, moreover, that they would disappear under perfectly free competition. He sought to put his ideas into practice, to actually test them before giving them to the world, and therefore started, and for two years successfully carried on, a store in Cincinnati, where cost was the limit of price, and where usury and profit were eliminated. Finding that he was doing a business of \$150,000 a year—a large amount for Cincinnati in those days—he was convinced of the practicality and correctness of his idea, and therefore closed his business to devote his life to the propagation of his ideas. His main writings were "True Civilization," a short work, first published in 1846, and "Equitable Commerce," in which he elaborated his ideas of cost as the limit of price. These books found at least a few thoughtful readers. Stephen Pearl Andrews declared at a later day that the "True Civilization" was the text and basis of all his own writings, and John Stuart Mill refers to Warren with expressions of deepest interest and respect.

Others, however, were thinking in the same line. Lyndar Spooner may be called the Nestor of anarchism, of the extreme individualistic school. Commencing public life

Other Americans

as a young lawyer in Worcester, Mass., he first showed strong analytic and argumentative powers in several pamphlets defending Deism against Christianity, but soon passed more and more into sociological studies and controversy, coming to hold and defend extreme views as to individual sovereignty and the tyranny of the state. As early as 1844 he established a private mail between Boston and New York, and later extended it to Philadelphia and Baltimore, achieving success, until at last compelled to stop, owing to petty and constant persecution and annoyance from the government. From that time he devoted his great abilities to the promulgation of his ideas. During the antislavery contest he did good work as an abolitionist, and incorporated his views in "The Unconstitutionality of Slavery." His legal acumen appears in his "Trial by Jury," in which he reverts to the early and true meaning of the phrase—a trial by one's peers; and protests against the absurd and monstrous system (as he claims it to be) of ignorance and injustice now passing under that name. How far he carried his ideas appears in an unsigned monograph from his pen, entitled "Revolution."

Stephen Pearl Andrews was a disciple of Warren. As Warren especially studied economic questions, so Andrews studied the family and marriage. His "Science of Society," published in 1850, is still considered by philosophical anarchists a classic on the subject. Warren himself declared it a better statement of his own ideas than he himself could write. (For further account, see ANDREWS.)

We now first come to the influence of Proudhon in America. Col. William B. Greene, of Boston, being the first in this country known to have declared himself a follower of the great Frenchman. Colonel Greene's book on "Mutual Banking" is one of the most acute and searching inquiries into the monetary problems to be found in the literature on the subject. Colonel Greene was a keen, logical thinker and a profound scholar. He was a remarkably witty speaker and writer, and his book entitled "Socialistic, Communistic, Mutualistic, and Financial Fragments," shows his power and versatility. E. H. Heywood, a writer on various subjects, was another disciple of Warren. He is the author of a number of very able pamphlets. Charles T. Fowler, also a disciple of Warren, was a Unitarian minister when he first fell under the influence of Warren. He studied Proudhon, and after leaving the church devoted himself to the propaganda of anarchistic doctrines. He died leaving an admirable series of pamphlets on social and economic problems.

These men, however, while holding essentially anarchist views, and contributing, severally, to the development of anarchism in the United States, did not adopt the name anarchist, and did not really start the movement which has taken such definite shape under that distinctive denomination. The man who, assimilating and profiting by the teachings of Proudhon, Warren, Greene, and the American and English individualists, formulated a consistent and comprehensive anarchistic philosophy, and started the practical anarchistic movement is Benjamin R. TUCKER, the editor of *Liberty*, the organ of anarchism. Mr. Tucker was a young man, a student of the Massachusetts Institute of Technology, when he, becoming interested in social reform, sought the acquaintance of Warren and Greene. The latter called his attention to Proudhon's "What is Property?" and so impressed was he with the originality and value of that revolutionary (in an intellectual sense) and epoch-making work, that he set himself the task of translating it into English. No work has ever enjoyed the privilege of a more competent rendering into another language. The vigor and eloquence of Proudhon's style was fully preserved in the translation, and to this is due a large share of the influence exerted by Proudhon's work in America and England. A few years later Mr. Tucker started his periodical, *Liberty*, which has been for more than two

Present Writers

Joseph
Warren

decades the recognized authority on anarchism. Mr. Tucker does not strictly follow Proudhon, any more than he strictly follows Warren. He rejects the inconsistencies of the former as he does the crudities of the latter. He may be said to have organized the various anarchistic ideas—economic, political, etc.—into a coherent and systematic whole. Where Proudhon was vague and Warren inadequate, Mr. Tucker is clear, logical, consistent, and scientific. Mr. Tucker has influenced a considerable number of able men in journalism and other professions, as well as some of the prominent men in the labor movement. We will only mention here the name of Dyer D. Lum, one of the leaders of the early Greenback movement. Mr. Lum, while sympathizing to some extent with the methods of revolutionary reformers, was for several years before his death a vigorous and scholarly champion of the economic and political ideas of anarchism.

The growth of anarchism has not been rapid, and its history is not eventful or sensational. Its indirect influences, however, have wrought great changes in social science and in the intellectual attitude of sociologists and reformers.

In Europe, the real history of philosophic anarchism begins with Proudhon. We study him here but in brief, in relation to the movement of anarchism. Born in 1809, after a bitter personal experience with poverty and ill-paid work, he published in 1840 his great work, "What is Property?" Of this an admirer says: "He first with genius, and with learning and acumen rarely equaled, pleaded for absolute liberty of the individual and the doing away with all government. Property in its modern sense he showed to be, not the product of individual labor on the part of the owner of the property, but the product of the labor of others, taken from them by legalized wrong, or by aid of monopolies and class legislation created by the State. Hence the truth of his celebrated sentence, 'Property is theft.' The cure, he argued, was to do away with all government, and then each individual could retain that which he had produced, so that justice and order and well-being would be the result of liberty."

Europe

The book exposed him to new persecution from the government and learned societies, which continued more or less to his death in 1865. He passed much of his life in Belgium, banished from France. Yet he was ever active and at times popular in France. He was elected in 1848 to the Constituent Assembly by 77,000 votes, which, together with his frequent imprisonments and banishments, as well as the suppression of his books, shows his power and influence in his generation. Yet few followed him understandingly. Proudhon himself declared that even those who voted for him did not understand his views. He believed that in America (as seems to be the case) his thoughts would first take root. His principal writings besides the above-named are: "The Creation of Order in Humanity" (1843); "A System of Economical Contradictions" (1848); "Justice in the Revolution and in the Church" (1858); "Justice" (revised edition, 1859-60).

Proudhon was right; few followed him understandingly. The movement that sprang from his teachings has in the main, in Europe, been anarchist communism, which is no more like philosophic anarchism than Proudhon was like Bakounine. The real followers of Proudhon and philosophical anarchism, in Europe, can almost be counted on one's fingers, though their influence has been more marked than this might seem to indicate.

In Germany Caspar Schmidt, better known under his nom de plume of Max Stirner, laid what some regard as the ethical foundations of anarchism in his "Der Einzige und sein Eigenthum" (1845). John Henry Mackay, a Scotchman by birth, but with a German mother, and brought up in Germany from boyhood, has developed philosophic anarchism in poems, a novel ("The Anarchists," translated into English, 1891), and other works. In England philosophic anarchism under this name has had scarcely any development at all; but perhaps this is only because so much of its individualism, of which there has been considerable development, has come so near to philosophic anarchism in such writers as Herbert Spencer, Auberon Herbert, Wordsworth Donisthorpe, Thomas Mackay, Frederick Millar, and others.

II.—Anarchist Communism

The following statement of anarchist communism is abridged from a tract on "The Place of Anarchism in Socialistic Evolution," by Pierre A. Kropotkin:

"All things belong to all, and provided that men and women contribute their share of labor for the production of necessary objects, they are entitled to their share of all that is produced by the community at large. 'But this is communism,' you may say. Yes, it is communism, but it is the communism which no longer speaks in the name of religion or of the State, but in the name of the people. . . . The tendency of this closing century is toward communism, not the monastic or barrack-room communism formerly advocated, but the free communism which places the products reaped or manufactured in common at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home.

"This is the solution of which the mass of the people can most readily take hold, and it is the solution which the people demand at the most solemn epochs. In 1848 the formula 'From each according to his abilities, to each according to his needs' was the one which went straight to the heart of the masses, and if they acclaimed the republic and universal suffrage, it was because they hoped to attain to communism through them. In 1871, also, when the people besieged in Paris desired to make a supreme effort to resist the invader, what was their demand? That free rations should be served out to every one. Let all articles be put into one common stock and let them be distributed according to the requirements of each. Let each one take freely of all that is abundant, and let those objects which are less plentiful be distributed more sparingly and in due proportions—this is the solution which the mass of the workers understand best. This is also the system which is commonly practised in the rural districts (of France). So long as the common lands afford abundant pasture, what commune seeks to restrict their use? When brushwood and chestnuts are plentiful, what commune forbids its members to take as much as they want? And when the larger wood begins to grow scarce, what course does the peasant adopt? The allowing of individuals.

"Let us take from the common stock the articles which are abundant, and let those objects whose production is more restricted be served out in allowances according to requirements, giving preference to children and old persons—that is to say, to the weak. And, moreover, let all be consumed not in public, but at home, according to individual tastes and in company with one's family and friends. This is the ideal of the masses.

"But it is not enough to argue about 'communism' and 'expropriation'; it is furthermore necessary to know who should have the management of the common patrimony, and it is especially on this question that different schools of Socialists are opposed to one another, some desiring authoritarian communism, and others, like ourselves, declaring unreservedly in favor of anarchist communism. In order to judge between these two, let us return once again to our starting point, the revolution of the last century.

"In overturning royalty the Revolution proclaimed the sovereignty of the people; but, by

an inconsistency which was very natural at that time, it proclaimed not a permanent sovereignty, but an intermittent one, to be exercised at certain intervals only, for the nomination of deputies supposed to represent the people. In reality it copied its institutions from the representative government of England. The Revolution was drowned in blood, and, nevertheless, representative government became the watchword of Europe. All Europe, with the exception of Russia, has tried it, under all possible forms, from government based on a property qualification to the direct government of the little Swiss republics. But, strange to say, just in proportion as we have approached nearer to the ideal of a representative government, elected by a perfectly free universal suffrage, in that same proportion have its essential vices become manifest to us, till we have clearly seen that this mode of government is radically defective. Is it not, indeed, absurd to take a certain number of men from out the mass, and to intrust them with the management of all public affairs, saying to them, 'Attend to these matters; we exonerate ourselves from the task by laying it upon you; it is for you to make laws on all manner of subjects—armaments and mad dogs, observatories and chimneys, instruction and street-sweeping; arrange these things as you please and make laws about them, since you are the chosen ones whom the people have voted capable of doing everything?' It appears to me that if a thoughtful and honest man were offered such a post he would answer somewhat in this fashion:

"You intrust me with a task which I am unable to fulfil. I am unacquainted with most of the questions upon which I shall be called on to legislate. I shall either have to work to some extent in the dark, which will not be to your advantage, or I shall appeal to you and summon meetings in which you will yourselves seek to come to an understanding on the questions at issue, in which case my office will be unnecessary. If you have formed an opinion and have formulated it, and if you are anxious to come to an understanding with others who have also formed an opinion on the same subject, then all you need do is to communicate with your neighbors and send a delegate to come to an understanding with other delegates on this specific question; but you will certainly reserve to yourselves the right of taking an ultimate decision; you will not intrust your delegate with the making of laws for you. This is how scientists and business men act each time that they have to come to an agreement."

Argument

of taking an ultimate decision; you will not intrust your delegate with the making of laws for you. This is how scientists and business men act each time that they have to come to an agreement."

"But the above reply would be a repudiation of the representative system, and nevertheless it is a faithful expression of the idea which is growing everywhere since the vices of representative government have been exposed in all their nakedness. Our age, however, has gone still further, for it has begun to discuss the rights of the State and of society in relation to the individual; people now ask to what point the interference of the State is necessary in the multitudinous functions of society.

"Do we require a government to educate our children? Only let the worker have leisure to instruct himself, and you will see that, through the free initiative of parents and of persons fond of tuition, thousands of educational societies and schools of all kinds will spring up, rivaling one another in the excellence of their teaching. If

we were not crushed by taxation and exploited by employers, as we now are, could we not ourselves do much better than is now done for us? The great centers would initiate progress and set the example, and you may be sure that the progress realized would be incomparably superior to what we now attain through our ministries. Is the State even necessary for the defense of a territory? If armed brigands attack a people, is not that same people armed with good weapons the surest rampart to oppose to the foreign aggressor? Standing armies are always beaten by invaders, and history teaches that the latter are to be repulsed by a popular rising alone. While government is an excellent machine

No Need of the State

to protect monopoly, has it ever been able to protect us against ill-disposed persons? Does it not, by creating misery, increase the number of crimes instead of diminishing them? In establishing prisons into which multitudes of men, women, and children are thrown for a time, in order to come forth infinitely worse than when they went in, does not the State maintain nurseries of vice at the expense of the taxpayers? In obliging us to commit to others the care of our affairs, does it not create the most terrible vice of societies—indifference to public matters?

"Let others, if they will, advocate industrial barracks or the monastery of authoritarian communism, we declare that the tendency of society is in an opposite direction. We foresee millions and millions of groups freely constituting themselves for the satisfaction of all the varied needs of human beings—some of these groups organized by quarter, street, and house; others extending hands across the walls of cities over frontiers and oceans. All of these will be composed of human beings who will combine freely, and after having performed their share of productive labor will meet together, either for the purpose of consumption, or to produce objects of art or luxury, or to advance science in a new direction. This is the tendency of the nineteenth century, and we follow it; we only ask to develop it freely without any governmental interference. Individual liberty! 'Take pebbles,' said Fourier, 'put them into a box and shake them, and they will arrange themselves in a mosaic that you could never get by intrusting to any one the work of arranging them harmoniously.'

"Now let me pass to another part of my subject—the most important with respect to the future.

"There is no more room for doubting that religions are going; the nineteenth century has given them their death-blow. But religions—all religions—have a double composition. They contain, in the first place, a primitive cosmogony, a rude attempt at explaining nature, and they furthermore contain a statement of the public morality born and developed within the mass of the people. But when we throw religions overboard or store them among our public records as historical curiosities, shall we also relegate to museums the moral principles which they contain? This has sometimes been done, and we have seen people declare that as they no longer believed in the various religions, so they despised morality and boldly proclaimed the maxim of *bourgeois* selfishness, 'Every one for himself.' But a society, human or animal, cannot exist without certain rules and moral habits springing up within it; religion may go, morality remains.

If we were to come to consider that a man did well in lying, deceiving his neighbors, or plundering them when possible (this is the middle-class business morality), we should come to such a pass that we could no longer live together. You might assure me of your friendship, but perhaps you might only do so in order to rob me more easily; you might promise to do a certain thing for me, only to deceive me; you might promise to forward a letter for me, and you might steal it, just like an ordinary governor of a jail. Under such conditions society would become impossible, and this is so generally understood that the repudiation

of religions in no way prevents public morality from being maintained, developed, and raised to a higher and ever higher standard. This

fact is so striking that philosophers seek to explain it by the principles of utilitarianism, and recently Spencer sought to base the morality which exists among us upon physiological causes and the needs connected with the preservation of the race.

"Let me give you an example in order to explain to you what we think on the matter.

"A child is drowning, and four men who stand upon the bank see it struggling in the water. One of them does not stir; he is a partizan of 'Each one for himself,' the maxim of the commercial middle class; this one is a brute, and we need not speak of him further. The next one reasons thus: 'If I save the child, a good report of my action will be made to the Ruler of heaven, and the Creator will reward me by increasing my flocks and my serfs,' and thereupon he plunges into the water. Is he, therefore, a moral man? Clearly not! He is a shrewd calculator, that is all. The third, who is a utilitarian, reflects thus (or at least utilitarian philosophers represent him as so reasoning): 'Pleasures can be classed in two categories, inferior pleasures and higher ones. To save the life of any one is a superior pleasure, infinitely more intense and more durable than others; therefore, I will save the child.' Admitting that any man ever reasoned thus, would he not be a terrible egotist? and, moreover, could we ever be sure that his sophistical brain would not at some given moment cause his will to incline toward an inferior pleasure—that is to say, toward refraining from troubling himself? There remains the fourth individual. This man has been brought up from his childhood to feel himself *one* with the rest of humanity; from his childhood he has always regarded men as possessing interests in common; he has accustomed himself to suffer when his neighbors suffer, and to feel happy when every one around him is happy. Directly he hears the heartrending cry of the mother, he leaps into the water, not through reflection, but by instinct; and when she thanks him for saving her child, he says, 'What have I done to deserve thanks, my good woman? I am happy to see you happy; I have acted from natural impulse, and could not do otherwise!'

"You recognize in this case the truly moral man, and feel that the others are only egotists in comparison with him. The whole anarchist morality is represented in this example. It is the morality of a people which does not look for the sun at midnight—a morality without compulsion or authority, a morality of habit. Let us create circumstances in which man shall not be led to deceive nor exploit others, and then by the very force of things the moral level of

humanity will rise to a height hitherto unknown. Men are certainly not to be moralized by teaching them a moral catechism; tribunals and prisons do not diminish vice—they pour it over society in floods. Men are to be moralized only by placing them in a position which shall contribute to develop in them those habits which are social, and to weaken those which are not so. A morality which has become instinctive is the true morality, the only morality which endures while religions and systems of philosophy pass away.

"Let us now combine the three preceding elements, and we shall have anarchy and its place in socialistic evolution.

"Emancipation of the producer from the yoke of capital; production in common and free consumption of all the products of the common labor.

"Emancipation from the governmental yoke; free development of individuals in groups and federations; free organization ascending from the simple to the complex, according to mutual needs and tendencies.

"Emancipation from religious morality; free morality, without compulsion or authority, developing itself from social life and becoming habitual.

"The above is no dream of students, it is a conclusion which results from an analysis of the tendencies of modern society; anarchist communism is the union of the two fundamental tendencies of our society—a tendency toward economic equality and a tendency toward political liberty. So long as communism presented itself under an authoritarian form, which necessarily implies government, armed with much greater power than that which it possesses to-day, inasmuch as it implies economic in addition to political power—so long as this was the case communism met with no sufficient response. Before 1848 it could, indeed, sometimes excite for a moment the enthusiasm of the worker who was prepared to submit to any all-powerful government, provided it would release him from the terrible situation in which he was placed, but it left the true friends of liberty indifferent.

"Anarchist communism maintains that most valuable of all conquests—individual liberty—and moreover extends it and gives it a solid basis—economic liberty—without which political liberty is delusive; it does not ask the individual who has rejected God, the universal tyrant, God the king, and God the Parliament, to give unto himself a god more terrible than any of the preceding—God the community, or to abdicate upon its altar his independence, his will, his tastes, and to renew the vow of asceticism which he formerly made before the crucified God. It says to him, on the contrary, 'No society is free so long as the individual is not so! Do not seek to modify society by imposing upon it an authority which shall make everything right; if you do, you will fail as popes and emperors have failed. Modify society so that your fellows may not be any longer your enemies by the force of circumstances; abolish the conditions which allow some to monopolize the fruit of the labor of others; and instead of attempting to construct society from top to bottom, or from the center to the circumference, let it develop itself freely from the simple to the composite, by the free union of free groups. This course, which is so much obstructed at present, is the true, forward march of society;

do not seek to hinder it, do not turn your back on progress, but march along with it! Then the sentiment of sociability which is common to human beings, as it is to all animals living in society, will be able to develop itself freely, because our fellows will no longer be our enemies, and we shall thus arrive at a state of things in which each individual will be able to give free rein to his inclinations, and even to his passions, without any other restraint than the love and respect of those who surround him."

"This is our ideal, and it is the ideal which lies deep in the hearts of peoples—of all peoples. We know full well that this ideal will not be attained without violent shocks; the close of this century has a formidable revolution in store for us; whether it begins in France, Germany, Spain, or Russia, it will be a European one, and spreading with the same rapidity as that of our fathers, the heroes of 1848, it will set all Europe in a blaze. This coming revolution will not aim at a mere change of government, but will have a social character; the work of expropriation will commence, and exploiters will be driven out. Whether we like it or not, this will be done independently of the will of individuals, and when hands are laid on private property we shall arrive at communism, because we shall be forced to do so. Communism, however, cannot be either authoritarian or parliamentary, it must either be anarchist or non-existent; the mass of the people does not desire to trust itself again to any savior, but will seek to organize itself by itself."

HISTORY AND METHODS OF ANARCHIST COMMUNISM

Anarchist-communism, tho more or less indebted to the thoughts of Rousseau, Proudhon, Ruge and others, owes its origin as a movement to the Russian Bakounin. Born of

Origin

aristocratic and even princely parentage, Michael Bakounin, at first an officer in the Russian army, threw up his commission at the age of twenty-one, disgusted by the oppression of the government and the consequent sufferings of the poor, and studied philosophy, reading Hegel and Schopenhauer in St. Petersburg and Berlin. Coming into revolutionary circles mainly under the influence of Arnold Ruge, who represented the extreme Hegelian left, Bakounin took part in the Dresden insurrection of 1848, and was arrested and condemned to death, but eventually handed over to the Russians and imprisoned in Schlüsselberg and in 1853 sent to Siberia, whence, however, he eventually escaped through Japan and the United States, and in 1861 appeared in London, a revolutionist, declared by his enemies to be half crazed by his years of suffering and imprisonment. Be this as it may, he threw himself into revolutionary propaganda of every kind, mainly as an Internationalist, but sometimes as a Panslavist, and occasionally as a Nihilist. Switzerland, Italy, and southern France were the main scenes of his efforts, but he contrived to fill all Europe with his spirit of revolution. Gradually his utterances became wilder and his position more extreme. He commenced to preach the gospel of pan-destruction. When the INTERNATIONAL was founded in London under the presidency of Marx in 1864, Bakounin did not at first connect himself with it. But later, realizing what capital could be made of it, he threw himself into the movement, and almost captured the International for anarchism. He did capture it in Italy, Spain, southern France, Belgium, and to a large extent in Switzerland and other countries. In 1872, however, Marx as president contrived to have the congress of the International called at The Hague, where Bakounin could not come, since he was only secure in Switzerland, and would have been arrested in traversing any country through which he could have reached The Hague. At this congress, therefore, the adherents of Bakounin were defeated, and the General Council of the International was transferred to New York City. It resulted in the death of the International; but out of the split came the modern movements of democratic socialism and anarchist-communism, economic schools which, altho previous to 1872 more or less confounded, are now utterly distinct and even opposed. The ultimate ideals of the followers of Marx and Bakounin were not, however, so different. They both believed in communism, and communism was the early name for all socialism as well as for anarchist-communism; the split came in methods. The followers of Bakounin believed in destroying the State; Marx stood for capturing the State by legitimate political means,

and through the State establishing the Social Democracy or communism. Both opposed the present State; but one sought to overturn it at once by force, the other sought to capture it and use it.

For a considerable time the anarchist-communists, especially in the southern countries, were stronger than the Socialists. The working classes did not see the strength of the Socialist program. Anarchist-communism appealed to revolutionary deed. Words, its advocates declared, were cheap. The propaganda by deed has ever been the favorite policy among anarchist-communists, being defended, tho not practised, even by such men as Krapotkin and Réclus. But organization among anarchists has never prospered. Their policy lends itself to individual deed. Bakounin did not quietly accept his defeat by Marx at The Hague. He and his adherents called another congress in Switzerland, and declared that they were the true International. From this time anarchist-communism had an organized existence. (For further details as to the preceding period, see BAKOUNIN; INTERNATIONAL.)

In 1876 Bakounin died, Elisée Réclus, Paul Brousse, and others gathering around his grave, ready to carry on his work. In October of the same year a congress was held at Bern and enunciated the principles of anarchist-communism, altho still under the name of

Organization

Socialism. It denounced even the Paris Commune, as not having entirely eliminated the principle of authority. At this congress were present two Italian delegates, Carlo Cafiero and Enrico Malatesta, who in April, 1877, went home to head a revolution in the Italian province of Benevento. They burnt archives, and laid their hands on what arms and money they could find, distributing them among the people. The same year a congress was held at Verviers, where Krapotkin first appeared on the scene under the name of Scrahoff. In 1878, Brousse and Krapotkin commenced publishing the *Avant-Garde*, the first anarchist organ. The same year, Nobeling and Hodel made their attack upon Kaiser Wilhelm at Niederwald; the cooper Broncasi attempted the life of Alfonso XII., and Passanante the life of King Humbert I. of Italy. At a congress at Freiburg that year, a letter from Réclus made the following succinct statement of anarchist-communism: "We are revolutionaries," he said, "because we desire justice. . . . Progress has never resulted from mere peaceful evolution; it has always been an outcome of a sudden revolution. The necessary preliminary preparation of the minds of men may be a gradual process, but the realization of their hopes comes abruptly. . . . We are anarchists, who recognize no one as our master, as we are ourselves the masters of nobody. There is no morality without liberty. . . . We are also international collectivists, for we are aware that the very existence of human beings necessarily implies a certain social grouping." The congress voted for the appropriation by the community of all wealth, the abolition of the State, and even of any central administrative agency; and as regards means of propaganda, the congress favored the dissemination of anarchist ideas, and even rebellion and revolutionary deed. In 1879 the *Avant-Garde* ceased to appear, and Krapotkin and others started a new paper, the *Revolte*, at Geneva (later moved to Paris). The same year Johann Most, expelled from Germany and driven from the Socialist meetings, arrived in London, Dec., 1878, and in Jan., 1879, began publishing his paper, *Freiheit*.

In 1880 Otero Gonzales attempted the life of Alfonso XII. At a congress held in Switzerland in this year, Krapotkin advised the adoption of the name "Anarchist-Communism" in the place of "Collectivism." In 1881 the French anarchists and Socialists finally separated, and a congress of anarchists was held at London. Krapotkin was banished from Switzerland for his utterances; Most, in London, was sentenced to sixteen months' hard labor for his words concerning the assassination of the czar. At the close of the sixteen months he removed, with his paper, to the United States. There were outbreaks in southeast France, and many discoveries of dynamite plots were reported. Anarchists were arrested all through southern France. In the north, Louis Michel delivered a series of lectures. The daughters of Elisée Réclus ostentatiously contracted "free marriages." Krapotkin himself was arrested. In 1883 the anarchist trials in France took place, and forty-seven were sentenced, among them Louis Michel. All through Europe at this time anarchists were being arrested and sentenced. In Spain a campaign was undertaken against the Black Band. In December Cyvoct was tried at Lyons for having caused the explosion at Bellecour Theater, and was sentenced to death, but the sentence was commuted by President Grévy. The year 1884 was comparatively calm, tho dynamite was found laid against the Federal Palace at Bern, and led to the expulsion of anarchists from Switzerland. In 1885 German anarchists were tried. Krapotkin published this year his "Paroles d'un Révolté" and Réclus his "The Products of the Earth." An attempt was also made to blow up the English House of Parliament. In 1886 there were several riots in Europe, especially at Charleroi, and the great strike at Chicago took place, with the famous Haymarket meeting, the arrest of eight anarchists, and the condemnation of seven of them to death (in 1887). (See CHICAGO ANARCHISTS.) In 1887 *L'Idée Ouvrière* was started at Havre. In 1888 the *Père Peinard* began to appear in Paris, a paper written in the slang of the

streets. In 1890 the first international May-day demonstration took place, and the anarchists took advantage of it in incendiary speeches and gatherings. Merlino, Malato, and Louise Michel were imprisoned. *The International*, an anarchist paper, was started in London. In 1891 French anarchists agitated chiefly against the army and the police. At Levallois the black flag was unfurled.

History

Several anarchist papers were started, among them the *Pot à colle* and the *En-dehors*. In 1892 bombs were exploded in France in private houses of deputies and at cafés, among others at the Café Rich. In June one of the dynamiters, Ravachol, was condemned to death, and executed in July. In 1893 there was more violence in Spain. Pallas was tried and executed for throwing a bomb at Marshal Campos at Barcelona, and there was also a terrible bomb explosion at the El Liceo Theatre in Barcelona. On Dec. 9th, Vaillant threw a bomb in the French Chamber of Deputies. In 1894 severe laws against anarchists were passed in France and other countries; 100 anarchists were arrested in France alone and several deported. The papers *Revolte* and *Père Peinard* were seized and compelled to discontinue. Jean Grave, the leading anarchist-communist after Kropotkin and Réclus, was imprisoned. Vaillant was executed. Emile Henry threw a bomb in the Café Terminus. Bombs were exploded also in the Hôtel St. Jacques and other houses. An attempt was made to murder the prefect of Barcelona. An Italian anarchist, Cossario Santo, assassinated the French President, Carnot, at Lyons. Restrictive legislation in Italy sought not only to arrest all anarchists, but to close all trade-union meetings. In Germany the kaiser introduced severe measures against both anarchism and socialism, which, however, were rejected by the Reichstag.

In 1893 an attempt was made to hold an anarchist-communist congress in connection with the World's Fair at Chicago, but it had to meet surreptitiously on account of the police, and when it met its members could agree upon no program nor declaration of principles, tho it is said that an international committee was chosen. In America anarchist communism has held on to the name of the old International longer than in Europe. In 1872, as we have

America

seen, the general council of the International was transferred at Marx's suggestion to New York City. But in this country it never thrived. The fundamental differences between the Socialists and the anarchists soon showed themselves here, as in Europe. In 1877, the Socialist wing, in a meeting at Newark, took the name of the Socialist Labor Party (see Socialism), and practically left the International to the anarchists. The split, however, was not at once complete. In 1883 the Socialists met at Baltimore and the anarchists at Pittsburg, and these took the old name of the International Working People's Association. By 1885 the split with the Socialists was complete, and since then in America, as in Europe, anarchists and Socialists have had nothing in common. The congress at Pittsburg adopted unanimously a manifesto or declaration of motives and principles, often called the Pittsburg proclamation, in which they describe their ultimate goal in these words:

"What we would achieve is, therefore, plainly and simply:
1. Destruction of the existing class rule, by all means—i. e., by energetic, relentless, revolutionary, and international action.

2. Establishment of a free society based upon cooperative organization of production.

3. Free exchange of equivalent products by and between the productive organizations without commerce and profit-mongery.

4. Organization of education on a secular, scientific, and equal basis for both sexes.

5. Equal rights for all without distinction to sex or race.

6. Regulation of all public affairs by free contracts between the autonomous (independent) communes and associations resting on a federalistic basis."

In 1881, however, another association was formed, designated by the initials I. W. A., or International Workmen's Association, differing in a few particulars only from the I. W. P. A. It lays greater stress on education and is somewhat less inclined to favor violence in the present, holding that a revolution in the minds of men must precede the political revolution. The following explanation of its principles and methods is taken from the "First Report of the Kansas Bureau of Labor Statistics":

"To print and publish and circulate labor literature; to hold mass-meetings; to systematize agitation; to establish labor libraries, labor halls, and lyceums for discussing social science; to maintain the labor press; to protect members and all producers from wrong; to aid all labor organizations; to aid the establishment of unity and the maintenance of fraternity between all labor organizations; to bring about an alliance between the manufacturing and the agricultural producers; to encourage the spirit of brotherhood and interdependence among all producers of every state and country; to ascertain, segregate, classify, and study the habits and acts of their enemies; to secure information of the wrongs perpetrated against them; and to record and circulate the same; to arouse a spirit of hostility against and ostracism of the capitalistic press; to prepare the means for directing the coming social revolution by enlightening public opinion on the wrongs per-

petrated against the producers of the world; to obliterate national boundary lines and sectional prejudices, with a view to the international unification of the producers of all lands; and to eradicate the impression that redress can be obtained by the ballot. The organization is formed on the 'group' system—that is, any person who subscribes to these principles may become an organizer. He organizes a group of eight besides himself. When this group becomes thoroughly conversant with the principles and methods of the organization, each member becomes an organizer and forms a group of his own; and this goes on indefinitely. North America is divided into ten divisions—the Canadian, the British Columbia, the Eastern States, the Middle States, the Western States, the Rocky Mountains, the Pacific Coast, the Southern States, the Mexican, and the Missouri Valley. Each division is presided over by a division executive of nine persons. The International was organized on its present basis on July 15, 1881, with fifty-four delegates, representing 320 'divisions,' or groups, composed of 600,000 members. The countries represented were France, Belgium, Holland, Germany, Austria, Italy, Spain, Switzerland, Russia, Siberia, Bulgaria, Rumania, Turkey, Egypt, England, Mexico, and the United States."

It is the agitation of these groups of the I. W. A. and the I. W. P. A. which produced what popular anarchistic communism there is in this country. But the movement has come to naught. The I. W. A. and the I. W. P. A. no longer exist save in the minds of a few half-crazed persons, and the only recent activity has been the publication of a paper and the occasional delivery of speeches by Most and others, which make "good copy" for the newspapers. There have been also a few attempts of devoted but fanatical men to assassinate men of wealth and influence, like Erick and Russell Sage; but these acts have been very rare. When an agitator like Most speaks, he will often get a large audience, who will cheer his utterances, but the movement has no power.

Among English workmen, too, there is little, if any, anarchism. The head of Oxford House, in East London, testified that there were no anarchists among the English working people, and that the last place possible for a man to arrive with bomb was East London. Among the foreign residents in London there are some anarchist clubs, and there is some anarchist-communism among the intellectual radicals, but it has little force.

During the last decade a marked change has taken place in the anarchist-communist field. Heretofore the line between it and individualist (or philosophic) anarchism has been clearly drawn, and the former was almost identical with the revolutionary movement—that is to say, with the party or organization that both preached and practised the so-called "propaganda by deed."

Recent Developments
The assassination of the Spanish minister Canovas (1897) did not attract much attention; but when the unoffending, really liberal and unhappy Empress of Austria was assassinated in Switzerland (1898) a decided reaction against indiscriminate murder took place among those who, by simple acquiescence, had permitted themselves to become identified with the revolutionary movement. Large numbers of these withdrew altogether, denouncing the last killing as wanton and unjustifiable, while others, led by their individualistic and pacific tendencies, came more and more to consider the egoist-anarchist (or Tuckerian) movement the most congenial atmosphere. Of course, open adhesion to this latter was not in many cases given, because the antipathy existing in the ranks of the communists against anything individualistic was so great and so deep-seated that it could not be quickly or very generally overcome. The result, therefore, was that many ceased their open allegiance to the cause of the dynamiters, without affiliating themselves formally with any other movement, altho quietly expressed sympathy with individualism became quite common.

It cannot be denied, too, that the tremendous advance of socialism in late years, apparently offering an immediate opportunity to overthrow the existing political régime, has attracted many of the more opportunist of the communists. These latter, however, were not displeased with the assassination, in 1900, of the King of Italy by Bresci, since Humbert was the responsible head of the repressive movement that was then being vigorously carried on by the Italian Government against all the open manifestations by labor-unions as well as those by the more radical reformers. Even the assassination of President McKinley at Buffalo by Leon Czolgosz in 1901, tho the act of one who was not actually affiliated with any definite movement, and who, so far as is known, acted wholly of his own volition, was not a particularly unwelcome deed to those communists who had been shocked by the killing of the Empress of Austria. Open and almost unqualified approval by the American press and public of the recent political assassinations in Russia has been pointed to by revolutionists as showing that it is not assassination of rulers *per se* that conservative people object to, but that they consider it reprehensible in other countries than those with an autocratic form of government merely because they feel that oppression by rulers has not yet reached a point where such tactics are justifiable. It becomes, therefore, merely a question of difference in opinion as to the quantitative valuation of the denial of liberty in countries having a more representative form of government. The individualist anarchists, as a rule, believe that assassination of rulers is

not justifiable where free speech and free press are not wholly denied; and this has come to be the real dividing line between them and the communists on the question of methods of propaganda.

Anarchist-communism in America now has no specific organ in English. *The Firebrand*, started on the Pacific coast some years ago, was moved to San Francisco and its name changed to *Free Society*; afterward it was moved successively to Chicago and to New York, and finally went out of existence in 1905.

Literature

Since then *The Demonstrator*, published at Lakebay, Washington, by a group of colonists, is the principal organ in English which at the present time shows any sympathy for communism, tho, as a matter of fact, the colony is founded upon individualistic principles, and probably a majority of the colonists are individualists. It is, moreover, about the only really successful colony of radical reformers, which many attribute to the fact that the utmost freedom in every direction is accorded to the colonists by their by-laws. The communists have organs in French and Italian in New York, San Francisco, Paterson, N. J., and Charleot, Pa., tho they are usually feebly supported and lead a precarious existence. *Mother Earth* is a small magazine recently founded in New York, and, altho having on its staff such revolutionists and communists as Emma Goldman and Max Baginsky, is not distinctively a communist organ, as some of its writers, present and prospective, are of individualist tendencies. The chief organ in German in America is *Freiheit*, edited for many years by John Most. In his death the militant revolutionists lost their most vigorous propagandist, altho his work was of such a nature that there was always a group who dissented violently from his methods as well as from his ideas. Voltairine de Cleyre is one of the most rational of the exponents of the doctrine that is now before the public, tho in recent years she has been prevented by ill health from being as active on the lecture platform as formerly. Her poems, are among the most effective of the literature of communism, but they are not collected in book form.

In France, Italy, and Spain the movement, tho not so vigorous as formerly, is still far from dormant, and has demonstrated its vitality by the continued publication of several newspapers, such as *L'Ere Nouvelle* and *Les Temps Nouveaux* (France), *Il Pensiero* (Italy), *El Progreso* (Spain), and a number of others. In England *The Freedom* is about the only paper to sustain the movement. The most prominent English anarchist communist is John Turner, who was detained under the immigration laws upon a recent visit to this country, and afterward ordered deported to England. He was imprisoned for more than three months at Ellis Island, pending an appeal of his case to the Supreme Court of the United States, but before the final decision was rendered he was released on bail, delivered a number of lectures in different parts of the country, and eventually returned voluntarily to England before the decision ordering his deportation was handed down. The recent release of Alexander Berkman, upon the expiration of his fifteen-year sentence in the penitentiary at Pittsburg, where he was incarcerated for an attempt upon the life of H. C. Frick, one of the steel magnates, has passed without any particular demonstration on the part of the communists, altho he is now doing some lecturing. Krapotkin, tho now quite old, is still the leading anarchist-communist of the world, tho the learned Elisée Réclus, recently deceased, was about his equal in popularity.

III.—Arguments against Anarchism

1. The argument against individualist anarchism is, first, that it starts from a false basis. The individual, say the philosophical opponents of anarchism, is not sovereign; he does not even exist. Man is not born to and never attains, nor can attain, individual sovereignty. From his birth to his death he is dependent upon his fellow-man, and ever must be so long as he is a social being. Society is not made up of units, but is one; and the sooner this is realized, and man no longer attempts an impossible individual sovereignty, the sooner will the individual find his true freedom in developing his inmost personality

in the unity of a perfect state. Anarchism is opposed thus, first, because it misreads the facts of individual life. Second, the opponents of anarchism assert that for anarchists to define the State as necessarily invasive, because states always have been more or less invasive, is to be illogical. The State, according to the anarchist's own admission, is a power, and has been, as at least most anarchists admit, in the past a necessary power. Why, then, throw away that power? Why—since some cooperative organization for defense and other purposes anarchists themselves declare necessary—not use the State, making it non-invasive? To say that the State cannot be harnessed to do the will of the people, because it never has been wholly so harnessed in the past, is as if a man before the discovery of the uses of electricity should declare that electricity always must be harmful, since it always had done harm. The fact is, say these critics, that the State, with all its evils—and they are to be admitted, every one—has in the past been immeasurably useful and beneficial, and should not be thrown away, but captured and improved and made to do the will of freemen.

2. As to the anarchist assertion that states have no right, for example, to compel any man to pay a tax, since no individual has a right to tax another, and the mere multiplying individuals into a majority cannot make that right in many persons which is wrong in one, it is said that this is purely a doctrinaire position of unproven ethics. That it seems axiomatic and convincing to a certain class of minds by no means proves its truth. The opposite assertion that the individual is born in society, and has as his only right to take his place in society, which is a natural unit, and not made up of individual units, and has rights and duties of its own, among others that of ordering the conditions of society according to the will of the majority, and compelling others to support it, is, it is claimed, as plausible a dogma as the anarchist dogma, and a good deal more deducible from facts. The truth is, that the science of social ethics is as yet so utterly undeveloped that to talk of what is ethically right in society is to say nothing. One man holds this opinion; another that; and neither can convince the other. The only possible way out of social problems, unless one take the religious ground of theism, and find in that a law of procedure, is to slowly learn by experience; believers in government, therefore, base their main arguments against anarchism on the facts of experience.

3. It will not work. Said President Andrews in a discussion with Mr. Tucker at Salem:

Suppose the citizens of Salem to constitute an anarchistic group under the beautiful social compact which Mr. Tucker describes. Not many days will elapse before some of the parties to that compact will show how useless it is. Let some rioters from Beverly or Beverly Farms invade the Salem group. The foreman of the town calls all hands to turn out and put them down. One man replies that he does not care to come out; he has the rheumatism, or he is reading a book, or engaged in some other work, and says, "I pray you, have me excused." What is going to be done? I know of no way in which the anarchistic group named Salem can defend itself—as Mr. Tucker says is legitimate—except by coercing Meroz to come up to the help of the Lord against the mighty. The anarchist must here renounce his theory and resort to some of those species of action which Mr. Tucker denounces as not permissible because of the nature of coercion, aggression upon individual rights.

Says another writer: "Some rule there must be under any theory. You cannot escape law.

If it is not the rule of brotherhood, it must be the rule of might. You do not escape rule by flying to anarchy. Says Mr. Donisthorpe, in his 'Individualism: A System of Politics': 'It is a mistake to suppose that anarchism is lawless. Nothing of the kind. Where there is no ruling body; where there is no governmental authority, as in San Francisco within the memory of many of us, what happens? Did the marauders and pests of society carry all before them? Not a bit of it. Those who had inherited the habits of a social and methodical mode of life, owing to its greater average economy, banded themselves together and straightway lynched those who were desirous of violating the principles of order and method.' This, says Mr. Donisthorpe, was anarchism. Exactly; and most people prefer Uncle Sam, with all his faults, to Judge Lynch."

Concerning the economic impossibilities of anarchism, G. Bernard Shaw says:

The full economic detail of individualist anarchism may be inferred with sufficient completeness from an article entitled "State Socialism and Anarchism; How Far They Agree, and wherein They Differ," which appeared in March, 1888, in *Liberty*.

"The economic principles of modern socialism," says Mr. Tucker, "are a logical deduction from the principle laid down by Adam Smith in the early chapters of his 'Wealth of Nations'—viz., that labor is the true measure of price. From this principle these three men [Josiah Warren, Proudhon, and Marx] deduced 'that the natural wage of labor is its product.'"

Now the Socialist who is unwary enough to accept this economic position will presently find himself logically committed to the Whig doctrine of *laissez-faire*. And here Mr. Tucker will cry, "Why not? *Laissez-faire* is exactly what we want. Destroy the money monopoly, the tariff monopoly, and the patent monopoly. Enforce then only those land titles which rest on personal occupancy or cultivation;* and the social problem of how to secure to each worker the product of his own labor will be solved simply by every one minding his own business."

Let us see whether it will or not. Suppose we decree that henceforth no more rent shall be paid in England, and that each man shall privately own his house and hold his shop, factory, or place of business jointly with those who work with him in it. Let every one be free to issue money from his own mint without tax or stamp. Let all taxes on commodities be abolished, and patents and copyrights be things of the past. Try to imagine yourself under these promising conditions with life before you. You may start in business as a crossing-sweeper, shopkeeper, collier, farmer, miller, banker, or what not. Whatever your choice may be, the first thing you find is that the reward of your labor depends far more on the situation in which you exercise it than on yourself. If you sweep the crossing between St. James' and Albemarle streets you prosper greatly. But if you are forestalled not only there, but at every point more central than, say, the corner of Holford Square, Islington, you may sweep twice as hard as your rival in Piccadilly, and not take a fifth of his toll. At such a pass you may well curse Adam Smith and his principle that labor is the measure of price, and either advocate a democratically constituted state Socialist municipality, paying all its crossing-sweepers equally, or else cast your broom upon the Thames and turn shopkeeper. Yet here again the same difficulty crops up. Your takings depend not on yourself, but on the number of people who pass your window per hour. . . .

It is useless to multiply instances. There is only one country in which any square foot of land is as favorably situated for conducting exchanges, or as richly endowed by nature for production as any other square foot; and the name of that country is Utopia. In Utopia alone, therefore, would occupying ownership be just. In England, America, and other places, rashly created without consulting the anarchists, Nature is all caprice and injustice in dealing with labor. Here you scratch her with a spade; and earth's increase and foison plenty are added to you. On the other side of the hedge twenty steam-diggers will not extort a turnip from her. Still less adapted to anarchism than the fields and mines is the crowded city. . . .

Such, in brief, is Mr. Shaw's argument. Anarchism aims to establish individual liberty; but as long as any occupier can have the best lands in agriculture and the best building lots, he can,

under free competition, receive enormous gains over his competitor—can with these gains buy machinery that others cannot afford, and run his competitors out of business, reenacting under anarchism all or most of the industrial evils that we have to-day—the development of great monopolies, the oppression of the small producer, wage slavery, the unemployed, etc. It is not government, but the natural inequalities of land and of human ability that are the fundamental source of the economic differences, and under competition the under dog must always serve the upper. The only way to individual freedom for all men is, then, to pool the difference of land and talent and have all work for all, which is collectivism. Such is, in brief, the "Socialist" argument against anarchism.

4. As to the anarchist communists, who are collectivists, it is said that for the poor, ignorant, and downtrodden to attempt to overthrow the state by force is but folly, no matter what the aim. To appeal to force will simply call out force, and the strong and rich and powerful will surely win. Moreover, to appeal to force without organization, as anarchist communists do, is to appeal to force in the weakest possible way. It may kill a few kings; it can never overthrow kingdoms. If it could overthrow the state it would simply produce a chaos, in which the strongest would rule and enact anything but equality on earth.

ANDREWS, ELISHA BENJAMIN; Chancellor of the University of Nebraska since 1900; born at Hinsdale, N. H., 1844. He served in the United States army, 1861-64, and was wounded at Petersburg (1864), losing an eye. Andrews studied at Brown University, Providence, R. I., and at Newton Theological Institution, Newton, Mass. (D.D., LL.D.). He was principal of the Connecticut Literary Institution, Suffield, Conn., 1870-72; pastor of the First Baptist Church, Beverly, Mass., 1874-75; president of Denison University, Granville, O., 1875-79; professor of homiletics in Newton Theological Institution, 1879-82; professor of history and political economy at Brown University, 1882-88; professor of political economy and finance in Cornell University, 1888-89; president of Brown University, 1889-98; superintendent of schools, Chicago, 1898-1900. Andrews was appointed one of the commissioners sent by the United States to the monetary conference at Brussels in 1892. In political economy he is of the historical school. On the question of the tariff, he believes in the infant-industry argument, and would carry it further than Mill. With regard to currency he is an ardent bimetalist; and on questions of industry he would neither nationalize nor municipalize any industry, monopoly or otherwise, till every available resource in the way of regulation had been tried in vain; he would then nationalize or municipalize, tho with care. Author: "Institutes of Our Constitutional History, English and American" (1887); "Institutes of General History" (1889); "Institutes of Economics" (1889); "An Honest Dollar" (1893); "Wealth and Moral Law" (1893); "History of the United States" (1894); "History of the United States in Our Own Time" (1904). Address, Lincoln, Neb.

ANDREWS, STEPHEN PEARL; Author; born in Templeton, Mass., 1812; studied at Amherst College; practised law in New Orleans. In 1839

* See Mr. Tucker's article entitled "A Singular Misunderstanding" in *Liberty* of Sept. 10, 1892. "Regarding land," writes Mr. Tucker, "it has been steadily maintained in these columns that protection should be withdrawn from all land titles except those based on personal occupancy and use."

he went to Texas where, becoming an abolitionist, he converted many of the slave owners, who were also landowners, by showing them that they would become rapidly rich from the sale of land if immigration were induced by throwing the country open to free labor. In 1843 he went to England in the hope of raising money to pay for the slaves and make Texas a free state. He was well received; but the plan was finally abandoned through fear that it would lead to war with the United States. Returning to America, he went to Boston and took part in the antislavery movement there.

While in England he learned of phonography, and after his return wrote and published extensively on that subject and on the philosophy of language in general. He was the founder of the present system of phonographic reporting, and is said to have been familiar with thirty languages. In later life he wrote more on sociology, especially on the family, taking an extremely individualistic position. He is claimed by the American philosophical anarchists as one of their great writers. (See ANARCHISM.) His most important works on that subject are: "Cost the Limit of Price" (New York, 1851); "The Constitution of Government in the Sovereignty of the Individual" (1851); "Love, Marriage, and Divorce and the Sovereignty of the Individual": a discussion by Henry James, Horace Greeley, and Stephen Pearl Andrews, edited by the latter (1853). Andrews died in New York City in 1886.

ANIKIN, STEPAN VASILIEVICH: Representative in the first Russian Duma from the province of Saratof; born 1869, of peasant parents. He attended a mechanical school at Saratof, and later was a zemstvo teacher in the county schools at Athar and Petrovsk. After numerous difficulties with the local authorities he was twice imprisoned. In the Duma he became a leader in the "Group of Toil." He died in Kief prison in 1907.

ANSEELE, EDOUARD: A leading Belgian Socialist and founder of the Socialist cooperative movement in Ghent. Born in Ghent, 1856; son of a shoemaker; studied at the royal atheneum of that city; became a notary and later a typesetter. Founded (1879) the "Vooruit," a Socialist cooperative club, with which was connected a cooperative bakery. This was the beginning of the great Socialist cooperative movement. (See BELGIUM.) Anseele is editor of the *Vooruit*, and treasurer of the International Socialist Committee. He was elected deputy from Liège in 1894 and 1898, and from Ghent, 1900; and was common councilor in Ghent in 1895. He is the author of various Socialist tracts, and of a Flemish socialistic novel for which he suffered six months' imprisonment.

ANTHONY, SUSAN BROWNELL: Lecturer, abolitionist, woman suffragist; born at South Adams, Mass., 1820. After completing her education, Miss Anthony taught in New York State from 1835-50. She first spoke in public in 1849, and from that time took part in the temperance movement, organizing societies and lecturing. Through her exertions and those of Mrs. E. C. STANTON, women came to be admitted to educational and other conventions, with the right to speak, vote, and serve on committees. This, however, was only gained after great opposition and public ridicule. About 1857 she became

prominent among the agitators for the abolition of slavery. In 1858 she advocated the coeducation of the sexes. Since then her energies were chiefly directed to securing equal civil rights for women. In 1854-55 she held conferences in each county of New York in the cause of female suffrage. She was active in finally securing the passage of the act of the New York Legislature of 1860, giving to married women the possession of their earnings, the guardianship of their children, etc. During the war she devoted herself to the Women's Loyal League, and obtained 400,000 signatures to a petition in favor of the Thirteenth Amendment. In 1860 she started a petition in favor of leaving out the word "male" in the Fourteenth Amendment. In 1867 she went to Kansas with Elizabeth Cady Stanton and Lucy Stone, and there obtained 9,000 votes in favor of woman suffrage. In 1868, with the cooperation of Mrs. Stanton, Parker Pillsbury, and George F. Train, she began in New York City the publication of a weekly paper called *The Revolution*, devoted to the emancipation of women. In 1869, with Mrs. Stanton, she organized the National Woman's Suffrage Association. In 1872 she cast ballots at the state and congressional election in Rochester, in order to test the application of the Fourteenth and Fifteenth Amendments of the United States Constitution. She was indicted for illegal voting, and was fined by Justice Hunt; but in accordance with her defiant declaration, she never paid the penalty. Between 1870 and 1880 she lectured in all the Northern and several of the Southern States more than 100 times a year. In 1881 she wrote, with the assistance of her coeditors, Elizabeth Cady Stanton and Matilda Joslyn Gage, "The History of Woman Suffrage," in two volumes. In 1883, with Mrs. Stanton, she began in Europe the movement which led to the International Council of Women, held in Washington, 1888. In 1904, in her eighty-fourth year, she attended the International Council of Women in Berlin. She died in 1906, honored and loved.

ANTI-CIGARET LEAGUE, THE NATIONAL: Incorporated in 1901 as the outgrowth of the work of Miss Lucy Page Gaston, in 1897, as editor of *The Christian Citizen*, the organ of the National Christian Citizenship League, and as national superintendent of Christian citizenship in the W. C. T. U. The object of the National Anti-Cigaret League is to organize a national movement for the purpose of combating by all legitimate means the cigaret habit, and the use of tobacco in any form by boys. In furtherance of this object the National Anti-Cigaret League proposes to bring into cooperation all forces honestly working toward the same end in all countries; to hold public meetings; publish and circulate literature; to organize and maintain anti-cigaret leagues, and in every way possible to make sentiment against the manufacture, sale, and use of cigarets, giving special attention to needed legislation and to the enforcement of existing laws on this subject.

The league works by having anti-cigaret bills introduced in legislatures, by organizing anti-cigaret clubs in schools and elsewhere, by holding meetings, and by circulating pledges and literature, especially its monthly organ, *The Boy Magazine*, edited by Miss Gaston. A very large agitation on the subject has been created, and bills introduced in many state legislatures. President, David Paulman, M. D.; superintendent,

Miss Gaston; corresponding secretary, Mrs. Caroline F. Grow, 1119 Woman's Temple, 184 La Salle Street, Chicago, Ill.

In England also there has been considerable agitation of the subject. An International Anti-Cigarette League was formed in 1901, the founder and secretary being Rev. Frank Johnson, 57-59 Ludgate Hill, London.

ANTI-IMPERIALIST LEAGUE, THE: Formed 1898. Its constitution says: "This league was organized to aid in holding the United States true to the principles of the Declaration of Independence. It believes that governments derive their just powers from the consent of the governed, and holds self-government to be fundamental, and good government but incidental. It demands for all people under the United States government the rights guaranteed by the Constitution. Its object is by all proper means to oppose as inconsistent with American ideals the forcible extension of the sovereignty of the United States over foreign peoples and in particular to work constantly for the early and complete independence of the Philippine Islands." The league has enrolled a very large number of influential men as vice-presidents, and for several years after its organization was very active in holding meetings and issuing tracts and circulating literature. President, Moorfield Storey; secretary, Erving Winslow, 20 Central Street, Boston, Mass.

ANTIMONOPOLY PARTY: Organized at Chicago, May 14, 1884. It nominated Benjamin F. Butler, of Massachusetts, for the presidency. Its platform demanded economical government, the passage and enforcement of equitable laws, including an interstate commerce law, labor bureaus, industrial arbitration, a direct vote for senators, a graduated income tax, payment of the national debt as it matures, and "fostering care" for agriculture. It denounced the tariff and the grant of land to corporations. Its nominee was also indorsed by the GREENBACK PARTY, and polled 130,000 votes.

ANTIPOVERTY SOCIETY, THE: Founded in New York City in connection with the Henry George movement of 1885-87. It was formed as a society, under the auspices of which "Father McGlynn" could conduct his work for land reform, which was then assuming large proportions.

The object of the society was "to spread, by such peaceable and lawful means as may be found most desirable and efficient, a knowledge of the truth that God has made ample provision for the needs of all men during their residence upon earth, and that poverty is the result of the human laws that allow individuals to claim as private property that which the Creator has provided for the use of all."

The president was Dr. McGlynn. The first public meeting was held May 1, 1887, in Chickering Hall, and public meetings were continued for many months amid intense excitement. This was largely due to the personal interest taken in Dr. McGlynn and in his contest with his archbishop and the papal authorities. As that passed away the excitement of the movement gradually dwindled, and the meetings ceased. (See GEORGE, HENRY; LAND; MCGLYNN; SINGLE TAX.)

ANTIPURITAN LEAGUE, THE: Formed in London with the object of fighting against "Puri-

tanism." It seeks to enrol those who resent Puritan domination, so that they may become as potent a force at elections as the Puritans are at the present time. The league stands for the recognition of the right of every citizen to decent and humane recreation. It advocates temperance in pleasures, instead of abstinence from them, and a rational use of the Sunday, instead of Sabbatarianism. It views with alarm the growing power of what may be called the Puritan party in English national and municipal politics. Those who regard half of human life as inherently vile, who look upon a dance or the drinking of a glass of beer as a mortal sin, are a small minority of the people of England. But they are admirably organized, and are consequently able to get their representatives elected to municipal bodies, and to frighten timid candidates into pledging themselves to their policy.

The league aims at organizing the forces which can be directed against coercive Puritanism, at bringing home to the mind of the ordinary citizen the dangers which its domination involves, and at educating the public mind to a saner view of public enjoyment. Its manifesto, from which this account is taken, is signed by such men as Hubert Bland, G. K. Chesterton, Stewart D. Headlam, Conrad Noel, and Cecil Chesterton, who is the honorary secretary. Address: 11 Warwick Gardens, Kensington, W., London, England.

ANTIRENTERS: An organization which from 1839 to 1849 resisted the collection of rent on certain manorial estates in New York State. Large portions of Columbia, Rensselaer, Greene, Delaware, and Albany counties, in the State of New York, belonged to manors, the original grants of which were made to "patroons" by the Dutch Company and renewed by James II. The tenants had deeds for their farms, but paid annual rental in kind, instead of a principal sum. After 1790 this arrangement caused growing dissatisfaction among the tenants, and in 1839 they refused to pay rent and began a reign of terror. In 1847 and 1849 the Antirenters "adopted" a part of each state ticket, and showed a voting strength of about 5,000. In 1850 the legislature directed the attorney-general to bring suit to try title. The suit was decided in 1850, but both parties were then ready to compromise—the owners by selling the farms at fair rates, and the tenants by paying for them.

ANTI-SALOON LEAGUE OF AMERICA, THE: The Ohio branch, formed in Oberlin in 1893, was the first state league organized. Rev. Howard H. Russell was the chief factor in its formation, and the first state superintendent. In 1895, at a meeting called in Washington, D. C., he was chosen national superintendent and organizer. There are now forty-three states and territories organized. About 350 people, including stenographers and mailing-clerks, are giving their entire time to the work of the league. The league publishes thirty-six state papers (thirty-two monthlies and four weeklies), with an aggregate circulation of nearly a quarter of a million.

The object of the league is the most radical repression and ultimate suppression of the liquor traffic. Its method is the federation of existing agencies—especially the churches. Its departments of activity are agitation, legislation, and law enforcement. It is interdenominational and

omnipartizan. Each state league is busily engaged in securing advanced legislation in harmony with the growing public sentiment, and in putting into operation such legislation wherever possible. Hundreds of towns and cities, townships and counties, are abolishing the saloons under the local option laws that have been secured through the efforts of the league in different states.

The national league, with offices at Washington, D. C., and Columbus, Ohio, is seeking advanced legislation in Congress, in harmony with the legislation that is being secured in the several states. General superintendent, Rev. P. A. Baker, Columbus, Ohio; assistant general superintendent, Rev. G. W. Young, D.D., Louisville, Ky.; superintendent of the legislative department, Rev. Edwin C. Dinwiddie, Washington, D. C.; attorney of the national league, Mr. Wayne B. Wheeler, Columbus, Ohio.

ANTISLAVERY: For the American Antislavery Society, see **ABOLITION MOVEMENT**; for foreign societies, see **BRITISH AND FOREIGN ANTISLAVERY SOCIETIES**.

ANTITUBERCULOSIS: See **TUBERCULOSIS**.

APPLEGARTH, ROBERT: Manufacturer, trade-unionist; born at Hull, England, 1833. Unapprenticed, he picked up the trade of a joiner and cabinet-maker, moved to Sheffield in 1852, and soon became the most prominent member of the local Carpenters' Union, inducing it to unite with the Amalgamated Society of Carpenters and Joiners in 1861. From 1862 to 1871 he held the office of general secretary of this organization, voluntarily resigning at last. He was an unsuccessful candidate for the London School Board from Lambeth in 1870; and was invited to be a candidate for Parliament at Maidstone, but retired in favor of Sir John Lubbock. In 1871 he was appointed a member of the Royal Commission on the Contagious Diseases Act. Resigning his secretaryship he entered journalism for a time, but before long became foreman to a firm manufacturing engineering and diving apparatus, eventually becoming proprietor of the business. He always retained his interest in trade-unionism. Mr. Applegarth sought to win for the trade-union organization a social and political status, and was, in his day, an ideal representative of the labor movement in the political world.

APPONYI, ALBERT G. A.: Austro-Hungarian count; born in Vienna, 1846; leader (since 1891) of the National Hungarian Party; hereditary member of the House of Magnates; from 1900 to 1903 President of the House of Representatives; reconstituted his party in 1904. He is an active worker for international arbitration and in the movement for the International Parliament. Address: Schloss Eberhard, Presburg, Hungary.

APPRENTICESHIP: A system whereby a person, usually a minor, is bound by law or trade regulations to work for another in consideration of maintenance or money wages, and for the purpose of receiving instruction in some trade or art. The question of apprentices and the apprenticeship system has always been of more or less importance in the United States. During the earlier part of the nineteenth century it was the cause of a large number of strikes among the

workers who were suffering from the effects of an overcrowding of the trades by half-instructed apprentices and child laborers. It was partly for the purpose of correcting these abuses that the first national unions were organized in this country. Of late years, however, the question has again become prominent because of the agitation of the employers, who claim that the restrictions of the unions upon the number of apprentices allowed in each trade have caused a shortage of skilled labor, seriously interfered with the development of industry, and prevented the American boy from learning a trade.

The apprenticeship system is of comparatively recent origin, beginning as it did with the gild system of the Middle Ages. Adam Smith, in his "Wealth of Nations" (I. x. 2), states that "Apprenticeships were altogether unknown to the ancients. Roman law is perfectly silent in regard to them. I know no Greek or Latin word (I might venture, I believe, to assert that there is none) which expresses the idea we now annex to the word apprentice."

The gild system, with its handicraft methods, its production solely for local markets, its steady employment, uniform wages, and lack of business depressions and panics, made an ideal setting for a very complete and thorough system of apprenticeship. The youth was bound out, or indentured, by his parents to a master with whom he lived and in whose shop the trade was learned, the master agreeing to furnish the apprentice with food, clothing, and shelter, and to teach him the trade; the latter agreeing to obey the orders of the master, keep all business affairs secret; and behave himself properly under all conditions. In England the usual period of apprenticeship was about seven years; in France, from three or four years to six, and in Germany, from two to four years, after which the apprentice became a journeyman with all the rights and privileges of the latter. In 1513 an indenture fee of 2s. 6d. was charged in England by the masters, and under James I. this was increased.

The Statute of Apprentices (1562) legalized the practices and customs of the gild system. It declared that no person could engage in any trade without having served an apprenticeship of seven years; that the master must hire one journeyman for every three apprentices, and for every apprentice above this number, still another journeyman; that the hours of labor should be twelve in summer and from daybreak until nightfall in the winter; and that wages should be fixed by magistrates who were also empowered to settle all disputes arising between master and apprentice. This law was of the greatest value to the journeymen. It made their condition secure, and practically guaranteed steady employment at wages "sufficient for the hired person in times of need as well as in times of abundance."

With the development of industry, following closely upon the invention of the steam-engine, these regulations seriously interfered with the *laissez-faire* ideas of the employers, who chafed at the restrictions placed upon industry, at the fixation of the hours and wages of labor, and at the limitations to the freedom of competition. Consequently it is natural to expect that they should fight (as they did) the enforcement of the Statute of Apprentices as bitterly as the gilds, and that the unions should staunchly support it. With the passage of years, however, the law was practically nullified by being flagrantly disregarded by the employers. Skilled laborers were dismissed and their places filled with hundreds of child-workers and apprentices. Instances are recorded in which "manufacturers employed as many as a hundred apprentices for every two skilled workmen," with the result that many of the skilled trades were ruined because of the ignorance of the workers. At the same time child and woman labor appeared in its most horrible aspects. Wages, no longer fixed by magistrates but by the employers, were reduced again and again, while the hours of labor were correspondingly increased. In an attempt at satisfying the demands of the employers the courts then interpreted the law as applying only to towns and cities, and to those industries in existence at the time of its passage. In 1800 the woolen industry was freed from the restrictions, and in 1814 the law was repealed in toto. From that time to the present, apprenticeship in England has remained untouched by governmental regulations.

In the United States, during the first half of the nineteenth century, the matter of apprenticeship was a troublesome one for the workers. As early as June, 1803, we find the Philadelphia Typographical Society passing resolutions to the effect that "No member of this society shall be permitted to work at presswork with any person who is not a regularly bred, bound apprentice till twenty-one years of age, except under penalty of expulsion."

In 1807 the same organization considered it advisable to hold a conference with the master printers and ask that none but its members or "at least men who have served a reg-

Gild System

In the United States

slar apprenticeship" be employed by them. In 1808 it fixed eighteen years as the age at which a person could be apprenticed, and in 1809 it set the period of apprenticeship for pressman or compositor at three years. No attempt, however, was made to limit the number of apprentices in this trade until 1835, in which year such a resolution was adopted by the New Orleans Typographical Society.

At that time the same struggle against the abuses of the apprenticeship system is to be noted in all lines of industry. T. V. Powderly, speaking of the latter portion of the first half of the nineteenth century, said that "The time of every session of the convention of every trade organization was taken up in discussing two measures, the question of wages and the regulation of the number of apprentices, other matters being of secondary importance." Employers considered it their unquestioned right and privilege to hire as many apprentices as they saw fit. With the use of labor-saving machinery the latter could produce as much as and at a lower price than could the skilled mechanics. It was in order to correct these abuses that several unions were formed at this time among the better class of workmen. The National Association of Hat Finishers (1854) was among the first of those formed for this purpose, and was followed in 1859 by the Iron Molders Union of America. Each of the journeymen molders had been compelled to accept two apprentices to be hired and taught by them, and it was only by means of their organization that they were able to put an end to this obnoxious system. The short-lived National Labor Union of 1860 declared for "a more rigid enforcement of the apprenticeship system as a preventive against filling the shops with botch mechanics." The Industrial Brotherhood followed it in 1874 by declaring in its preamble that it stood for the advancement of "the standard of American mechanics by the enactment and enforcement of equitable apprentice laws." Declarations of other unions at this time were to the same effect.

In the succeeding years the regulations and restrictions of the unions were so successful in removing the more flagrant abuses of the system, that for years this question has received comparatively little attention either from the public or from the workers themselves. Its decreasing importance is readily shown by the small number of strikes declared each year for the purpose of enforcing apprenticeship regulations, this number comprising but 17½ per cent of all strikes during the period 1881-86, and further decreasing to 1½ of 1 per cent during the period 1881-1900. It is further evidenced by the fact that the census for the year 1900 returned but 81,482 apprentices and helpers in sixteen trades and other miscellaneous industries, or 2.45 per cent of all workers engaged in those occupations.

The immediate cause of the lately renewed agitation concerning the apprenticeship question is the claim of the employers that the unions have restricted the number of apprentices to such an extent that it is impossible to obtain enough skilled mechanics to meet the industrial demands.

They are reiterating the arguments of the earlier unionists, that "the shops are being filled with botch mechanics" and that the "trade will be ruined unless a higher grade of labor is assured." The sources from which the larger factories formerly drew their supply of skilled workmen—i. e., (1) the small general shop, and (2) immigration—have practically disappeared. The large factory has absorbed the smaller, while the greater number of immigrants no longer come from the manufacturing countries of northern Europe. These conditions have resulted in demands for the establishment of manual training schools and trade-schools, and for the adoption of INDUSTRIAL EDUCATION. The sincerity of the employers in their demand for a better grade of mechanics is seriously questioned by the unionists, who note that this demand is linked with agitation for the "open shop" and the destruction of organized labor. The workers also feel that such schools would greatly add to the number of workmen in the trades, thus increasing competition, lowering wages, and making employment less continuous. They also fear that if a person learn his trade in a school, rather than by working with union men "upon the job," he will acquire ideas and opinions different from those of the laborers, and will be taught the tenets of non-unionism by his instructors, thus rendering

impossible the united action of the workers for their general betterment. It is impossible to predict the outcome of the agitation for industrial education and trade-schools, bitterly opposed as it is by the unions; yet, the permanent agreement between the Mason Builders' Association and the bricklayers' unions of Boston and vicinity, presents a very unique solution of the matter, as is shown by the following quotation taken from that agreement:

The parties to this agreement (the employing masons and the bricklayers' unions) agree that they will join in an effort to establish an institution in this city where all the trades shall be systematically taught, and that when such a school is established they will unite in the oversight and care of the same.

Just as the evolution of industry and the development of society made impossible the enforcement of gild regulations concerning apprentices, so the same causes have practically abolished the necessity for, and the practicability of, the further application or retention of the old system of apprentices in most trades and occupations. A few trades remain, however, in which handicraft still retains an important place, such as in stone-cutting, carpentry, bricklaying, jewelry repairing, etc.; and it is in these scattered trades that an apprenticeship system can be retained to advantage. But under the large-scale production of to-day, specialization, the minute division of labor, and the extended use of machinery have made it unnecessary that a worker serve an apprenticeship and thus be skilled in all branches of his trade. In an ordinary factory but one or two all-around mechanics are required, the remainder of the workers being machine hands, mere automatons, who feed the material into the machine and make but a small portion of the finished product. In the majority of cases the worker cannot learn all the branches of the trade even though he desired to do so, because of the fact that it is seldom that they are to be found under the roof of one establishment.

To learn all branches would thus necessitate a change of employers, and under such conditions a regular apprenticeship is impossible. Besides this, owing to our policy of standardization, the American factory turns out but a limited number of patterns or styles, and no necessity arises for the cultivation of individual skill or craft. Then, too, the employer seldom knows his trade well enough to teach it to his apprentices if he have any. He is engaged with the administrative side of the business, and knows but little of its mechanical processes. The workers, not being paid for teaching the apprentices, do not care to bother with them. The result is that the latter are usually left to pick up what they can of a trade by watching others, and sooner or later become what are known as "monkey-wrench mechanics." Many of the boys who enter a factory do not wish to spend three or four years in learning a trade. They desire to make money, and a job operating a machine will pay them higher wages and is more easily learned than a trade. This is also satisfactory to the employer, who desires that his workmen acquire speed and turn out a large product, rather than that they be taught all the branches of the trade as the unions require under an apprenticeship system. Even though the employer attempt to teach the trade to his apprentices, he realizes that in a short time after the completion of their

Present Agitation

Influence of Modern Methods

instruction they would undoubtedly leave his employ and enter that of another, perhaps his competitor. Another consideration which makes the retention of the old apprenticeship system impossible is the fact that employment in the United States is at the best an uncertain matter. Panics, strikes, business failures, etc., force the laborer to travel from shop to shop and from city to city in search of work. Such unstable conditions of industry make the serving of an apprenticeship in almost any trade a practical impossibility.

Several of the large corporations, especially in the metal trades, have established carefully worked-out systems of apprenticeship in connection with their factories, the most notable of these, perhaps, being that of the Baldwin Locomotive Works. Some of these corporations apprentice a youth for four years, some for three. Some use a form of indenture or agreement, while others demand a money deposit on the part of the apprentice, as evidence of his intention to complete the course of instruction, the deposit being returned at the close of the term, with an additional sum given as a reward for good behavior and faithfulness. The wages of the apprentice vary considerably, both with the practices of the firm with whom he is working and with the extent to which he has completed his term.

It is impossible to review here with any degree of thoroughness the various regulations placed by organized labor upon the hiring of apprentices. Only a general résumé of the situation, supplemented with a few specific examples, can be given. Apprenticeship regulations are fixed to a greater or less extent by the national union of the trade, but it seldom happens that these regulations are followed very closely by the local organizations. The latter may, and often do, make and enforce rules which differ greatly from those established by the national association, local conditions being the determining factor in each case.

Union Regulations

The usual term of apprenticeship is three or four years, altho in some cases a shorter or longer period is demanded, as, for example, in the case of the watch-case engravers who require five years, and the New York electrical workers who only require two years. It is an almost generally established rule that apprentices must begin their trade before the age of sixteen or seventeen, the upper limit to the apprenticeship period usually being twenty-one years. It is customary for the unions to limit the number of apprentices that may be hired by an employer. In some trades this number is very low, as is the case with the stone-cutters, who forbid the employment of more than one apprentice to fifteen cutters, or more than two to any number less than a hundred cutters. In other trades, however, the number is very much greater, the pressmen, as also the trunk and bag workers, allowing one apprentice for every four journeymen. In some cases apprentices are affiliated with the union of the journeymen of their craft, and are classed as "auxiliaries"; in others, they support separate organizations, altho in a very large number of cases they belong to no organization whatsoever. In some trades the apprentices are forced to work longer hours than the journeymen, but as a rule they are taught all the branches of the trade.

According to the New York Electrical Workers' Union, an apprentice is "a boy registered by the union, who is employed to do errands, carry material to or on the job, attend lockers, and assist the journeymen in testing, but for no other purpose. Apprentices must not encroach on the work of helpers, or work with tools." They must be under nineteen years of age and must serve for two years. A shop can have one apprentice for the first ten journeymen or part thereof, and one more for every additional ten journeymen above the first ten. The United Association of Journeymen Plumbers allows one apprentice to a shop; the International Association of Machinists restricts the employer to one apprentice per shop and one for every five journeymen; the Iron Molders' Union permits one apprentice to eight workmen; the Typographical Union, one to seven; and the Cigar Makers' Union one to five.

The system of apprenticeship adopted by the Mason Builders' Association and the bricklayers' unions of Boston and vicinity is so unique that it deserves detailed mention in this place. By its terms no limit is placed upon the number of apprentices which may be hired by an employer, altho it is required that an apprentice shall be not less than sixteen years of age nor more than twenty-one, that he shall serve for three

years, and that he shall be able to read and write the English language. A joint committee of the employers and the unions can be appealed to either by apprentice or employer in cases of disputes and failure to keep the agreement. The agreement fixes the pay of the apprentices at the rate of "eleven cents per hour during the first year, twelve cents per hour during the second year, thirteen cents per hour during the third year, and fifteen cents per hour for any additional years which they may be forced to serve under these rules; these sums to be paid weekly." In addition to this the apprentice receives an allowance of \$50 the first year and \$75 for every additional year, payable in quarterly instalments. An apprentice shall not be eligible to membership in the bricklayers' union of that locality unless he carries a card showing that he has completed the required term of instruction as laid down by the clauses of this agreement.

As typical of existing conditions, the recent investigation of the apprenticeship system in California by the labor commissioner of that state may be of interest ("Eleventh Biennial Report of the Bureau of Labor Statistics of California," 1904). In 1904 it was found that, of all the trades investigated, 13.41 per cent had no apprenticeship system, and that 30.9 per cent of the remainder imposed no restrictions upon the employers. "Generally the period of apprenticeship varied from two to five years, three and four years being the more common." Sixteen to eighteen years seemed to be the average age at which apprentices were taken.

All the states of the Union, excepting Idaho, Wyoming, and Nebraska, have elaborate apprenticeship laws upon their statute books, permitting and regulating the binding out of apprentices to employers and masters. These laws are practically obsolete, however, having been replaced by the regulations of the unions. The United States statutes permit the public printer to employ any number of apprentices less than twenty-five which he considers to be consistent with the economical operation of the office. So far as could be ascertained, no court in the United States has ever decided any case relating to the matter of regulating or restricting the terms of apprenticeship.

In foreign countries, England excepted, the apprenticeship system is governed to a greater or less extent by statutory provisions. In some instances very "elaborate regulations exist, and the system holds absolute sway as far as the training of mechanics is concerned."

In Foreign Countries

The situation in England is similar to that in the United States, the terms of the apprenticeship being regulated by the respective unions. In this regard it is interesting to note that in 1897 Mr. and Mrs. Webb claimed that but 90,000 of the 1,490,000 trade-unionists of England belonged to unions which were strong enough to enforce apprenticeship regulations.

In France, during the period 1890-99, but 11.5 of 1 per cent of all the strikes concerned the enforcement of apprenticeship rules. In that country, the terms of the apprenticeship contract are provided for by the laws of 1851 and 1892. No limit is placed upon the number of apprentices permitted each employer; but the latter is obliged to educate an apprentice if he be sixteen years of age and illiterate. For apprentices under fourteen years of age, and for those between fourteen and sixteen, the hours of labor are limited to ten and twelve per day respectively. Persons convicted of crime or of certain misdemeanors cannot hire apprentices unless they obtain a permit from the mayor of the town.

The labor unions of the cantons of Switzerland supervise the regulation of apprentices provided the unions contain a majority of the workers

in the trade. The apprentice is indentured by means of a written contract, and must not be made to work more than ten hours per day if he is between thirteen and fifteen years of age, nor more than eleven hours if he is over fifteen years of age. Night and Sunday work is generally forbidden. Every apprentice must be examined by a public board before he is admitted to the trade as a journeyman.

In Germany the law of 1897 provides for the regulation of apprentices. Only those persons enjoying all their civil rights can employ apprentices, and then only on the condition that the agreement with the apprentice be in writing four weeks prior to the commencement of the term. Three years is the average length of the term, altho chambers of commerce and trade are given the right by the government to "fix the duration of apprenticeship in each trade" as well as the maximum number of apprentices which may be employed in those trades, provided that the government has not already taken some action in regard to the matter.

In Austria "much attention is being given to perfecting the apprenticeship system." In non-manufacturing trades the terms of service are from two to four years, and in manufacturing trades not more than three years. No apprentices may be hired by any person previously convicted of a crime.

Belgium has no apprenticeship laws.

The employers claim that in restricting the number of apprentices the unions are trying to obtain monopoly of the trades, are preventing hundreds of boys from learning a trade, and are seriously hindering the development of industry. The unions, however, argue that they have no desire to obtain any monopolies. They claim that if there were no regulations fixing the

number of apprentices allowed an employer, the skilled mechanics would soon be replaced by ignorant and unskilled apprentices, and that the standards of the trade would deteriorate, wages decrease, and employment become less steady and continuous. In support of their arguments they point to the conditions which existed in the various trades before the unions were strong enough to enforce restrictions and regulations. They also claim that it is the employer who is to be blamed for the shortage of skilled labor, inasmuch as he often refuses to take as many apprentices as the unions permit, because he dislikes to be bothered with their instruction, and will not teach them all the branches of the trade. In short, he has brought about a shortage of skilled labor because he has been more anxious to have his workers acquire speed—which means a greater output, and consequently greater profits to him—than to have them acquire a thorough knowledge of the trade. The unions further state that it is only by means of the trade-unions that conditions can be maintained which make it worth a boy's efforts to learn a trade.

Under ordinary conditions of trade, with a period of apprenticeship fixed at three years, and one apprentice to every five workers, the present force of journeymen in all trades could be doubled once in every fifteen years. However, there is no necessity for fixing the limit at one apprentice for so small a number of journeymen, since there are few trades in which it would be requisite to have the number of skilled workers doubled every fifteen years.

AQUINAS, ST. THOMAS: The chief representative of the theology, philosophy, and economic teaching of the medieval Church; born in 1225 or 1227, at the castle of his father, the Count of Aquino, in the territories of Naples; received his education at Monte Cassino and the University of Naples. When but seventeen years old, in spite of the opposition of his family, he took the habit of the Dominican order at Naples, and was afterward sent away to study theology and philosophy under the famous Albertus Magnus at Cologne and Paris. Aquinas early gained distinction as a student of theology, and began his lectures, which were given at Paris, Rome, Bologna, and other places. He was on familiar terms with many princes of his time, and especially honored by the kings of France and of Naples, who frequently sought advice from him. Clement IV. offered him the archbishopric of Naples and the abbacy of Monte Cassino, both of which were declined. It was on the route to the Council of Lyons, whither he had been specially summoned by Gregory X., that Aquinas died, March 7, 1274. He was canonized in 1323 by Pope John XXII. In his life there was a union of simple piety with the greatest philosophical power. He fulfilled the ecclesiastical ideal of a saint and a father of the church. As a theologian his name stands with that of Augustine.

Aquinas represents scholasticism, the philosophy of the Middle Ages. Scotus Erigena, the earliest schoolman, said: "There are not two studies, one of philosophy and one of religion; true philosophy is true religion, and true religion is true philosophy." Hence the greatest work of Aquinas, the "Summa Theologiae," aimed to give a summary of all the science of the time. This work is divided into three principal parts which may be said to treat respectively of God, man, and the God-Man. The latter part of the third division was added after the death of the author. With regard to the other works of Aquinas, it may be said that all his writings lead up to the "Summa."

To Aquinas theology is the sum of all science, and hence he is little interested in economics. But since the scope of the "Summa" was so wide, he was obliged to deal to a certain extent with both politics and economics. His statements have great value to students of social questions, because he so thoroughly represented medieval Church thought. In regard to private property, Aquinas justified individual ownership. He argued that the results of private ownership were beneficial, and he adopted Aristotle's theory that property should be owned separately, but used for the common good. In dealing with the subject of property as it concerned the monastic orders, or as it affected the highest sort of Christian living, Aquinas takes the conservative view. He holds, in opposition to many in the monastic orders who wished for absolute poverty, not only individual, but corporate, that property is only injurious when it hinders the spiritual life. A moderate property, especially if possessed by a religious order, is not necessarily an evil.

In regard to the bestowal of charity, Aquinas does not unduly exalt almsgiving. The practise is obligatory; but at the same time alms need only be given, as a general thing, after a man has provided for himself and his family in a proper way. The giving should usually be from the superfluity—what remained after legitimate expenses.

One example of Aquinas's teaching on politics may be referred to. On the question of the right of government to tax its subjects, he favors the subjects rather than the prince. He says that rulers should seek the common good of the people in preference to their own advantage. Hence they should not take from their subjects by taxation save when some public need arises. Their revenues should be derived from their own special possessions.

Economics

Right of Taxation

In treating of commercial ethics, Aquinas follows generally the teaching of the earlier church fathers, and stands firm for the application of Christian principles to trade. He agrees with the old views as to usury, and especially with those of his instructor, Albertus Magnus. Usury is wrong. Money is consumable; the borrower has a natural right to make use of it when loaned, and the lender should not ask a payment for its use in addition to the return of the original sum, as this would be a double charge.

Trade was in Aquinas's view, a base thing, and even sinful when carried on for the sake of gain. But it was not so when the trader pursued it as a means of livelihood, and was contented with a moderate profit, which he used for good purposes. Further, trade was also right when it served the public interest and provided a country with the necessities of life. The civil law was wholly imperfect, then as now, from a Christian standpoint, in its provisions regarding business. The Christian principle was, according to Aquinas, that no one should ever demand or pay more than a just price. He was conscious of the opposition between his teaching and the civil law, but he explains that human law has its necessary limitations, and does not prohibit everything that is wrong. Divine law is higher, and must forbid all things that are opposed to justice and virtue.

The scholastic philosophy reaches its culmination in Aquinas, and no medieval writer has had more influence than he. His "Summa Theologiae" is even now, to a great extent, a recognized manual of the theology of the Roman Catholic Church.

REFERENCES: There is no adequate account of the economic teaching of Aquinas, which may be best collected from his own works. See the *Summa Theologiae* as to private property, Secunda Secundae, Quaestio 77, Articulus 3; Q. 66, Art. 1, 2; as to voluntary poverty, Q. 188, Art. 7; as to alms, Q. 32, Art. 5, 6; as to slavery, Pars Prima, Q. 96, Art. 3; Prima Secundae, Q. 94, Art. 5; as to price, Secunda Secundae, Q. 77; as to usury, Q. 78; as to taxation, *De Regimine Judaeorum* among the *Opuscula*. The best brief account will be found in *La Philosophie de S. Thomas d'Aquin*, by C. Jourdain (1858). See also, *Economic History*, by W. J. Ashley (1888), vol. i., pt. 1, and the same author's article on Aquinas in Palgrave's *Dictionary of Political Economy*, to which article we are in the main indebted for that portion of our article bearing on Aquinas's economic teaching.

ARBITRATION AND CONCILIATION, INDUSTRIAL: The phrase "industrial arbitration and conciliation," in its broadest sense, refers to the entire subject of the methods of maintaining or, if broken, of restoring peaceful relations between employers and employees. (See also **COMPULSORY ARBITRATION**; **NATIONAL CIVIC FEDERATION**; **NEW ZEALAND**; **TRADE AGREEMENTS**.) But each of the terms "arbitration" and "conciliation" has a narrower technical meaning of its own. When the negotiations between employer and employees are conducted entirely between the two parties or their representatives and the procedure consists only of discussion and mutual concession between the two, the process is known as "conciliation." But when employer and employee refer the question at issue to final decision by some person or body other than the parties directly in dispute, it is called "arbitration."

If the reference to arbitration be made voluntarily by both parties, or if the acceptance by them of the decision or "award" when made be voluntary, the procedure is known as "voluntary arbitration." If, on the other hand, the government requires that, upon the motion of either party, or upon its own motion, the case shall be submitted to arbitration, and provides for the enforcement of the award when rendered, the process is "compulsory arbitration." To constitute compulsory arbitration in any true sense, it may be emphasized that the acceptance of the award must always be compulsory, whereas the reference to arbitration need be compulsory only for either party when the other desires it, tho it may be compulsory also for both without the desire of either.

Intervention by a third party may, however, take another form. The third party may intervene, either upon his own initiative or by invita-

tion of one or other of the parties, simply for the general purpose of endeavoring to bring about a settlement of the dispute. Such action constitutes "mediation." When one or more employers negotiate with their employees collectively, concerning the terms of future employment, the procedure is known as "collective bargaining," a phrase of recent origin which is gaining wide usage. "Collective bargaining," it will be seen, is virtually conciliation in collective differences concerning terms of future employment.

The term is applied, not because the procedure is something essentially different from conciliation, but because conciliation in such form is of tremendous significance under modern industrial conditions.

The agencies of arbitration and conciliation may be either private or public. Considering first the former, we find them most highly and widely developed in Great Britain, the United States being second in importance in this field. Belgium and France, however, stand first in some respects in results accomplished. The develop-

Private Agencies

ment of these private agencies naturally lies within that period in which the modern industrial system, characterized by the employment of considerable numbers of work people in a single establishment or undertaking, has existed, and, at the same time, combined action by employees with reference to the conditions of employment has been recognized as legal. Roughly speaking (exact dates are impossible for the more general facts of this subject), the period of development of private agencies of industrial peace in Great Britain, where the oldest of these are found, appears to date from the third decade of the nineteenth century. In the U. S. the period of development of such agencies is approximately that since the Civil War, or the last forty years.

The most primitive agency, so to speak, is an informal committee of unorganized employees, named for a particular occasion to negotiate with the employer. Such temporary conference committees are not uncommon in unorganized trades, but are usually resorted to only for negotiations within the limits of a single establishment, tho occasionally utilized in the case of several establishments.

Organization of labor opens the way for the development of conference bodies in two important respects. In the first place, with local unions affiliated with national organizations, the size of the field for which such bodies are available becomes extended beyond the single establishment or locality, until it becomes national in extent, covering an entire industry in a given country. In the second place, with the existence of permanent unions of work people, the temporary conference committee develops most easily into a permanent agency of peace, be it local or national. Very often the regular union officers, local or national, constitute a standing agency for negotiations, thus doing away with the necessity for naming special committees.

As the field of collective negotiations between employers and employees extends beyond a single establishment or firm, so as to involve a considerable number of employers, there arises the need of a representative body to act for the latter. The most elementary agency in such case, as in the case of employees, is a temporary committee named for a particular occa-

Collective Negotiations

sion. Such temporary conference committees of employers are not infrequently used in the case of negotiations covering a single locality where the employers have no organization. But more often they occur where the employers have some kind of organization, and such organization of employers, just as in the case of the employees, gradually paves the way for the development of permanent negotiation agencies.

So long as agencies of industrial peace in a given trade are employed only for the settlement of occasional disputes, they rarely develop beyond conciliatory conferences between temporary committees, resorting sometimes to arbitration by some equally temporary arbitration agency. The development of such temporary agencies into more permanent forms occurs usually in connection with collective bargaining. Collective bargaining being one of the fundamental methods of trade-unionism, it is usually found in practise wherever employers recognize its justice and advantages, or wherever the latter, because of the strength of organized labor, must perforce submit to it. Where it does occur, it commonly results in a written agreement as to terms of employment which is signed by the respective parties or their representatives. Such agreements are commonly known as "trade agreements" or "joint trade agreements," or "industrial agreements"; and the system of regulating the terms of employment by such agreements is often designated, especially in the U. S., as the "agreement system." A special form of agreement with respect to wages is the "sliding scale," in which the wages, instead of being fixed absolutely at a certain point for a given period, rise and fall at a rate agreed upon as the market-price of the product of the labor in question fluctuates.

Joint trade agreements are not infrequently adopted in the settlement of industrial disputes, and they are probably most often introduced into a given establishment or trade in that manner. When so adopted in the character of a treaty after a struggle between the parties, they are more frequently drawn for an indefinite time than when adopted as a result of amicable negotiations; in the latter case they are as a rule adopted for a definite period. Obviously in either case, but especially so in the latter, such written contracts (and they often read as formal contracts, sometimes with an exchange of nominal sums of money in more complete fulfilment of the contract idea) introduce a powerful influence for industrial peace in the simple element of permanency which they give to the conditions of employment. But a far more important assurance of industrial peace very often appears in connection with such agreements in that they contain clauses providing for the settlement by conciliation or arbitration of any differences that may arise in their interpretation. It is also frequently provided that, pending arbitration of such differences, there shall be no cessation of work. Manifestly, under such an agreement the certainty of industrial peace is limited only by the degree of loyalty with which the two parties adhere to the terms agreed upon. In only a very few instances do joint agreements prescribe fines for failure to carry out the arbitration decisions under them.

In the U. S. trade agreements do not, as a rule, make provision for their renewal; and the system becomes permanently established chiefly by custom. It is generally regulated by custom or by

the constitutions or rules of the employees' organizations, and sometimes also by the rules of employers' organizations. In Great Britain, however, it is common for the system to be maintained under permanent written compacts or agreements, regulating the modes of procedure, etc. This undoubtedly adds to the stability of the system.

With the agreement system maintained chiefly by custom in the U. S., it is not surprising that permanent machinery in connection with it, either for collective bargaining by which agreements are made, or for conciliation and arbitration in cases of dispute, is comparatively rare, tho it has been developed in some cases. The usual American practise is to name a conference committee for each periodic negotiation, or an agreement and conciliation committee for each dispute as it arises, or to choose an arbitrator for each special occasion. But in Great Britain it is usual to name permanent boards or joint-committees which are to decide in all matters under dispute. The British boards for collective bargaining are often known as "wages boards," and those for the settlement of differences as "boards of conciliation" or of "conciliation and arbitration," while the term "trade boards" is sometimes used for both classes together.

In regularly established collective bargaining it is rare, in the U. S., to find any resort to arbitration when conciliation fails to bring about an agreement. Such appeal to arbitration is less seldom in Great Britain, but in both countries the general sentiment appears to be strongly opposed to submitting the general terms of future employment to the decision of an outsider. Future terms of employment, however, are more frequently submitted to arbitration as a means of escape from a deadlock in conciliation. In the case of interpretation differences, resort to arbitration is much more frequent; and in all systems of collective bargaining which make any provision for such disputes, it is usually provided for as a second resort after conciliation.

In collective bargaining the actual process of negotiation is usually one of "higgling" between the two sides, each acting as a unit, until by mutual compromise a unanimous agreement is reached. Final decision of a question by majority vote of the conference is very rarely allowed; and usually, especially in the less permanent bodies in American practise, equal representation of employers and employees is not specially striven for. But in bodies constituted for conciliation of interpretation differences, it is common to find equal representation of employers and employees provided for, and decisions by majority vote are sometimes allowed. In cases of arbitration it is usual to have only one arbitrator, who is regarded as impartial and disinterested with respect to the particular trade or dispute; or else a board composed of an uneven number, in which, however, the final decision is practically that of a single member or umpire.

Private mediation agencies—that is, agencies constituted by outsiders to intervene between employers and employees—are rare as compared with the agencies of peace constituted by the two industrial classes themselves. Occasionally it happens, in the case of a strike or lock-out, usually one so serious as to affect the interests of the public, that an individual or a committee, either chosen or acting of its own volition, intervenes to bring about a settlement.

Trade Agreements

Mediation Agencies

Usually, the mediators in such a case are prominent men of the community, and not infrequently public officials. The most notable instance of this sort in the U. S., because the interests involved were no less than national in extent, was the intervention of President Roosevelt in the coal strike of 1902.

Permanent private mediation agencies are even more rare than the temporary ones just noted. About the only thing of the kind in Great Britain are the "district boards of conciliation" which have been established in several industrial centers, usually under the auspices of the local board of trade, the most important being the London Conciliation Board. This board, which was an outgrowth of the great strike of London dock-laborers in 1889, comprises a number of conciliation committees, each composed of equal numbers of employers and employees, with one committee for each prominent group of trades in the city. In addition there is a central board composed of equal numbers of representatives named by employers and employees, to which cases may be taken on appeal from a committee, and which offers facilities for arbitration in case its efforts at conciliation are unsuccessful. The results accomplished by the district boards of conciliation in Great Britain have been insignificant except in the case of the London board which has accomplished some substantial results. Its work has not been extensive, however, and has been done chiefly through mediation upon its own initiative. A very notable permanent private mediation agency in the U. S., and the only significant one in this country, is that which has been established by the NATIONAL CIVIC FEDERATION in its Industrial Department. This agency has been active in a number of important disputes, and with a considerable degree of success. What it has accomplished has been almost entirely along lines of conciliation through mediation upon its own initiative.

There are no comprehensive statistics of private agencies of industrial peace for any country except Great Britain, for which there are fairly complete statistics of the permanent private agencies; and as these are of especial interest because they present facts for the country most advanced in the use of such agencies, the following from the most recent reports may be quoted here. During the year 1904 the number of permanent boards of conciliation and arbitration known to have considered cases was sixty-two, one of which was a "district board," one a "general board," or one established by employers and employees but not confined to a single trade, while the other sixty were "trade boards," or those instituted by employers and employees for a given trade. The following table shows the amount and results of work done by these boards in 1904:

| BOARDS | NO. OF BOARDS WHICH | | NO. OF CASES | |
|----------------------|---------------------|---------------|--------------|---------|
| | Considered cases | Settled cases | Considered | Settled |
| Trade boards..... | 60 | 52 | 1,413 | 610 |
| General boards..... | 1 | 1 | 1 | 1 |
| District boards..... | 1 | 1 | 4 | 4 |
| Total..... | 62 | 54 | 1,418 | 615 |

Of the 803 cases not settled, 748 were "withdrawn, referred back, or settled independently of the boards," and fifty-five were pending at the close of the year. Of the 615 cases settled, 400 were settled by boards or committees, that is, by conciliation, and 215 were decided by arbitration or umpires named by such boards or committees. Among the cases settled were ten strikes or lock-outs, of which seven were settled by conciliation, and three by arbitration. The number of boards known to have settled cases varied but little from 1900 to 1904, having numbered in those five years respectively 64, 54, 57, 62, and 54.

Since, as noted in the foregoing, recognition of collective disputes as legal is of comparatively recent date, and individual disputes were characteristic of the industrial régime prior thereto, it is not surprising to find that the oldest government agencies for industrial peace were established for individual disputes. In

Government Agencies

Great Britain, prior to 1803, a series of statutes, going back as far as the Statute of Apprentices in 1562, contained provisions with reference to disputes between masters and servants. All of these provided simply that disputes should be summarily settled by justices of the peace, the authorities charged with the fixing of wage-rates for all labor under the then existing system of government regulation of industry.

In 1803, 1804, and 1813 special acts for disputes in the cotton industry were passed, differing from the earlier laws in that they provided that disputes should be settled by arbitration by two referees appointed, one by the employer, the other by the employee, from nominations made by a justice of the peace to whom the dispute was to be referred for final decision in case the two arbitrators could not agree. Finally these three laws were consolidated and extended to all industries by the Consolidation Act of 1824. This act did not alter any of the provisions for arbitration, except to forbid justices of the peace to fix future wages without the consent of both master and workman, this limitation being practically a recognition of the principle of freedom of contract between employer and employed which had been formally established by the repeal of the Statute of Apprentices in 1814.

All the earlier statutes had provided compulsory arbitration for all disputes; the Consolidation Act provided still for compulsory arbitration for interpretation differences, but recognized the fundamentally different character of disputes touching future terms of employment by providing only voluntary arbitration for such, at least for all those touching wages. The Consolidation Act was passed because the earlier laws had been effectual; yet it proved a total failure, tho it was in force until 1896. It appears to have been an anachronism. It was passed coincidentally with the formal recognition of the right of working men to combine by the repeal of the combination laws by Act of 5 Geo. IV., ch. 95, the Consolidation Act being 5 Geo. IV., ch. 96. With the repeal of the combination laws the pressing problem of industrial peace became at once that of collective disputes, whereas the Consolidation Act offered only provisions drawn essentially for the individual disputes of an earlier régime.

For the most notable agency for the settlement of individual disputes, and one which is still in existence, one must turn to continental Europe, to the French system of *Conseils des Prud'hommes*

or Councils of Experts. These were first instituted in France in 1806. The law of that year,

Conseils des Prud'hommes

since frequently amended, which established the system in France, applied also to Belgium, which was then a French dependency; and the first Belgian Council was established in 1809. Laws regulating the system were afterward passed by the Belgian Government. Prior to the acquisition of the Rhine Province by Germany, councils under the French law were established there, and from thence the institution spread to other parts of Germany, being regulated by state or municipal statutes until 1890 when an imperial law governing the system was passed. In 1882 the Swiss canton of Geneva established a council, followed by the cantons of Neuchâtel (1885), Vaud (1888), Basel-Stadt (1889), Lucerne (1892), and Bern (1894). In 1893 Italy established the system. In all five of the countries named—France, Belgium, Germany, Switzerland, and Italy—the systems of *Conseils des Prud'hommes*, or *Gewerbegerichte*, as they are called in Germany, are still maintained, and are in active operation. In 1903 there were in France 153 councils which heard disputes; in Belgium, 33; and in Germany, 400. In 1905 Switzerland had at least 7 councils, and in 1899 Italy had 39.

With regard to details of organization and procedure the councils in different countries vary considerably, but the general plan of all is essentially the same. They are established

Procedure

by the government, either national or local, but their members are elected by the employers and employees within their jurisdiction, except the president and vice-president who in France and Switzerland are chosen by the members from among their own number, but in Belgium, Germany, and Italy are appointed independently by the government. Two bodies are organized in each council: the one a conciliation bureau or committee; the other the general, or arbitration bureau. Cases go first before the conciliation bureau where an effort is made to bring about a settlement by conciliation. If such effort fails, the case goes to the general bureau for final decision. In both bureaus there are always equal numbers of employers' and employees' representatives. The procedure is compulsory upon the desire of either party, and awards or decisions are enforceable as in ordinary civil courts. The jurisdiction of the councils is limited essentially to individual disputes growing out of the interpretation of existing contracts.

The systems of *Conseils des Prud'hommes* have been very successful and are doing a large amount of work. Thus, in 1903, the number of cases brought before the councils in France was 43,832; in Belgium, 8,277; and in Germany, 97,561. Of the cases before the French councils 18,591 were settled by conciliation, 4,588 by arbitration, and 16,240 were withdrawn by the parties.

Impressed by the obvious evils of the industrial warfare of strikes and lockouts which affect the general public as well as the contestants, many governments have in more recent years endeavored to provide by law for the settlement of collective industrial disputes. In 1905 no less than fifty-one different national or state governments had some provision of law relating to the subject, and a number of these had passed more than one

act upon the subject. With but three unimportant exceptions, all this legislation is the product of the last thirty years. With this mass of laws all that can be attempted within the limits of the present article is a very general classification according to their more important characteristics and results, considering first foreign statutes and afterward American laws.*

Standing quite by themselves as the only general compulsory arbitration laws in the world are four statutes of the British colonies in Australasia.

These, with the dates of the earliest laws in each case, are: New Zealand (1894), Western Australia (1900), New South Wales (1901), and the Commonwealth of Australia (1904).

These compulsory arbitration laws, in their present form, have practically unlimited jurisdiction over collective industrial disputes of all kinds, except that the Commonwealth law takes cognizance only of disputes extending beyond the limits of any one of the Australian states. They provide, except in New South Wales, for both conciliation and compulsory arbitration. New South Wales provides only for compulsory arbitration. The conciliation agency provided is, in New Zealand and Western Australia, a board whose members are elected in equal numbers by employers and employees, with a chairman chosen by the members; in the Commonwealth the same agency as for arbitration. For arbitration the three state laws provide a court consisting of three members appointed by the government: one from nominations made by employers, and one from nominations made by employees, while the president is chosen directly by the government from the highest civil court of the colony. In the Commonwealth the arbitration court consists of only a single judge appointed by the government. All of these compulsory arbitration laws proceed upon the principle of utilizing to the utmost the advantages for collective negotiations to be derived from organization of employers and employees, especially the latter.

In connection with these compulsory arbitration systems, strikes and lockouts are very largely prohibited, especially in the New South Wales and Commonwealth laws. In practise the three state laws have proved generally successful to the extent of having practically eliminated strikes and lockouts from industrial life, the Commonwealth act being too recent to show results in practise. The most notable development in practise has been the fact that, for the most part, the conciliation provisions have been of little use and most of the work has had to be done sooner or later by the arbitration courts. For this reason the New Zealand law, which originally required conciliation procedure, had later to make it optional; while New South Wales made no provision whatever for conciliation in her law. The whole tendency of practical experience has thus been to enlarge the scope of the compulsory arbitration features, and to employ them exclusively, with a consequently increasing amount of the virtual government regulation of industrial relations which compulsory arbitration involves.

Three of the countries which have the systems

* The laws are described as they are at present, without special reference to amendments; and the year given in parentheses refers to the time when the earliest law of the kind in question was passed.

of Conseils des Prud'hommes, or industrial courts for individual disputes, have utilized those courts for intervention in collective disputes also, viz., Germany (1890); Italy (1893); and Switzerland (Cantons of Geneva, 1882; Vaud, 1888; Lucerne, 1892; and Bern, 1894). In Switzerland there is provision only for conciliation by the courts in collective disputes; while in Germany and Italy arbitration is also provided, but the distinction between individual and collective disputes is carefully preserved, and for the latter the arbitration is entirely voluntary in character. Very little has been accomplished under these provisions for collective disputes, except in Germany. The German courts have developed extensive activity in their field, and are accomplishing important results, for the most part entirely by conciliation. Thus, in 1903, the German courts intervened 174 times in collective disputes, and settled sixty-one—fifty-four by conciliation, and seven by arbitration.

Another group of foreign laws may be distinguished in those which undertake to establish permanent special agencies for the settlement of collective disputes.

The oldest of these is a British law of 1867, known as Lord St. Leonard's Act, which attempted to foster the establishment of boards for conciliation and arbitration after the pattern of the French

Permanent Government Agencies

Conseils des Prud'hommes by granting to such boards, when established voluntarily by employers and employees, and fulfilling the requirements specified in the law as to organization and procedure, a license under which they might exercise the powers specified in the Consolidation Act of 1854, to compel the presence and testimony of witnesses and enforce arbitration awards except when the latter concerned future wages. This law was, however, a total failure, as were likewise two British colonial statutes which copied it; namely, a law of 1873 in Ontario (Canada), and one of 1891 in Victoria, the latter with all compulsory arbitration features eliminated, and both with no restriction as to disputes touching future wages.

In Belgium (1887) and the Netherlands (1897) are two laws, the later one modeled after the earlier, which provide

Holland and Belgium

for the establishment of councils of labor and industry, composed of members elected in equal numbers by employers and employees. These councils, which are under very direct government supervision, have a threefold function: (1) To give information or advice to the government concerning the condition of labor; (2) to serve as conference committees for collective bargaining, and (3) to settle industrial disputes. For the two latter purposes conciliation only is provided for. The system of councils of labor is in active operation in both countries, Belgium having seventy-six councils in 1903, Netherlands ninety in 1904. In practise the function of the councils as statistical and advisory agents of the government has been most important, especially in Belgium. In the Netherlands they have accomplished most in the way of collective bargaining and settlement of disputes. Thus, in 1903 they assisted seventy-three times in amicable negotiations concerning terms of employment, twenty-eight cases of which concerned government work; and in 1904 they intervened in thirteen strikes and lockouts, and brought five to a settlement.

In 1892 New South Wales passed an act providing for permanent councils of conciliation, and a council of arbitration for the settlement of collective disputes. There were to be either several conciliation councils in industrial districts into which the colony should be divided, or one large colonial council from which a special council for each dispute could be chosen, the members of these conciliation councils to be elected in equal numbers by employers and employees, with a secretary appointed by the government. The one court of arbitration was to consist of three members, one each to be named by employers and employees, with the third (the president) to be chosen by the other two, or, failing that, appointed by the government. In each dispute there were to be efforts at conciliation first, with appeal to arbitration or, if the parties desired, reference to the arbitration court in the first instance, arbitration in any case being voluntary in character.

Three of the British Canadian colonies have copied this New South Wales statute—British Columbia (1893), On-

tario (1894) and Quebec (1901)—without important modifications, except that Ontario by subsequent amendment (copied in Quebec also) enabled the government to itself appoint the members of the council of arbitration, and permitted that council to mediate in disputes of its own motion, thus providing an essentially independent government agency in place of one established by employers and employees.

Canada

The system of conciliation and arbitration councils contemplated in the New South Wales law has been practically a failure in the four British colonies which adopted it. The machinery for it was set up in all save British Columbia, where it was never established, but so little was accomplished by the councils that New South Wales finally abandoned the whole system, and Ontario and Quebec amended the plan by providing for independent mediation in disputes by the clerk of awards; or registrar as he is styled in the two Canadian laws. Something more has been accomplished by the registrars alone (the registrar intervened in twelve disputes in 1902 in Ontario), but no important results have thus far been attained.

A very elaborate act of 1894 in South Australia provided for a system of boards of conciliation and arbitration on the same general plan as the New South Wales system just described, but providing, instead of purely voluntary arbitration, what may be designated as permissive compulsory arbitration; that is, a system of compulsory arbitration, very much the same as that of New Zealand, but applicable to employers and employees only so far as they chose to voluntarily put themselves under its jurisdiction. The act, however, failed utterly, simply because none chose to submit to it.

In connection with laws making provision for permanent special agencies for collective disputes, passing mention may be made of the Austrian law of 1896. This law, which established guilds for the mining industry, incidentally provides for conciliation in collective disputes (there is also provision for individual disputes), through the agency of the executive committees of the guilds, tho scarcely anything has been accomplished by this provision. The Danish Act of 1900, which gives private boards of arbitration for interpretation differences power to summon and examine witnesses, may also be mentioned.

A more numerous group of laws is comprised by those which, without creating any special agency therefor, provide for conciliation or arbitration of collective disputes through some government officer or administrative body. The earliest of these acts, and perhaps the most important, is the French law of 1892. This law provides for mediation by local justices of the peace, either for conciliation by committees named by the parties to the dispute in question, with the justice as chairman, or if conciliation fails, by three arbitrators, one being named by each of the parties, with an umpire either chosen by the two, or, in a deadlock, named by the local civil judge; the entire procedure is voluntary for the parties. Mediation by a justice may occur upon application of the parties or, in case of strikes and lockouts, on the justice's own motion. Large results are being accomplished under this French law. Thus, in 1903 intervention under it was attempted 152 times (143 times in strikes and lockouts), fifty-eight upon the initiative of the justices, and fifty-three disputes were settled, fifty-one by conciliation and two by arbitration.

Government Officials

Next in importance to the French law is the British act of 1896, which provides for mediation by the British Board of Trade. In case of disputes, the board is empowered, of its own volition, to inquire into the circumstances and endeavor to bring about conciliation. Upon application from either party, it may name one or more private persons as conciliators; or, on application of both parties, appoint an arbitrator for voluntary arbitration. The board may also encourage the formation of private boards of conciliation. Three British colonies have copied this act of the mother country (New South Wales, 1899; the Dominion of Canada, 1900; and Nova Scotia, 1903) with no important change, save that New South Wales and the Dominion both add provisions for formal public investigation of disputes in New South Wales, at the option of the government; in the Dominion at such option and with the consent of both parties. The duty of intervention under the law is delegated in New South Wales to the minister of public instruction, labor, and industry; in the Dominion to the minister of labor; and in Nova Scotia to the provincial secretary.

Great Britain

As to the results achieved under these laws, nothing had been accomplished in Nova Scotia down to the middle of 1905. Results in New South Wales have been very meager, and altho the act is still in force there it has practically been superseded by the compulsory arbitration law of 1901. Under the British and Canadian acts, however, substantial results have been accomplished. Thus, during the two years ended June 30, 1903, there were forty-one interventions, actual or requested, by the British Board of Trade under the law of 1896. In all of these application from one or both parties was received, and the same has been true with but very few exceptions in previous years. Of the

forty-one cases, in four the board declined to act; four were settled by the parties during negotiations, two by conciliators named by the board, and twenty-seven by arbitrators chosen by the board; three failed of settlement, and one was pending at the close of the year.

The most striking feature of the British act has been its usefulness in offering a means of escape from deadlocks in private negotiations, and the results accomplished in this direction have led to the adoption by many private boards of rules providing for an appeal to the Board of Trade when the private board is unable to agree. Of experiences under the Canadian act it may be noted that the power of public investigation specially provided in that act has been used with good effect in some stubborn disputes, through the publicity thus secured. A law somewhat resembling the British act of 1896 is that of 1894 in British Columbia, which makes it the duty of the provincial secretary to assist the parties to a given dispute in forming a conciliation council and, if need be, an arbitration council, for that particular controversy; but there is no provision for mediation by the secretary himself. The act offers these councils large official sanction by providing that the members, the chosen by the parties, shall receive appointment from the provincial governor, and by giving them power to summon witnesses. The expenses of such councils are paid by the government. In practice, however, the act has been fruitless, no councils ever having been formed under it.

In Switzerland there are two practically identical laws (Basel-Stadt, 1897, and St. Gallen, 1902) which provide for intervention in industrial disputes by the council of state, either upon request from the parties or, in grave cases, upon its own motion, by appointing a board of conciliation comprising equal numbers of employers and employees for purposes of conciliation only. There has been some little activity by the councils of state under these acts, that in Basel-Stadt having intervened in six disputes in 1904, and settled three.

In Austria, under a general clause of the factory law (1883), the state factory inspectors have developed large activity as mediators in industrial disputes. The greater part of such work is done in connection with individual disputes; but much is done also in collective differences, as shown by the fact that in 1903 they intervened in 110 strikes and lockouts.

The remaining three laws in the group of those providing for intervention of government officers are statutes relating only to special industries or special subjects of dispute. The earliest of these is a statute in Nova Scotia (1888), providing for arbitration of disputes in coal mines owned by, or leased from, the government. These are under the administration of a commissioner of works and mines who, in case of a dispute concerning wages, may refer the dispute to arbitration by a board comprising two members permanently appointed by the provincial governor, one member each named by employers and employees, and a fifth chosen by the last two. A unique feature of this arbitration plan is a provision for the posting by each side of a money forfeit, a certain amount of the wages due the workmen and an equal sum by the employer, to be paid over to the one party in case the other does not at once submit to the award. Awards may also be enforced by ordinary process in the civil courts, so that the system amounts to compulsory arbitration. This statute has been almost a dead letter, however, having been invoked but twice down to 1905.

In 1904 a decree of Argentina, notable as the first South-American law dealing with the settlement of industrial disputes, made it the duty of the chief of police of Buenos Ayres to intervene as mediator in collective disputes over questions of Sunday rest or hours of work. But by far the most important of the laws for special industries or subjects is the Canadian Railway Labor Disputes Act of 1903. This provides

for intervention by the minister of labor in collective disputes involving suspension of work or interference with traffic on railways. The minister is to intervene primarily for the purpose of bringing about conciliation. If failing, the case is submitted to arbitration by a conciliation committee or board of arbitrators composed of three members, one named by each of the parties, and the third chosen by the other two or by the parties. The arbitration is purely voluntary, but publicity of awards is required.

Of the remaining two foreign laws, providing for permanent industrial agreements between employers and employees, one was the British Arbitration Act of 1872 which contemplated the drawing up of permanent agreements between employers and employees. These agreements, in addition to specifying the terms of employment, should designate some agency to arbitrate disputes, such agencies to have the power of compelling the production of evidence. This act, however, altho it remained in force until 1896, was from the first a dead letter, no agreement under it ever being made. A more modern law for agreements is one in the Swiss Canton of Geneva (1900), which provides both for regular periodic collective bargaining and trade agreements, and for the settlement of disputes. Three successive methods and agencies are specified for either purpose: (1) A conciliation conference of employers' and employees' delegates;

(2) mediation between the delegates by a representative of the council of state of the canton; (3) arbitration by a board composed of the delegates and the central committee of the Geneva Conseil des Prud'hommes. In case of disputes the council of state may itself inaugurate proceedings as above. There is no means provided to enforce arbitration awards, but strikes and lockouts pending proceedings, or under agreements made under the law, are forbidden.

In the U. S. no provision has ever been made for individual disputes; but the federal government and twenty-four of the states have made some provision by law for collective disputes. Two federal laws have been passed (1888 and 1898), both limited in application to interstate commerce. The former specified

United States Laws

two procedures: (1) Voluntary arbitration of disputes by a board of three members, the only action of the government being the endowment of such a board with power to secure evidence, and the publication by the Commissioner of Labor of the award; (2) public investigation into the causes of a dispute and the best mode of terminating it, to be instituted upon the government's initiative by a commission comprising two members named by the President of the U. S. together with the Commissioner of Labor as chairman, the findings of the commission to be made public. No arbitration under the law of 1888 ever occurred, but one public investigation was made under it in the great Pullman strike of 1894, the investigation being made after the dispute was practically ended, and the elaborate report being devoted to a history of the case and discussion of the general question of methods of settling such disputes.

Many of the recommendations of the commission of 1894 went into the law of 1898, which repealed the earlier act. This later law, which is still in force, provides for two procedures also: (1) Mediation by the Interstate Commerce Commission and the Commissioner of Labor upon request of either party; and (2) arbitration essentially as in the law of 1888, except that awards are made enforceable by process of law, the submission to arbitration is entirely voluntary. There has been no practical application of this law.

The thirty different state laws (in twenty-four of the states), which had been passed down to 1905, present so many similarities that they may be grouped in four classes. The first group comprises those laws which provide for local arbitration, with no permanent agency therefor, and includes four special acts: Maryland, 1878; New Jersey, 1880; Pennsylvania, 1893; and Texas, 1895. Ten laws have incidental provisions for state boards; namely, those of California, Colorado, Idaho, Massachusetts, Minnesota, Montana, New Jersey, New York, Ohio, and Wisconsin. The general features common to nearly all these laws are: (1) That they provide only for voluntary arbitration; (2) that the agency in each case is a temporary board; and (3) that such boards are given power to compel the presence of witnesses and the production of evidence. As to practical results these laws have all been dead letters, tho all, except the special act in New Jersey, still stand on the statute-books.

A second group of state laws includes those which provide for permanent district or county boards established by private parties. These are as follows: Pennsylvania (1883), Ohio (1885), Iowa (1886), and Kansas (1886). The characteristic features common to all of these are: (1) Provision for permanent tribunals established jointly by employers and employees; (2) licensing of such tribunals by local civil courts and endowment of them with power to compel the presence of witnesses and the production of evidence; (3) provision only for voluntary arbitration by such tribunals. The only tribunal ever established under any of these laws was active in connection with the coal trade in Pennsylvania, and had considerable success for a couple of years (1883-85).

In a third group of state laws are five providing for arbitration or conciliation through the mediation of state commissioners of labor: Colorado (1887), Missouri (1889), North Dakota (1890), Washington (1893), and Maryland (1904). The more important characteristics of these laws are as follows: (1) In three states (Colorado, North Dakota, and Washington) mediation by the commissioner is provided for only upon application from a party to the disputes; but in the other two (Missouri and Maryland) there is provision for mediation upon the initiative of the commissioner; (2) in Colorado and North Dakota mediation with a view to conciliation only is contemplated, in Missouri both conciliation and arbitration are specified, and in Washington and Maryland conciliation, arbitration, and public investigation of disputes are provided for; (3) arbitration, where provided, is to be by a board with members chosen in equal numbers by the parties, and an odd member selected by the others, except in Missouri where the commissioner is to be the odd member, but public investigation is in each case to be by the commissioner. Concerning results accomplished under these provisions, nothing was ever done in North Dakota, and after a year the provision was repealed. Very little was ever accomplished in Colorado, and a state board of arbitration was established there in 1897. Somewhat more has been accomplished in Missouri, tho there, too, the provision has been practically

State Boards

Local Arbitration

State Boards

superseded by a state board established in 1901. In Washington, in the ten last months of 1904, the commissioner intervened in twelve disputes (ten strikes and lockouts) and secured settlements in six, one by arbitration, the others by conciliation. The law of Maryland, which gives the commissioner the broadest powers for intervention of any, is still too recent to afford evidence as to results in practise.

By far the largest and most important group of American state laws includes those which create a special board or commission for the settlement of industrial disputes. These

Special Commissions

are to be found in the following seventeen states: New York and Massachusetts (1886), Montana (1887), Michigan (1889), California (1891), New Jersey (1892), Ohio (1893), Louisiana (1894), Connecticut, Illinois, Minnesota, and Wisconsin (1895), Utah (1896), Colorado, Idaho, and Indiana (1897), and Missouri (1901). The laws of New York and Massachusetts, where state boards were first established, are the sources from which most of the other states have drawn nearly all the provisions of their laws. The fundamental features of the state-board laws, as they now stand, may be summarized as follows: (1) All the boards consist of three or five members, except in Indiana and Idaho where the permanent commission comprises two members. The members are appointed by the governor, except in New York where, as the result of a consolidation of departments in 1901, the board consists of the commissioner of labor, appointed by the governor, and the two deputy commissioners, appointed by the commissioner.

All but four states (Connecticut, Michigan, New Jersey, and New York) specify equal representation of employers and employees on the board, and five states (Connecticut, Idaho, Illinois, Indiana, and Utah) require bipartisan political representation. (2) Three procedures are specified for boards—mediation for conciliation purposes, arbitration, and public investigation. Mediation is specified for all save the California board, and is made the duty of all those boards in case of actual or threatened strike or lockout. Arbitration is specified for all the boards, but is always voluntary, the six states (Colorado, Idaho, Illinois, Indiana, Missouri, and Ohio) make some provision for the enforcement of awards. For purposes of arbitration there is to be added to the state commission in Idaho and Indiana the circuit judge of the county. Public investigation of more serious or stubborn disputes is specified for all the boards, except in Utah, and the authority to make such investigations may be exercised of the board's own motion, except in California where request from one of the parties to the dispute is necessary. (3) With the single exception of California, all the states confer upon their boards some authority for the purpose of compelling the presence of witnesses and the production of evidence.

Turning to results accomplished by state boards, all of the seventeen statutes providing for them still stand on the statute-books, and under all of them boards have been at some time established. In nine states, however, the boards have displayed little or no activity. These nine states are California, Colorado, Connecticut, Idaho, Louisiana, Michigan, Minnesota, Montana, and Utah. In the other eight states—

Results

Illinois, Indiana, Massachusetts, Missouri, New Jersey, New York, Ohio, and Wisconsin—the boards have records of considerable activity ever since their establishment. Among these the leading one, certainly at present, is the Massachusetts board, and the following summary of its work is given as the best example of what has been accomplished by state boards in this country:

The Massachusetts board has been notably successful in arbitrations, especially in recent years. Nearly all of these have been on wage questions in the great boot and shoe industry of the state, where the board is held in so favorable an estimation that many agreements between employers and employees provide for reference to the state board when the parties cannot agree.

The first French Conseils des Prud'hommes was constituted at Lyons in 1806 in the silk trade.

Dates and Statistics

The first permanent board of conciliation was organized in 1860 in Nottingham, England, in the hosiery and glass trade, largely through the efforts of A. J. Mundella. Palgrave's "Dictionary of Political Economy" gives the following detail of the board established in 1860 in the manufactured iron trade of the north of England:

The men belonging to the different works select in each case by ballot a delegate, and the employers belonging to a single firm are similarly represented by a single delegate. The members of the board thus constituted elect a president, together with one secretary, from among the delegates of the masters, and a vice-president, together with a second secretary, from among the delegates of the men. They also elect a standing committee, as it is called, consisting of five representatives of the men and ten representatives of the masters (five of whom alone are able to discuss or vote on any question); and of this committee the president and vice-president are ex officio members, without enjoying any power of voting. The standing committee meets every month, or if occasion demands, more frequently, and the board itself meets twice a year and at other times when summoned by the committee. In the first instance, all questions are laid before the committee. They are submitted in writing to the secretaries seven days before the meeting; the written reply of the other side is usually placed before the same meeting, and an agreement of submission signed by the parties concerned. If the standing committee cannot arrive at an agreement, the referee, who is a permanent official, is called in and can take evidence; and in this way all questions may be settled, except a general advance or reduction in wages, or the appointment of an arbitrator. These questions the board alone can decide, and it also determines matters referred to it from the standing committee, selecting an arbitrator if it cannot itself arrive at an agreement. The necessary expenses of the board are defrayed by the subtraction of a penny every fortnight from the wages of every workman earning upward of half-a-crown a day, and by requiring each firm to pay an amount equal to that thus subtracted from the wages of employees.

In Australia the Federated Seamen's Union drew up a scheme for a board of conciliation which was accepted by the Australasian Steamship Owners' Association in 1889.

In the U. S. the first recorded instance of arbitration was at the beginning of the eighteenth century, when a copper arbitration board was established in the mines of Simsbury, now called East Granby, in Connecticut. The next recorded attempts at a peaceful settlement of industrial disputes were those of the Sons of Vulcan between 1865 and 1876. On Feb. 13, 1865, a Committee of Boilers met a Committee of Iron Manufacturers and agreed upon a sliding scale of wages, thus to this extent forming a board of conciliation. (See AMALGAMATED ASSOCIATIONS OF IRON AND STEEL WORKERS.) In 1870 some of the shoe manufacturers of Massachusetts formed a committee of five to meet with the committee of the Knights of St. Crispin, and to draw

up a scale of wages for the ensuing year. This was the first board of arbitration or conciliation in Massachusetts.

In 1878 Mr. Joseph D. Weekes was sent to inspect the English boards of conciliation and on his return presented a report to the Governor of Pennsylvania. The result was the Wallace Act of 1883, by which voluntary boards of arbitration might be established in Pennsylvania.

In New York City the Church Association for the Advancement of the Interests of Labor, a Protestant Episcopal organization, organized a Council of Conciliation and Mediation, in 1903, with Bishop Potter as its president, and with one workman and one business man as other members. It has been active and useful on more than one occasion.

In Great Britain in 1905, sixty-six permanent boards of conciliation and arbitration considered 1,746 cases, of which 834 were withdrawn, referred back, or settled independently of the boards; 614 were settled by the boards or committees; 225 by arbitrators or umpires appointed by them; and fifty-three remained over, under consideration.

Of the 358 disputes referred to above, under strikes and lockouts, which caused a stoppage of work, thirty, involving directly 10,546 work people, or 15.6 per cent of the total for all disputes, were settled by conciliation or arbitration. The work people involved in stoppages settled by arbitration formed 3.3 per cent of the total number involved during the year, and the proportion involved in disputes arranged by conciliation 12.3 per cent.

Recent Statistics

In Germany two kinds of conciliation tribunals exist—the Courts of Arbitration for the guilds of handicrafts, and the Industrial Courts for the rest of the working classes. There were 411 Industrial Courts in Germany at the end of 1905. During the last five years these courts acting as conciliation boards were able to settle 51 per cent of the disputes referred to them, the extremes being a maximum of 86 per cent (1905) and a minimum of 27 per cent (1902).

In France recourse to conciliation is almost invariably on the requisition of the work people, or on the initiative of a justice of the peace. In a considerable percentage of cases the offer of mediation is refused (34 per cent of the total for 1901-5), for the most part by the employers. Where conciliation committees are formed by consent of both sides, however, a successful issue appears to be reached in a large proportion of cases (over 60 per cent of the cases of actual reference in 1901-5).

In Holland the Chambers of Labor are the official boards of conciliation. In 1899 these took part in thirteen cases of negotiations concerning terms of employment. In 1903 that number had increased to seventy-three, the total number of such cases during the five years 1899-1903 being 242.

Italy has kept close to the old French institution of the *Conseils des Prud'hommes*, which France itself has found unsuited to the adjustment of industrial disputes. The Italian Courts of *Probi Viri* are established by royal decree, but no great number of these courts appear to have been formed, and their interventions in disputes have been few (forty-three during the seven years 1897-1903); tho, on the other hand, they have, almost without exception, intervened successfully.

In the U. S. the state boards intervene far oftener on their own initiative than by invitation. Of sixty-three cases of intervention in New York State in 1902-4, fifty were on the initiative of the Conciliation Board. In Ohio the board took the initiative in fifty-one out of fifty-seven cases of intervention during the three years 1901-3. In Indiana during 1902-4 the State Labor Commission took the initiative in eighteen out of a total of twenty-one interventions. In Massachusetts during the same period the board intervened of its own initiative 171 times out of a total of 395 cases. Considering that these conciliation boards offer their services so often without invitation, the number of successful interventions is considerable. The figures for the last three years covered by the returns show 36.5 per cent of successes in New York, and 67 per cent in Massachusetts.

ARBITRATION, INTERNATIONAL: See INTERNATIONAL ARBITRATION.

ARBOR DAY: A certain day in the year appointed by different states in the United States, on which people, and especially school-children, are asked and encouraged to plant trees in order to counteract the tendency to forest extermination. (See FORESTRY.) The Nebraska State

Board of Agriculture established the first Arbor Day in 1879. To-day it is appointed in almost every state and territory, and usually falls late in April or early in May.

ARBOUX, DAVID LOUIS ISAAC JULES: French chaplain; born at Montauban, Nov. 20, 1847; went to Paris in 1868, and was with Martin Paschon, president of the consistory of the Reformed Church of England in that city. He took active part in the Franco-German War. In 1873 he was appointed and has since remained Protestant chaplain of the prisons on the Seine; and he is a member of the Board of Directors of Prisons in General. Arboux has written various works on prisons, and also on socialistic subjects.

ARCH, JOSEPH: English labor leader; born 1826; leader of the English agricultural laborers' movement (1870-88), and founder of the National Agricultural Laborers' Union (1872), of which he became president. He was the son of a laborer, and worked on the farm from an early age. For some years he used his spare time preaching for the Primitive Methodists, and when the movement began among the agricultural laborers he used his talent in their behalf, soon being recognized as a leader. Four times a candidate for parliamentary honors, he was successful as the nominee of the Liberal Party for northwest Norfolk in 1885, 1892, 1895, and 1900, after a defeat in 1886.

ARGYRIADES, PANAGIOTES: French Socialist; lawyer; born in Kastoria, Macedonia, 1832. He practised law in Paris, where he founded *La Question Sociale* and *L'Almanach de la Question Sociale*. Argyriades, who was a militant propagandist, died in 1901.

ARISTOCRACY: Term which, literally, means government by the best; but in ordinary use "the best" means simply "the highest in rank and in opulence"; so that the word has come to mean a government where the supreme power is exercised by those highest in station, inheritance, blood, or wealth. With the word used in this sense, it is generally claimed that the United States is to-day more of an aristocracy than of a democracy. Dr. Josiah Strong, in "Our Country," wrote, even in 1885:

Every nation has its aristocracy. In other lands the aristocracy is one of birth; in ours it is one of wealth. It is useless for us to protest that we are democratic, and to plead the leveling character of our institutions. There is among us an aristocracy of recognized power, and that aristocracy is one of wealth. No heraldry offends our republican prejudices. Our ensigns armorial are the trade-marks. Our laws and customs recognize no noble titles; but men can forego the husk of a title who possess the fat ears of power.

Some claim that this power of wealth goes to the ablest, but against this assertion may be quoted the following extract from an article by John Stuart Mill (*Fortnightly Review*, February, 1879):

The very idea of distributing justice, or of any proportionality between success and merit or between success and exertion, is in the present state of society so manifestly chimerical as to be relegated to the regions of romance. It is true that the lot of individuals is not wholly independent of their virtue and intelligence; these do really tell in their favor, but far less than many other things in which there is no merit at all. The most powerful of all the determining circumstances is birth. The great majority are what they were born to be. Some are born rich without work, others are born to a position in which they can become rich by work, the great majority are born to hard work and poverty through-

out life, numbers to indigence. Next to birth the chief cause of success in life is accident and opportunity. When a person not born to riches succeeds in acquiring them, his own industry and dexterity have generally contributed to the result; but industry and dexterity would not have sufficed unless there had been also a concurrence of occasions and chances which falls to the lot of only a small number. If persons are helped in their worldly career by their virtues, so are they, and perhaps quite as often, by their vices; by servility and sycophancy, by hard-hearted and close-fisted selfishness, by the permitted lies and tricks of trade, by gambling speculations, not seldom by downright knavery. Energies and talents are of much more avail for success in life than virtues; but if one man succeeds by employing energy and talent in something generally useful, another thrives by exercising the same qualities in outgeneraling and ruining a rival. It is as much as any moralist ventures to assert, that, other circumstances being equal, honesty is the best policy, and that with parity of advantages an honest person has better chances than a rogue. . . . The reward, instead of being perfected to the labor and abstinence of the individual, is almost in reverse ratio to it; those who receive the least labor and abstain the most.

ARISTOTLE: Greek philosopher; born at Stagira 384 B.C.; died in 322. He was a pupil of Plato at Athens, and is said to have been called "the intellect of the school." After Plato's death (347 B.C.) Aristotle left Athens, and in 342 B.C. was invited to Macedonia by Philip, and became the teacher of Alexander. He remained here till Alexander started on his Asiatic expedition (334 B.C.), when he returned to Athens and opened a school called the Lyceum, and (from his practise of walking as he lectured) the "Peripatetic" school. He died at Chalcis in Euboea, aged sixty-two. His main works are the "Nicomachean Ethics," "Organon" or "Logic," "Rhetoric," "Poetics," "Physics," and "Politics." His knowledge for his times was encyclopedic. His thorough knowledge of facts made him much more concrete and scientific, and as objective as Plato was idealistic and subjective. The following summary of his economic and sociologic positions is abridged from Professor Ingram's "History of Political Economy," p. 16:

Aristotle, like all the Greek thinkers, recognizes but one doctrine of the State, under which ethics, politics proper, and economics take their place as departments, bearing to each other a very close relation, and having, indeed, their lines of demarcation from each other not very distinctly marked. When wealth comes under consideration, it is studied not as an end in itself, but with a view to the higher elements and ultimate aims of the collective life.

The origin of society he traces not to economic necessities, but to natural social impulses in the human constitution. He opposes the suppression of personal freedom and initiative, and the excessive subordination of the individual to the State, and rejects the community of property and wives proposed by Plato for his governing class. The principle of private property he regards as deeply rooted in man, and the evils which are alleged to result from the corresponding social ordinance he thinks ought really to be attributed either to the imperfections of our nature or to the vices of other public institutions. Community of goods must, in his view, tend to neglect of the common interest and to the disturbance of social harmony.

Of the several classes which provide for the different wants of the society, those who are occupied directly with its material needs—the immediate cultivators of the soil, the mechanics and artificers—are excluded from any share in the government of the State, as being without the necessary leisure and cultivation, and apt to be debased by the nature of their occupations. In a celebrated passage he propounds a theory of slavery, in which it is based on the universality of the relation between command and obedience, and on the natural division by which the ruling is marked off from the subject race. He regards the slave as having no independent will, but as an "animated tool" in the hands of his master; and in his subjection to such control, if only it be intelligent, Aristotle holds that the true well-being of the inferior as well as of the superior is to be found. This view, so shocking to our modern sentiment, is of course not personal to Aristotle; it is simply the theoretic presentation of the facts of Greek life, in which the existence of a body of citizens pursuing the higher culture and devoted to the tasks of war and government was founded

on the systematic degradation of a wronged and despised class, excluded from all the higher offices of human beings, and sacrificed to the maintenance of a special type of society.

Like the other Greek social philosophers, Aristotle recommends to the care of governments the preservation of a due proportion between the extent of the civic territory and its population, and relies on antenuptial continence, late marriages, and the prevention or destruction of births for the due limitation of the number of citizens, the insufficiency of the latter being dangerous to the independence and its superabundance to the tranquillity and good order of the State.

Aristotle's economic and social ideas are found almost exclusively in his "Politics." The following quotations give some of the salient points:

It is evident that the State is a creation of nature, and that man is by nature a political animal. The State is, by nature, clearly prior to the individual and to the family, since the whole is of necessity prior to the part. . . . The proof that the State is a creation of nature, and prior to the individual, is that the individual, when isolated, is not self-sufficing; and, therefore, he is like a part in relation to the whole. But he who is unable to live in society, or who has no need, because he is sufficient for himself, must be either a beast or a god. He is no part of the State. A social instinct is implanted in all men by nature, and yet he who first founded the State was the greatest of all benefactors ("Politics," i., 2).

There are many difficulties in the community of women, and the principle on which Socrates rests the necessity of such an institution does not appear to be established by his arguments (ii., 1).

Property should be in a certain sense common, but is as a general rule private; for when every one has a distinct interest, men will not complain of one another, and they will make more progress because every one will be attending to his own business (ii., 5).

The beginning of the reform is not so much to equalize property, but to train the noblest sort of natures not to desire more, and to prevent the lower from getting more; that is to say, they must be kept down but not ill-treated (ii., 7).

ARMSTRONG, SAMUEL CHAPMAN: General, philanthropist, educator; born in Hawaii in 1839; son of an American missionary; educated in Hawaii and at Williams College, Williamstown, Mass. In 1862 he joined the army and served through the war, afterward accepting a position in the Freedman's Bureau. He enlisted the American Missionary Association in the cause of negro education, and founded the Hampton Normal and Agricultural Institute (1868), at Hampton, Va., devoting the remainder of his life to this undertaking. He died in 1893.

ART AND SOCIAL REFORM: Art meant originally skill in fitting. The artist was simply the skilled workman, and not different from the artisan. He was the man who could make good houses to live in, and particularly good houses in which to enshrine the public's ideals, good temples, baths, etc. He was one who could make good furnishings for the houses—good chairs, good vases, good mosaics, good statues and pictures of the gods. Art was thus developed as soon as and to the extent to which the community was lifted above absolute want and the struggle for mere physical existence—i. e., as soon as people had opportunity to think of the quality as well as the quantity of its work. Hence the great art periods of a nation have been either when the nation was rich and prosperous (e. g., the age of Phidias in Athens, The Renaissance in Italy and France, the age of Merry England), or when the people were at least enjoying the fruits of victory or of success in any line (e. g., periods of Gothic art). If, however, a nation becomes wealthy, not by conquest or slow growth, but by producing commodities and selling them, it is evident that the nation will not produce a great art, because it will be compelled to think more of the quantity than the quality of its work, or, if it think of quality, it will think mainly of commodities as

fitted to sell. The rich nations of to-day being commercial nations, we need not be surprised to hear artists complaining of the real dearth of art, altho we have in England and America phenomenal wealth. It is evident, from this consideration alone, how social conditions can affect art. We shall in a moment see how art can affect social conditions. For the moment, however, we must notice another point. If art be the production of commodities worthily expressing a nation's aspirations—public buildings, statues, and pictures of its gods, its heroes, its ideals of beauty and of power—it will follow that it will attain to high development where *hand-work* is largely practised, since this allows the expression of ideals; and conversely it will attain meager development where machine-work prevails, since this does not allow of much expression of ideals. Here, too, remembering that the present age is characterized by machine production, we see a very potent cause for the present dearth of art.

Once again, when a community becomes divided into two classes, one having leisure and wealth and not producing commodities, the other class poor and doing the productive work, a desire for art will spring up amid the leisure class and not in the other. But since the leisure class does not itself produce, the desire will not create

Influence of Social Conditions

art, but a dilettante, artificial, unnatural desire for art; while the producing class, not having leisure, and being compelled to think mainly how to get a bare existence, will not be able to produce art; especially when the nation's production is mainly carried on by machinery. In such a community the artist will come to be considered very different from the artisan. The artist will usually become an affected idler and the artisan an unartistic "hand." It is only too evident that this is the state of affairs to-day. Such are but some of the ways in which social conditions affect art.

Let us now see some of the ways in which art affects social conditions. Art we have seen to be the producing of good work. Now, when a community thinks a great deal of producing good work—good houses and furnishings for houses, worthy temples, public buildings, baths, etc.—it follows inevitably that the people do not think so much of merely producing commodities to sell. As a people primarily commercial cannot be primarily artistic, so a people primarily artistic cannot be primarily commercial. It raises a different ideal. The ideal of good work operates in various ways. It produces a demand for leisure in which to do the work. An artistic nation will never live in a hurry. It will seek freedom in which to work. It will not endure great factories and machine-made work. It is a fact that almost all the great artists and poets and idealists to-day are among the bitterest foes of the commercialism and mammonism of the present time, and are, for the same reason, among the most earnest workers for social reform. A high and uncommercial social development develops art, and the art demands and calls for social reform, thus producing action and reaction. Thus, great artists like William Morris and critics like John Ruskin are never weary of condemning the shoddy work and commercialism and baseness and ugliness which characterize so much of modern life. Nor are they ever weary of comparing it, to the damage of the present, with the beautiful work of ages when commerce was not a god, and when

machines had not crowded people into slums, nor prevented expression entering into the work of the producer. A somewhat smaller number of artists, poets, and idealists, and especially the greatest among them, are equally ready to work not for "the good old times," but to bring in the better new times, when machines shall not be abandoned, but when brotherhood shall rule in society, making all classes workers, but giving to all classes immunity from the mere struggle for bare existence. They long for the day when all men shall have time to think of producing good work, using machinery indeed, but using it mainly in producing materials to be worked upon and made beautiful by the free hand expressive of the free creative soul.

Particularly have William Morris and Walter Crane, two English artists of genius, thought deeply and written suggestively on the relation of art to social reform. Morris's life was revolutionized by his sense of the importance of this relation. Until the age of fifty he lived, as many artists live, in aristocratic seclusion, absorbed in poetry and the decorative arts. In his "Earthly Paradise" he confesses that he was but "the idle singer of an empty day." And then, at an age when most men would consider their work done, he was impelled to study social problems, and became an ardent Socialist, writing Socialist articles, tracts, and poems, lecturing in the open air in London's parks, and serving on Socialist committees. In a lecture on "Art and Socialism," he has given us, in these pregnant words, his social-artistic creed:

Morris and Crane

I put forward a claim on behalf of labor enslaved by commerce, which I know no thinking man can deny is reasonable, but which if acted on would defeat commerce; that is, would put association in the stead of individualist anarchy.

I have looked at this claim by the light of history and my own conscience, and it seems to me so looked at to be a most just claim, and that resistance to it means nothing short of a denial of the hope of civilization.

This then is the claim:

It is right and necessary that all men should have work to do which shall be worth doing, and be of itself pleasant to do; and which should be done under such conditions as would make it neither overwearisome nor overanxious.

Turn that claim about as I may, think of it as long as I can, I cannot find that it is an exorbitant claim; yet I say if society would or could admit it, the face of the world would be changed; discontent and strife and dishonesty would be ended. To feel that we were doing work useful to others and pleasant to ourselves, and that such work and its due reward could not fail us! What serious harm could happen to us then? And the price to be paid for so making the world happy is revolution.

When Morris died, his mantle fell on Walter Crane more than upon any other single man. Crane, too, is an active Socialist. Some of his best cartoons have been made for the Socialist press, and he is a familiar figure at London Socialist gatherings. In an essay in his book, "The Claims of Decorative Art" (1892), he writes as follows on "The Prospects of Art Under Socialism":

Socialism presents a new ideal to humanity. It is a religion and a moral code, as well as an economic system. Its true realization would mean unity of public sentiment and the sympathy of a common humanity freed from the domination of class and the grinding conditions of commercial competition. Such an atmosphere could not but be favorable to art in the highest degree.

Not only would the common property in the beauty of nature not be allowed to be disfigured for the purposes of private gain, but with leisure and security of living it would not be a question, as it is now so often, with the artist or craftsman, hindered, in pursuing his higher aims, and in seeking perfection in his craft, by the cramping consideration that it will not pay.

And what is true of art work is, after all, true of all work.

A profit-grinding system must of necessity be against the best in all ways.

Greater simplicity and dignity of life, too, which would naturally result from a juster distribution of wealth, would have its effect on both art and architecture, and would find expression in simpler and sincerer forms of construction and ornament.

If we imagine a truly socialized community—a state of equal condition (not necessarily of mental capacity or other quality) wherein every able-bodied member served the community according to his capacity, it might necessitate a portion of time (determined by the numbers of the community and their necessities) being spent in some form of manual labor. This in itself would be an advantage and physical benefit to each individual; nor so long as enough leisure was secured would mental capacity be likely to suffer, in its true sense, or the art instinct or capacity either—on the contrary. There is nothing, after all, like close intimacy with nature and fact to strengthen the character all round, and clear the mental vision of morbid states; and as for art, like the wrestler, it always gains new vigor every time it touches the ground—the ground of common nature and common life.

The type of artist—supposing artists existed as a class or order in a socialistic community—most likely to be fostered would, I think, be probably such as that represented by the master craftsmen of the Middle Ages, such as Albert Dürer or Holbein, for instance—men capable of design in all kinds of materials, who could design a building, make the pattern of a jewel or a gown, draw a title-page or paint a portrait. What may be called, in short, the all-round artist would be likely to be more in demand than the specialist more or less fostered under present conditions.

The essence of art is harmony and unity. Before we can hope to get harmonious art and thought, therefore, we must realize harmony and unity in life.

William Morris and Walter Crane are, however, but the two most prominent representatives of artistic tendencies that are worldwide. Before their time, and without their definite Socialist tendencies, Jean François Millet had stirred the heart of all mankind with his delineations of French peasants—dull victims of age-long oppression. And since Morris and Crane began their work, Constantin Meunier, the Belgian sculptor, has stamped on the imagination of his age the somber and tragic figures of mine- and factory-workers.

Two other of the great English artists of the past generation, George Frederick Watts and Sir Edward Burne-Jones, felt at least something of the social tragedy of our time, and prefigured it in their art. All over the Continent of Europe, younger artists are now working along socialistic lines. The most talented, perhaps, of these younger men is E. M. Lilien, of Berlin, a Jewish black-and-white artist, who has illustrated Rosenfeld's "Songs of the Ghetto" with haunting power, simplicity, and pathos. The *Wahre Jacob* of Stuttgart, and the socialistic papers of Italy and France often bear striking witness to the influence of humanitarian ideals on the new generation of artists.

The impress of the social spirit on the broader art, which includes not merely pictures, but also poetry, music, the drama, and literature, is a challenging portent in our age. Shelley's ethereal song was colored by a spirit of intense social revolt. Richard Wagner, the greatest figure in modern music, was in his earlier life a rebel and a revolutionist, and has written voluminously of his subversive social ideals. Henrik Ibsen, the greatest figure in the modern drama, remained throughout his life an unsparing critic of modern society. Victor Hugo's "Les Misérables," probably the greatest novel of the nineteenth century, is a poignant revelation of that nether world which is not far from us all. Sudermann and Hauptmann, the leading German dramatists of to-day, Maeterlinck, the Belgian poet and playwright, G. Bernard Shaw, the Eng-

lish satirical dramatist, Tolstoy, the Russian novelist, and Maxim Gorky, this latest and menacing figure who comes to us "out of the depths"—are all preoccupied with social problems.

Here in America the ideal of a new society has fired the souls of our most important writers. Whitman's "Leaves of Grass" has become the Scripture of the democratic movement in its largest sense. The dean of American novelists, William Dean Howells, has known the lure of the social ideal, and at one time it looked as if he, like his friend Edward Bellamy, might abandon literature for socialism. Edwin Markham leapt into fame with a poem that voiced the bitter cry of "The Man with the Hoe." Jack London, the most brilliant of our younger men of letters, is a militant Socialist; and Upton Sinclair's "The Jungle," a Socialist novel dealing with the horrors of the Chicago slaughterhouses, has done for wage slavery something of what Harriet Beecher Stowe's "Uncle Tom's Cabin" did for chattel slavery.

It is not difficult to understand why the social problems of our day grip the heart of the artist. In the deepest sense, the social instinct and the artistic instinct are one. The instinct that drives men on to the achievement and realization of perfect social forms is the same as that which impels the artist to express himself in poems, statues, and paintings. The true reformer is a social artist molding the rough materials out of which shall come a new and radiant world. In the degree that he fulfils his mission, he becomes truly godlike, creating and shaping the universe anew.

ARTHUR, PETER M.: Late head of the Brotherhood of Locomotive Engineers in the United States; born in Scotland, 1836; came to America when ten years old. He was employed in an engine-house in various capacities, until at length he became an engineer. Early interested in the organization of his craft, he was in 1874 elected to its highest office, being reelected annually until his death. Under him the Brotherhood became one of the most powerful altho most conservative trade-unions in the country, numbering some 30,000 men. He was much criticized by many in the labor movement for not being more willing to combine with other labor organizations. Arthur regarded himself as the head of a business corporation formed to subserve the interests of its members; and he felt that, however he or any one else might personally look upon any matter, his plain duty was to serve only those who had placed him at the head of their organization. He died in 1903.

ATELIERS NATIONAUX: National workshops; a term used in France for the workshops established by the Provisional Government of France in the Revolution of 1848, to give work to the unemployed.

The Provisional Government had scarcely been established (in February, 1848), when a committee of Socialists demanded of it the recognition of the right to work. Louis Blanc and one or two others were the only real Socialists in the government, and the demand of the men was only reluctantly conceded, for political reasons. Louis Blanc says distinctly that the government nominally yielded, but appointed a committee secretly instructed to make the experiment fail, and the most cursory examination of the evidence shows that it is impossible to judge correctly of the *ateliers nationaux* on the supposition that they were merely a *bona fide* effort to carry out the decree establishing the "right to work."

Louis Blanc advocated the formation of a ministry of labor, but this was negatived. In place of it, as a compromise, a government labor commission, under the presidency of Louis Blanc, was established, with power of inquiry and consultation only. Meanwhile, the carrying out of the decree by the establishment of national workshops was confined not to this commission but to the Minister of Public Works, M. Marie. This was followed the next day by a decree specifying various public works to be started. Besides the works organized by the Minister of Public Works, the Minister of War opened works in the Champs de Mars. All went well while the number of the unemployed was less than 6,000, but as soon as that number was exceeded the workmen of each *arrondissement*, after having visited all the open works in succession without result, returned to their *mairies* offices tired, starving, and discontented. Louis Blanc, resigned and publicly denounced the scheme as not being conducted in good faith. Each *mairie's* office was authorized to pay every unemployed workman 1.50 francs per day on production of a ticket showing that there was no vacancy for him in the national works. The fixed sum of two francs was paid to any workman engaged on the public excavation works, without regard to his age, the work done, or his calling. The workman,

**Louis Blanc
Denounces
the Scheme**

therefore, made the following simple calculation, "The state gives me thirty sous for doing nothing; it pays me forty sous when I work, so I need only work to the extent of ten sous."

As the numbers claiming work or relief rapidly increased, both the bureaus and the *mairies'* offices became the centers of tumultuous crowds. Therefore, Emile Thomas, a chemist connected with the *Ecole Centrale*, was commissioned by M. Marie to reorganize the works on a complicated and absurd semimilitary plan. When Emile Thomas took the work in hand, the number of unemployed in Paris was estimated at from 13,000 to 14,000, in addition to 4,000 or 5,000 already engaged on public works. This number continued steadily to increase day by day, without, however, any corresponding expansion of the public works. After a meeting of the chief engineers, who were unable to suggest means of employing usefully more than a few hundred of the 14,000 unemployed men, it was resolved to undertake a series of works in the plain of Monceaux, which, if serving no other object, would at least have the advantage of keeping the crowd employed. Already the whole scheme was costing 20,000 fr. a day, and measures were contemplated for reducing and finally extinguishing the pay to the idle.

Political feeling between the Moderates and the Extremists was already running high in view of the elections which were fixt for April. The strength of the former centered in the Hôtel de Ville, that of the Socialists in the Luxembourg. The national works depended politically on the Hôtel de Ville. From this time it becomes progressively more difficult to treat the works as a purely economic experiment. That the administration of the works was on an altogether unnecessary scale is not denied even by the director, who, however, declared that he was continually under the necessity of finding places for crowds of applicants sent to him with recommendations which he could not resist. Thus a large number of actors, painters, commercial clerks, and others, thrown out of work by the crisis, having been refused tickets for admission to the works as not wearing the workman's blouse, were employed by the director as pay agents.

The National Assembly met on May 4th. Louis Blanc re-

newed his motion for a minister of labor, which was rejected. On the 15th the Assembly was invaded by the mob, and from that time the antisocialist tendency of the government became more marked. The new government immediately determined to reduce and suppress the national works, which were draining the treasury and demoralizing the people, and which were suspected of being centers of intrigue on the part of Louis Bonaparte. The result was the bloody insurrection of June 23d and following days, which was only suppressed after three days of street fighting. Soon after Louis Napoleon was elected President of the Republic. The gigantic schemes subsequently carried out under the Second Empire for the rebuilding of large parts of Paris served for many years to provide employment for Paris workmen, and while they lasted formed an effective substitute for the ill-fated national works.

ATHENS, SOCIAL POLITY OF CLASSIC: Greek social thought centered around the state, and the state usually meant the municipality, or the city (hence, *political economy*, the economy of the city). Of this policy Athens under Pericles was the most brilliant example. In the first place, it was, *with the exception of its slave basis*—of which we shall speak later—to a large extent democratic. Even during the kingly or traditional period, there seems to have been recognition of the popular power in the brotherhoods (*phratrias*) and clans (*genai*), believed to rest, and probably actually resting, on consanguinity. This largely disappeared under the Eupatrids, but was more than revived by Solon. He established the *ekklesia*, or assemblies of the whole people, to elect the archons and councilors; to judge the former at the annual expiration of their office; and to accept or reject all the laws and decrees proposed by the council. (See REFERENDUM.) Under Clisthenes all free inhabitants of Attica were admitted to citizenship. This, however, is the least interesting of Athens' sociological features.

Mr. W. D. P. Bliss, in *The Outlook* (Nov. 11, 1905), has argued that socialism was virtually tried in Athens, under Pericles. This was the exact period of Athens' greatest glory and of the production of individualities so great that Francis Galton, of the highest authority in anthropological science, says: "A population of 90,000 produced two men, Socrates and Phidias, whom the whole population of Europe has never equaled, and fourteen men of an ability of which the Anglo-Saxon race has only produced in 2,000 years five equals." He asserts that the average ability of the Athenian race was about as much above that of the English race as that race is above the African negro. J. A. Symonds favorably quotes this, and says that the population of classic Athens, taken as a whole, was perhaps as superior to ours as our race is to that of the Australian savage. This Mr. Bliss considers mainly due to Athens' socialism, of which he says, in substance:

It practically asked from each citizen according to his ability, and gave to each according to his need. This was accomplished in the main by two institutions: the so-called "liturgies," securing from the rich gratification for the less fortunate, and above all by the "dicaeticon," or daily money payment for public service, given to practically any citizen who wished it, and in quantity sufficient to enable him to live upon it in respectability and ordinary comfort. It was the latter institution which above all made Athens socialistic. It was introduced by Pericles, as we may clearly learn, among other sources, from Aristotle ("Politics," ii., 12) and Plato ("Gorgias," 575). We will consider the latter first.

The dicaeticon was the daily money payment, first of one obol and later of three, to any Athenian citizen who did duty as a *dicas* or juror in the multitudinous courts of Athens. One obol is three cents—seemingly a small affair, and yet, measured by Athenian prices, sufficient to maintain life in

respectability and comfort, and paid sufficiently frequently to form, Mahaffy tells us ("Old Greek Life," p. 68), "an income on which most of the poorer citizens lived." Professor Boeckh, in his "Public Economy of Athens," estimates that prices in Athens, under Pericles, were at least ten times lower than in modern times. He who received three obols a day therefore received the equivalent of ninety cents to-day. He probably received vastly more compared with modern city prices. It has been calculated that 6,000 persons received the *dicasticon* each day, supporting perhaps 30,000 persons (including wives and children), or about one third of the free population. And this payment was only the principal one of several similar payments. It was for service in the courts; but for attendance at the *ecclesia*, or popular assembly, to which also any Athenian citizen could go, there was another payment, an *ecclesiasticon*, varying at different times from one to nine obols. Moreover, the city saw to it that her poorest citizen could enjoy the drama and the religious festivities, both of which were considered municipal functions which it was important that every citizen should attend. Therefore the poorest citizens were paid a *theoricon* of two obols for the drama, besides various payments for the different religious festivities. It must be remembered, too, that the greatest Athenians lived in the simplest way. Therefore, those who were paid their three obols a day could not only live, but live as did the best. And all this was the result of its socialistic government. The state was omnipresent. It conducted and maintained the religious rites of the city, the Panathenaic and other festivals. It built and cared for the temples, baths, gymnasia, stoa, theaters, and market-places. It cared for the arts. The Parthenon and the Acropolis were the creation of state artists. The state entered into trade. It owned and operated mines in Thrace and Attica. The silver Laurium mines constituted the first Attic treasury. The revenues of the state were mainly derived, not from citizen-paid taxes, but from woods, pastures, lands, houses, and mines, all owned and operated by the state. The state largely watched over and guided the colonial system, which was almost the ruling feature of Athenian financial life. The state built the wharves and warehouses of the *Peiræus*; it controlled the weights and measures; it examined balances and minted coin. It entered into distribution, providing food at cheap price in time of want; and it regulated the price of corn.

The result of all this was the high development of the individual. The Athenian was delivered from the necessity to "hustle" for a livelihood. Any Athenian who wished it was allowed to devote his life to money-making. Some did, and accumulated wealth. But such were few, and those few were compelled to spend their money for the public good. The vast number of Athenians preferred, and were encouraged to prefer, higher things. Commerce and trade were generally left to slaves. Athens' "Four Hundred" were devotees of art and philosophy. The state believed in competition, but in the higher life, not in the market. The *liturgies* of the wealthy were used to institute prize games or art contests. Athens' great dramas were prize plays. In economics she practised socialism, and so freed men for the higher life.

Athens fell because she was not moral. Her socialism, we have said, was selfish. Her public men were often corrupt; her family life was impure. Greece, too, was not socialistic. She was at best but a loose federation of competing republics. She fell before a united Macedon, even as Macedon fell before the larger unity of the Roman Empire. Her slavery, too, largely undermined her. The number of these slaves cannot be determined with any certainty. They were scarcely regarded as men, but as the tools or machinery of the day. Yet they had rights.

Slavery Professor Ingram, writing in the "Encyclopædia Britannica," in the article on "Slavery," says:

The condition of slaves at Athens was not in general a wretched one. Demosthenes ("In Mid.," p. 530) says that, if the barbarians from whom the slaves were bought were informed of the mild treatment they received, they would entertain a great esteem for the Athenians. Plautus in more than one place thinks it necessary to explain to the spectators of his plays that slaves at Athens enjoyed such privileges, and even license, as must be surprising to a Roman audience. The slave was introduced with certain customary rites into his position in the family; he was in practice, tho not by law, permitted to accumulate a private fund of his own; his marriage was also recognized by custom; tho in general excluded from sacred ceremonies and public sacrifices, slaves were admissible to religious associations of a private kind; there were some popular festivals in which they were allowed to participate; they had even special ones for themselves both at Athens and in other Greek centers. Their remains were deposited in the family tomb of their master, who sometimes erected monuments in testimony of his affection and regret.

Thus Athens may be looked at from the standpoint of social science in at least two opposite ways. Looking at its free population, it may be considered a socialistic city, and the Socialists may use it as an illustration of great individualities produced, not by competition, but by socialism. Looking at its large slave population and the despite put upon manual labor, Athens may be considered as an oligarchy, intellectual, brilliant, but resting on injustice and immorality.

ATKINSON, EDWARD: American economist; born in Brookline, Mass., 1827; educated principally at private schools. His reputation was made by the numerous pamphlets and papers which he contributed to current literature on economic topics. The subjects treated embrace such general topics as banking, competition, cotton, free trade, mechanical arts, and protection. The most important of his addresses are "Banking," delivered at Saratoga in 1880 before the American Bankers' Association; "Insufficiency of Economic Legislation," delivered before the American Social Science Association; "What Makes the Rate of Wages?" before the British Association for the Advancement of Science; address to the chiefs of the Bureau of Labor Statistics, at their convention in Boston in 1885; vice-presidential address on "The Application of Science to the Production and Consumption of Food," before the American Association for the Advancement of Science, in 1885. Among his pamphlets are the following: "Labor and Capital, Allies, not Enemies" (New York, 1880); "The Railway and the Farmer" (ib., 1881); "The Distribution of Products" (ib., 1885).

In 1886 Atkinson began the preparation of a series of monographs on economic questions, for periodical publication. Through his efforts was established the Boston Manufacturers' Mutual Fire Insurance Company, an association consisting of a number of manufacturers who, for their mutual protection, adopted rules and regulations for the economical and judicious management of their plants. Atkinson invented an improved cooking stove called the "Aladdin cooker." He died December, 1905.

AUER, IGNAZ: German Social Democrat, and member of the Reichstag; born in Dommelstadt, 1846; educated in the public schools; a saddlemaker by profession. From 1874 to 1877 he was secretary of the Social Democratic Party in Hamburg, and from 1877-78 editor of the *Berliner Freie Presse*, and later of the *Hamburger Gerichtszeitung*. In 1877 he was elected a member of the Reichstag for Auerbach, and was reelected in 1880, 1884, and 1890. Address: Kreuzbergstrasse, 30, Berlin, S. W., Germany.

AUSTIN, JOHN: English writer on jurisprudence; born at Creeting Mill, Suffolk, England, 1790. He entered the army at the age of sixteen, but after five years returned to London, studied law, and was admitted to the bar in 1818. He was an intimate friend of Jeremy Bentham and of James and John Stuart Mill, and developed an academic rather than a professional career. In 1826 he was appointed professor of jurisprudence in the University of London but had to resign his chair four years later for lack of students who would pay class fees. Austin was a member of the Criminal Law Commission and of a Maltese Commission, but devoted himself mainly to his

writings, best known for their clear tho abstract development of the doctrine of sovereignty. His "Province of Jurisprudence Determined" was published in 1832, while an additional volume, under the title "Lectures on Jurisprudence," was published by his widow (née Sarah Taylor), in 1866. He died in Surrey, England, 1859.

AUSTRALIA: The Australasian colonies comprise the continent of Australia, the adjacent island of Tasmania, and the islands of New Zealand. On Jan. 1, 1901, the five mainland states and Tasmania became the commonwealth of Australia, New Zealand retaining its position as a separate colony.

I.—Statistics

AREA AND POPULATION

| STATE | Area in acres | Area in sq. m. | Population, 1903 |
|--------------------------------|---------------|----------------|------------------|
| New South Wales..... | 108,848,000 | 310,700 | 1,417,870 |
| Victoria..... | 56,245,760 | 87,884 | 1,205,513 |
| Queensland..... | 427,838,080 | 668,497 | 523,266 |
| South Australia..... | 578,361,600 | 903,690 | 389,727 |
| Western Australia..... | 624,588,800 | 75,920 | 254,309 |
| Tasmania..... | 16,778,000 | 926,215 | 174,233 |
| Commonwealth of Australia..... | 1,902,660,240 | 2,972,906 | 3,964,918 |
| New Zealand..... | 66,861,440 | 104,471 | 894,206 |
| Australasia..... | 1,969,521,680 | 3,077,377 | 4,859,124 |

Australasia, including the native races, had in 1903 a density of 1.61 persons per square mile—a rate far below that of any other civilized country. From the earliest years of settlement there was a steady, if not powerful, stream of immigration; but in 1851, memorable for the finding of gold, the current was swollen by many thousands. Immigration was long aided by the State. Recently, however, there has been much emigration, and in 1902-3 emigration exceeded immigration.

The progress of the chief cities has been remarkable, and has no parallel among the cities of the Old World, and rarely in America. The population of the chief cities in 1903 was: Sydney, New South Wales, 511,030; Melbourne, Victoria, 501,460; Adelaide, South Australia, 168,066; Brisbane, Queensland, 124,463; Wellington, New Zealand, 53,082; Perth, West Australia, 46,400; Hobart, Tasmania, 34,682. The cities are well laid out, often beautiful, and provided with museums, art galleries, libraries, etc. All the capitals are liberally supplied with parks and recreation-grounds. In Sydney and suburbs there are parks, squares, and public gardens comprizing an area of 4,598 acres, including 745 acres which form the Centennial Park.

Fully 95 per cent of the people are of British origin. In 1901, the aborigines numbered 40,880 full-blooded and 7,368 half-castes. Of the total male population, 28.65 per cent are married; and of the female, 31.71. The birth-rate in 1903 was 25.16. It has been declining for some years, and in 1903 a royal commission investigated the causes of this and of the mortality of infants. It was found that there had been a serious diminution of fecundity since 1889, due chiefly to deliberate prevention of conception and the destruction of fetal life, and to the consequent pathological causes. Illegitimate births are rather numerous, the total number in

the whole of Australasia during 1903 being 6,912, equal to 5.75 per cent of the total births.

The death-rate is 12.07, much below that of any of the European States, and is steadily declining. Every year sees an advance in the sanitary condition of the people in the large centers of population, and to this cause may be ascribed the greater part of the improvement. As to suicides, the experience of Australasia agrees with that of other countries, namely, that the tendency to self-destruction is increasing.

In 1903 the marriage rate was 6.63 per thousand. The following table shows the number of decrees of dissolution of marriage and judicial separation granted in each state in quinquennial periods since 1871, so far as it has been possible to procure the information. Divorce was legalized in New South Wales in 1873, and the figures of that state for 1871-75 only cover the two years 1874 and 1875.

| STATE | 1871-75 | | 1881-85 | | 1891-95 | | 1906-1902 | |
|------------------------|----------|----------------------|----------|----------------------|----------|----------------------|-----------|----------------------|
| | Divorces | Judicial Separations | Divorces | Judicial Separations | Divorces | Judicial Separations | Divorces | Judicial Separations |
| New South Wales.... | 21 | ... | 116 | 6 | 1,087 | 55 | 1,675 | 110 |
| Victoria..... | 33 | 6 | 74 | 8 | 441 | 10 | 700 | 4 |
| Queensland..... | 4 | 1 | 5 | 3 | 26 | 3 | 62 | 5 |
| South Australia..... | 22 | 3 | 31 | 10 | 30 | 3 | 47 | 3 |
| Western Australia..... | ... | ... | 5 | ... | 9 | ... | 47 | 1 |
| Tasmania..... | 9 | ... | 9 | ... | 21 | 2 | 34 | ... |
| New Zealand..... | ... | ... | ... | ... | 101 | 14 | 426 | 25 |
| Australasia..... | 89 | 10 | 240 | 26 | 1,715 | 86 | 2,986 | 148 |

During the five years ended 1895 the marriage rate fell considerably in Australasia. It was lower in every state than during the preceding quinquennial period, and lower everywhere than during the five years 1881-85; but during the last five years the rate rose again in every state except South Australia.

In all the Australasian provinces the State system of education is secular. Compulsory clauses find a place in the acts of the various states; but the enforcement of these is not everywhere equally strict. In Victoria, for example, compulsory attendance at school has been rigorously insisted upon, while in Queensland the principle of compulsion has been allowed to remain almost in abeyance, and in the other states it has been enforced with varying degrees of strictness. In Victoria, Queensland, New Zealand, Western

Australia, and South Australia, the primary education provided by the State is entirely free of charge to the parents; in New South Wales and Tasmania small fees are charged, but these are not enforced where the parents can reasonably plead poverty. In 1903 there were in New South Wales 2,862 public schools with 243,516 children; and 841 private schools with 58,258 pupils; in Victoria, 1,988 public schools with 251,655 pupils; and 798 private schools with 45,658 pupils; in South Australia, 276 public schools with 67,697 pupils, and 205 private schools with 10,260 pupils; in Queensland, 1,023 public schools with 69,759 pupils, and 171 private schools, with an average daily attendance of 12,494. During the year 1903 the cost of administration and maintenance

* Information not available.

Vital Statistics

of the State schools of Australasia was £2,530,618, while the revenue from fees, rents, sales of books, etc., amounted to £125,399, leaving a net cost to the State of £2,405,219, excluding a sum of £287,458 expended on school premises.

Great progress has been made in education. The following table affords a comparison of the number of literates and illiterates in every 10,000 of the population:

| DEGREE OF EDUCATION | POPULATION OVER 5 YEARS OF AGE | | | | |
|---------------------|--------------------------------|--------|--------|--------|--------|
| | 1861 | 1871 | 1881 | 1891 | 1901 |
| Read and write..... | 7,001 | 7,038 | 8,270 | 8,804 | 9,999 |
| Read only..... | 1,380 | 1,186 | 689 | 303 | 229 |
| Cannot read..... | 1,619 | 1,776 | 1,041 | 803 | 672 |
| Total..... | 10,000 | 10,000 | 10,000 | 10,000 | 10,000 |

University education is provided at five universities, as seen in the following table:

| UNIVERSITY | STUDENTS ATTENDING LECTURES | | |
|------------------|-----------------------------|------------------|-------|
| | Matriculated | Not matriculated | Total |
| Sydney..... | 724 | 53 | 777 |
| Melbourne..... | 509 | 119 | 628 |
| Adelaide..... | 343 | 299 | 642 |
| New Zealand..... | 646 | 216 | 862 |
| Tasmania..... | 51 | 11 | 62 |
| Total..... | 2,273 | 608 | 2,971 |

Technical instruction is given in nearly all the capital cities of Australasia, as well as in many other parts of the country, and the question of extending the scope of the teaching in the various subjects is at present occupying the attention of the authorities in several of the states.

In the eyes of the State all religions are equal in Australasia, and State aid to the denominations has now been abolished in all the provinces of the group. South Australia, in 1851, was the first state to withdraw such aid, after it had been in force only three years.

Considerable outdoor relief is given in Australasia. The sum of indoor and outdoor relief, public and private, in 1903, in the seven colonies was £1,382,790. There are also many private charities, most of them being aided by the State. There were, 1902, 3,779 friendly societies, with 343,861 members. There are many ecclesiastical charities of the different denominations. In 1902 14,577 persons were cared for in destitute asylums. There were 349 hospitals in 1903.

One point in Australia is of special interest. It is said that "Australia is a continent without an orphanage, a country without an orphan. Each waif is taken to a receiving-house, where it is cared for until a country home is found. The local volunteer societies canvass their neighborhoods and send to the Children's Committee of the Destitute Board the names and circumstances of such families as they have found where children may be placed. The Children's Committee

selects that home which it judges is best adapted to the development and care of the child in question. When of school age the child must be in school. The local volunteer committee looks after its care and culture. When the child is fourteen years old he begins to work. His earnings are placed in the postal savings-bank, and at seventeen or eighteen he goes into the world an independent man. The State, at an expense of less than \$70 a year, has raised a man or woman to contribute to its wealth, and prevented the manufacture of a criminal, and the expense of courts, prisons, and reformatories."

The number of insane persons in Australasia under official cognizance in the various government hospitals for the treatment of the insane, at the end of 1902 was 15,673, equal to 3.36 per 1,000 of the population, or corresponding to one insane person in about every 300. This rate is below that prevailing in England, where one person in every 293 is officially known to be insane.

In Australasia 65.25 per cent of the male population and 19.88 per cent of the female are breadwinners. The number engaged in each class of occupation in 1901 was as given in table at bottom of page.

Thus 564,744 persons are engaged in the primary productive industries, agricultural, pastoral, and mining.

Gold-mining has played the most important part in Australian industry, having largely drawn her populations. Her gold product, too, doubled from 1890 to 1900, and almost equaled that of the United States and the Transvaal, her only rivals. In 1903 the exported gold was valued at £17,124,233. The gold produced in 1899 was £14,459,000. Other metals, however, are growing relatively important, the total mineral produced in 1899 being £22,201,000.

Industry

In wool-raising Australia leads the world, exporting in 1903 a value of £13,997,233. The wool crop has recently temporarily decreased, owing to drought, but scarcity has kept up its value.

Cattle-raising is also important, especially in Queensland, there being 9,838,000 cattle in 1899.

Manufacturing has, as yet, been comparatively little developed. High wages and a high protective tariff are the main features.

Agriculture is increasing, and Australia is becoming an important factor in the world's wheat product. (See AGRICULTURE.)

The discovery of gold in 1851 divides the industrial history of Australia into two periods. Prior to 1851 Australia appeared to be destined for a purely pastoral country, but the discovery of gold effected a revolution in all industrial relations. The supply of labor in many occupations speedily became exhausted, and most branches of industry and all public works were at a standstill. The fever brought not only young, stalwart, enterprising men, but also multitudes whose chief idea was that wealth could be acquired almost without exertion. Unable to endure the hardships of the

| | Professional | Domestic | Commercial | Transport | Industrial | Agricultural | Pastoral | Mining |
|--------------|--------------|----------|------------|-----------|------------|--------------|----------|---------|
| Males..... | 84,451 | 56,877 | 222,546 | 139,995 | 435,507 | 317,115 | 81,617 | 136,068 |
| Females..... | 50,195 | 178,563 | 40,042 | 3,914 | 91,880 | 26,702 | 3,115 | 37 |
| Persons..... | 134,646 | 235,440 | 262,588 | 143,909 | 527,387 | 343,817 | 84,732 | 136,105 |

digger's lot, the latter mostly drifted back to the chief towns; and there was speedily presented the spectacle of thousands of unemployed clamoring for government work, while the more stalwart laborers were earning extraordinary wages in the gold-fields. At the height of the gold discovery the earnings of miners in some cases were prodigious. Making allowance for illicit digging, in the first half of 1852, the average wage of all miners could hardly have been less than thirty shillings per day. From 1872 to 1893, however, the production of gold fell away, and gradually other industries were developed. The years 1892-95 were years of great disturbance, centering round the crisis of 1893. Since then conditions have improved and wages risen.

The movement in wages from 1896 to 1901 was distinctly upward. Carpenters, for example, were in 1896 paid 8s. per day in Sydney, while in 1900 their wages were 9s. 6d., in 1901, 10s., and in 1902, 9s. 6d. The wages in Melbourne at these periods were lower

Wages

than in Sydney, their upward movement has been even greater, for in 1896 carpenters' wages in Melbourne ranged between 6s. and 7s. per day, the greater number being employed at the lower figures, while in 1900 the accepted rate was 8s. 3d., in 1901, 10s., and in 1902, 9s. As regards other trades connected with building, there has also been a marked improvement, and the rates of 1903 approach very closely those paid in 1891—that is to say, before the changes accompanying the financial crisis began to be felt. The following are the wages paid in 1903 in certain manufacturing industries:

Considering the comparatively high rate of wages which prevails, food of all kinds is fairly cheap in Australasia, and articles of diet which in other countries are almost within the category of luxuries are largely used even by the poorer classes. The quantity of meat used by the Australasian people is the most remarkable feature of their diet. The consumption per inhabitant in Germany is 64 pounds, while in Australia it is nearly four times that quantity. In the United States, a meat-exporting country, the consumption is about two thirds of that of Australasia.

The expenditure of Australia coming under the designation "cost of living" amounted in 1903 to £42 19s. 1d. per head, made up of the following items:

| DIVISION OF EXPENDITURE | Total expenditure | Per inhabitant |
|---|-------------------|----------------|
| Food and non-alcoholic beverages | £65,499,000 | £ 16 14 5 |
| Fermented and spirituous liquors | 14,217,000 | 3 12 7 |
| Tobacco | 3,365,000 | 0 17 2 |
| Clothing and drapery | 17,868,000 | 4 11 3 |
| Furniture | 2,075,000 | 0 10 7 |
| Rent or value of dwellings | 19,574,000 | 5 0 0 |
| Locomotion | 7,159,000 | 1 16 6 |
| Fuel and light | 5,416,000 | 1 7 8 |
| Personal attendance, and lodging | 7,032,000 | 1 15 11 |
| Medical attendance and nursing | 4,652,000 | 1 3 9 |
| Religion, charities, education | 3,075,000 | 0 15 8 |
| Art and amusement | 4,831,000 | 1 4 8 |
| Books, newspapers, etc. | 1,804,000 | 0 9 3 |
| Postage and telegrams | 1,098,000 | 0 5 7 |
| Direct taxes not falling on trade | 1,706,000 | 0 8 9 |
| Household expenses not included | 5,447,000 | 1 7 10 |
| Miscellaneous expenses | 3,574,000 | 0 18 3 |
| Total | £168,389,000 | 42 19 1 |

The Australasia has but the population of a province of some of the great European powers, in the wealth and earnings of its people it stands before most of the secondary states, and as regards wealth and income per head of population it compares favorably with any country. The following table shows the value of private property for the whole of Australasia, and the increase thereof at intervals of twenty-five, and in one instance fifteen, years:

| YEAR | Value of Private Property |
|----------------|---------------------------|
| 1788 | Country first colonized |
| 1813 | £1,000,000 |
| 1838 | £6,000,000 |
| 1863 | £81,000,000 |
| 1888 | £1,150,000,000 |
| 1903 | £1,204,042,000 |

For all Australasia, the value of land in private hands is £461,255,000.

The value of land and improvements together amounts to £836,770,000, or 69.5 per cent of the total value of property. The classification of the elements is as follows:

| CLASSIFICATION | Commonwealth States | New Zealand |
|---------------------------------------|---------------------|--------------|
| Land | £373,779,000 | £ 87,576,000 |
| Houses and improvements | 310,265,000 | 65,250,000 |
| Live stock | 96,915,000 | 28,304,000 |
| Household goods | 30,899,000 | 5,661,000 |
| Personal effects | 12,464,000 | 2,498,000 |
| Machinery, excluding mining | 33,495,000 | 6,725,000 |
| Shipping | 6,350,000 | 1,944,000 |
| Mining properties and plant | 32,190,000 | 3,911,000 |
| Merchandise on hand | 59,640,000 | 14,915,000 |
| Coin and bullion | 26,064,000 | 5,189,000 |
| Total | £981,979,000 | £222,063,000 |

| INDUSTRY | AVERAGE WEEKLY WAGES (£. s. d.) | | | |
|---|---------------------------------|----------|-----------------------|-------------|
| | New South Wales | Victoria | Queensland (Brisbane) | New Zealand |
| Males | | | | |
| Cooperage | 2 5 0 | 2 4 6 | 2 0 4 | 1 10 7 |
| Sawmills | 1 15 7 | 2 3 0 | 1 13 3 | 1 9 0 |
| Wood-turning | 1 16 11 | 1 14 8 | 1 9 5 | 1 10 5 |
| Agricultural implements | 1 7 10 | 1 15 7 | 1 15 6 | 1 15 6 |
| Brass and copper | 1 9 8 | 1 9 8 | 1 9 4 | 1 12 0 |
| Ironworks and foundries | 1 18 3 | 1 15 7 | 1 12 0 | 1 12 0 |
| Engineering | 1 14 0 | 1 16 0 | 1 13 0 | 1 13 0 |
| Stoves and ovens | 1 12 3 | 1 12 8 | 0 17 8 | 1 13 9 |
| Tinsmithing, sheet iron-works | 1 6 2 | 1 7 7 | 1 3 7 | 1 6 |
| Tobacco, cigars | 1 9 7 | 1 14 0 | 1 12 0 | 1 13 4 |
| Boots and shoes | 1 12 9 | 1 15 1 | 1 7 6 | 1 13 4 |
| Woolens | 1 3 7 | 1 3 6 | 1 13 9 | 1 13 9 |
| Females | | | | |
| Confectionery | 0 9 3 | 0 13 4 | 0 7 4 | 0 8 2 |
| Jam and fruit canning | 0 12 3 | 0 13 10 | 0 10 3 | 0 8 3 |
| Tobacco, cigars, etc. | 0 16 6 | 1 1 1 | 0 15 8 | 0 16 11 |
| Woolen mills | 0 12 11 | 0 17 8 | 0 12 10 | 0 13 3 |
| Boots and shoes | 0 12 3 | 0 14 0 | 0 13 10 | 0 15 11 |
| Clothing (tailoring) | 1 1 8 | 0 13 10 | 0 15 11 | 0 10 3 |
| Dressmaking and millinery | 0 10 5 | 0 11 9 | 0 10 0 | 0 10 3 |
| Printing and bookbinding | 0 11 0 | 0 13 2 | 0 11 6 | 0 12 7 |

These figures must be accepted with a certain degree of caution. In each state a considerable number of juvenile workers is employed, but only in Victoria is their actual strength ascertained, and as the average weekly wage paid in any establishment would depend to a large extent on the proportion of juvenile labor employed, a fair comparison is impossible while that information is lacking.

From 1880-84, for the Commonwealth the percentage of people possess of property at the time of death was 11.1. From 1890-94 it was 14.1, and from 1895-1900 it was 17.23. These figures show a distribution of property not to be paralleled in any other part of the world, but are not in sufficient detail to enable the question of distribution to be adequately discuss. During the year 1903 the number of adults in the state was 735,589, and of these 190,617 were possessors of property, and 544,972 were without property. As regards the distribution among the 190,617 property owners, the following table throws much interesting light:

| CATEGORIES | Number of persons with property | Proportion of total adults in each category per 10,000 | Total value of property | Percentage of property belonging to persons in each category |
|----------------------|---------------------------------|--|-------------------------|--|
| £50,000 and over... | 987 | 13 | £130,521,100 | 35.4 |
| 25,000 to £50,000... | 1,009 | 15 | 38,261,700 | 10.4 |
| 12,500 to 25,000... | 2,397 | 33 | 41,125,000 | 11.2 |
| 5,000 to 12,500... | 6,041 | 82 | 46,226,000 | 12.5 |
| 200 to 5,000... | 120,798 | 1,648 | 107,315,600 | 29.1 |
| Under £200..... | 59,205 | 809 | 5,327,700 | 1.4 |
| No property..... | 544,972 | 7,400 | | |
| Total adults..... | 735,589 | 10,000 | £368,778,000 | 100 |

It would thus appear that 987 persons—that is to say, 0.13 (about one eighth of one) per cent—were possess of £130,521,000, or 35.4 per cent of the whole property of the community; 2,086 persons held £168,782,800, or 45.8 per cent of the total; and probably half the property of the state is in the hands of 3,000 persons. According to C. E. Russell (*Everybody's*, September, 1906), most of the troubles in Australia come from its land system. Crown land was originally given away to "the better classes" for a song. He says:

In Victoria about a dozen families own one tract of 2,000-000 acres, chiefly used for sheep-runs and hunting grounds. For miles together are no inhabitants and no production except of primeval forest and native grass. Outside of this splendid domain settlers clamor for land; inside, the total population is insignificant and the use of the lands inconsiderable.

The last compilation of agricultural statistics by the government of Victoria makes this startling showing of conditions in that state:

| SIZE OF HOLDINGS | Number of holdings | Total area | Area under cultivation |
|------------------------------|--------------------|------------|------------------------|
| 100,000 acres and more..... | 8 | 2,448,433 | 8,209 |
| 50,000 acres to 100,000..... | 15 | 983,948 | 5,835 |
| 20,000 acres to 50,000..... | 121 | 3,549,351 | 13,953 |
| 10,000 acres to 20,000..... | 186 | 2,583,802 | 20,905 |
| 5,000 acres to 10,000..... | 309 | 2,162,458 | 42,808 |

The fact that of nearly 2,500,000 acres held by eight persons only 8,000 acres produced anything, amounts to a demonstration that these things cannot continue. Yet these are typical conditions. In Queensland six families own 1,500,000 acres. One estate amounts to 250,000 acres. Ninety-two families hold 3,000,000 acres. Estates equivalent in size to a New England county were obtained in the old days, fifty years ago, for perhaps fifty cents an acre, and are now valued at \$15 or \$20 an acre, or even more; meantime, they lie as nature made them.

The total indebtedness of Australasia to British investors is set down at £407,290,000, and the

annual return therefrom, excluding absentee incomes, £17,702,000. The capital sum represents a weight of £84 15s. 7d. per inhabitant, and the annual return £3 13s. 8d. The apparent interest earned is, therefore, over 4½ per cent, a rate which must be considered very favorable, seeing that £250,415,000, or three fifths of the total, comprises government and municipal securities. The Indebtedness of the states of the commonwealth to British creditors amounts to £343,938,000, or £86 16s. 3d. per inhabitant, of which £188,345,000 is due by the central governments, and £8,221,000 by local bodies, while £147,372,000 represents private investments. The indebtedness of New Zealand is £63,352,000, or £75 4s. 5d. per inhabitant, of which £48,049,000 is owing by the central government of the colony, £5,800,000 by local bodies, and £9,503,000 represents private investments.

The external trade of Australia is larger than that of any British possession, India alone excepted.

| YEAR | Imports | Exports | Value per inhabitant |
|-----------|-------------|-------------|----------------------|
| 1861..... | £17,562,060 | £17,399,656 | £ s. d. 30 5 10 |
| 1871..... | 16,715,442 | 21,225,797 | 22 14 10 |
| 1881..... | 29,031,131 | 27,528,583 | 24 16 0 |
| 1891..... | 37,711,953 | 36,052,145 | 22 19 1 |
| 1901..... | 42,433,811 | 49,606,172 | 24 4 3 |
| 1904..... | 37,920,242 | 57,489,216 | 24 1 3 |

These figures would be still larger if proper records had been kept.

The chief exports are: From New South Wales: wool, silver, gold, coal, and hides (there are 30,000,000 sheep in the colony); from Queensland: gold, wool, frozen meat, hides, and sugar; from Victoria: gold, wool, wheat, and butter; from South Australia: wool, wheat, and copper; from West Australia: gold, wool, pearl, and timber; and from Tasmania, gold.

Customs duties through the commonwealth are uniform. The trade of the commonwealth with the more important countries was (1903): Exports to United Kingdom, £19,062,503 (mainly wool); India, £5,601,972; Ceylon, £3,973,799; France, £3,216,526; Germany, £3,134,683; United States, £2,625,399 (mainly wool). Imports from United Kingdom, £19,855,340 (mainly cottons and iron work); United States, £6,368,532 (mainly wheat and machinery); Germany, £2,358,533; New Zealand, £2,301,792.

One third of all goods now imported into Australia may be said to be of non-British origin as compared with one fourth ten years ago. The chief factor in bringing about this change is undoubtedly the establishment of direct and rapid communication between Germany, France, Belgium, Japan, the United States, and the Commonwealth. The German and French governments subsidize lines to Australia.

The imports from the United States amounted, in 1903, to £6,368,532, or nearly half the total imports from all foreign countries. Next in order comes Germany with £2,358,533, followed by the Netherlands and Java with £847,387, and France with £506,667. The chief imports from the United States are boots and shoes, barley, wheat, flour, agricultural implements, leather, machinery, metal manufactures, kerosene, printing paper, tobacco, tools, vehicles, and timber. The chief

imports from Germany comprize wearing apparel, dynamite, candles, fancy goods, pianos, machinery, metal manufactures, piece goods, and manures.

II.—Constitution and Government

New South Wales, Queensland, South Australia, Tasmania, West Australia, and Victoria formed, Jan. 1, 1901, the federal commonwealth of Australia. Power (largely nominal) is vested in the king, represented by a governor-general, and in a Senate and House of Representatives. The present governor-general is Lord Northcote. The Senate consists of 36 members, 6 from each original state, chosen by direct vote of the people. The House has 75 members, chosen for three years by direct vote. New South Wales has 26 members, Victoria 23, Queensland 9, South Australia 7, Western Australia 5, Tasmania 5. The governor-general may assent or withhold assent to any law, or return it with recommended amendments, or reserve it two years for the king's pleasure. State governors are still appointed by the crown, and State Parliaments legislate on matters not transferred to the Federal Parliament. There can be no State religion. Trade between the states must be absolutely free. The executive of the commonwealth is the governor-general, with a council of seven ministers. The Hon. Alfred Deakin is minister.

In the first election (1901) the first cabinet, formed by Sir Edward Barton, had a majority of both houses, tho the Labor Party secured 36 seats in the House and 8 in the Senate. Mr. G. H. Reid led the opposition, and Mr. Watson the Labor Party. The second general election (1903) returned to the Senate 8 Conservatives, 14 Liberals, 14 Laborites, and to the House 26 Liberals, 26 Conservatives, and 23 Labor members. In April, 1904, Mr. Watson formed a Labor ministry, having, with the aid of the Liberals, defeated Mr. Deakin's Government (Conservative). In August, 1904, however, he was defeated on a bill favoring trades-unionists over non-unionists, and Mr. Reid formed a Liberal ministry. July 5, 1905, he was defeated, largely on account of his denouncing the "White Australia" policy, and Mr. Deakin returned to office. There are now 23 Laborites in the House out of a total membership of 75. In the separate Australian legislatures there are many more Labor representatives: 34 in Queensland, 25 in New South Wales, 22 in Western Australia, 18 in Victoria, 6 in South Australia, and 7 in Tasmania. The Australian Labor Party is not avowedly a Socialist Party, nor are all its members Socialists, but its platform is virtually socialistic, both in its immediate proposals and in its tendencies.

State socialism is well known to have played a large part in Australia, and the railroads and most public services are owned and conducted by the government. Hence Australia is sometimes called a socialistic commonwealth. But the fact is that it is quite as true to say that there is no socialism in Australia as that there is much. Either statement is inexact. There is a great deal of State socialism, conducted mainly by a capitalistic government, and considerable democratic socialistic sentiment, but little more.

The State ownership of railroads in Australia may be said to have even tended to temporarily check the advance of real socialism; for investors, unable to invest or to speculate in railroads, have

gone the more extensively into land speculation. Land booms have been universal. As they began to fail, capital poured in from England to keep them up and to defer, tho only finally to intensify, the inevitable collapse. Capital, too, unable to obtain sufficient interest

in ordinary production, has been put into banks to obtain 5 per cent, compelling the banks to invest in all they could that promised more than 5 per cent. Hence banks bought land, conducted farms, stores, anything that promised dividends. When the bubble finally burst the banks collapsed, the whole community suffered, and Australia, with the rest of the world, has had to struggle with the unemployed. The policy of the government in opening railroads before they could be made profitable, in order to develop the land, has meant large State debts, and often deficits, tho it probably means eventual profit. Conservatives, therefore, have taken advantage of this, and often declare government ownership in Australia a financial failure. For example, Mr. Charles Fairfield wrote, in "A Plea for Liberty" (1891):

Experiments in cryptosocialism, tried upon a society at base free, commercial, modern, English, would long ago have broken down on the financial side, had it not been that the legendary repute of those lands for natural wealth, such as gold, wool, a fruitful soil, and a fine climate, has tempted investors in Europe to fling their money at the heads of Australasian borrowers. Latterly, as the frightful cost and necessarily unproductive results of State socialism became apparent to colonial ministers, they have, to prevent a collapse of the whole thing, been driven to apply for ever-recurring loans in Europe on false pretences. . . . The truth is, that nothing definite can be known about the finances of the Australasian colonies.

State socialism there dares not present a genuine balance sheet. No attempt has been made to introduce the imperial system of simple, methodical, and exact account keeping.

Meanwhile, for years past reports of imaginary surpluses, as well as misleading and worthless "official" statistics have been circulated in the Australasian colonies, and have been carelessly reproduced here. The statement is constantly put forward, for example, that the Victorian State railways, which are supposed to represent an expenditure on productive public works of the bulk of the money borrowed by that colony since 1865, honestly earn a surplus in excess of the interest on their cost. That statement is not and never has been true.

On the other hand, Sir Charles Dilke, in his "Problems of Greater Britain," says:

The railways are used for the spread of education, and in New South Wales and some other colonies the school children are carried free of charge. In Victoria remissions of fares are made in the case of students in the schools of mines and in the schools of design. Specially low rates exist in all the colonies for suburban traffic. The fares in the neighborhood of Melbourne, for a district nearly thirty miles across, are, for single journeys, 1d. a mile, first-class, and 3d. a mile second class; and return tickets are given at 3d. a mile, first class, and 1d. a mile, second class; while monthly, quarterly, half-yearly, and yearly tickets are granted at great reductions even upon these low rates. The result is a wonderful spread of suburban railroad traveling, and the custom in Victoria is so developed that out of the large number of persons working in Melbourne who come in by train every day, a considerable proportion come to the town a second time in the evening to visit the theaters. The lowness of railway fares in Victoria is the more striking when we remember that wages are twice as high for shorter hours as they are in England, and that coal costs nearly twice as much. No one in Victoria now advocates private ownership of railways (p. 198).

Not only have the State railways of Victoria been placed under non-political management, but this has been the case with the public departments generally (p. 199).

The principle of government cooperation with localities has been carried into a large number of different fields in the colony of Victoria; tramways, for example, are constructed by municipalities on government loans, the State borrowing money for the municipalities on the best terms which the colony can command in the market, but the municipalities ultimately becoming the owners of the lines (p. 203).

In 1904 Mr. T. A. Coghlan, editor of the *Statistical Account of Australia and New Zealand*,

and universally regarded as the best authority, wrote:

To the proper development of a country like Australasia, ill supplied with navigable rivers, railway construction is absolutely essential. This has been recognized from an early period, and for the last forty years the governments of the principal states have been fully alive to the importance of carrying on the work. For a long time, however, they were hampered in their efforts by the difficulty of borrowing money in London at a reasonable rate of interest; but since the year 1871 considerable progress has been made in the work of construction; indeed, by far the greater portion of the public debt of Australasia has been contracted for railway purposes. As the area of the six states and New Zealand almost equals that of Europe or the United States of America, while the population numbers a little over 4,500,000, it is almost needless to say that many of the lines run through districts very sparsely peopled. This is particularly the case in the states of Queensland, South Australia, and Western Australia, where there are vast tracts of territory in which little in the nature of permanent settlement has yet been accomplished, and in none of the states can it be said that the railway lines traverse thickly settled areas. Indeed, if a fault may be found with the State policy pursued in the past, it is that in some cases expensive lines have been laid down in empty country the requirements of which could have been effectually met for many years to come by light and cheap lines, and that in consequence the railway administrators find themselves heavily burdened with a number of unprofitable lines. A few of these have been closed, and the remainder are worked at a loss. Notwithstanding these drawbacks, however, the railways of the commonwealth of Australia collectively yield a net return equal to 3.08 per cent, and those of Australasia 3.15 per cent on the cost of construction.

The facts in regard to the railways are as follows: In New South Wales, the first railways were projected as far back as 1846, and a few years afterward a company—the Sydney Tram and Railways Company—was formed. The company undertook the construction of a line from Sydney to Parramatta, a distance of fourteen miles; but as the capital became absorbed before the work was completed the company was unable to carry on operations, and in the end the government had to take the line, which was finished on Sept. 26, 1855.

The following table shows the extent of railway mileage in each state since 1861:

| STATE | 1861 | 1871 | 1881 | 1891-2 | 1903-4 |
|----------------------|------|-------|-------|--------|--------|
| New South Wales... | 73 | 358 | 1,040 | 2,266 | 3,362 |
| Victoria..... | 114 | 276 | 1,247 | 2,903 | 3,381 |
| Queensland..... | * | 218 | 800 | 2,320 | 3,030 |
| South Australia... | 56 | 133 | 845 | 1,823 | 1,901 |
| Western Australia... | * | * | 92 | 657 | 2,170 |
| Tasmania..... | * | 45 | 168 | 425 | 620 |
| Commonwealth... | 243 | 1,030 | 4,192 | 10,394 | 14,464 |
| New Zealand..... | * | 105 | 1,334 | 2,011 | 2,412 |
| Australasia..... | 243 | 1,135 | 5,526 | 12,405 | 16,876 |

* Railways not in existence.

At the close of the year 1903-4 the cost of construction and equipment of the State railways completed and open to traffic in the commonwealth was, in round figures, £131,930,000, or 57.96 per cent of the public debts of the states comprised in the federation, after deducting sinking-funds. The construction and equipment of the railways of Australasia cost £152,623,700, or 53.52 per cent of the public debt of Australasia, after deducting sinking-funds. The proportion of gross earnings absorbed by working expenses recently has been as follows:

| STATE | PERCENTAGE OF GROSS EARNINGS ABSORBED BY WORKING EXPENSES | | | | |
|------------------------------|---|--------|--------|--------|--------|
| | 1899-1900 | 1900-1 | 1901-2 | 1902-3 | 1903-4 |
| New South Wales... | 55.93 | 57.17 | 61.80 | 68.37 | 65.74 |
| Victoria..... | 62.80 | 62.17 | 64.31 | 66.09 | 58.82 |
| Queensland..... | 64.78 | 80.34 | 71.82 | 69.95 | 62.19 |

¹ Years ended Dec. 31, 1899-1903.

² Years ended March 31, 1900-4.

Of 1905, Consul-General Bray says ("U. S. Consular Reports," November, 1905): "The gross revenue of the Australian Government roads the year ending June 30, 1905, was \$56,436,837, with net earnings of \$22,745,508."

In Australia post, telegraph, and telephone are in the hands of the State. The first post-office was established in 1810, and in 1831 a twopenny post was introduced. In 1903 there were 6,501 post-offices in the commonwealth,

Post and Telegraph

conveying 12,844,300 letters or cards, 99,580,261 papers, and 44,314,366 packets. Excepting Western Australia, where there was no inland service, there were inland, intercolonial, and international parcels posts in operation in 1903; but statistics of the services on a uniform basis are not obtainable. In all the states there are money-order and postal-note systems in operation; and in all the states, except Victoria, Queensland, and South Australia, post-office savings-banks. In Queensland there is a government savings-bank, but it is not placed under the administration of the postmaster-general. The savings-banks, however, not administered by the government, are under trustees or commissioners usually nominated by the government. Returns of savings-banks show an enormous increase.

In 1861 the number of persons who had accounts in the savings-banks represented only 2.31 per cent of the entire population of Australasia; but in 1871 the percentage had risen to 5.98; in 1881, to 11.33; in 1891, to 19.47; in 1900-1, to 25.52 per cent; in 1902-3 the proportion was 27.69 per cent; while in 1903-4 it was 28.41 per cent. In 1903-4 the number of depositors were 1,352,853, with deposits amounting to £42,613,014, or an average sum of £31 9s. 10d.

In no other country in the world has the development of telegraphic communication been so rapid as in Australasia, and in none has it been taken advantage of by the public to anything like the same extent. Taking Australasia as a whole, there are only four countries that possess a greater extent of telegraph lines, and only seven in which a larger number of messages is actually sent. In no other countries, however, except the United Kingdom and Belgium, do the number of messages bear anything approaching the same ratio to the population. In Australasia, in one year, over three messages were sent over the telegraph for each inhabitant. In the United Kingdom the number was nearly two and one fifth for each inhabitant; and in the United States of America about one message to every inhabitant. The return for the United States, however, includes only the lines of the Western Union Company. In the whole of Australasia there were on Dec. 31, 1903, 4,282 telegraph stations, of which 987 were in New South Wales, 878 in Victoria, 481 in Queensland, 290 in South Australia, 172 in Western Australia, 321 in Tasmania, and 1,153 in New Zealand. There were 52,919 miles of telegraphic lines in 1903, and 14,673,452 messages were sent.

In connection with the telegraph departments of the various states, telephone exchanges have been established in the capitals and other important centers of population. In the Australasian states the rates for telephones at places of business range from £5 to £10 for the maximum length of wire—generally one mile, the colonies with a half-mile radius being New Zealand and Queensland—and the charge is higher in the city than in the

country. The following table shows the revenue and expenditure of the postal and telegraph departments of the states during 1903:

hours, and the number of apprentices in such trades as Parliament determines. Western Australia and New South Wales have adopted compulsory arbitration laws mainly as in New Zealand.

| STATE | REVENUE | | | | Expenditure |
|-------------------|-----------|------------|------------|-----------|-------------|
| | Posts | Telegraphs | Telephones | Total | |
| New South Wales | £652,761 | £154,839 | £105,002 | £912,602 | £884,963 |
| Victoria | 448,486 | 106,839 | 86,600 | 641,925 | 582,520 |
| Queensland | 191,931 | 83,266 | 27,321 | 302,518 | 425,568 |
| South Australia | 166,400 | 74,840 | 23,209 | 264,449 | 240,987 |
| Western Australia | 122,862 | 68,137 | 30,324 | 221,323 | 277,021 |
| Tasmania | 75,412 | 17,289 | 8,910 | 101,611 | 100,232 |
| Commonwealth | 1,657,852 | 505,210 | 281,366 | 2,444,428 | 2,511,291 |
| New Zealand | 343,207 | 166,536 | 71,028 | 580,771 | 526,747 |
| Australasia | 2,001,059 | 671,746 | 352,394 | 3,025,199 | 3,038,038 |

In the expenditure shown in the table, interest on the outlay on post-office buildings and telegraph lines and maintenance of buildings is not taken into account. If allowance be made for these, so far as is possible from the very imperfect returns concerning the expenditure on post-offices in each state, the total expenditure and the deficiency in revenue would be as follows:

| STATE | Departmental expenditure | Interest and maintenance of works and buildings | Total charge | Deficiency in revenue |
|--------------|--------------------------|---|--------------|-----------------------|
| Commonwealth | 2,511,291 | 380,995 | 2,892,286 | 447,858 |
| New Zealand | 526,747 | 78,535 | 605,282 | 24,511 |
| Australasia | 3,038,038 | 459,530 | 3,497,568 | 472,369 |

With the progress of settlement and the increase of population, the expenditure on the postal and telegraphic services naturally expands, and it is apparent that in order to keep pace with the expenditure, the services must be conducted on a self-supporting basis. This, it is believed, can be reached with growth of population and consolidation.

III.—Social Reform

Social reform in Australasia may be said to have begun with the first formal recognition of the eight-hour day by the New Zealand Company in the settlement of Otago, under the influence of the Rev. Thomas Burns. Its spread through Australia is largely due to the Victorian Operative Stonemasons' Society, who set the movement on foot in Melbourne in February, 1856.

Eight-Hour Day

An eight-hour league was formed of united trades, and notice given that after April 21, 1856, no union man would work more than eight hours. The strength of the artisans' position in the labor market enabled them to win, and April 22 has been kept ever since as a public holiday, known as the Eight-Hour Day. The eight-hour day has come to be regarded as normal throughout Australasia. Nevertheless, it is fully realized only by the stronger unions and skilled trades. Gained at first without legislation, it has been found that legislation is needed to secure and maintain it.

In 1873 Victoria enacted a law limiting the employment of women and children to eight hours, and New Zealand almost immediately did the same. Other colonies have been much more slow in action. In 1885 a Victorian law (amended in 1896) fixed the closing of shops, except for certain trades, at seven p.m. five evenings in the week, and at ten on Saturday nights. New Zealand acted somewhat similarly in 1894, and closed all shops (with a few exceptions) for one afternoon. Other colonies have followed later. Victoria in 1896 created a Minimum Wage Board, which can fix minimum wages,

Trade-unionism has played a prominent part in Australia, but with few features of especial interest. As early as 1850 a branch of the Amalgamated Society of Engineers was established in Australia, and since that date almost every industry has formed its own organization. Strikes have not been very frequent nor of very great importance till we come to the great strikes of 1890 and 1891, which mark an epoch in the development of the Australian labor movement. The membership of the trade-unions on Jan. 1, 1904, was:

| | |
|-----------------|---------|
| New South Wales | 70,622 |
| Victoria | 7,042 |
| Queensland | 4,681 |
| South Australia | 7,300 |
| West Australia | 20,047 |
| Tasmania | 34 |
| Commonwealth | 100,626 |
| New Zealand | 25,354 |
| Australasia | 125,980 |

There are, however, perhaps twice that number more or less affiliated with the trade-unions. Their history is bound up with the great strike of 1890, which originated in an effort of the Shearers' Union to allow only union shearers to be employed. The wharf laborers struck to support them.

Difficulties had also arisen in the shipping trade, quite apart from the shearers' dispute, owing to the discharge of a fireman. Great discontent also existed among the marine officers, on account of lack of accommodation on board ship. Conference was declined by the employers, it being alleged that meeting on equal terms with their subordinates would destroy discipline on board ship.

In August, therefore, the marine officers struck, the wharf laborers came out a few days later, followed by the seamen and draymen, the Newcastle miners were locked out for refusing to hew coal which they believed to be intended for employers engaged in the strike, and in September the shearers were ordered to join the others. The strike spread from Victoria to New South Wales, Queensland, and New Zealand, and there was a general cessation of trade. The unionists were successful in stopping almost all the steamer traffic, and agriculturists were prevented from disposing of their produce. Food became very dear in consequence, and butter rose to as much as 2s. 6d. a pound. Some disorder developed but was put down, and the striking unions gradually found themselves losing.

In Queensland the strike was less serious than in Victoria and New South Wales, because the Queensland Labor Federation ordered the execution of all existing contracts, and the shearers returned to work after being out only one week. By October the strike was practically at an end throughout the colonies.

In 1891 the shearing difficulty was renewed in Queensland and New South Wales, and a strike of much longer duration took place. "Obstacles were placed in the way of trains, bridges were weakened, armed mobs of men traveled about the

The Great Strike

country burning and destroying the property of the pastoralists." Armed resistance to the government was advocated as preliminary to a general revolution throughout Australasia, and attempts were made to bring the railway servants and even the military over to the side of the strikers. Throughout March, April, May, and June arrests were frequent. Meanwhile shearing was carried on by means of free labor, and since the strike could not accomplish its objects and funds were exhausted, it was declared off on June 15th.

But it was the failure of these strikes which created the Australian Labor Party. Finding themselves defeated in the strikes, the men turned to politics. In some cases the victorious employers suddenly found themselves defeated in elections and their places taken by the very trade-unions' leaders they had defeated. Even strike leaders who had been sent to jail were nominated for Parliament.

Previously there had been a few working men elected as trade-unionists, but none on a distinctively Labor platform. A great impetus was

Labor Parties

given to the movement by the vivid speeches of the radical, "the great Pro-Consul," George Grey, ex-Governor of New Zealand, South Australia, and South Africa. With little organization and less money, 36 Labor candidates were elected (1891) in New South Wales. Since then the movement has grown throughout Australasia. South Australia was, however, the first state to form a direct Labor Party. In the Australian Federal Parliament there were in 1904 (second House) 23 Labor men in a house of 75. But they hold the balance of power. Free-traders and protectionists (formerly the main political issue in Australia) are so equal in numbers that the Labor men, by uniting with one party, can at any time defeat the other. Hence the continual changes and the Labor men themselves being given the government for five months (see above). The present ministry only holds by passing most of the bills the Labor Party demands. Hence largely the progress in legislation of Australia, covering Industrial Arbitration, Miners' Accident Relief, Coal Mines Regulation, Early Closing, Navigation Act Amendment, Land Tax, Old Age Pensions, Women's Franchise, Electoral and Trucks Acts, etc.

At the third Interstate Labor Conference, held in Melbourne, July, 1905, the following objective was adopted:

(a) The cultivation of an Australian sentiment, based upon the maintenance of racial purity and the development in Australia of an enlightened and self-reliant community.

(b) The securing of the full results of their industry to all producers by the collective ownership of monopolies and the extension of the industrial and economic functions of the state and municipality.

The question of the tariff also received a large amount of attention—some delegates being favorable to making the advocacy of a high protectionist policy a *sine qua non* for labor candidates, but the majority held the view that to introduce the fiscal issue would be to split the ranks, and it was eventually decided to place a Tariff Referendum as a plank in the platform. "A progressive tax on land values" was also added to the platform.

The conference also carried a resolution against any alliance, coalition, or combination being entered into by Labor representatives in Parliament without the consent of the combined labor organizations. It was also decided in the event of labor governments coming into power, that the ministries should be recommended by the caucus.

It will thus be seen that the Labor Party is practically, tho not avowedly, a Collectivist or Socialist party; and an increasing section of the labor ranks advocate straight-out socialism. There is a strong agitation for a reduction of members in the upper houses, if not for the abolition of this branch of the legislature, in view of the fact that Australia has now fourteen houses

of Parliament. The establishment of boards to regulate wages and conditions of workers and arbitration courts, and a movement to break up the large estates and throw the lands open to the mass of the people, constitute the most burning questions of the day in all parts of the commonwealth.

The Single Tax idea has some hold in Australia, owing to the land concentration, particularly in South Australia; and the movement was much helped by a visit from Henry George in 1890. In New South Wales a land tax is levied

on the unimproved value; the present rate being one penny in the pound.

Taxation An exemption of £240 is allowed, and if the unimproved value is in

excess of this sum a deduction equal to the exemption is made, but when a person or company holds several blocks of land only one sum of £240 may be deducted from the aggregate unimproved value. The number of persons owning land in New South Wales is about 178,000, but the deductions allowed by law reduced the actual number of taxpayers to 41,000.

The Land Tax Act in force in Victoria was passed with the object of breaking up large holdings. For this purpose it was declared that all "landed estates" should be subject to taxation; that a "landed estate" should consist of one or more blocks of land not more than five miles apart which possess an aggregate area of 640 acres and a capital value of more than £2,500; and that the value in excess of £2,500 should be taxed at the rate of 1½ per cent per annum. In South Australia the land tax is calculated on the unimproved value, the rate being one halfpenny in the pound sterling, with an additional tax of one halfpenny on every pound in excess of £5,000. The amount of tax payable by an absentee, who is defined as a person who has been absent from or resident out of the state for twelve months, is increased by 20 per cent.

The land tax payable in Tasmania is at the rate of one halfpenny in the pound, where the assessed value is under £5,000; five eighths of a penny, where the assessed value is £5,000 and under £15,000; three quarters of a penny, where the value is £15,000 and under £40,000; seven eighths of a penny where the value is £40,000 and under £80,000; and one penny where the value is over £20,000.

Income taxes are also levied in all the states; In Victoria, e. g., the rate of income tax payable in the state varies according to the source whence the income is derived and the taxable amount of such income. On incomes derived from personal exertion, threepence in the pound is payable up to £300; on every pound in excess of £300 up to £800, fourpence; on every pound in excess of £800 up to £1,300, fivepence; on every pound in excess of £1,300 up to £1,800, sixpence; and on every pound in excess of £1,800, sevenpence; double these rates being payable on incomes the produce of property within the state. All incomes, except those of companies, of and under £150 escape taxation.

Such legislation is not revolutionary; yet it is this which has largely raised hostility to the Labor Party on the part of conservatives, making some of the latter class in Australia declare that the commonwealth is being ruined. Financial and economic returns, however, do not justify this criticism.

Political reforms have also had considerable

development in Australia. (See AUSTRALIAN BALLOT SYSTEM; also, for the Australian system of land registration, see TORRENS.) There has

Political Reform

been considerable agitation in Australia for proportional representation and for direct legislation, but as yet with slight results. Currency reform has its various advocates in Australia, and especially bimetalists and others who declare that the great southern continent, like the rest of the world, has suffered from the appreciation of gold. Yet little of importance has been accomplished in the way of reform. For good or for evil, Australian finance is still ruled by English gold.

The woman's suffrage movement has gone further.

There are in Australia three distinct classes of suffrage, municipal, parliamentary, and federal. Women were given municipal suffrage in New South Wales in 1867; in Victoria, 1869; in West Australia, 1871; in New Zealand, 1877; in South Australia, 1880; in Tasmania, 1884. Parliamentary suffrage was extended to women of New Zealand in 1893; in South Australia, 1895; in West Australia, 1900; in New South Wales, 1902; in Tasmania, 1903; in Queensland, 1905. In 1902, the first federal Parliament extended the federal suffrage to all women in Australia upon the same terms as men. All women in Australia, therefore, upon the same terms as men, enjoy full municipal and federal suffrage, and the women of West Australia, South Australia, and New South Wales possess all forms of suffrage.

One problem that has vexed Australia considerably is that of the immigration and importation of cheap labor. The importation of Chinese labor was long more or less common to all Australia. According to the latest returns, there were 30,542 full-blooded Chinese in the commonwealth, and 24,000 other colored aliens. The immigration of the Chinese, however,

Kanaka Labor

has, after an intense excitement, been carefully restricted in all Australia. Kanaka labor has been another "burning question." Particularly has the introduction of Kanaka labor been a source of grievance to the trade-unions of Queensland. The Kanakas have been introduced mainly to work on the sugar plantations. The claim has been that white labor was unsuited to this work in this climate, while it was a good thing for the Kanakas, they going back to their Pacific island to carry home the benefits of civilization. On the other hand, the trade-unions have asserted that this was simply an excuse to get cheap labor, and that the Kanaka trade was simply a disguised slave trade, done in ships little better than the old slave-traders and accompanied by most of the evils of that trade. The Kanakas were inveigled on board, often by "fire-water." Once there they were supposed to sign a document that bound them to labor for a term of years in the sugar fields. As none of them could read or write or understand the document they signed, this meant little. One hundred dollars a head the planter was wont to pay the "recruiter" for catching Kanakas and landing them in Queensland—rather less than African slavers' rates in the good old days, but the distance was less and the danger nothing, because the British Government protected this traffic. Finally, however, mainly from the agitation of the trade-unions and the Labor Party, aided in part by the British and For-

eign Anti-Slavery Society, after a struggle of twenty years, Kanaka labor has become practically ended.

The question of granting pensions to aged persons has been of late years much discussed throughout Australia and New Zealand, and at the present time the old-age pension system is in operation in New South Wales, Victoria, and New Zealand. (See also OLD AGE PENSIONS.) The settlement of population on the land also has enlisted considerable attention. Large estates are being bought up and divided into allotments, which are sold to purchasers on easy terms, extending over many years. (See NEW ZEALAND.) Labor colonies for the unemployed are being agitated.

Important Australian societies are:

Imperial Federation League. President, Hon. Alfred Deakin, Llanarth, Walsh Street, South Yarra, Melbourne, Victoria.

Federal Council of Australian Labor Unions. Hon. Secretary Robert Storrie Guthrie, Knighton Villa, Peterhead, South Australia.

National Anti-Sweating League. Hon. Secretary, Samuel Manger, M.P., 66 Bourke Street, Melbourne, Victoria.

Federal Single Tax League of Australia. President, Max Hirsch, 416 Collins Street, Melbourne, Victoria.

Peace Society (Australian Branch of the London Society). Chairman, Dr. Charles Strong, Avoca Street, South Yarra, Melbourne, Victoria.

Peace, Humanity, and Arbitration Society. President, Rev. Dr. Rentoul, St. Oswald's, Ormond College, Melbourne, Victoria.

Melbourne Socialist Society. President, H. H. Champion, Commonwealth Rooms, 117 Elizabeth Street, Melbourne, Victoria.

Christian Social Union. Adelaide Secretary, Rev. C. E. Doudney, Jeffcott Street. Melbourne Secretary, Rev. R. Stephen, Trinity College. Sydney Secretary, Rev. S. S. Tovey, St. John's, Bishopsthorpe Glebe.

Australian Woman's National League. President, Lady Janet Clarke Cliveden, East Melbourne, Victoria.

Woman's National Council (affiliated with the London International Council).

Effective Voting League of South Australia. President, Catherine Helen Spence, Aviland Avenue, N. Norwood, Adelaide, South Australia.

Salvation Army in Australasia. Chief Secretary, Col. W. T. Hoskin, 67 Bourke Street, Melbourne, Victoria.

AUSTRALIAN BALLOT: A ballot the distinctive feature of which is that it contains the names of all the candidates, so that the voter is given but one single ballot to take with him into the polling-booth; and by making his cross on this one sheet against the names or emblem of the party for which he wishes to vote, he may indicate his choice and fold up and cast his ballot without any one knowing which way he has voted. It is called the Australian ballot because first used in Australia, having been first proposed by Francis S. Dutton of the legislature of South Australia in 1851, and adopted in that state and in the various other states of the Australian commonwealth during the "fifties" of the nineteenth century. In slightly different forms it was adopted in England in 1872, and in various English colonies. In 1882 it was advocated in the United States by Henry George, and first adopted by Massachusetts in 1888, and about the same time by the city of Louisville, Ky. In the original system the names of all the candidates are printed in alpha-

betical order, so as to compel the voter to make individual choice; but in many of the states of the American Union each party is allowed to have on the ballot a party symbol, so that by making one cross against this the voter may indicate his desire to vote the "straight ticket" of that party.

AUSTRIA-HUNGARY: In the following article are considered all matters pertaining to Austria, as well as such conditions as are common to both Austria and Hungary. All questions specifically affecting HUNGARY are treated under that heading.

I.—Statistics

Austria proper has 115,903 sq. m. and a population of 26,000,000. Of this number about 9,000,000 are Germans, 6,000,000 Bohemians and Moravians, 4,250,000 Poles, 3,380,570 Ruthenians, and 1,200,000 Slavs. The principal cities are Vienna, with a population of 1,674,957 (1900); Prague, 201,589; Lemberg, 159,877; Gratz, 138,080; Trieste, 134,143; Brunn, 109,346. The birth-rate in 1901 was 36.9; death-rate, 24. (See BIRTH- AND DEATH-RATE.) The illegitimate births (1897-1901) were 14.20 per cent, the highest ratio in the world, tho they varied from 41 per cent (1900) in Carinthia to 4.2 per cent in Dalmatia. Marriages in 1900 were 8.1 per 1,000 of population. (See MARRIAGE.)

In 1900, 79 per cent of the population were Roman Catholic, 12 per cent Greek Catholic, 2.3 per cent Greek Oriental, 4.7 per cent Jewish, 2 per cent Evangelical. Religious liberty is secure. There were (1900) 16,939 Roman Catholic priests; 7,860 members of male orders, and 19,194 of female. Education is on the increase, yet 31 per cent of the population above twelve years of age were (1900) unable to read and write. In 1890, however, it was 79 per cent. (See ILLITERACY.) In 1900 there were 16,211,272 who could read and write (an increase since 1880 of over 5,000,000), and 9,186,362 who could neither read nor write (a decrease since 1880 of nearly 700,000). Elementary schools (1902), 20,827, with 3,742,486 pupils and 96 training colleges. Gymnasias and real-schools (preparatory for universities or technical schools), 328, with 105,585 pupils. There were also 8 state universities, 49 theological colleges (45 Roman Catholic), 8 government technical

schools, besides 4,230 special schools (agricultural, industrial, etc.). In 1904, 3,320 periodicals were published, of which 3,039 were in German, 172 being dailies. The *Neues Wiener Tagblatt* has the largest circulation.

Convictions for crime in 1903 numbered 33,940; for other misdemeanors, 581,254. There were 15 penal establishments, with 8,266 male prisoners and 1,069 female. (See CRIME.)

About 2 per cent of the population receive aid. There were in 1902, 1,643 poorhouses, with 37,808 inmates. The expenditures for these was 8,301,652 kronen. Institutions for relief vary greatly throughout the empire. They were formerly mainly in the care of the Church, but now tend to be transferred to civil officers. No one can claim relief for whom any third party is legally responsible. Recipients are bound to return the aid when they can. Aid must be limited to that which is necessary for existence, for the care of the sick, and for needy children. It is usually given in cash. Overseers or visitors (*Armenpfleger*) are not found everywhere, wherefore "Certificates of Poverty" are required, which are often misused. In Lower Austria the overseers of the poor usually serve without compensation. In Upper Austria the commissions for the poor are made up of the chief executive of the borough, a priest, and at least three overseers (*Armenwäter*). In Vienna there are nineteen districts, each with a district committee, which elects a board of commissioners. There are also a general poor department and another department for orphans. There are many institutions which are partly private, but that are endowed with public funds. In 1899 there were in Vienna 951 endowments, with a capital of 6,140,939 gulden.

There are many Church institutions: Catholic or Protestant, several being connected with certain knightly orders. Charity organization is backward. The municipal Houses of Maintenance are better organized. The Vienna foundling asylum is the largest in the world. There were in 1902, 1,387 crèches, kindergartens, etc., and 220 orphanages. There are over 600 hospitals (16 for children).

There were in 1903, 585 savings-banks, with 3,464,715 depositors, and deposits amounting to 4,368,550,000 kronen.

The principal occupation is agriculture. Of the bread-earners 64.3 per cent are engaged in agriculture or fishing, 21.9 per cent in manufacturing or mining, and 6.4 per cent in trade and commerce; 63.2 per cent of the men are bread-earners, and 47.3 per cent of the women. The main crops are wheat, oats, rye, corn, potatoes. Rich soil, abundance of water, and a mild climate make Austria one of the foremost agricultural countries of Europe; 95 per cent of the land is productive. The breeding of stock is important. There are more than 4,000,000 horses, a number only surpassed by Germany and Russia. Over 30 per cent of the empire is in forests. Land in most of the provinces is well divided. Nearly 87 per cent of the peasants own their farms, but these are often too small to yield a livelihood. Mining is diversified and the resources rich. Coal is the most important product, worked mainly in Bohemia. Iron is found in large quantities. Copper and gold are also found. The mineral output of Austria was some \$55,000,000 in 1890, and \$75,000,000 in 1900. Salt is a State monopoly.

Manufacturing has recently made advances, being aided by the government in many ways; low railroad-fares, etc. exemption from import duties. The clothing industry of the empire employs about 800,000 workers; foods and drinks, 600,000; textile trades, 500,000; building trades, 400,000; woodwork, 325,000; iron and steel, 300,000; quarries and potteries, 150,000. Beet-sugar enjoys a liberal bounty. The glass industry is important in Bohemia. Tobacco is a government monopoly.

Wages are low. Ordinary labor averages 20 cents per day in the country and 50 cents in towns, tho varying from 7 to 61 cents. Skilled labor averages 70 cents. Carpenters receive from 61 cents to \$1.29 per day. Locomotive engineers earn from 55 to 93 cents. (See WAGES.)

The general efficiency of labor is also low, scarcely averaging one eighth of that of the United States or one quarter that of Great Britain.

Commerce is rapidly increasing. The exports of the total empire (Austria-Hungary) rose from 771,400,000 florins in 1890 to 1,084,000,000 fl. in 1905 (\$450,000,000), the imports from 510,700,000 fl. to 1,078,900,000 fl. The value of the

Commerce

chief exports (1904) was: sugar, 151,885,000 kronen or half florins (krone = 20.3 cents); eggs, 105,567,000 kr.; cattle, 98,617,000 kr. The chief imports were cotton (raw), 215,226,000 kr.; wool, 129,888,000 kr.; coal and coke, 105,947,000 kr.; silk and manufactures, 83,499,000 kr. The chief exports (1904) were: to Germany, 1,037,321,000 kr.; Great Britain, 183,726,000 kr. (principally wheat and flour); Italy, 156,815,000 kr.; Turkey, 91,436,000 kr.; Switzerland, 79,741,000 kr.; Rumania, 75,868,000 kr.; Russia, 71,741,000 kr.; United States, 70,759,000 kr. The chief imports (1904) were: from Germany, 766,566,000 kr.; United States, 182,461,000 kr. (principally cotton and machinery); Great Britain, 155,076,000 kr. (principally cotton and machinery); British India, 130,436,000 kr.; Russia, 119,863,000 kr.; Italy, 104,617,000. The customs are next, common to Austria and Hungary, by the *Ausgleich* or Compromise of 1867.

II.—Constitution and Government

The reigning sovereign is Francis Joseph I., Emperor of Austria (1848) and King of Hungary (1867). Austria and Hungary, by the Compromise (*Ausgleich*) of 1867, are, in most matters, completely independent, each having its own constitution, legislature, and executive, and united only in having the same sovereign and the same management of foreign affairs, of the army and navy, and of matters of finance, common to both. Such matters are regulated by a common ministry and two deputations, one Austrian, one Hungarian, of sixty members each, representing the legislatures of the two countries. These deputations meet annually, alternately in Vienna and Budapest, deliberate separately, and only meet to vote together, without discussion, when there have been three failures to agree by communication. There is also a commercial union, renewable every ten years. In Austria, Baron von Bech is premier. The Austrian Reichsrath has two houses. The Upper House (*Herrenhaus*) has 238 members, of whom 16 are princes of the imperial family, 65 hereditary nobles, 17 archbishops and bishops, and 140 life-members, nominated by the emperor

for service or merit. The Lower House (*Abgeordnetenhaus*) has 425 members; 85 represent large landed proprietors (5,431 in 1901), 21 the Chambers of Commerce, 118 the town voters (493,804), 120 the country voters (1,585,659), and 72 the whole body of male voters (5,004,222). At the end of 1906, however, the Reichsrath passed a universal suffrage bill which will completely change this. Bills must pass both houses and be ratified by the emperor. Austria's seventeen provinces have each its diet or Landtag. The parties in the Reichsrath are mainly divided on national or race lines.

With the exception of the Socialists, most parties in Austria proper may be termed Home-rulers. The Czechs, the Poles, the Ruthenians, the Italians, etc., all aim at autonomy in some form or another. The government is carried on by a combination of parties, there being no permanent majority.

The budget estimate for the common affairs of the empire was (1905) 490,327,883 kr., almost wholly for military expenses. Of this amount

114,716,883 kr. were derived from customs. Expenditures rose from

281,820,000 kr. in 1890 to 368,010,000 kr. in 1904, of which sum

Austria contributed 167,107,000 kr. and Hungary 87,630,000 kr., with 113,273,000 kr. from customs.

The estimated revenue for Austria proper (1906) was 1,822,027,401 kr., and the expenditures 1,819,042,210 kr. The Austrian debt (1905) was 3,863,020,074 kr. (See FINANCES.)

The Austro-Hungarian army has on peace footing 318,347 officers and men, and 60,758 horses. The Austrian Landwehr has, besides, 37,032 officers and men, and the Hungarian Honvédsig 31,491. The yearly contingent for the common army is 59,024 officers and men from Austria and 43,899 from Hungary. The army on a war footing numbers 980,000 officers and men; besides 500,000 in the Landwehr and 1,000,000 in the Landsturm. The navy, mainly coast-defensive, has 12 battle-ships (9 modern), 3 armored cruisers, 22 lesser vessels, and 26 torpedo-boats.

The Austrian railway system must be studied in the light of its history. First begun by private effort, railways became so necessary that the

government aided them by guaranteeing interest or direct State construction. The Revolution of 1848

and the Hungarian war, however, embarrassing it, the government sold out what

interest it had in the roads, and Austria went through a long period of speculative railroad-

building, ending for many of the roads in failure and bankruptcy. These weaker roads the

government, after the crisis of 1873, was compelled first to aid and then to buy and operate.

This policy has been largely carried out, but has not been adopted as a system on its own merits

as in Germany. Where necessitated by poor private management the government in the main

has had to buy simply the poorer roads. Nevertheless the State roads are a success, and the

tendency is toward State ownership. In 1903 the State owned and operated 4,809 miles, besides

operating 2,671 miles of companies' lines; the companies owned and operated 5,048 miles and

operated 18 miles of State roads; 114 miles belonged to foreign lines. In 1906 the State

bought another of the largest and best-paying

lines.

private roads in the Empire. There were 12,660 miles in all. The cost in 1903 was \$1,397,970,000. Passengers carried were 176,467,000; freight, 121,491,000 tons. The receipts were 331,551,000 florins; the working expenses, 225,590,000 fl. The State revenue from the railways for 1906 was estimated at 304,218,570 kronen and the expenditures at 270,410,820 kr. There were 5,947 telegraph-offices, with 40,373.71 kilometers of wire and 16,463,654 messages. The urban telephone systems numbered 429; the interurban systems 134. There were 8,086 post-offices. Receipts (postal and telegraph) were 116,858,886 kr.; expenses, 117,519,722 kr. Of post-office savings-banks there were 6,339, with 1,860,347 depositors and deposits of 471,647,730 kr. at end of the year.

III.—Social Reform

The history of modern social reform in Austria begins with the Revolution of 1848. The years previous to this had been marked in industrial evolution mainly by the decay of the ancient guilds and the development of modern ideas. The Revolution of 1848 witnessed national political uprisings in Vienna, Italy, Bohemia, Croatia, and Hungary. A constitution was granted to Austria, but was soon abrogated, and imperial absolutism, in close alliance with the Catholic power, reigned supreme. In 1859, however, an industrial code was adopted which enjoined upon all manufacturers the maintenance of relations with the guilds, or the restoration of such relations where they had been discontinued, but the guilds continued to decline in spite of all efforts. Progress was mainly political with the distracting complications of an empire of such diverse racial constituents.

In 1866 Prussia gained the severance of Austria from the Germanic Confederation, and Italy soon after gained her freedom. Hungary, too, grew more and more restless, and the emperor had to grant concessions, till the present dual political system was organized in 1867. Since 1879, when Count Taaffe came into power, the government has been compelled to do more and more for the working classes. This, however, has been forced upon the government by the labor party, which in Austria, more than in most countries of Europe, has been purely socialistic.

A Viennese Workingmen's Mutual Improvement Society was started under the influence of Lassalle's agitation in 1867; and on April 11, 1869, it published the first number of the *Volksstimme*. In 1869 Austrian delegates were sent to the German Socialist Congress at Eisenach. The Austrian Government now prohibited all Socialist meetings, and the Socialist agitators had to concentrate their efforts to obtain freedom of coalition and universal suffrage.

After the German laws against the Social Democrats were passed in 1878, the Austrian Socialists, in part, lost heart. The Radicals declared for anarchism and the Moderates for the Liberals, working mainly on race lines. Between 1882 and 1884 the anarchists attempted much violence in Austria; the government resorted to strong measures, and the Socialist papers suffered much. Nevertheless, the trade-unions became the camping-grounds for the Socialists, and the propaganda was carried on.

Since 1886 the movement has made steady progress. In 1888 a conference was held at Hainfeld, and, largely through the influence of the *Gleichheit*, Dr. Adler's paper, the Moderates and those Radicals who were not anarchists, united on the lines of Marxist socialism. The result was a rapid advance. Socialist papers obtained a wider circulation, meetings for the propagation of Socialist doctrines were held, and many new workmen's associations were founded. Strikes and agitation became common, and the government again tried repression. Papers were suppressed, and the editors of the *Gleichheit* arrested on charges of anarchism.

The winter of 1892 was marked in Austria by agitation on

the part of the Social Democrats against the censorship of the press.

The early months of 1893 saw the opening of "a campaign in favor of universal, equal, and direct suffrage." The May Day celebrations took place throughout the empire, and developed into a gigantic demonstration, not only for the eight-hour day, but also for the suffrage. In Vienna 150,000 men and women marched in military order through the streets. A few weeks later the political victories gained by the German Social Democracy at the ballot-box were celebrated throughout the empire. In July 500,000 workmen and women gathered in the very heart of Vienna and declared they would neither rest nor be deterred by any sacrifice until they had won.

In Oct., 1893, Count Taaffe introduced a bill granting a very much enlarged suffrage. Notwithstanding that by the provisions of the new bill the number of voters in Austria were doubled, the Social Democrats would only agree to accept it as a move in the right direction.

During the last ten years organization has gone on steadily but not rapidly. "The Social Democrats in the empire are organized on a basis of 'national autonomy and international solidarity.'" There are German, Czech, Polish, Italian, Slavic, and Ruthenian sections. They work harmoniously, but their progress has been retarded by the national jealousies and political efforts of the different races. In 1897 the government made a further electoral concession. To 383 deputies elected by privileged voters, 72 were added elected by universal suffrage. This at first seemed but to increase the international struggle. By 1901, however, the Socialists polled about 800,000 votes and elected 10 deputies (7 Czechs). The government was compelled to introduce various reform measures (see below), but the old national strife went on, the largely fruitless to all parties. In 1905, however, a proposition of Baron Fejervary's Hungarian ministry to establish universal suffrage in that country caused widespread excitement in Austria, and on Nov. 3d a monster Socialist demonstration in Vienna led to a clash with the police.

Universal suffrage was finally granted, and as a result, in the elections of 1907, almost a revolutionary change was made. There were elected 82 Social Democrats, 66 Christian Democrats (Anti-Semites), 33 Agrarian Czechs, 31 of the (Catholic) Center; 25 Pan Germanists, 24 German Liberals, 22 Young Czechs, 18 German Agrarians, 15 Clerical Slavs, 14 Free Independent Pan Germanists, 14 Italians, 11 Clericals, 10 Radical Czechs, and 100 of minor parties. There are 2 Socialist dailies in German, the *Arbeiter Zeitung* at Vienna and the *Arbeiterwille* at Gratz. There are 25 other German Socialist journals. The Czech Socialists have also 2 dailies (at Vienna and Prague), and 12 other journals. There are 2 Polish, 4 Italian, 2 Slavic, and 1 Ruthenian papers. The women have a Socialist organ, the *Arbeiterinnen Zeitung*.

A so-called Roman Catholic Christian Socialism has had considerable development in Austria, under the patronage of Prince John of Lichtenstein and others, but it has meant little more than the Church of Rome taking an interest in political and social questions from the ecclesiastical-paternal standpoint. It has also contributed largely to the development of anti-Semitism.

The trade-union movement in Austria runs parallel with the Socialist movement. The Industrial Code of 1859, trying to compel employers and employees to unite in trade-guilds, had failed. In 1869 a demonstration in Vienna won the right of combination for workmen, and trade-unions slowly developed. A law of 1883 greatly modified the code of 1859. (See STRIKES.)

The chief centers of Austrian trade-unionism are the industrial and populous districts of Lower Austria, Bohemia, and Moravia, while about a fifth of the total number of associations are established in Vienna. The highest organization is found in the printing trade and in the textile and metal industries.

The aggregate membership of all labor organizations in Austria in 1903 was 177,592, a net

increase of 13,104 in the year. The rapid progress made since 1892 is shown below:

| END OF— | Unions | Total number of members | Women included | Annual income | Annual expenditures |
|-----------|--------|-------------------------|----------------|---------------|---------------------|
| 1892..... | 1,308 | 70,343 | 4,263 | | |
| 1896..... | 1,634 | 117,046 | 5,761 | \$197,034 | \$130,167 |
| 1899..... | 2,263 | 157,773 | 9,206 | 370,488 | 349,688 |
| 1901..... | 2,294 | 152,604 | 9,928 | 445,869 | 422,216 |
| 1902..... | 2,370 | 164,488 | 8,958 | 523,437 | 478,508 |
| 1903..... | 2,469 | 177,592 | 12,063 | 590,473 | 541,031 |

There are 74 national trade-unions, containing 154,665 members; 104 local assemblies, with 5,653 members, and 416 workmen's associations, devoted chiefly to educational work, with 17,274 members. The following table shows the membership, receipts, expenditures, and cash balance of the largest national unions, 11 of which have upward of 3,000 members each. Two other unions, with smaller membership—hatters' and lithographers—are included on account of their strong financial position. It will be observed that the printers, altho not the strongest union numerically, have by far the largest income. It is said that the union contains nearly 90 per cent of all the printers in Austria.

| TRADE | No. of members | Annual receipts. Crowns | Annual expenditures. Crowns |
|---------------------------------|----------------|-------------------------|-----------------------------|
| 74 national unions..... | 154,665 | 2,942,855 | 2,647,066 |
| Including— | | | |
| Railway workers..... | 28,036 | 323,016 | 340,470 |
| Iron and metal workers..... | 16,667 | 299,331 | 269,030 |
| Textile workers..... | 11,932 | 112,833 | 92,193 |
| Printers..... | 10,997 | 985,374 | 949,744 |
| Wood workers..... | 10,747 | 120,224 | 93,805 |
| Miners..... | 8,450 | 62,815 | 70,310 |
| Tailors..... | 4,871 | 50,464 | 47,103 |
| Building laborers..... | 4,478 | 46,631 | 37,223 |
| Bakers..... | 4,421 | 65,687 | 55,845 |
| Paper and chemical workers..... | 3,610 | 33,194 | 28,118 |
| Shoemakers..... | 3,007 | 41,893 | 38,443 |
| Hatters..... | 2,404 | 154,893 | 104,546 |
| Lithographers..... | 1,604 | 86,520 | 61,749 |
| 104 local mixed unions..... | 5,653 | 17,685 | 19,238 |
| 416 educational associations | 17,274 | 36,821 | 38,850 |
| Grand total..... | 177,592 | 2,997,361 | 2,705,154 |

Between 1850 and 1860 cooperation began in Austria, but has not had great development. A union of cooperative societies was organized in Vienna in 1874, with 217 societies in 1892. The same year there were 2,501 cooperative societies in Austria, of which 1,882 were loan societies and about 300 distributive.

At the close of 1900 there were 7,616 cooperative societies, including 5,098 credit, 758 distributive, and 1,760 other societies. Of the credit societies, 1,513 were of the Schulze-Delitzsch type, with 923,967 members.

Industrial betterment has at least begun. At Dornbirn, in connection with Herr Hammerle's cotton-mill, a picturesque industrial village has been developed. Cottages, with open verandas, covered with vines and grouped in gardens with fruit-trees, can be hired, with cow shed and pasture, for some \$34 per year, or bought for from \$1,060 to \$1,500. At Smichof, near Prague, Baron Ringhofer has done much building for the 1,000 men employed in his machine-works. Two-

room dwellings or blocks can be rented for 55 cents per week, or 3 rooms for 75 cents. Detached houses are also being built. Baron Ringhofer has established a sick-fund and "welfare institutions."

Industrial legislation is more advanced than cooperation, and recently the government has increasingly followed German precedents.

Accident insurance was made compulsory in Austria in 1887, and insurance against sickness in 1888. The aim is to keep all laborers from dependency. The minister of the interior requires such insurance of all employers where employment is at all dangerous, as in mines, quarries, buildings, factories, etc., and exempts all others.

In case of fatal accident, the widow receives funeral expenses, 20 per cent of the husband's wage till death or remarriage, and 15 per cent for each child till the age of fifteen, or, if both parents are dead, such children receive each 20 per cent. Illegitimate children receive 10 per cent each, but the aggregate amount is not to exceed 50 per cent. In case of total disability the injured receives 60 per cent; in case of partial disability the amount is not to exceed 50 per cent.

The postal savings-bank system is more developed in Austria-Hungary than in any other country.

The Austrian provisions against non-employment are: (1) employment agencies carried on for gain, about 916; (2) the ancient trade-gilds, composed of employers and employees, of which there were 5,273 in 1895; (3) employees' associations (trade-unions and others); (4) relief stations on the German plan (see GERMANY); (5) labor registries, public or private. Vienna and Prague have large municipal registries. The public registries found 95,107 situations in 1903; agencies for gain, 44,034; the trade-gilds, 30,520; other agencies, 74,923.

The government has also made especial efforts in the interest of the industrial middle classes by creating a special department of the Board of Trade, the *Gewerbeförderungsdienst* (Service for the Promotion of Handicrafts and Trades), which has had a rapid growth and been imitated in other countries.

The staff consists of a large number of experts in the various trades and crafts, and of men devoted to the cooperative movement; the institute itself may be described as a social laboratory endowed and supported by the state. It has developed also a tendency which is becoming important throughout Austria—the endeavor to apply artistic methods to as many spheres of production as possible. It has a Trade and Crafts' Museum, now in its twenty-sixth year.

Important Austrian social reform institutes or societies are:

Arbeitsstatistisches Amt, Vienna, I., Biberstrasse 2. Chief, Dr. Victor Mataja. (Austrian Labor Department or Bureau.)
Gewerbeförderungsdienst des k. k. Handelsministeriums, Vienna, IX., 2, Severingasse 9. Chief, Dr. W. F. Exner. Secretary, Dr. A. Vetter. (Imperial Bureau for the Promotion of the Crafts.)

Arbeiterzeitung (Labor News; Socialist organ). Editor, Dr. V. Adler. Vienna, VI., Mariahilferstrasse 89. (Headquarters for Socialist and labor information.)

Wiener Volksheim (People's Palace). Vienna, XVI., Koller Park 7. Secretary, Prof. Dr. Emil Reich. (Educational: furthering of university extension, libraries, etc.)

Kulturpolitische Gesellschaft. Vienna, I., Giselstrasse. Chairman, Dr. Robert Scheu. (Object: political, economic, and social education in Austria.)

Sozialpolitischer Verein. Vienna, II., Helfferstorferstrasse 3; Chairman, Dr. Sigismund Wolf-Eppinger. (Object: social reforms.)

Sozialwissenschaftlicher Bildungsverein. Vienna, VIII., Schönelberggasse 11. Chairman, Dr. Alexander Hollander. (Object: political and economic education.)

Allgemeiner Verband der auf Selbsthilfe beruhenden deutschen Erwerbs- und Wirtschaftsgenossenschaften in Oesterreich. Vienna, I., Giselastrasse 4. (Object: to protect the interests of the German cooperative societies in Austria.)

Allgemeiner Verband der landwirtschaftlichen Genossenschaften in Oesterreich. Vienna, I., Weiburggasse 12. (A union similar to the preceding, for agricultural cooperative societies.)

Reichsverband der deutschen Gewerbevereine Oesterreichs in Wien. Vienna, I., Eschenbachgasse 11. President, Section Chief Dr. W. F. Exner. (Object: promotion of the interests of German industrial associations.)

Wiener Volksbildung Verein. Vienna, I., Tegetthoffstrasse 4. Chairman, Dr. Friedrich Jodl. (Object: popular education.)

Oesterreichischer Zweigverein zur Hebung des Mittelstandes. (Austrian branch of the *Institut international des classes moyennes*, founded in Brussels, for the development of the middle classes.)

Oesterreichische Friedensgesellschaft. Vienna, I., Spiegelgasse 4. President, Frau Bertha Frein v. Suttner. (Austrian Peace Society.)

Oesterreichischer Verein gegen Trunksucht. Vienna, I., Spiegelgasse 19. Secretary, Dr. Adolf Daum. (Austrian Temperance Society.)

Allgemeiner Rechtsschutz und Gewerkschaftsverein für Oesterreich. Vienna, X., Laxenburgerstrasse 8. Arbeiterheim. (General Trade Association Union.)

Vereinigung der arbeitenden Frauen. Vienna, I., Tuchlauben II. President, Frau Karoline Gronemann. (Working Women's Club.)

Allgemeiner Oesterreichischer Frauenverein. Vienna, XVIII., Gentzgasse 6. President, Fräulein Auguste Fickert. (General Austrian Women's Union.)

Verein der katholisch geschiedenen Eheleute. Vienna, IV., Leibenfrosgasse 6. (Society of Divorced Catholics, whose object is agitation for legalization of divorce.)

Verein zur Reform des Eherechtes. Vienna, VI., Mariahilferstrasse 5. (Object: reform of marriage law.)

Heimat. Vienna, I., Dorotheengasse 12. Chairman, Adolf Ruzicka. (Girls' Friendly Society.)

Kinderschuttsstationen. Vienna, I., Wipplingerstrasse 8. President, Dr. Prince Eduard von und zu Liechtenstein. (Children's Aid Society.)

Verein abstinenter Frauen. Vienna, I., Steindlgasse 2.

President, Frau Emilie Kassowitz. (Women's Temperance Union.)

AVELING, EDWARD: Socialist lecturer, born in 1851. He was educated at various schools and at University College, London, and went to Cambridge as Prof. Michael Foster's assistant in physiology. He has been professor of chemistry and physiology at New College, and of comparative anatomy at the London Hospital, and was a member of the London School Board in 1882. An avowed atheist, he became vice-president of the National Secular Society, socialist lecturer, journalist, author, and dramatist. Author: "Student's Marx"; "Student's Darwin"; "Botany for Students"; "Geology for Students"; "Physics"; "Biology"; translations of Marx's "Kapital" (vol. i.); Engel's "Socialism"; Haeckel's "Pedigree of Man"; Titchomiroff's "Russia." He married Eleanor, daughter of Karl Marx.

AVERY, MRS. SUSAN LOOK: Writer; reformer; born at Conway, Mass., 1817; educated at Utica, N. Y.; married (1844) Benjamin F. Avery (died 1885). She has largely devoted her life to speaking and writing on woman's suffrage, temperance, the single tax, and other reforms. Address: Louisville, Ky.

B

BAADER, FRANZ XAVIER: German philosopher; born at Munich, 1765. His father counted among his friends some liberal German bishops, and shared their views. Franz Baader studied at the University of Freiburg, where he became the friend of Alexander von Humboldt. In 1826 he was made professor of philosophy and speculative theology at Munich, but desiring the reunion of Protestantism and Catholicism, and having uttered a remonstrance against the absolutism of the Roman court in 1838, he was deposed from his professorship. He gradually became more and more interested in social subjects, and recommended a theocracy, a state held together by Christian love, which should be equally free from lawless individualism and from despotism. Kaufman in his "Christian Socialism" has summarized Baader's view as follows:

Without previous and perfect union between God and man, social union can neither be effected nor maintained. Social coordination and subordination must rest on Divine authority. All members of the social organism are what they are by the grace of God. Physical force without spiritual power, compulsion without conviction, fear without respect, interest without love, cannot permanently secure social order.

Corporate action and association are essential to the common weal, because they imply organized social life. On the other hand, all attack on property by way of advocating a communistic redistribution is a crime against the common interests of all. The Christian law of mutual affection is the only safeguard against the disintegrating power of individualism. With the development of the moral and religious life of the nation, social evolution will become possible also, and thus the unhealthy elements of social progress will be eliminated without the adoption of revolutionary measures. *The Church must provide a new diaconate* to bring about a more equitable

redistribution. The most perfect corporation is the Catholic Church; it is, therefore, the best type of social organization. The Church is altogether opposed to the heathenish view of ownership of property, which is purely selfish, and therefore antisocial, separating private from common interests. The Church regards all men as agents and stewards of their possessions for the common good.

Baader was, however, not destined to make any attempt to carry out his views, as he died in 1841, only three years after losing his Munich professorship. The "Encyclopedia Britannica" says of him:

Baader is, without doubt, the greatest speculative theologian of modern Catholicism, and his influence has extended itself even beyond the precincts of his own church.

BABBAGE, CHARLES: English economist; born 1792; studied at Trinity College, Cambridge; was made a Fellow of the Royal Society in 1816; helped found the British Association; became professor of mathematics at Cambridge in 1828, and devoted much time and money to the building of two great calculating machines. In political economy, altho he did not contribute to economic theory, he nevertheless won a high place on account of his thorough and faithful descriptions of characteristic economic phenomena. Especially faithful and discerning were his analysis and portrayal of the benefits and effects of the division of labor. Political economy he was one of the first to declare not an exact science, like the mathematical, altho it did depend on "generals, being much more frequently obeyed

than violated." He was no blind worshiper of Mammon, and sneered at the notion that no calling could be deemed respectable which did not produce wealth. In the public interest he believed that inventors should be generously rewarded by the state. He died in 1871.

Babbage's main works were: "On the Economy of Machinery and Manufactures"; "Thoughts on the Principles of Taxation with Reference to a Property Tax and its Exceptions"; "A Comparative View of the Different Institutions for the Assurance of Life"; "The Exposition of 1851, or Views of the Industry, the Science, and the Government of England"; "Passages from the Life of a Philosopher."

BABEUF, FRANÇOIS NOEL (called *Caius Gracchus*): French Socialist; born at Saint Quentin, 1760. Left alone at the age of sixteen, his youth and whole life was stormy and wild. From the commencement of the Revolution he wrote violent articles, and was tried, but acquitted. He edited a paper which he called *Tribun du Peuple*. This took place after the fall of Robespierre. He gradually became more violent, and gathered round him a body of men whose main idea was to put down inequality of condition. "We desire," said they, "real equality or death." They met at the Pantheon (till their public meetings were broken up by Napoleon), and there counseled how to rouse the people to insurrection. They aimed at a real community of goods. The public authorities were to organize industry. Every one was to have a right to lodging, food, *mediocre mais frugale*, clothes, washing, warming, lighting, and medical attendance. Babeuf's theory of communism was based largely on Morelly's "Code de la Nature." According to it, "the aim of society is the happiness of all, and happiness consists in equality. Let all the arts perish," cried its followers, "provided we obtain real equality." Government was to be absolute. No private individual was to be allowed to trade with foreign countries. Even within the country only such publications were to be allowed as taught the unqualified blessings of equality. All were to be dressed alike save for differences of age or sex. Children were to be removed from the family at an early age, to be taught of "civism" and communism. Comfortable mediocrity was the openly expressed ideal.

Babeuf and his friends had planned a general uprising in May, 1796, but their plot was discovered a few hours before the time set for its execution, and in February of the following year, Babeuf and Darthé were condemned to die. They stabbed themselves before the tribunal, not fatally however, and they were guillotined the next day. Babeuf's last words were, "I wrap myself in a virtuous slumber."

BACON, FRANCIS, VISCOUNT ST. ALBANS: English scholar, philosopher, and diplomat; born in London, 1561; studied at the University of Cambridge at the age of thirteen. He entered diplomacy, and was one of the suite of the English ambassador at Paris. Later he studied law, became a member of Parliament, Solicitor-General, Keeper of the Great Seal, and Lord Chancellor, and was made Baron Verulam, then Viscount. In 1621 he was convicted of corruption in office on his own confession. After this he devoted himself entirely to science and literature till his death in 1626.

Altho dishonorable in public life, Bacon's fame as a literary and scientific man is of the first order. His life was contemporary with the birth of modern science, and with it his name has always been associated. As a literary man Bacon exhibits profound thought expressed in a remarkable and splendid style. There are few subjects with which he did not occupy himself. In his day economic questions did not form a separate study, nor were they of much account. Bacon, however, here and there touches on them, as in Essay xxxiv., "Of Riches," and in the essay on "Plantations." He discusses the government of colonies, and says: "Let there be freedom from custom till the plantation be of strength, and not only freedom from custom but freedom to carry their commodities where they may make their best of them, except there be some special cause of caution." In the "History of Henry VII," and in other shorter works he shows himself a deep student of human and social philosophy. "The New Atlantis" is a brief Utopia written between 1614 and 1617, and published a year after his death. Among his other works may be mentioned: "Essays," "The Advancement of Learning," the "Novum Organum," and the "History of the Reign of Henry VII."

BAGEHOT, WALTER: English banker and economist; born at Langport, Somersetshire, in 1826. He was the son of a banker, and studied at London University. After being called to the bar he chose to enter his father's bank, and later became known as a brilliant literary critic and writer. In 1858 he married the eldest daughter of James Wilson, editor of *The Economist*, and two years later succeeded to the editorship, continuing thus till his death. He was considered one of the best financiers of his day. His special service in economics may be said to have been to reconcile them with history. He had almost unbounded admiration for Ricardo, with whom as a successful man of business he had many points of agreement. "Adam Smith," he said, "discovered the country (of political economy), but Ricardo made the first map." He considered himself the last man of the ante-Mill period. Mill and Cairns had already shown that the old political economy was hypothetical, dealing not with real but imaginary "economic men," who were simply conceived "as money-making animals." In history and life, as Bagehot showed, men are not merely this. He named his great treatise "Lombard Street," not "The Money Market," because he desired to show that he dealt with the concrete and not the abstract. His sympathies were with the capitalists; yet to the working classes and trade-unions he was never hostile. His only remedy was *laissez-faire*. As was natural from his position, his best detailed work was in elucidating the orthodox teaching concerning banking and finance. He died in 1877.

Bagehot's main works were: "History of the Unreformed Parliament"; "Physics and Politics"; "Lombard Street: A Description of the Money Market"; "International Coinage"; "Literary Studies"; "Economic Studies"; and "Biographical Studies."

BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION OF AMERICA: The bakery trade is one in which great evils exist. Working by hot ovens often in unventilated rooms and not infrequently in underground cellars is

very difficult, much work having to be done at night. The hours are often long and irregular and wages (except for organization) are very low. Frequently the baker, saturated with perspiration sleeps on his table or on flour bags, without undressing, ready for work the next morning. Organization began in New York, and by 1881 New York and Brooklyn had 5,000 union bakers, mainly German. The union struck for twelve hours, but lost and largely went to pieces. In 1885, however, Mr. Henry Weisman started the *German-American Bakers' Journal*, threw himself into building up a national union, with the result that to-day the national union had, 1905, 12,000 members and is working for an eight-hour day. Secretary, F. H. Harezbecker, 236 Superior Street, Cleveland, O.

BAKOUNIN, MICHAEL: The father of revolutionary anarchist-communism; born in Torschok, Russia, 1814, of aristocratic and even princely family. Educated for the military service, he became an artillery officer, and was stationed in Poland; but by 1835 became disgusted with Russian militarism, and went to Moscow to study philosophy, reading mainly Hegel and Schopenhauer, in company with Alexander Herzen, the later notorious Russian revolutionist, and others of similar type.

In 1841 he went to Berlin, becoming particularly acquainted with Arnold Ruge, and writing in his *Deutsche Jahrbücher*, at Dresden. He was led by Ruge to be a communist. In 1843 Bakounin went to Paris, and there made the acquaintance of Proudhon and his writings, and learned to give to his communistic views an anarchistic basis. In 1849 he resided for a time in Leipzig, surrounding himself with Czech students, and endeavoring to provoke a fresh rising in Bohemia. When in that year the revolution broke out in Dresden, Bakounin joined it. He was, however, captured during a skirmish and condemned to death. On the eve of being shot he was handed over to the Austrian authorities, and tried by them for his part in the Czech rebellion. Again sentenced to death, he was claimed by Russia, and imprisoned in the fortress of Schlüsselburg, and in 1852 transported to Siberia. In 1860 Bakounin reappeared in London, having escaped from Siberia by the way of Japan and the United States. He immediately resumed his advocacy of Pan Slavism, and became more revolutionary than ever. He wrote in Herzen's journal, *Kolokol* (*The Bell*), and exerted wide influence, among other ways, by his brochure, "Romanoff and Pugatcheff."

When the International was formed in London in 1864, Bakounin did not at first join it; but soon realizing its power, he threw himself into it and

became the leader of its anarchist wing against Marx, the leader of the Socialist wing. The names Anarchist and Socialist were not then used

save in a vague way; both Marx and Bakounin called themselves communists, but gradually around these two leaders arose the two distinct movements which have since become the Socialist and anarchist-communist movements existing to-day, and completely opposing each other in all European countries. The difference, however, only gradually asserted itself. The International at first was simply an effort to unite the workers of all countries. (See INTERNATIONAL.)

At a congress held in Geneva in 1867, Bakounin favored the abolition of centralized states, and the substitution of voluntary federations of independent communes. At the next congress, in 1868, at Bern, under the presidency of Victor Hugo, he urged joining the International. Failing to convince the assembly, he formed his supporters into a Social Democratic Alliance, the aim of which was to make land and capital the collective property of society, to be used by agricultural and manufacturing associations. Existing states were to "disappear in the universal union of free associations." The Alliance desired to be recognized as part of the International, but its claim was rejected, whereupon it dissolved after six months' existence, during which it had been active in Spain and Italy, and its sections joined the International separately.

On Sept. 28, 1870, Bakounin organized an insurrection at Lyons, but failing in France he resorted to Italy. In 1872, however, Bakounin was to make his break with the Marxian wing of the International. When the congress of the International was to be held in that year, Marx succeeded in having it called at The Hague, where Bakounin could not come, since he would have been arrested in passing through either France or Germany. At the congress, therefore, Marx had it all his own way. In Sept., 1873, both the Marxists and the Autonomists held a congress at Geneva, each claiming to be the true International. The autonomists were the stronger. Bakounin appeared to have conquered. It was the last congress of the Marxist International. The real triumph of Marxian socialism was not then apparent. Bakounin retired to Lugano, in Italy, but returned to Switzerland, and died in Bern, July 1, 1876. Elisée Reclus, Paul Brousse, J. Guillaume, and others gathered round his grave, and organized the cause to which Reclus later gave the name of anarchist-communism. (See ANARCHISM.)

Bakounin is said, by Reclus, to have been a man of great thought, strength of will, and untiring energy. By Felix Dubois he is described as a man of no original thought, hungry only for a notoriety to be obtained by any means. He was the embodiment of the revolutionist. He wrote of the International:

We wish to destroy all states and all churches, with all their institutions and laws, religious, political, juridical, financial, magisterial, academical, economical, and social, in order that all these millions of poor human beings, who are cheated, enslaved, overworked, and exploited—having been at last delivered from their masters and benefactors, whether official or officious, whether associations or individuals—may henceforth and forever breathe in absolute freedom.

His ideal of the future was not formulated. He wrote:

All reasonings about the future are criminal, because they hinder destruction pure and simple, and fetter the progress of the revolution. . . . The revolutionist is a man under a vow.

He ought to have no personal interests, no business, no feelings, no property. He ought to be entirely absorbed in one single interest, one single thought, one single passion—the revolution. . . . He has only one aim, one science—destruction. For that, and for nothing else, he studies mechanics, physics, chemistry, and sometimes medicine. With the same object, he observes men, characters, the situations, and all the conditions of the social order. He despises and detests existing morality. For him everything is moral that helps on the triumph of the revolution, everything is immoral and criminal that hinders it. Between him and society there is war—war to the death, incessant, irreconcilable. He ought to be ready to die, to endure torture, and with his own hands to kill all who place obstacles in the way of the revolution. So much the worse for him if he has in this world any ties of relationship, of friendship, of love! He is no true revolutionist if

The International

The Revolutionist

these attachments stay his arm. Nevertheless, he must live in the midst of society, feigning to be what he is not. He must penetrate everywhere among the upper classes, as well as among the middle—into the merchant's shop, into the church, into the government offices, into the army, into the literary world, into the detective force, and even into the imperial palace. . . . He must prepare a list of those who are condemned to death, and dispatch them in the order of their relative misdoings. A new member can only be admitted into the association by a unanimous vote, and after his qualities have been proved, not by words merely, but by deeds. Each "companion" should have under his control several revolutionists of the second or third degree, not wholly initiated. He should consider them as part of the revolutionary capital placed at his disposal, and he should expend them economically and so as to abstract the greatest possible profit out of them. . . . The most valuable element are women who are completely initiated, and who accept our whole program. Without their aid we can effect nothing.

Bakounin's best work is probably "God and the State," which has been translated by B. R. Tucker (1883). . . His other writings were mainly attacks upon Marx and Mazzini, or violent "Bulletins of the Federation of the Jura."

BALANCE OF TRADE: The difference between the amount or value of the commodities exported from and imported into a country. The balance is said to be favorable to a country when the value of its exports exceeds that of its imports, and unfavorable when it is *vice versa*. This is derived from the old idea long prevalent, but especially developed by the MERCANTILISTS, that wealth consists only, or at least mainly, in money, and that therefore that country which exports more commodities than it imports must be rich, since it receives money in excess of what it pays for its imports. Clement Armstrong, in his "Treatise Concerning the Staple and the Commodities of this Realm" (1530), says: "The holl welthe of the realme is for all our riche commodities to gete owt of all other realmes, therefore redy money; and after the money is brought into the holl realme, so shall all people in the realme be made riche therewith." This was the universal theory in the Middle Ages, when there was what has been called a "balance of bargain" theory, each state striving on every bargain to obtain a balance of money. The first real refutation of the theory seems to have been by Nicholas Barbon in 1690, tho it remained largely accepted till the onslaught upon it by Hume in his "Essays" (1752), and the more calm and judicious analysis of Adam Smith. To-day, when it is seen that wealth may consist in many things besides money, the absurdity of the theory is apparent. See Buckle's "History of Civilization in England," vol. i., pp. 210-212; W. Cunningham's "The Growth of English Industry and Commerce," p. 362; C. F. Bastable's "The Theory of International Trade," p. 164 (Dublin, 1887).

BALL, JOHN: English priest and revolutionist; born 1338; studied at St. Mary's, York, and was ordained to the priesthood not long after 1356, becoming one of the class of parochial chaplains, who corresponded among the clergy to the artisan class among the laity. It was toward the end of the long reign of Edward III. that the "mad priest," as it suited the landowners to call him, began to prophesy against the evils of his time; and, as John Richard Green has said, "in the preaching of John Ball England first listened to the knell of feudalism and the declaration of the rights of man." England was ripe for the message. The years of prosperity following the plague of 1348 had done more to open the eyes

of the peasants than all the centuries of poor rations which had gone before. At first by royal proclamation, and subsequently by the repeated enactments with added penalties of the famous "Statute of Laborers," every effort was made to defeat the rising prosperity of the artisans and peasants, but every resistance only fanned the flame.

Such were the conditions amid which Ball began his life-work, and for twenty years preached Lollardism of a coarser and more popular sort than that of Wycliffe. He traveled from place to place, and preached in churchyards and from the market crosses to crowds, which were ever

His Life

increasing as he incurred the greater displeasure of the authorities. He insisted on the necessity of marriage of the clergy, on a voluntary priesthood, and on the injustice of demanding tithes from poor men. From the headquarters which he maintained in Essex his work extended in all directions, and he gradually became the recognized head of an ever-growing labor party, whose sections in the different parts of the country were united by a great band of itinerant priests, whose office enabled them to travel unsuspected in every direction. While all this was going on events were rapidly preparing the way for insurrection. The peasants were filled with what Professor Rogers calls a "religious socialism." The actual outbreak was delayed by several causes, for the leaders were loath to provoke an appeal to arms, tho as early as 1375 they seem to have decided that it would ultimately be necessary. Between 1375 and 1377 riots were frequent, and the people were held back with great difficulty. Then Edward III. died, and the hopes of the popular party for a better state of things were revived for a short time, while the troubles with the French helped to distract attention from the troubles at home. But when defeat abroad added to misery at home was capped by a fresh tax levy, to which the poor were compelled to contribute as much as the rich, the suffering became unbearable. In the early part of 1381 Ball began sending letters to his party everywhere, saying that the time for action had come. In April he was imprisoned, first in Maidstone jail and then in the archbishop's palace at Can-

Wat Tyler's Rebellion

terbury; but his plans were too well laid to be so frustrated, and in June the storm burst. The people rose simultaneously in all parts of the country. Canterbury, where "the whole town was of their sort," was thrown open to the insurgents, who plundered the archbishop's palace and released Ball, who thenceforth became the heart of the movement, as Wat Tyler was its military head. Then they moved on London, occupied Blackheath and Southwark, and sent their demands to the king, at the same time crossing the bridge and burning the new palace of the hated John of Gaunt and the hospital of St. John. The best of order and discipline were maintained; gold and silver vessels they smashed with axes, jewels they brayed; they stole nothing. This was between the 11th and the 13th of June. On the 14th the insurgents insisted on a conference with the king, and he came forth from the Tower, and met them almost alone at Mile End, giving assent to their demand: "We will that you make us free forever, ourselves, our heirs, and our lands; and that we be no more bond or so reputed." He set clerks at work writing charters

of manumission, and giving these to them, he bade them go home at once, which many did, thus weakening their strength through division. On the 15th, while Tyler was conferring with the king alone, and under the protection of a safe-conduct, he was murdered by Walworth, the mayor, and the rebels having lost their chief and leader, fell into the stratagem of the king, who put himself at their head and persuaded them to leave London altogether. Ball seems to have made an unsuccessful attempt to rally the peasants again; but, being caught at Coventry, was hanged, drawn, and quartered, after the fashion of the time. "The peasants were dispersed and defeated," says Professor Rogers; "their leaders were tried, sentenced, and hanged; but the solid fruits of victory rested with the insurgents of June, 1381. Once in the history of England only—once, perhaps, only in the history of the world—peasants and artisans attempted to effect a revolution by force. They nearly succeeded—at least they became for a short time the masters of the situation. The English laborer, for a century or more, became virtually free and constantly prosperous."

BALLANCE, HON. JOHN: The first Liberal-Labor Premier of New Zealand; born in 1839; the son of a north Irish tenant farmer. Apprenticed to a Dublin ironmonger, he went to New Zealand in 1866 and became a sheep farmer; soon, however, he started a jeweler's shop, and later a paper. In 1875 he was elected to Parliament, and became a member of the cabinet from 1877 to 1879 and again in 1884 and 1887, and prime minister from 1891 till his untimely death in 1893. He gained his popularity largely by being the first promoter of New Zealand's present land system, in opposition to private monopoly in land. He inaugurated the village-settlement plan in 1886; was the author of the first land-value tax law; and took a leading part for manhood-suffrage. In 1890 he succeeded in uniting the Liberal and the Labor leaders; and on becoming premier he inaugurated the era of radical reforms with regard to land, etc., which has made New Zealand so prosperous.

BALLOU, ADIN: Founder of Hopedale Community; born in Cumberland, R. I., 1803. His ancestor, Maturin Ballou, in 1646 aided in founding the city of Providence, R. I. At eleven years of age Adin Ballou felt a fervor of the Divine spirit, and at eighteen he preached his first discourse. He became a Universalist, published books and pamphlets, and edited many papers on reformatory subjects. In 1841 he founded the HOPEDALE COMMUNITY in Massachusetts, which, as long as it remained under his management, succeeded in doing the good it started out to accomplish. Ballou remained at its head for over ten years, but was finally superseded by an intriguing business man, who got the lead and ruined the community. Mr. Ballou died in 1890. (For his views, see HOPEDALE.)

BALTIMORE, MD.: Social reform movements in Baltimore are characterized by qualities growing inevitably out of the somewhat unique position and history of the city. With a large negro population (a larger negro vote than any city in the union except Washington) the city has its full share of ignorance and poverty, and yet, descending from its early history, traditions of aristocracy and in some ways of feudal relationship between the rich and the poor, which are not common in the United States. Such relations exist elsewhere in the South, but in many ways Baltimore is not a Southern city. A situation favorable to commerce early developed a considerable foreign trade and local manufacture. The trade of the "Baltimore clippers" before the war became famous. Tho this was cut off by the war and hurt by the great fire of 1904, the city emerged from that experience to develop a very energetic commercial and industrial life.

The aristocratic element came first. The foundation of Baltimore in 1829 was under the influence of the proprietary government of Maryland. It had been the intention of Lord Baltimore, the first lord proprietor, to found a feudal state, largely for Catholics, tho Protestants were to be free to dwell there and conduct their faith. Maryland early outgrew this intention, but the influence of its beginnings has never wholly disappeared.

Ignorance, however, soon followed. Slavery was introduced and Maryland became a slaveholding state. Strong influences from Washington as well as in the State, in period of the rebellion, saved Maryland from seceding, but large numbers of her people sympathized with the South and many entered the Confederate army. After the close of the war the proximity to the South induced many colored freedmen to settle in Baltimore, providing her citizens and her commerce with cheap labor, and her politicians with a large element that could be easily bought. In 1900 Baltimore had a population of 508,957, of whom 79,739 were colored, 68,600 were foreign born, a small proportion for the U. S. The illiterate population was 29,148, of which 17,037 were colored and 12,111 "poor whites." Such conditions mean a low standard of labor, and Baltimore has never been a strong trade-union city. Commerce, however, has flourished.

Equally, however, until recently, has political corruption flourished, and Baltimore passed through a great period of municipal corruption in connection with public connivance with Senator Gorman's Democratic machine. In 1885, however, a Reform League was organized, and a fight upon corruption begun. For ten years, however, little or no impression was made. Only in 1895 did it succeed, through activity and watchfulness in ward clubs, in defeating the city machine, and electing a Republican governor and U. S. senator. But this was in part (tho not wholly) a mere party victory. In 1898, however, a new and progressive charter was obtained, going into effect March 1, 1900.

Executive functions are vested in a mayor elected for four years, a few other officials, and in seven executive departments: Finance, Law, Public Safety, Public Improvements, Public Parks and Squares, Education, Charities and Correction, Review and Assessments. These officials (except the controller) and heads

**New
Charter**

of departments were appointed by the mayor, subject to approval by the Second House, giving, therefore, very centralized responsibility, especially since they may be removed by the mayor, at pleasure, for the first six months, and after that by trial and for cause. The sole power of money appropriations is in a board of estimates, all of whom are elected by the people. No money can be appropriated unless actually in the treasury, a condition which works for honesty, conservatism, and against municipal operations. A separate spring election has called attention to city conditions as apart from the state and country, and has resulted in the election of better councilors. The result has been that Baltimore is almost unique among the large cities of the U. S. in not having the question of corruption prominently up for the last ten years. Much of the credit for this is due to the first mayor under the new charter, Thomas G. Hayes.

The better element of citizens, however, have largely helped. The Baltimore Reform League is a somewhat small and compact organization of influential citizens, but a Municipal League, organized in 1905, enrolls 3,000 members.

It is in part due to Baltimore's wealth and aristocracy that the city, in spite of many ignorant citizens, has long ranked as one of the foremost educational centers of the country. Johns Hopkins University, opened in 1876 by the munificence of a Baltimore merchant, has been a pioneer in postgraduate study and has influenced the whole city. A Roman Catholic seminary and college, a woman's college, two colored advanced institutions, besides various professional schools and departments of the University of Maryland, increase this influence. The Enoch Pratt Free Library has 200,000 volumes and several branches. The Peabody Institute, founded by George Peabody, who laid the foundations of his wealth in Baltimore, has 145,000 volumes, art gallery, and conservatory of music. Public schools are also well developed, one of the chief successes of the new charter being in its freeing of the schools from politics and the development of the Department of Education.

Charity has been well organized in Baltimore. A fine Federated Charities Building was opened in 1903. The Lawrence House Settlement (founded 1893) and the more recent Locust Point Social Settlement are doing good work. Several churches have well-appointed parish houses for social work and many now show considerable institutional activity.

The following are some of the more important social and charitable institutions:

- Federation Charities Building, 101 West Saratoga Street.
- Lawrence House, 816 West Lombard Street.
- Locust Point Social Settlement, 1504 Port Avenue.
- Baltimore Reform League, 18 East Lexington Street.
- Municipal League, 126 Law Building.
- Socialist Headquarters, 1011 East Baltimore Street.
- Young Men's Christian Association, 302 North Charles Street.
- Young Women's Christian Association, Park Avenue and Franklin Street.
- Woman's Christian Temperance Union, 516 Park Avenue.
- State Board of Education, Carrollton and Lafayette Avenues.
- Baltimore Federation of Labor, Baltimore and North Streets.
- Labor Leader, 27 Franklin Building.
- Labor Lyceum, 1011 East Baltimore Street.
- State Bureau of Industrial Statistics, 100 Equitable Building.

BANDS OF HOPE: Temperance organizations for juveniles, established throughout all English-speaking countries. In the United States the name has been generally changed to "Loyal Temperance Legion," altho some local organizations are continued under the old name. The Band of Hope pledge in this country is as follows: "I hereby solemnly pledge myself to abstain from the use of all intoxicating drinks, including wine, beer, and cider, as a beverage; from the use of tobacco in every form, and from all profanity."

The first society called a Band of Hope was formed in Leeds, England, in 1847, more than 200 children taking the pledge: "I promise to abstain from all intoxicating drinks as beverages." In Great Britain there are probably over 2,000 juvenile temperance societies of one kind or other. In 1851 the first Band of Hope Union was formed. Its sphere of work is in Bands of Hope, Sunday-schools, day-schools, colleges, orphan asylums, industrial and district schools, training ships, reformatories, and the homes of the children. The latest estimate of the strength of the movement shows that there are nearly 15,000 Bands of Hope and juvenile temperance organizations in Great Britain, with upward of 20,000 members.

BANK OF ENGLAND: Established in 1694 with a capital of £1,200,000. It was projected by William Paterson, a Scotchman who had had business experience in America. In 1816 the capital reached £14,553,000, the present amount, with a reserve fund of £3,000,000. Its issue department is limited to £14,000,000, tho this may be increased if other note-issuing banks discontinue issues. The Bank of England pays £180,000 a year for its exclusive privileges, and is paid £247,000 a year (less charges of £124,000) for acting as the government's banker in managing the national debt, loans, bonds, and much of the colonial business. In case of panic the government can permit the bank to issue notes beyond the legal amount, and this usually ends the panic. The bank is controlled by a governor, a deputy, and twenty-four directors, elected by the stockholders.

BANK OF VENICE, THE: This famous bank, which has played an important part in monetary discussion, dates according to some from 1171, and according to others, from 1619. This is because the latter authorities deny that up to 1619 it was a bank in any modern or correct sense of the word. Stephen Colwell, in his "Ways and Means of Payment," has made this bank an argument for the practicability of fiat money, tho these conclusions are severely criticized by their opponents. Mr. B. S. Heath, in his "Labor and Finance Revolution," says in brief:

Stephen Colwell's digest of fourteen authorities leads to the following deductions, as will be seen by perusal of his able work:

It proves that there was a national bank of Venice founded on a loan of 2,000,000 ducats spent by the State in 1171, and the bank existed within the memory of living men, a period of 626 years, during which time it was gradually enlarged over 700 per cent.

That, in 1423, the 4 per cent interest previously paid was abolished.

That all promise of reimbursement, other than transfer of credit receipts, was abolished.

That no coin was kept as a specie basis of credit, or for strengthening the nation.

That no promise to pay any coin was made after 1423, for nearly 400 years of its continuance.

That the premium fixt by law of 20 per cent premium over the Venetian gold ducat, so celebrated for its fineness in ex-

port, was a real superiority of legal money of account over the commodity gold, and over gold currency.

That it was not dependent on any promise of convertibility or redemption in gold, as no claim for any gold was acknowledged in the National Bank.

That it continued for nearly 400 years with all these extraordinary attributes, producing no financial derangements and no opposition; but, on the contrary, grew until it exceeded the money per capita of any nation in Europe, ancient and modern, and was the pride of Venice, the envy of Europe.

That it only fell when Napoleon conquered Venice, when it had reached an issue exceeding \$16,000,000 of government credit or money for 200,000 people, excluding the dependencies of Venice.

On the other hand, Professor Dunbar, in Palgrave's "Dictionary of Political Economy," gives an account different in several essential points. According to him, the bank was simply a bank of deposit under public officers. In 1619 it was changed into the *Banco del Giro*, long known as the Bank of Venice. It received funds both for the State and individuals, making a small charge for holding private deposits. Transfers were made upon the books by the order of depositors; bills of exchange were paid, and the tender of payment for any sum not less than 100 ducats could not be refused. Loans to the government compelled it to suspend more than once, especially from 1717-39. For the greater part of its existence, however, it received or paid out cash on demand. It kept its accounts in ducats *banco*, which had no corresponding coin, but were credited or redeemed by the bank as might be required at an advance of 20 per cent, above the ducat *effectivo* of the mint. Whatever be the origin of this, it seems finally to have represented a mere difference of denomination.

BANKS AND BANKING: A bank may be defined as an institution for receiving money at or without interest, for loaning, discounting, or transmitting money, and sometimes for issuing notes. (See SAVINGS-BANKS; COOPERATIVE BANKS; CURRENCY.)

I.—General History

The name "bank" is derived from the Italian *banco*, a bench, from the benches in the markets on which the early money-changers were wont to sit. Passing by obscure references to money-lenders and usurers on Assyrian

Early Banks tablets in Egyptian records and classic and sacred literature, the origin of modern banking is largely to be found in Florence, altho the BANK OF VENICE was the first real bank. The names of the Bardi, Acciajuoli, Peruzzi, Pitti, and Medici were famous throughout Europe. In 1345 the Bardi and the Peruzzi, the two greatest mercantile houses in Italy, failed. Edward III. owed the Bardi 900,000 gold florins, which his war with France prevented him from paying; and the King of Sicily owed them 100,000 gold fl. The deposits of citizens and strangers with the Bardi were 550,000 gold fl. The Peruzzi were owed 600,000 gold fl. by Edward III. and 100,000 by the King of Sicily, and the deposits they owed their customers were 350,000 gold fl. The fall of these two great pillars of credit involved that of multitudes of other smaller establishments. The city, however, recovered from this terrible disaster, and we find that between 1430-33 seventy-six bankers at Florence lent 4,865,000 gold fl. At one time Florence is said to have had eighty bankers, but not any public bank.

The first bank to be established on really modern principles as a bank issuing notes payable to bearers at sight is the Bank of Sweden, established by a Swede named Palmstruck, in 1656. Its first bank-note was issued in 1658. This bank became the Riks Bank (National Bank) of Sweden in 1688, and still carries on business as such. Banking in

Continental European Banking

Germany, save for the great Bank of Hamburg, presents little of interest. Each German state had its own banking laws and banks of issue, confined mainly to its own neighborhood. After the unification of the empire by an act of 1875—the Bank of Germany was established, and thirty-two banks were recognized as possessing rights of uncovered issue of 135,000,000 marks, the bank of Germany being allowed 250,000,000 mk. The state itself has the right of issue of 120,000,000 mk. in small denominations. France has many large banks besides the Bank of France, among others the Comptoir d'Escompte, founded 1848; the Crédit Foncier and Crédit Mobilier, 1852; the Crédit Lyonnais, 1863; the Société Générale, 1864.

England has many old banks. Says Mr. Courteney: "The still existing bank of Messrs. Smith & Co., of Nottingham, the parent of the London establishment of Messrs. Smith, Payne & Smiths, claims to have been established in 1688; the Bristol Old Bank (Messrs. Baillie, Cave & Co.) dates from 1750; the Hull Old Bank (Messrs. Pease & Co.)

Banking in England

from 1754; and many other country banks trace back their history to the latter half of the 18th century. It is believed that all these bankers issued their own notes payable to bearer as part of their business; and they were not very scrupulous in regard to the magnitude of the sums for which they were given. The Bank of England had not issued any notes for less than £20 previously to 1759, when it commenced the issue of £10 notes; but the country bankers put in circulation notes for such small sums that Parliament enacted, in 1775, that none should be issued for less than £1. In 1777 this minimum limit was further raised to £5, but in spite of this restriction the number and the amount of the issues of the country bankers soon became dangerously multiplied."

In 1792 there were said to have been 350 banks. In the panic of 1792-93, about 300 banks suspended payments, and 50 were totally destroyed. After the panic, however, banks gradually multiplied till 1825, when the circulation of notes of less than £5 was forbidden. Joint-stock banks with any number of partners were allowed to issue, but did not multiply again till 1834-36, when there was a rush into banking, leading to the passage of the Banking Act of 1844. (See BANK OF ENGLAND.)

II.—Banking in the United States to the Period of the War of the Rebellion

As early as 1690 the colony of Massachusetts issued bills of credit, making the paper legal tender for taxes and other debts, the notes being payable to the bearer on demand. This was five years before the establishment of the Bank of England; and William Paterson, the father of that bank, had been in the colonies and studied the Massachusetts experiment. This

Colonial Period

issuing of bills of credit was repeated with various modifications by Massachusetts and the other colonies through all their history. (See CURRENCY.)

In 1739 a land bank and a specie bank, according to modern banking methods, were started in Massachusetts. The latter, however, closed in 1740, when Parliament extended the old Joint-Stock Companies' Act (passed after the South Sea Bubble, 1720) to the colonies; the former bank, however, struggling and battling for its life for the next ten years.

Dec. 31, 1781, Congress chartered the Bank of North America in Philadelphia. It had a capital of \$400,000, and took its origin in a union of citizens of Philadelphia, formed to supply the army with rations. They were allowed to issue notes to buy the articles required. Congress ordered bills drawn on American ministers abroad to be deposited in the bank as a guaranty of payment; \$70,000 in specie were subscribed by individuals in 1782, and the remainder by the government, out of the proceeds of a foreign loan. It issued convertible notes, redeemable in Spanish dollars; but the people were slow to take them. However, it made large dividends, and was attacked by a rival, which it was obliged to absorb.

The first bank of the United States under the Constitution was chartered by Congress in 1791. The capital was \$10,000,000. One fifth of the stock was owned by the United States and \$8,000,000 by the people. Six of the eight millions were government indebtedness; and \$2,000,000, money. Notes of the bank were made receivable for all obligations due the government for twenty years, or during the life of the charter. The bank always paid coin when demanded, but the notes were legal tender to the government, and, therefore, satisfactory to the people, whether the bank paid coin or not. This was made plain by the law, and was demonstrated in the last four years of the life of the charter, when the most bitter controversy was carried on between the bank and the president and cabinet. When the time came to renew its charter (1811), ninety state banks had grown up to oppose it. It had been successful, and paid 8 or 10 per cent a year to its stockholders. It was charged that the bank controlled elections in the state, and was then laboring to control those of the nation. Reports charging the bank with corruption, and even insolvency, were circulated, and the charter was not renewed.

The following table, from the report of the Controller of the Currency for 1892, gives a convenient *résumé* of the banks in the United States in the period we are now considering:

Specie, Circulation, Capital, and Number of Banks in the U. S., 1774-1804

| YEAR | No. of banks | Specie | Circulation | Capital |
|-----------|--------------|-------------|-------------|-------------|
| 1774..... | | \$4,000,000 | | |
| 1784..... | 3 | 10,000,000 | \$2,000,000 | \$2,100,000 |
| 1794..... | 17 | 21,500,000 | 11,600,000 | 18,000,000 |
| 1804..... | 59 | 17,500,000 | 14,000,000 | 39,500,000 |

Banking of the wildest kind was now the rule. After 1805 notes were allowed for sums under \$5, and finally were issued as low as for twenty-five cents. Specie was driven out. A crash came in 1800. Severe bank laws were passed. In 1813 the New England Bank was chartered as a bank of redemption at Boston, in order to keep the paper of the adjacent county at par. It did this, but was unpopular, and was the beginning of the Suffolk bank system.

The note circulation of the banks of the country is estimated, in 1811, by Gallatin, at \$6,000,000. The country being at war, \$57,000,000 were borrowed by the government from 1812 to 1814. Treasury notes for one year were issued in 1812 to the amount of \$3,000,000; in 1813, to \$6,000,000; and in 1814, to \$8,000,000. Silver flowed to New England. In 1814 all the banks save those in New England suspended

payment. Notes were depreciated from 20 to 50 per cent. The Secretary of the Treasury now began to be engaged in the money market. He tried to get the banks to come to some agreement. He ordered that taxes should be received only in specie, treasury notes, or notes of banks which received treasury notes at par. Madison recommended another national bank.

The second United States bank was finally opened Jan. 1, 1817. It began business with \$1,400,000 in specie, \$14,000,000 in stocks, and the rest in stock notes. It was to have a capital of \$7,000,000. A second instalment of \$2,800,000 was soon due, but only \$32,400 was paid in specie, the rest mainly from notes or discounts of the bank itself. The third instalment was still worse. The bank discounted its own stock at par to pay the instalment. In Aug., 1817, the bank discounted its own stock at 125. The facilities for stock-jobbing were used. Congress resolved that after Feb. 20, 1817, only specie, treasury notes, and notes of specie-paying banks ought to be taken by the national treasury. The banks refused to resume before July, 1817. The Western banks were still comparatively sound. The Southern banks had become inflated. The inflation was increased during the year by the government paying off \$11,000,000 of the public securities held by the banks. The note circulation at this time is estimated at \$100,000,000.

The Second National Bank

By March, 1818, the discounts of the United States Bank were \$43,000,000—\$11,000,000 on stocks. It had \$2,000,000 in specie. It had now eighteen branches, but only \$3,000,000 of specie in them all. Its operations in the West drew that region into the "golden" age. The bank now bought \$7,000,000 bullion in the West Indies. Fifteen months after it was started it was doubtful if the bank was solvent. In November, Congress appointed a committee of investigation, which reported unfavorably; but Congress would not respond, forty members being stockholders. The bank now took energetic measures to save itself, and in seventy days was solvent, but had ruined the community. In Aug., 1819, there were 20,000 seeking work in Philadelphia, and a similar state of things existed in other cities. Land in Pennsylvania was worth, in 1809, \$38 per acre; in 1815, \$150; in 1819, \$35. The note circulation of the country in 1812 was about \$45,000,000; in 1817, \$100,000,000; in 1819, \$45,000,000. Financial distress was general and lasted till 1823. Money was plentiful in the hands of those who had no debts to pay, as they would not invest. In 1823 the circulation of the United States Bank was very low—\$4,081,842; but there was a great creation of banks, and the bank began to expand and receive the notes of all its branches.

In 1826 there was dulness and reaction throughout the year. In 1827 money was plentiful, and continued so with some changes till 1831. President Jackson commenced his attack on the United States Bank in his first message (1829). About 1830 American securities began to attract English investments, in canals, steamboats, and, later, in railroads. Currency, however, became more and more of a political issue. Jackson committed his party to hard money. In 1832 the United States Bank petitioned for a renewal of its charter, which was to expire in 1836. The bill passed both Houses, but was vetoed by the president. A violent warfare was now begun by the bank. It is certain

The Bank War 1832- 1836

that the bank had paid little heed to the laws of the state or of prudence, expanding or contracting according to will. In 1832 Jackson defeated Clay by 288 to 49 in the electoral college. In his message in Dec., 1832, he recommended the sale of the \$7,000,000 stock of the United States Bank which was owned by the nation, and an investigation into the bank. Bank shares fell from 112 to 104, but recovered to 112 on a favorable report of the treasury agent. This report showed \$79,000,000 assets and \$37,000,000 liabilities, besides \$35,000,000 capital and \$7,000,000 surplus. But when the government desired to pay the 3 per cents in July, 1832, the bank agreed to pay the interest on them if the payment might be delayed so long. It then negotiated a loan of \$5,000,000 from Barings, the reason given being fear of the cholera. This caused fear for the public deposits, but a resolution that they were safe was carried, through the influence of the bank, 109 to 46. After Congress adjourned (Sept. 22, 1832), the president ordered Mr. Duane, the secretary of the treasury, to remove the public deposits from the bank. He refused, and was replaced by Mr. Taney, who did it. The order was that the collectors should send no more deposits to it, but to state banks. There was no sudden transfer, but it was proposed to withdraw at intervals. The bank began war, and began to draw in its loans. On the assembling of Congress, the Senate resolved (28 to 18) that the president had usurped unconstitutional powers. The House never noticed the resolution, but resolved (134 to 82) that the bank charter should not be renewed. The contraction of the money market caused great distress. It was stated that the bank caused this to obtain a renewed charter. It was claimed that they loaned to a select few who reloaned at usurious rates. The aggregate amount of loans, however, steadily decreased all these years.

Meanwhile, the bank war went on. The bank, finding that it could not coerce the people, and that smaller banks were taking its place, changed its policy and expanded, President Jackson using this as a proof that it had unnecessarily contracted before. The president induced many of the states to pass laws forbidding the issue of small notes, and this largely favored convertibility. These were times when cotton could command good prices, and railroad and other investments and speculation were good. The public debt was now nearly extinguished. On July 11, 1836, the president issued the famous Specie Circular, by which he ordered agents for the sale of public lands to take specie only. Congress in December passed an act rescinding this, but it did not become law, the president not signing it. The United States Bank not being able to renew its charter, now obtained a charter from Pennsylvania—by bribery, as it was asserted. It had not yet paid back the government stock or the dividends which it held for contracting a loan with France that finally never materialized. It continued to reissue the notes of the old United States Bank which it received. Gold, being forced on the market in this country, came here from England. In April, 1836, the gold reserve in the Bank of England began to lower, and this continued all summer. Nowhere had paper money been more in use than in the South. In March, 1837, several New Orleans houses failed. Next, the pressure was felt in New York, and then became general. There were 100 failures in New York in March,

and the losses were \$15,000,000. In March a meeting was held in New York, address by

The Panic of 1837

Webster. He laid the trouble to the government interfering with the currency and to the Specie Circular. A committee of fifty was sent to the president (Van Buren) to ask for its rescinding. The committee, in its address, spoke of 250 failures and 20,000 individuals discharged by their employers, and they laid it all to the effort to put metallic in place of paper currency. But they could obtain nothing from the president. In May the New York banks suspended in a body, a law being passed allowing them to suspend for one year. Suspension became general through the Union. Specie was driven out of the market, and all kinds of notes circulated instead. The New York banks then began to contract to be ready to resume. Nearly all the banks made money by the suspension, and paid good dividends during the year. In 1838, Congress passed an act forbidding the Pennsylvania Bank of the United States from using the old United States Bank notes. On May 10, 1838, most of the banks in New York City and in the Union resumed, the Bank of England sending \$1,000,000 to aid them. There was a general revival of trade, but it was not permanent. Gold in the Bank of England again declined. The Bank of Belgium failed. The Bank of England borrowed £2,500,000 of the Bank of France. During the same year the Bank of the United States became involved in cotton speculation. Several banks, especially in the South and West, failed. The management of the United States Bank became reckless. It owed from \$10,000,000 to \$20,000,000, and tried to borrow of various banks in Europe. On Oct. 10, 1839, it failed, and carried with it all the banks of the South and West. Three hundred and forty-three out of 850 banks in the Union closed entirely, and 62 partially. Some \$2,000,000 of government deposits were lost. This suspension lasted by law till Jan. 15, 1841. As soon as the bank opened again a run on it commenced, and it suspended finally Feb. 4, 1841. Its capital was a total loss, the shareholders receiving nothing. But all the creditors and all the circulating notes were paid in full, principal and interest, and the United States Treasury cleared some \$6,000,000 above the \$7,000,000 originally paid in.

Widespread Depression

When it failed the Bank of the United States owed the Bank of England \$23,000,000. Its failure, and, above all, the repudiation of indebtedness by several states ruined American credit abroad, and cost the bank many friends here.

In 1840 the Independent Treasury Act was passed, giving the government the custody of its own funds. It was only accomplished after a severe struggle, as it withdrew the public funds from use as banking capital.

NUMBER OF BANKS IN THE U. S., THEIR CAPITAL, ETC., IN THE YEARS 1811-40

| YEAR | No. | Capital | Circulation | Specie |
|-----------|-----|--------------|--------------|--------------|
| 1811..... | 89 | \$52,720,601 | \$28,100,000 | \$15,400,000 |
| 1830..... | 330 | 145,192,268 | 61,323,898 | 22,114,917 |
| 1840..... | 722 | 358,442,692 | 106,968,572 | 33,105,153 |

Among the new measures were the Suffolk Bank plan in Massachusetts, and the New York Safety-Fund System. The Suffolk Bank plan was merely an arrangement whereby

that bank was made the channel through which all notes of New England banks that found their way to Boston, as most of them naturally did, were at once forwarded to the issuers for redemption. The New York Safety-Fund System, which is the cardinal principle of the present national banking plan, required each bank to deposit, with the banking department of the state, securities consisting of federal or state stocks, or bonds and mortgages, which, in case of the failure of the bank, were sold, and the proceeds applied to the liquidation of its debts.

From 1844 things began to mend. Railroads were rapidly developed, and the discovery of gold in California added another powerful element to the industrial development. Our credit abroad slowly mended. By 1854 it was estimated that \$300,000,000 of state, railway, and other bonds were held abroad, and in 1857, \$400,000,000. Bank-notes expanded. Gold was exported; currency set toward the financial centers, the country banks keeping their balances generally in New York.

The following tables from the report of the Controller of the Currency for 1892, give the position of the state banks from 1834-63:

| YEAR | LIABILITIES | | | | | |
|-----------|--------------|---------------|--------------|--------------|--------------|-------------------|
| | No. of banks | Capital stock | Circulation | Deposits | Due to banks | Other liabilities |
| 1834..... | 506 | \$200,005,944 | \$94,839,570 | \$75,666,986 | \$26,602,293 | |
| 1839..... | 840 | 327,132,512 | 135,170,995 | 90,240,146 | 53,135,508 | \$62,946,248 |
| 1844..... | 696 | 210,872,056 | 75,167,646 | 84,550,785 | 31,998,024 | 5,842,010 |
| 1849..... | 782 | 207,309,361 | 114,743,415 | 91,178,623 | 30,095,366 | 6,706,357 |
| 1854..... | 1,208 | 301,376,071 | 204,689,207 | 188,188,744 | 50,322,162 | 13,439,276 |
| 1859..... | 1,476 | 401,976,242 | 193,306,818 | 259,568,278 | 68,215,651 | 15,048,427 |
| 1863..... | 1,466 | 405,045,829 | 238,677,218 | 393,686,226 | 100,526,527 | 53,814,145 |

| YEAR | RESOURCES | | | | | | | |
|-----------|---------------------|-------------|----------------------|-------------------|----------------------|--------------|--------------|-----------------|
| | Loans and discounts | Stocks | Due from banks, etc. | Real estate, etc. | Notes of other banks | Specie fund | Specie | Other resources |
| 1834..... | \$324,119,499 | \$6,113,195 | \$27,329,645 | \$10,850,090 | \$22,154,919 | \$26,641,753 | | \$1,723,547 |
| 1839..... | 492,278,015 | 36,128,464 | 52,898,357 | 16,607,832 | 27,372,966 | 3,612,507 | \$45,132,673 | 28,352,248 |
| 1844..... | 264,905,814 | 22,858,570 | 35,860,930 | 22,520,803 | 11,672,473 | 6,729,080 | 40,808,269 | 19,153,693 |
| 1849..... | 333,323,195 | 33,571,575 | 32,228,407 | 17,491,800 | 12,708,016 | 8,680,483 | 43,619,368 | 7,965,463 |

III.—The War Period and the National Banking System

When the War of the Rebellion began, the paper in circulation in the country was about \$200,000,000—about three fourths among the loyal states. The specie available was estimated at \$275,000,000. The opinion was that the war would be short. In 1862, Congress authorized the issue of \$150,000,000 in notes, of which \$50,000,000 was for withdrawal of the demand notes. This was the famous Legal Tender Act. The notes were legal tender except for imposts on duties and interest on the public debt. The friends of these "greenbacks" claim that it was this limitation which caused them to depreciate; but we are here only concerned with the fact and its bearing on the banking system. (See CURRENCY.) Whatever be the reason, they did depreciate. Albert Gallatin, in a famous proposition, advocated a prohibitory tax on existing bank-notes and the establishment of a currency founded on public stock, or possibly mortgages on real estate. John J. Knox, in his excellent review of the national banking system, ascribes the first suggestion of its underlying principles to an unknown writer in *The Analectic Magazine*, who, in 1815, a period of utter demoralization in our currency, advocated a system in which public funds were

to serve as the basis, support, and limit of American money. But there was a formidable opposition to every description of banks of issue inherited from the experience of reckless banking. It was finally favored only under pressure of war necessity. Secretary Chase, in his first annual report (1861), discuss the advantages of a national banking system substantially as finally adopted. But the country was not ready.

In December of 1862, Secretary Chase again urged upon Congress the advantages of a national banking system, and reiterated the danger of United States notes. Meanwhile, the sentiment in and out of Congress had rapidly changed in favor of the proposition, and on Feb. 25, 1863, a bill, recommended by Senator Sherman and favorably reported by the Finance Committee of the upper

Present National Banking System

House became law. The vote taken in the Senate Feb. 12 stood 23 to 21; that of the House, taken Feb. 20, 78 to 64, the president signing five days later.

It is needless to remark, in view of the immense personal financial interests involved and the prejudices to be overcome, that the discussion of the bill was decidedly warm. The ablest arguments for and against were those made in the upper House by Senators Sherman and Collamer, the latter of Vermont. By this law any association of five or more persons was authorized upon deposit of registered or coupon bonds to the minimum amount of \$50,000 to receive 90 per cent of the par value of the same in bank-notes, which, being properly signed, were receivable for all government dues, except duties on imports, and were payable on all government debts, except interest on bonds. In compensation for the issue privilege, banks organized under this act were required to pay a tax on circulation, the rate being fixed at 1 per cent by amendatory legislation in 1864. Each association was required to conform to the law of its own state in the matter of interest rates, and was compelled to maintain a special reserve for its notes and deposits, and to redeem circulation at the place of issue.

The amount of circulation was fixed at \$300,000,000, to be distributed throughout the states, territories, and District of Columbia, one half in proportion to the population, the remaining half in proportion to banking capital and business needs. The law provided for the establishment of a finance bureau, at the head of which was to be an officer called the Controller of the Currency, who was given general oversight of the entire system. The original bill has been repeatedly amended, yet its leading features, with certain important exceptions, remain valid to-day; the principal changes being made the next year, providing for redemption in certain specified leading cities,

Working Method

excluding coupon bonds from the list of securities, increasing the minimum of capital from \$50,000 to \$100,000, and providing for the easy conversion of state banks.

The bill had received the president's approval Feb. 25, 1863, but it was nearly four months then before a bank was organized under it, and five before one was opened in the city of New York. Up to Dec. 10, 1863, only 134 had been incorporated, and up to Nov. 25, 1864, only 584, of which 168 were state banks, reorganized under the national law. It is obvious that up to this time the state banks had continued to supply the major part of the currency of the country.

Mr. Fessenden had now become the Secretary of the Treasury, and Mr. McCulloch Controller of the Currency, and they agreed in opinion that the time had come when it was necessary to discriminate against the state banks in some manner if the good to be hoped from the national system was to be realized. State-bank systems were antagonistic to the national system, and they should not be suffered to exist unchecked and uncontrolled. It was indispensable to the financial success of the treasury that the currency of the country should be under the control of the government, and this could not be the case so long as state institutions had the right to flood the country with their issues. So thought these officers; and under their recommendation Congress was induced to pass an act, approved March 3, 1865, which provided, "That every national banking association, state bank, or state banking association, shall pay a tax of 10 per centum on the amount of the notes of any state bank or state banking association paid out by them after the first day of July, 1866." This act has in substance been continued to this day, and is now in force. Under and in consequence of it state banks of issue have ceased to exist.

Until recently, the country has had a period of changes in the currency rather than in banks or banking. (See CURRENCY.) The failure of the important house of Jay Cooke & Co. in 1873 precipitated a crisis, but the holders of national bank-notes were protected by the treasury deposits. (See CRISES.)

More recently, owing to the silver question (see SILVER), there has been something of a serious agitation for the abolition of the tax on state banks. On the more recent enormous development of banking, we quote, in condensed form, an article in *The Independent* (1906), from Mr. Sereno S. Pratt (editor of *The Wall Street Journal*): "The banking power of the world is estimated at \$33,608,000,000, of which 41 per cent is in the United States. The increase in this country is computed by the Controller of the Currency as having been 168 per cent in fourteen years, against 82 per cent in foreign countries. At this rate it will not be long before the United States will contain a larger banking power than all the other nations put together.

"The total bank deposits in the United States in 1904 were \$10,110,000,000, as compared with \$4,535,000,000 in 1893, an increase of 123 per cent. In the same year the total amount of actual money in the United States was \$2,803,500,000, of which \$1,982,000,000 were in upward of 15,000 banks; so that there were over three dollars of deposits to every dollar of money in the country and over ten dollars of deposits to every dollar of money in the banks. In this calculation the savings-banks are included, altho they are institutions of safe-keeping and investment and not of discount. . . .

"The total bank deposits in the United States in 1904 were \$10,110,000,000, as compared with \$4,535,000,000 in 1893, an increase of 123 per cent. In the same year the total amount of actual money in the United States was \$2,803,500,000, of which \$1,982,000,000 were in upward of 15,000 banks; so that there were over three dollars of deposits to every dollar of money in the country and over ten dollars of deposits to every dollar of money in the banks. In this calculation the savings-banks are included, altho they are institutions of safe-keeping and investment and not of discount. . . .

The recent growth of banking in this country presents these striking features:

(1) The extraordinary expansion of the trust-company business; (2) the growth of the national-bank system, especially in the small towns of the agricultural districts; (3) a notable development of banking power in the West; (4) the banking concentration which has gone on in the principal cities; (5) the interownership or alliance of banks and trust companies, making what are sometimes called "chains" of banking institutions (see CONCENTRATION OF WEALTH); (6) an eager and wasteful competition for deposits; and (7) the introduction of "department-store" methods in banking, many banks and trust companies.

This enormous growth of banking, and especially its concentration, has called general attention to it. The bankers themselves are eagerly discussing important questions. Some

of these are: Shall the national bank-note circulation be made more "elastic"? President Roosevelt and Secretary Shaw say that it should. Shall the trust companies, which have grown so rapidly in number, deposits, and power, be compelled to keep larger cash reserves? Secretary Shaw, in his annual report, recommends that the trust companies of large capitalization be permitted to take out federal incorporations. Shall the banks themselves keep stronger reserves or make provision for more elastic reserves by gathering larger amounts of cash in July and August for use in the crop-moving periods? Shall the payment of interest, on deposits subject to withdrawal by check, be prohibited or materially reduced? What provisions should be made for a larger banking publicity?

"Ten years ago there were only 569 trust companies. There are now 1,115. During this time their resources have more than doubled, and they now amount to \$3,802,000,000, or more than 27 per cent of the entire banking power of the country. Their deposits amount to \$2,847,000,000, as compared with \$4,735,000,000 in the national banks. Over \$1,000,000,000 of the total trust-company deposits are in greater New York, where their competition with the banks constitutes one of the problems of the situation. The banking system, however, has grown, tho not so fast as the trust companies.

"The national-bank expansion has been especially notable since 1900, when, by the Act of March 14th, national banks could be incorporated with a minimum capital of \$25,000. This has led to the organization of 2,666 national banks, or practically one third of the total number chartered since the national banking system was established. Of the total \$4,735,000,000 of national-bank deposits on Aug. 25th, \$2,117,000,000 were in the country banks. Secretary Wilson says: "One of the most notable outgrowths of savings by farmers is the very great multiplication of small national banks in recent years." There is in New York, Chicago, and St. Louis \$1,342,000,000 of national-bank deposits, while in thirty-five other banking centers there is \$1,275,000,000, and in the rest of the country \$2,117,000,000. Twenty-one per cent of the deposits are in New York City, but Chicago and Philadelphia hold over \$200,000,000; three other cities—Boston, Pittsburg, and St. Louis—hold over \$100,000,000; and four others—Kansas City, Cincinnati, Cleveland, and Baltimore—over \$50,000,000.

"The resources of the national banks of the United States are greater than the capital of all the railroads of the country. Their outstanding loans are larger than the public debt of Great Britain, Russia, Germany, Italy, or Spain. They hold in securities 2 per cent of all the stocks and bonds admitted on the New York Stock Exchange. They hold in actual money 66 per cent of all the money in all of the banking institutions, public and private, in the United States. Their circulating notes, amounting to \$533,000,000, are 20 per cent of all the money in circulation in the United States.

"There has at the same time been a remarkable concentration, which has been accompanied by a close alliance between the big banks and groups of trust and insurance companies. In New York there are fewer banks but larger increased banking resources than ten years ago.

"A recent compilation showed that there are 149 national banks in the United States having gross deposits of \$5,000,000, or more. There are 28 banks having deposits of over \$22,000,000. These include 14 in New York, 4 in Chicago, 4 in Philadelphia, 2 in Boston, 2 in St. Louis, and 1 each in Pittsburg and Kansas City.

Concentration of Banking Power

"In New York the National City, the National Bank of Commerce, the First National Bank, the National Park Bank, and the Hanover National Bank take the lead, their combined deposits making a total of \$662,000,000. This is indeed immense, and yet there are 5 banks in Great Britain (not counting the Bank of England) whose total deposits and current accounts make the imposing total of \$1,060,000,000. Yet the total deposits of all the joint-stock banks in Great Britain, this time including the Bank of England, is over \$1,000,000,000 less than those of the national banks of the United States.

"In Chicago there is one bank, the First National, having deposits of \$95,000,000, which ranks with the first five banks in the country.

"Not a few trust companies have also attained great size. In 1905 there were 20 trust companies, 14 of them outside of New York, having assets in excess of \$23,000,000. There are 5 trust companies in New York having combined deposits of \$280,000,000, comparing with \$662,000,000 in the five largest banks. *The London Economist* recently observed that concentration there had been checked for the time being. Just now this is the case in New York, but the tendency is irresistible, and it will again begin to show its power."

The more radical criticism of the banks varies from criticism of the national system to attacks upon banking altogether. It is argued that a state-bank issue would be less free from danger at the hands of agitators, since, if they did get control of the legislation of one state, they would not be likely to of all state legislations at the same time; and so the whole national system would not be endangered as if all were under the control of one national body. There are those who would do away altogether with the chartering of private banks by either state or nation as banks of issue. These argue that the present system gives enormous advantages to the favored few who have capital. They point out that under

Radical Views

the present system any five rich men can loan the government \$100,000, receive interest on the same without any serious risk to themselves, and yet, while receiving this interest on the whole \$100,000, can get \$90,000 of this to let out again at interest as a bank. They go on to argue that our whole banking and currency system since the war, if not before, has been controlled by the bankers of our great cities wholly in their own interests. They accuse them of first scheming to put limitations upon the government issue so as to lessen its value, thus causing depreciation; secondly, of buying up this depreciated currency, and with it purchasing United States bonds at par, and then getting Congress to vote, under the pretense that honesty demanded it, the redemption of these bonds in gold (having sold them for paper); and, thirdly, on top of all this, of scheming to reduce the volume of the currency, and so to raise the value of the notes in their possession. The People's Party, therefore, all Socialists, Nationalists, Greenbackers, Knights of Labor, and many even who do not indorse Greenbackism would have all banking carried on directly by the government, without the intervention of private banks chartered by either state or nation as banks of issue. Prof. Amasa Walker, Francis Bowen, and other economists oppose such private banks. (See CURRENCY; GREENBACKS; PAPER MONEY; PEOPLE'S PARTY.) Philosophical anarchists and ex-

trême individualists, on the other hand, would abolish the present system by putting no dependence upon government, but substituting mutual banks. (See MUTUAL BANKS.) Others, who do not go so far as either of the above extremes, would have simply a government postal-bank system or land banks, as in Germany. (See LAND BANKS.)

IV.—Latest Statistics

WORLD'S BANKING POWER, 1905

| CLASSIFICATION | 1890 | 1905 | Increase over 1890 | |
|-------------------------------------|--------------------|---------------------|---------------------|----------|
| | | | Amount | Per Cent |
| Banking power of the U. S. | Millions \$5,150.0 | Millions \$15,333.9 | Millions \$10,183.9 | 197.7 |
| Banking power of foreign countries. | 10,835.0 | 19,158.5 | 8,323.5 | 76.8 |
| Banking power of the world..... | \$15,985.0 | \$34,492.4 | \$18,507.4 | 115.8 |

The banking power of the U. S., including the island possessions, consisting of capital, surplus, other undivided profits, deposits and circulation, is shown to be \$15,333,865,561. These figures include funds of the national banks, amounting to \$5,711,271,024; reporting state banks and bankers, \$9,062,923,037; and non-reporting banks, estimated, \$559,671,500.

The world's banking power in 1890 was estimated by Mulhall at \$15,985,000,000, the U. S. being credited with something less than one third of that amount. The present estimate, compared with that of 1890, shows that the banking power of the U. S. has increased since that date to the extent of \$10,183,900,000, or 197.7 per cent; that of the foreign countries, \$8,323,500,000, or 76.8 per cent; and the combined banking power, \$18,507,400,000, or 115.8 per cent.

It will be noted from the table on page 97 that the Southern States show the largest percentage of increase in deposits during the period from June 30, 1896, to June 30, 1905, the percentage of increase in this section being 246.1, followed by the Western States, where the ratio of increase is 234.6; and, in the order named, the Middle Western States with 180.3, the Pacific States 171.6, the Eastern States 129.2, and the New England States 50.1. The average of increase for the United States is 129.2 per cent.

The average individual deposit in the U. S. per capita of population has steadily risen from \$69 in 1896 to \$95 in 1900, \$122 in 1904, and \$136 in 1905. The volume of exchanges of the 103 clearing-houses in the U. S. amounted to \$140,501,841,957, as against \$102,356,435,047 for the year ended Sept. 30, 1904, an increase of \$38,145,406,910 and the largest gain in any year since these statistics have been published. The general prosperity of the country and confidence in the stability of business credits are evidenced in the volume of clearings effected during the current year.

BANKS, LOUIS ALBERT: American clergyman; born at Cornwallis, Ore., 1855; educated in the public schools and at Philomath College of that state. In 1883 he was ordained an elder in the Oregon Conference of the M. E. Church, and has since served pastorates at Portland, Ore., Boise City, Ida., Vancouver and Seattle, Wash., and Cincinnati, O. Since 1886 he has been a pastor in the East where he has had prominent charges, and is now (1907) evangelist of the American Anti-Saloon League. In Vancouver he edited *The Pacific Censor*, state organ of the Washington Temperance Alliance, and so enraged the liquor dealers that in June of 1880 he was shot down on the streets by one of their agents. For two months he preached, reclining across chairs, to eager crowds. At the State Convention of Massachusetts Prohibitionists, held Sept. 8, 1893, he was nominated governor. A voluminous writer on religious and other themes, his main sociological works are "The People's Christ" (1891), and "The White Slaves" (1892), a study of Boston sweat-shops. Address: Nyack, N. Y.

BAPTISTS IN RELATION TO SOCIAL REFORM: In reviewing the relation of Baptists to social reforms, it is to be borne in mind that they do not constitute an organic body capable of giving a united authoritative expression of opinion on either social or religious matters, or of taking formal and concerted action thereon. While exhibiting a remarkable unity of doctrine and polity, they are, nevertheless, simply local societies, self-governing, and independent of one another. Indeed, to the sociologist this initial statement is one of deep interest, as these local societies were, in the times of the reformatory movements of the sixteenth century, already existing as free socialistic communities, and as such are deserving of the investigation of the social reformer. Mr. Richard Heath, in an article in *The Contemporary Review*, has clearly shown this fact. These societies have never completely lost the early social leaven, and in all times there have been among them earnest and able advocates of social, political, and religious liberty, contending for the separation of Church and State, liberty of conscience, government by consent of the governed, the kingdom of God on earth, and the inner light and teaching of the Divine Spirit. Baptists have, therefore, naturally affiliated themselves with the radical party in social and religious affairs. And yet this same love of individual liberty and a jealousy of autocratic external control have prevented the manifestation of this progressive spirit in the erection of great institutions or the promulgation of authoritative creeds. Perhaps, aside from individual expressions of this liberty-loving spirit, the widest in-

fluence which Baptists have exerted has been in a socialistic and missionary propaganda. Mis-

sionary zeal has ever been conspicuous among them both in home and foreign lands. In the modern missionary movement, William Carey and Adoniram Judson are conceded to rank among the foremost pioneers.

In political revolutions they have been usually found on the liberal side, and many of the leaders have been drawn from among them. In the antislavery movement they took an early and decisive position, while in the Revolution they were, almost to a man, on the patriot side; and in a still earlier day Roger Williams was the first great apostle of religious liberty.

The recent social discussions have naturally awakened the interest of Baptists. In the Baptist Congress reports, almost from its commencement, in 1882, a prominent place has been accorded to social topics, and able contributions will be found in them to the solution of these questions. In the proceedings of the missionary annual meetings, which are the only general gatherings of Baptists of a national character, as well as in state conventions and local associations, social opinions of an advanced type on temperance, slavery, negro and Indian education, etc., have found expression in resolutions and memorials intended for transmission to Congress or state legislatures.

The Baptist Congress was instituted in Nov., 1882, by several clergymen and laymen "for the discussion of current questions," and has proved a very useful and efficient organization. Its inception is credited to Prof. E. H. Johnson, D.D., of Crozier Theological Seminary, Upland, Pa.

In 1889 a few of the younger Baptist ministers in the vicinity of New York commenced a paper called *For the Right*, devoted to Christian Socialism. It was published for eighteen months, and then discontinued for lack of financial support. The first editors of this paper were Rev. J. E. Raymond, Rev. Walter Rauschenbusch, Miss Elizabeth Post, and Rev. Leighton Williams. In Dec., 1892, a conference of Baptist ministers interested in social topics met in Philadelphia and formed an undenominational society known as the Brotherhood of the Kingdom, to be devoted to the study and propaganda of the social teachings and gospel of Jesus Christ. In August, 1893, the Brotherhood held a three days' conference at Marlborough-on-the-Hudson, discussing various aspects of the doctrine of the Kingdom of God, with a view to the publication of a volume of essays on the subject. Smiliar conferences have been held yearly since. (See BROTHERHOOD OF THE KINGDOM.)

Perhaps the considerations already stated may explain the small number of Baptist churches which have as yet sought to exemplify the social aspects of the Gospel in the various appliances and applications now becoming common. Yet the "institutional Church," as it is coming to be called, is by no means unknown among Baptists. Mention should be made also in this article of the advanced stand which many of the Baptist preachers and authors have taken on social topics. Dr. Francis Wayland and Dr. Martin B. Anderson, exerted as educators a profound influence during the antislavery agitation and the Civil War, as did also Dr. William R. Williams by his sermons. In conclusion, it may

"Institutional Churches"

be said that as yet the relation of Baptists to social reform is not so important for any distinct contribution that they have made to its literature or to its institutions as for the illustration which their own historical descent and present condition affords of the possibility, permanence, and prosperity of self-governing, self-perpetuating social communities. They early built upon principles in the religious sphere which have since been embodied in our political constitution, and are yet to be realized in a new social régime.

LEIGHTON WILLIAMS.

BARKER, WHARTON: Banker and reformer; born in Philadelphia, Pa., 1846; was graduated from the University of Pennsylvania in 1866. The firm of Barker Bros. & Co. in 1878 acted as the financial agent of the Russian Government for the building of four cruisers. In 1879 he advised regarding the development of certain mines in Russia; and in 1887 he obtained valuable concessions in China. Barker remained a Republican until 1896, tho (since 1880) opposing the moneyed aristocracy. In 1896 he became a Populist, and in 1900 was presidential candidate of the antifusion Populists. He has written on the money question from the Populist standpoint, and in 1869 founded *The Penn Monthly* which, in 1880, was merged with *The American*, discontinued in 1905.

For the last six years Mr. Barker has urged the organization of a new party, to be called the Commonweal Party, and has striven to impress his views upon leaders among the wage-earning and salaried classes and among the farmers. He believes that the conflict between the people and the plutocrats will be fought on a platform of human rights versus property rights, for national money against bank money, for national railroads against private railroads, for a protective system that will protect the body of the people and destroy the trusts, and for direct taxation which will tax property and not persons. He stands for a foreign policy that will confine American activity to the American continent, and for an economic policy which, under commercial union, will extend free trade in America and set up a barrier against European and Asiatic complications. Address: 608 Chestnut Street, Philadelphia, Pa.

BARNARDO, THOMAS JOHN, AND THE BARNARDO HOMES: Founder of institutions in the United Kingdom and the colonies, by which over 60,000 orphans have been cared for, and over 17,000 emigrated to Canada or other British colonies. Dr. Barnardo was born in Ireland, 1845. Educated in parish schools and hospitals in London, Edinburgh, and Paris. Becoming interested in children he boarded out a group of children in 1866; established his first home, 1867, on Commercial Road; a village for girls with about fifty-two cottages at Ilford, 1873; Her Majesty's Hospital for Sick Waifs, 1873. Over 100 homes or branches have developed from this beginning, including an immigration depot in Ontario, and an industrial farm in Manitoba. Author, among other writings, of "Something Attempted, Something Done," and "The Rescue of the Waif." Died, 1905.

BARNES, G. MAHLON: National secretary of the Socialist party; born at Lancaster, Pa., 1866; attended Soldiers' Orphan School at

Mount Joy; learned the trade of cigarmaking; and in 1887 removed to Philadelphia. He has been five times elected secretary of the local Cigar Makers' Union, resigning the office at the end of each term and returning to the work of his trade. He has also been repeatedly elected to conventions of the Cigar Makers' International Union and of the American Federation of Labor. In 1905 he was elected national secretary of the American Socialist party. Address: 269 Dearborn Street, Chicago, Ill.

BARNES, GEORGE NICOLL: Labor member of Parliament; born at Lochee, near Dundee, Scotland, 1859. He was the son of a jute-mill employee, and was at an early age apprenticed to a Dundee engineer. Later he went to Barrow and to London, but subsequently secured work at Woolwich Arsenal, Millwall, Poplar, and Chelsea, having previously joined the union of his trade. A vacancy occurring in the council of the union by the retirement of John Burns, Barnes was elected in his place. From 1892 to 1895 he was assistant secretary of the Amalgamated Society of Engineers, and in 1896 was elected general secretary; he was prominent in the great lockout of 1897. In 1906 he was elected to Parliament from the election district of Blackfriars, Glasgow, and endorsed by the Labor Representative Committee. Address: 110 Peckham Road, S. E., London, England.

BARNETT, SAMUEL AUGUSTUS: Warden of Toynbee Hall, London; Canon of Bristol; born in Bristol, 1844; educated at Wadham College, Oxford. About 1872 he became vicar of St. Jude's Church, Whitechapel. In 1883 he presented to a small group of students, gathered in a room at Oxford, a plan for a settlement of university men to live and work among the poor. A small settlement of five men was made. Cambridge University joined with them, and in Jan., 1885, TOYNBEE HALL was founded with Mr. Barnett as warden. It was named for Arnold TOYNBEE. Mr. Barnett's central thought was that all true uplifting for the poor must come from life and from brother life. He and his wife, Henrietta O. Barnett, have been the authors of many essays and papers on various portions of the social problem, collected into a volume entitled "Practicable Socialism." Some of his more fundamental positions are as follows:

The social reformer must go alongside the Christian missionary, if he be not himself the Christian missionary.

The one satisfactory method of social reform is that which tends to make more common the good things which wealth has gained for the few. The nationalization of luxury must be the object of social reformers.

The first practical work is to rouse the town councils to the sense of their powers; to make them feel that their reason of being is not political, but social; that their duty is not to protect the pockets of the rich, but to save the people. The care of the people is the care of the community and not of any philanthropic section.

Societies which absorb much wealth and which relieve their subscribers of their responsibility are failing; it remains only to adopt the principle of the education act, of the poor law, and of other socialistic legislation, and call on society to do what societies fail to do.

Mr. Barnett's social efforts are not confined to Toynbee Hall. As a member of the Whitechapel Board of Guardians he has taken great interest in the reform of poor-law administration. He is also chairman of the Children's Country Holiday Fund; has aided very materially in the establishment of the Free Library in Whitechapel; and is one of the commissioners for that part of London.

He is also actively connected with the Metropolitan Association for Befriending Young Servants, with the Charity Organization Society, the School Board, the Teachers' University Association, and the London Society for the Extension of University Teaching. Address: Toynbee Hall, Whitechapel, E. London, England.

BARROWS, SAMUEL JUNE: Prison Commissioner and author; born in New York City, 1845; began work at the age of nine; received his elementary education in the night schools; studied stenography; was employed on the *New York Sun*, *The World*, and *The Tribune*; in 1868 became stenographic secretary to William H. Seward, Secretary of State; was graduated from the Harvard Divinity School in 1874 (B.D.). During the summers of 1873 and 1874 he was with General Custer on the Yellowstone, and in the Black Hills as correspondent to the *New York Tribune*. From 1874 to 1875 he studied at Leipsic, and in 1876 became pastor of the First Unitarian Church, Dorchester, Mass. From 1881 to 1897 he was editor of *The Christian Register*. In 1897 he was elected to Congress from the tenth district of Boston. He is one of the founders of the Massachusetts Prison Association, and helped to develop the probation system. In 1896 he was appointed by President Cleveland Commissioner for the U. S. on the International Prison Commission, and represented the U. S. at prison congresses in Paris, Brussels, and Budapest. He is chosen to be president of the next International Congress. Barrows is corresponding secretary for the Prison Association of New York and a member of the Commission on Probation and of the Commission on New Prisons. He has been a Republican in national politics, and an Independent in municipal politics, and believes that social reform must be obtained not through paternalism but fraternalism, evolution rather than revolution. Logic of democracy means no discrimination to race, sex, and creed, and better distribution of privilege. Democracy's problem is to secure the greatest privilege for the many without restricting the privilege of the individual. Author: "Shaybacks in Camp"; "Crimes and Misdemeanors in the United States"; "A Baptist Meeting House"; "The Doom of the Majority of Mankind." Address: 135 East Fifteenth Street, New York City.

BARTON, MISS CLARA: Founder of the Red Cross Society in the United States; born in Oxford, Mass., 1821; educated at home and in the public schools. At the age of fifteen she began teaching, continuing until her twenty-fifth year, when she took the graduating course at the Clinton Liberal Institute, N. Y. A pioneer in the public-school system, she opened the first public school at Bordentown, N. J., with six pupils; the school soon had 600 pupils. Afterward she became a clerk in the U. S. Patent Office, and was the first woman in any department to draw a salary over her own signature. During the Civil War she was active in the field, distributing provisions, clothing, and medicine sent for the relief of the soldiers. In 1865, by authority of President Lincoln, she instituted a search for missing men of the army, and succeeded in tracing 20,000 of the soldiers. At the request of afflicted people, she went about the country giving war lectures. At the outbreak of the Franco-Prussian War Miss Barton was associated with the International

Red Cross Society of Geneva, and was present at most of the great battles, doing splendid service. She returned to America in 1873. After five years' effort she obtained recognition of the Red Cross Society from the U. S. Government, and became first president of the U. S. society. In 1904, when the society passed under government control, she resigned her presidency, whereupon she organized and was chosen first president of the National First Aid Association of America. Miss Barton is an earnest advocate of all useful reforms: Suffrage, temperance, social purity, equal pay for equal service, etc. Author: "History of the Red Cross" (1882); "History of the Red Cross in Peace and War" (1898); "Story of the Red Cross" (1904); besides many pamphlets, reports, etc. Address: Glen Echo, Md.

BASCOM, JOHN: American author and educator; born in Genoa, N. Y., 1827; was graduated from Williams College, 1849, and Andover Theological Seminary, 1855. From 1852 to 1853 he was tutor and from 1855 to 1874 professor of rhetoric at Williams College; from 1874 to 1887 president of Wisconsin University and professor of mental and moral philosophy; and from 1891 to 1901 professor of political science at Williams College. He has written extensively for the periodical press on prohibition, labor reform, etc. His main works are: "Political Economy," "Æsthetics," "Science of Mind," "Philosophy of Religions," "Philosophy of English Literature," "Ethics," "Natural Theology," "Comparative Psychology," "Sociology," "Words of Christ," "New Theology," "Social Theory," and "Growth of Nationality in U. S." Address: Williamstown, Mass.

BASLY, EMILE JOSEPH: French deputy; born at Valenciennes in 1854. Left an orphan and cared for in an asylum, he became a miner. In 1880 he organized a union at Angin, and became its general secretary. In 1884 he was active in a long strike. In 1885 he was elected to the chamber of deputies on a Socialist platform, and has been repeatedly reelected. During the strike in Decazeville in 1885 he explained the murder of one of the subdirectors as an act of popular justice. In 1887 he joined the group of republican-socialistic deputies; and in 1889 was a delegate at the International Labor Congress in Paris. Since 1900 he has been mayor and town councilor of Lens.

BASTIAT, FRÉDÉRIC: Political economist; born at Mugron, near Bayonne, France, in 1801. His father was a merchant in the Spanish trade, and he was left an orphan at the age of nine. He commenced active life in the establishment of his uncle; then tried farming at Mugron; and after the Revolution of 1830 was made justice of the peace of his canton. His first pamphlets were memoirs on local subjects; but he became interested in English writing on political economy, and it seems to have awakened him to new powers. His "Sophismes Économiques" gained him popularity and recognition. He soon became a dreaded foe of protection, and a friend of Cobden. An *Association pour la Liberté des Échanges* was formed at Bordeaux and another at Paris, with Bastiat as secretary. After the Revolution of 1848, he turned his shafts of wit and epigram against the Socialists, and even more against Proudhon. Elected to the Assembly of 1848-49, he spoke little, being mainly engaged on his great

work, "Harmonies," the first volume of which only was published before he died in Italy in 1850. "In this brilliant work," says Palgrave's "Dictionary of Political Economy," "unhappily never finished, Bastiat shows the contrast between the internal weakness of the artificial organizations which are founded on constraint, and the prosperity spontaneously arising in an economic condition in which the equilibrium of individual and collective forces results from their free and reciprocal balance." (See Palgrave's *Dictionary of Political Economy*.)

BATHS, PUBLIC: Public baths have existed from the beginnings of civilized society. Reasons partly climatic and partly religious led to their early development in Egypt and in all Oriental countries. Baths were connected with the gymnasia of Greece, and were developed into especially great splendor and size in imperial Rome. Such ruins as those of the baths of Caracalla show what an enormous size these establishments must have had. In reality, however, they were club-houses as well as baths, and included libraries, lecture-rooms, banquet-halls, dance-halls, gymnasia, porticoes, gardens, race-tracks, and every device for luxury and amusement. In the fourth century there are said to have been 800 baths in Rome, and they were copied in every Roman city and province. In the Middle Ages almost every village had its public bath, as is true to-day in Russia, Turkey, and Japan. In Tokyo there are said to be 1,000 public baths. Modern public baths began in Germany, tho Liverpool in 1892 erected the first public bath-house. In 1896 Parliament passed an act, permitting municipal and local authorities to establish public baths and laundries. Birmingham was the first city to do this, but to-day such establishments are found in almost every English city of any size. On the Continent they are not so numerous, yet to be found in all the larger cities.

In the United States, the results of an extensive investigation conducted by the Federal Bureau of Labor showed the lack of facilities for bathing in the congested slum districts of Baltimore, Chicago, New York, and Philadelphia. The entire number of persons reported living in the selected districts on April 1, 1893, the date of the investigation, was as follows: Baltimore, 18,048; Chicago, 19,748; New York, 28,996; and Philadelphia, 17,060. It is explained in the report that the districts selected contain but a portion of the whole slum population of the cities included in the investigation, but were among the worst in these cities—the centers of the slum population.

The following table shows the number and percentage of families and individuals in houses or tenements having and not having bathrooms:

| CITY | POPULATION OF HOUSES OR TENEMENTS HAVING BATHROOMS | | | | POPULATION OF HOUSES OR TENEMENTS NOT HAVING BATHROOMS | | | |
|-------------------|---|-------------|----------|-------------|---|-------------|----------|-------------|
| | Number | | Per cent | | Number | | Per cent | |
| | Families | Individuals | Families | Individuals | Families | Individuals | Families | Individuals |
| Baltimore..... | 296 | 1,663 | 7.35 | 9.21 | 3,732 | 16,385 | 92.65 | 90.79 |
| Chicago..... | 110 | 748 | 2.83 | 3.79 | 3,771 | 19,000 | 97.17 | 96.21 |
| New York..... | 138 | 1,888 | 2.33 | 6.51 | 5,774 | 27,108 | 97.67 | 93.49 |
| Philadelphia..... | 560 | 3,080 | 16.90 | 18.05 | 2,753 | 13,980 | 83.10 | 81.95 |

Since that date large progress has been made. A report of the bureau, prepared for the exhibit at St. Louis of 1904, finds that in 34 cities of the United States more or less adequate provision for public baths has been made by the municipality. Other cities are carefully considering the establishment of houses, and in some cases, notably in St. Louis, appropriations have been made for the purpose. The report describes and tabulates 88 municipal public baths and 11 non-municipal.

The municipal baths in existence may be classified in a general way into five types: The beach bath, the floating bath, the pool bath, the shower-bath, and the combined shower and pool bath. The beach and the floating baths may be said to represent the earliest type of bath, while the shower-bath represents the latest development in this direction.

Beach baths with the simplest of accommodations have been in existence for many years. The L Street Beach in Boston is, however, the oldest of them for which information could be secured, having been established in 1866. Boston now maintains 10 beach baths; Milwaukee, 4; Chicago, 3; Baltimore, 3; while 1 or 2 are found in Cleveland, Ohio; St. Paul and Minneapolis, Minn.; Cambridge, Mass.; Detroit, Mich., and Bridgeport, Conn.

Floating baths were established by the city of Boston as early as 1866 and by the city of New York as early as 1870. Boston still maintains 12 of these houses, New York 15, and Brooklyn 5. One or two baths of this character are maintained also by Providence, R. I.; Hoboken, N. J.; Springfield, Taunton, Worcester, and Newton, Mass.; Hartford, Conn., and Washington, D. C.

Pool baths are of various kinds. The first established by any American city, as far as known, was constructed in 1885 by Philadelphia. That city was compelled to abolish its floating baths at that time owing to the pollution of the water, replacing them with pools in various parts of the city. It now has in operation 15 pool baths. Chicago has 2 elaborate baths of this character, while similar ones are found in Holyoke (4) and Boston (1), Mass.; Newark, N. J. (3); Utica, N. Y. (1); and Kansas City, Mo. (1).

The three kinds of baths just mentioned, it will be noted, are available only in the warm season—perhaps four months in the year. While they are excellent as affording recreation and facilities for securing a degree of cleanliness, it is apparent that the best results cannot be secured thereby. Hot water is essential not only to a thorough cleansing of the body, but also to render possible the giving of baths during the season when baths are most needed and when the facilities for bathing are most lacking. The tub bath, while serving a useful purpose under certain circumstances, has now been almost entirely abandoned in public baths. It is now very generally conceded that the shower or rain bath is best adapted for all public purposes. As has been stated, these baths have been in use for many years in many of the public baths in Great Britain and the Continent of Europe. Their general establishment by municipalities in this country, however, began about ten years ago. Baths of this character were, indeed, established by private philanthropic enterprise some years pre-

viciously through the efforts of Dr. M. Morris and others, and had been introduced in the Charlesbank gymnasium baths by the city of Boston as early as 1880. If the two modern types of baths, consisting of showers alone, or showers in connection with a pool, are considered together, it is seen that Milwaukee established the West Side Natatorium in 1890, Chicago opened the Carter H. Harrison Bath in 1894, while other cities followed their example during the succeeding years. At the present time 39 baths of these types are in operation by various cities in the United States, and many more are under construction. Of the houses devoted especially to the furnishing of shower baths, Boston, Mass., maintains 10; Chicago, Ill., 7; New York, N. Y., 3; Brooklyn, N. Y., 2; Baltimore, Md., 2; Buffalo, N. Y., 2; Yonkers, N. Y., 1; while 1 each is maintained by Rochester and Troy, N. Y.; Cleveland, Ohio; Louisville, Ky., and Portland, Me. Of the houses containing a pool in addition to the shower equipment, Milwaukee maintains 3 and Brookline, Mass., and Syracuse and Albany, N. Y., each 1. New York and Brooklyn recently opened elaborate bath-houses in which the equipment consists almost entirely of showers. These cities have also planned a number of additional houses, one of which will contain a pool of tempered water in addition to the shower equipment.

The costs of the baths range from \$461,000 (site \$331,000) for a bath now being built in Boston, to \$500 for one in Chicago (for building and equipment only on public land).

The exceedingly small cost of maintenance per bath is clearly shown. This cost ranges from one fourth of a cent in the fifteen municipal pool baths of Philadelphia to three or four cents in the indoor shower-baths in the larger cities. In a few of the smaller cities the cost runs considerably higher, this being due probably to the small number of bathers as compared with the size and equipment of the houses.

As regards the policy of furnishing baths entirely free of expense to bathers it is seen that at the floating baths in 9 cities no fee is charged for their use, while small fees are charged at such baths in 3 cities. In 3 cities all beach baths under the direct control of the municipalities are entirely free, while in 8 cities a small charge is made for the use of bathing-suits, etc. In 3 cities all pool baths are entirely free, while in 4 a small fee is charged. In 9 cities free shower-baths are found, while in 4 a charge is made. In 1 city the combination shower and pool baths are entirely free, while in 3 cities the privilege is contingent upon a small fee.

In considering the figures showing cost of maintenance per bath it should be remembered that in nearly all baths in which a fee is charged certain days or hours are usually set apart, during which baths are given free of charge.

A most interesting development of the public-bath movement has been the introduction of shower-baths in the public schools in a number of cities.

In certain cities a direct connection between the bath and the school is encouraged by locating the public bath near the school.

Swimming instruction during vacation is a feature of the floating, beach, and pool baths of New York, Brooklyn, and a number of other cities, while all indoor baths which maintain a tempered pool all the year, without exception, provide for instruction of this character during the entire year.

The public laundry is a feature connected with a number of the public municipal baths. The municipal bath-houses of Baltimore, Chicago, Cleveland, and Troy contain well-appointed public laundries where women may take their soiled clothes and in a comparatively short time accomplish the task of washing and ironing under the most desirable conditions. This feature has been a most unqualified success in all the institutions in which it exists, and is an especial boon to the poorer classes.

BAUER, STEPHEN: Secretary of the International Labor Bureau at Basel, Switzerland; born at Vienna, Austria, 1865; LL.D., Vienna, 1889; studied with traveling scholarship 1890 and 1891 in Paris and London; statistician of the Chamber of Commerce in Brünn, Moravia, 1892-99; lecturer from 1893 to 1899 at the Polytechnical High School of Brünn. In 1899 he held summer courses at the University of Chicago, and in the same year was appointed to the chair of political economy at Basel, which he still occupies. He was chief of the Swiss Census at Basel in 1900, and since 1901 has been chief of the International Labor Bureau. As the result of his experiences in Austrian, French, Swiss, and American factory towns, Dr. Bauer has advocated national labor laws, international understandings concerning

such legislation, trade boards of arbitration, co-operation, industrial insurance, and municipal reforms. He believes in permanency of employment as necessary to the greater well-being of the workers, in greater leisure and the useful employment of that leisure, and in the generation of an atmosphere of freedom in which all good things would grow. Author: "Die Arbeiter der Brünn Maschinen-Industrie"; "Wages and Labor Policy in Australasia"; "Night-Work of Women"; "Dangerous Trades," etc., besides numerous articles on the history of political economy, etc. Address: Rebgrasse 1, Basel, Switzerland.

BÄUMELER, JOSEPH: Head or leader of the Separatists, who in 1818 founded the communistic colony of ZOAR. Originally a weaver, and later a teacher, he seems to have been a man of unusual organizing ability, a fluent speaker and natural leader. The community was at first celibate, but between 1829 and 1830 they began to permit marriage, and Bäumeler himself took a wife. Under his lead the community prospered greatly, and when Bäumeler died in 1837 the loss was said to be almost irreparable to the community. (See ZOAR.)

BAX, ERNEST BELFORT: Author; Socialist; born at Leamington, England, 1854; educated privately, but later studied in Germany. In 1882 he joined the Social Democratic Federation, and in 1883-84 was on the Executive Council. In 1885, in consequence of a "split" in the original body, he founded, in conjunction with William Morris, the Socialist League. Later on, the league developing anarchist tendencies, he returned to the Social Democratic Federation, and has actively participated in the work of that body ever since, having been the federation's delegate at most of the international congresses. For a time he edited the party organ *Justice*, and during the Socialist League period, together with William Morris, he edited *The Commonweal*. Mr. Bax's socialism has its foundation in the doctrine of Marx, but he is prepared to criticize certain applications of the Marxian theory of historical determinism at present current. Author: "Ethics of Socialism," "Outlook from the New Standpoint," "The Problem of Reality," "German Society at the Close of the Middle Ages," etc. Address: Middle Temple, London, England.

BAZARD, SAINT-AMAND: Follower of St. Simon; born in Paris, 1791; won the Cross of the Legion of Honor for the part he took in the defense of Paris (1813). He had a good position in the Prefecture of the Seine, but becoming interested in the efforts for democratic freedom, he went to the south of France and took part in the activity of the Carbonari. Returning to Paris, he joined the Saint Simonian School, and became its leading economist and editor of its journals, the *Producteur* and the *Globe*. He advocated compulsory free education, and the gratuitous giving by the State of land and capital for life tenancy *only* (so as to prevent accumulation), the State to give to each his deeds and to receive from each according to ability. In 1828 he gave, in Paris, a long course of lectures which largely made Saint Simonianism popular. In 1831 he opposed ENFANTIN, his colleague, at the head of the Saint Simonian school, on the question of marriage and divorce, and died in 1832 of a broken heart at the division of the school. His

main work is "Exposition de la Doctrine de Saint Simon."

BEBEL, FERDINAND AUGUST: Socialist; born 1840, near Cologne; educated as a turner; passed through the usual grades of apprenticeship and journeyman, and after his *Wanderjahre*, spent in South Germany, established himself in 1860 at Leipsic. His first public activity was as an upholder of Schultze-Delitzsch's co-operative movement, to which Lasalle also at first adhered, and he became prominent in political and educational work among workingmen. He threw all his influence against Lasalle and the Universal Association when the latter was founded.

Prior to 1866 Bebel had no sympathy with socialism, but from that time his views rapidly changed. He joined the International, becoming influential enough to take a prominent part in bringing together the followers of Marx and Lasalle, thus helping to make the Social Democratic Party. When elected President of the Union of German Working Men's Associations in 1867, he persuaded the organization to unite with the International—at the time an important step in the movement toward socialism.

Bebel and Liebknecht became the leaders of social democracy in Germany in the elections of June, 1893, and continued so till the latter's death. Bebel still remains the most pronounced Socialist in the German Reichstag, to which he has been continuously elected, and the membership in which gives him the right to bitterly attack the government and to advocate socialism in brilliant speeches widely quoted throughout Germany. Bebel once summarized his views thus: "We aim in the domain of politics at republicanism, in the domain of economics at socialism, in the domain of what is to-day called religion at atheism." In 1872 he was sentenced to imprisonment for two years and nine months on a charge of lese-majesty, and has been repeatedly imprisoned since—for nine months in 1886. This, however, has only increased his popularity as the leader of German socialism. He has been elected from Glauchau-Meerane, Dresden, Strassburg, Hamburg, Saxony, and elsewhere. In 1868 he was connected with the *Volkstaat* at Leipsic, and since 1891 with the *Vorwärts* at Berlin. Main writings: "Unsere Ziele," 1869; "Deutscher Bauernkrieg," 1876; "Christentum und Sozialismus," 1883; "Die Frau und der Sozialismus," 1883 (later revised); "Die Sonntagsarbeit," 1888; "Für Volkswehr gegen Militarismus," 1898; and "Die Sozialdemokratie und das Allgemeine Wahlrecht," 1895. Address: Habsburgerstrasse 5, Berlin, Germany.

BECCARIA, CESARE BONESANO, MARQUIS OF: Italian political economist; born at Milan in 1738; educated at a Jesuit college at Parma. He was an able mathematician, an expert in many sciences, and belonged for twenty-five years to the magistracy, serving under the Austrians, who in 1768 formed for him a chair of political economy in Milan—the second of the kind in Italy. His famous little tract, "Dei delitti e delle pene," has been translated into twenty-two languages. Beccaria arrived at many of the conclusions of Adam Smith and of Malthus; and he is the author of the famous phrase, "The greatest happiness of the greatest number." He asserted that "coldly (rigidly) examining human nature, we see that every man

is absolutely *egotistic*, and that on this basis alone legislation can be established if it is not to be knocked over constantly; that nobody cares anything for the universal happiness or for the good of others, and that every man makes himself the center of all the things that happen in the world." He died in 1793.

BECK, KARL JOSEPH: Swiss Christian Socialist; born at Sursee, Lucerne, 1858; was graduated from the University of Innsbruck (Th.D. 1885); from 1885 to 1888 vicar of the Roman Catholic community in Basel. He became active in socialism in 1888, and took part in the Labor movement instituted by the Swiss Workingmen's Association. From 1888 to 1891 he was professor of exegesis, ethics, and pastoral theology at the Theological Seminary in Lucerne; and since then he has held the chair of pastoral theology at the University of Freiburg. Since 1902 he has edited the *Monatsschrift für Christliche Sozialreform*. During the semester 1906-7 he was rector of the University of Freiburg. His political aim is to bring about a realization of religious justice in social matters, through co-operation of democracy and socialism. Address: University of Freiburg, Switzerland.

BECKER, AUGUST: German Socialist and journalist; born about 1810; son of a clergyman; studied for a short time theology in Giessen where he became acquainted with Georg Büchner whose political creed he adopted. He was arrested and sentenced to four years' imprisonment, but was soon liberated, whereupon he went to Geneva. Becoming a zealous communist, he published pamphlets, and wrote articles in radical papers, notably the *Rheinische Zeitung* and *Vorwärts*. In 1848 he began to publish, in Giessen, a journal called *Der Jüngste Tag*. He was elected to the Hessian legislature, and later emigrated to America, where, after a wandering and adventurous life, he died in Cincinnati, Ohio, in 1875, as a reporter for a daily paper.

BECKMAN, ERNST: Swedish editor, educator, and social reformer; born about 1840; studied at Hernösand seminary and in England and the United States. From 1876 to 1879 he was inspector of public schools in Södermanland, where he did much to promote instruction in sloyd. He was editor of *Ny Illustrerad Tidning* (Stockholm) 1880-83; studied social economy in Switzerland in 1884; and was thereafter sent by the Swedish government to study conditions among working men in England and Germany. He was a member of the first Swedish laborers' insurance committee (1884-89), and of a working men's protective committee (1891). In 1894 he was active in endeavoring to regulate labor conditions in Stockholm. He was an alderman of Stockholm from 1886 to 1895, serving on many labor committees. In 1886 he studied English charity organizations, the results of his investigations forming the basis for the organization of the Swedish charitable societies. From 1893 to 1899 he was rector of a coeducational school in Stockholm. As a member of the Riksdag (first elected in 1886) he has been active in promoting legislation for the regulation of labor disputes.

BEECHER, HENRY WARD: American clergyman and reformer; born in Litchfield, Conn., 1813;

studied at the Boston Law School; was graduated at Amherst in 1837; studied theology at Lane Seminary. In 1839 he entered upon his first pastorate, the Lawrenceburg, Ind., Presbyterian Church, but soon went to the Second Presbyterian Church of Indianapolis, where he served for eight years. In 1847 he accepted an invitation to become pastor of the Plymouth Congregational Church, Brooklyn, N. Y. This society had just been formed by a few leading men especially interested in temperance, the new school theology, antislavery, and other questions of reform. He labored with this people until his death, which terminated a pastorate of forty years. As a preacher and reformer he had world-wide fame and influence. In the Plymouth pastor the oppress ever found a champion for their cause. On his platform in *antebellum* days stood Frederick Douglass, the black man, pleading for his race. Here often appeared fugitive slaves whose freedom Mr. Beecher purchased with the contributions of his congregation. Here Wendell Phillips, the abolitionist, was invited to voice his convictions when driven by mobs from the halls of New York City. Here Kossuth, the exile, pleaded for his people, and \$10,000 was raised for the freedom of Hungary. Here Mr. Beecher was confronted by a fierce mob which attempted to "clean out the nigger-worshiper." In 1850, in his famous star paper "Shall We Compromise?" in *The Independent*, he vigorously opposed the proposal of Webster and Clay to save the Union by moral compromise.

Beecher did much toward shaping the course of the Republican Party as a new political force. In 1863 he visited Great Britain, and there vindicated his national government. He spoke in several of its principal cities, where sympathy for the Confederacy prevailed. His life was often threatened; the press denounced him; and he frequently confronted vast, turbulent mobs, contending with them for an hour or more before they would listen to his argument. Once he reached the platform only by being carried over the heads of the dense crowd. But by his good humor, pluck, and eloquence he converted men to Northern principles. Tho a formidable opponent of the Southern policy, after the war he manifested great tolerance and compassion for the defeated states and their leaders. In 1870 he became editor-in-chief of *The Christian Union*, retaining this office till 1881. (See ABBOTT, LYMAN.) Through his voice and pen he had the widest influence of any preacher in America. Author: "Star Papers" (2 vols.); "Lectures to Young Men"; "Lectures upon Preaching"; "Patriotic Addresses"; "Evolution and Religion"; "Plymouth Pulpit Sermons." He died in 1884.

THOMAS A. BICKFORD.

BEESELY, EDWARD SPENCER: Positivist; author; born in Worcestershire, England, 1831; educated at Oxford; was assistant master in Marlborough College, 1854-59; professor of history, University College, London, 1860-93. His life has been principally devoted to the propagation of the positivist philosophy of religion, founded by Auguste Comte. He has also favored radical social reforms, and in 1863 presided at the organization of the INTERNATIONAL. From 1878 to 1901 he was president of the London Positivist Society, and in 1893 founded *The Positivist Review*, to which he is still a frequent contributor. In 1868, in recognition of his services to trade-

unionism when it was suffering under unjust laws, he was made an honorary member of the Amalgamated Society of Carpenters and Joiners. Beesly is the translator of Comte's "Discourse on the Positive Spirit," and joint translator of the same author's "Positive Polity." He has written: "Catiline, Clodius, and Tiberius," 1878; and "Queen Elizabeth," 1892. Address: 21 West Hill, St. Leonards-on-Sea, England.

BELGIUM: A kingdom of Europe, formed as an independent state in 1830, with constitution (1831), and guaranteed neutrality by treaty of London.

I.—Statistics

Belgium has a population (1900) of 6,693,548, with 11,373 sq. m. It is the most densely inhabited country in the world: 589 to the square mile. About 3,000,000 of its inhabitants speak Flemish (in the north), and a slightly smaller number speak French (in the south). Almost all are Roman Catholics. Chief cities (1904): Brussels (capital), 598,599; Antwerp, 291,949; Liège, 168,532; Ghent, 162,482. Of the total population (1900) 3,324,834 were males and 3,368,714 females. Of the males 2,047,607 were unmarried; 1,146,774 married; 127,014 widowed; and 3,439 divorced. Of females 1,968,383 were unmarried; 1,143,483 married; 252,202 widowed; and 4,646 divorced. The birth- and death-rates per 1,000 inhabitants since 1847 are shown in the following table:

| PERIOD | Birth-rate | Death-rate |
|----------------|------------|--------------------|
| 1847-56..... | | 23.52 |
| 1857-66..... | 31.54 | 23.59 |
| 1867-76..... | 32.47 | 21.73 |
| 1877-86..... | 31.21 | 21.31 |
| 1887-96..... | 29.04 | 20.92 ¹ |
| 1897-1901..... | 28.96 | 18.23 |
| 1904..... | 27.60 | 16.89 |

¹ Death-rate for 1897-1900.

In 1904, the percentage of illegitimate births to total births was 6.59, having fallen from 7.20 in 1871-80.

| | 1880 | 1890 | 1900 | 1902 | 1903 | 1904 |
|--------------------------------------|------|------|------|------|------|------|
| Marriages per 1,000 inhabitants..... | 7.03 | 7.32 | 8.62 | 8.11 | 7.87 | 8.02 |
| Marriages to 1 divorce..... | 1.82 | 1.30 | .83 | .80 | .75 | .61 |

The annual numbers of suicides were: 1871-80, 441; 1881-90, 658; 1890-1900, 799; 1900-1, 856.

General education has been low but is rising. In 1902 the percentage of the population enrolled in elementary schools was lower than in any other country of western and northern Europe. In 1904 there were 859,436 pupils in 7,092 schools. In 1880, of the population more than seven years of age, 33 per cent were unable to read and write; in 1890, 28 per cent; in 1900, 22 per cent. There were, in 1904, 2,688 infant schools with 254,658 children, and 3,897 adult schools with 193,907 scholars. Middle-class public schools for boys numbered 88 with 17,112 pupils; and for girls 40, with 7,689 pupils. Royal atheneums and colleges numbered 35, with 7,641 pupils; normal schools, 58, with 4,980 students. There are 4 uni-

versities: at Brussels, Ghent, Liège, and Louvain (R. C.), with a total attendance of 3,780 students.

General Statistics

Besides these there are 80 colleges, 65 middle-class private schools for boys, 150 private institutions for girls, and numerous private primary schools, mainly under ecclesiastical care. There are 8 commercial high-schools, and 84 schools of design with 14,977 students. In 1871 the state appropriated 15,282,171 francs for primary education, and in 1903 the sum of 43,867,450 fr. Crime, measured by commitments in the assize courts, has fallen from 97 in 1890, to 72 in 1903, but commitments in the Correctional Tribunals have risen from 40,275 in 1890 to 56,754 in 1903. Commitments in police courts have likewise increased 54 per cent since 1880. The population in the workhouses (*dépôts de mendicité*) was 2,857 in 1880, and 4,781 in 1890; in the refuges there were 1,983 in 1898, and 1,733 in 1903; in the schools of charity there were 698 in 1890, and 2,222 in 1903.

In no other country is so large a proportion of the population employed in purely industrial occupations. Mining, especially of coal, is very important, and cheap fuel has led to considerable metallurgical industry. Manufacture is the most important source of wealth. Textile industries employed 169,493 people in 1896; clothing, 137,903; metal, 133,875; mining, 128,313; building, 93,942; food products, 90,285. Characteristic features are very low wages, and an unusual proportion of small industries. Belgian glass works lead the world. Brussels lace and carpets are renowned.

ENGAGED IN INDUSTRY
(Not in private houses or public works)

| SIZE | ENTERPRISES | | WORKMEN | |
|------------------------|-------------|----------|---------|----------|
| | Number | Per cent | Number | Per cent |
| With no employees.... | 165,000 | 70.08 | | |
| 1-4 employees..... | 54,500 | 24.09 | 95,000 | 13.92 |
| 5-49 "..... | 14,800 | 5.12 | 177,000 | 25.06 |
| 50-499 "..... | 1,500 | 0.63 | 250,000 | 36.66 |
| 500 or over employees. | 300 | 0.08 | 160,000 | 23.46 |

Wages are low but rising. Blacksmiths (1903), made 17 cents per hour; carpenters, 15 cents; compositors, 13; laborers, 10; hod-carriers, 9; machinists, 13; plumbers, 15. (See WAGES.)

In 1896 more than one fourth of the population, without distinction of age or sex, earned less than 2 francs (40 cents) per day; 172,000 earned from 2 to 3 fr.; 169,000, from 3 to 4 fr.; and 102,000 over 4 fr. More than 100,000 men received from 3 to 3½ fr. per day; and more than 80,000 received less than 2½ fr. per day. Of the women, more than 100,000 received between 1 and 1½ fr. per day (less than 30 cents). The hours of labor are long.

Industrial Conditions

Agriculture occupies a comparatively small place. In 1895, 1,204,810 persons or 18.79 per cent of the population were engaged in agriculture; and 49.5 per cent of the farmers owned their farms. These are usually very small, tho the average size is increasing somewhat. In 1895, there were 544,041 holdings of less than 1 hectare (2.47 acres). Agricultural wages, in 1895, were 1.98 fr. (38 cents) per day without food for men, and 1.22 fr. for women.

The coal industry has increased from a product valued at 169,680,000 francs in 1880 to 286,648,000 fr. in 1904. (See COAL.) There were (1903) 218 coal mines of which 123 were worked. 139,592 persons were employed in these, of whom 95,033 men, 6,976 boys, and 55 women worked underground. There were (1903) 16 pig-iron works, 35 blast-furnaces, 44 works for the manufacture of iron, 343 puddling furnaces, 35 steel-works, and 49 Bessemer converters. Of shipping, Belgium had (1904) 65 steamers and 4 sailing vessels, with a total tonnage of 102,737. The number of vessels entering Belgium (1904) was 9,063, with a tonnage of 11,176,239.

The commerce of Belgium more than doubled from 1890 to 1900. In 1904 the exports amounted to 2,183,300,000 francs; and the imports to 2,782,200,000 fr. Chief exports: coal, textiles, sugar, machinery, agricultural products. The commerce of Belgium with the leading countries was (1904): Exports to Germany, 505,473,000 francs; Great Britain, 392,324,000 fr., chiefly iron, steel, and iron and cotton manufactured goods; France, 346,670,000 fr.; Netherlands, 268,781,000 fr.; United States, 86,324,000 fr., chiefly rubber goods, glass, iron and steel work, jewelry. Imports from France, 465,684,000 francs; Germany, 351,025,000 fr.; Great Britain, 335,404,000 fr. (chiefly cottons, woollens, machinery); Netherlands, 240,873,000 fr.; United States, 222,301,000 fr., chiefly wheat, provisions, cotton.

II.—Constitution and Government

Belgium is a constitutional kingdom. The reigning sovereign is Leopold II.; the Premier, Comte de Smet de Naeyer. Legislative power is vested jointly in King, Senate, and Chamber of Deputies. The Senate has 110 members, of whom 83 are elected directly for eight years by manhood suffrage, tho heads of families, those with diplomas of higher education, those occupying certain positions, or those having certain property, may have one or even two additional votes, giving them a balance of power, much opposed by the Socialists. The 27 indirectly elected senators represent county councilors. The Chamber of Deputies has 166 members, elected for two years, one for every 40,000 people. Belgium has compulsory voting, and a system of proportional representation of minorities. The leading political parties are the Clerics or Catholics, the anti-Clerics or Liberals, and a well-organized Socialist party. The Catholics are generally strongest in the Flemish provinces, and the Socialists in the Walloon. The Senate stands: Catholics, 61; Liberals and Progressists, 43; Socialists, 6. The Chamber of Deputies: Led by the Premier, 87; Liberals and Progressists, 41; Socialists, 35; Christian Democrats, 2.

The estimated public revenue for 1906 was 558,863,927 francs; expenditures, 557,805,483 fr.; public debt (1905 consolidated), 3,117,038,048 fr. Taxation presses somewhat heavily altho the debt was largely contracted in the construction of public utilities, particularly the State railroads; and the revenue from these more than covers the interest.

The standing army numbers 49,731 men. It is recruited by voluntary enlistment, supplemented by annual levies. The war strength is 180,000 men.

Belgium was one of the first countries to develop State railroads. She began her system in

ness averages about \$1,200,000 annually. It has butcher shops, grocery, dry-goods, and department stores, a dairy and two large bakeries, which produce annually almost 12,000,000 loaves of bread of 2.2 pounds each. This society devotes annually about \$10,000 to the Socialist cause, and moreover, furnishes free quarters to the seventy groups belonging to the federated organization of that city.

Similar organizations, tho in differing degrees of development, are to be found in all the principal centers. Thus, in the very bosom of capitalist society, is found another society, like a state within a state, the members of which are united, not only by their political convictions, but by economic ties that become more binding as time runs on, and that insure a stable and enduring organization.

These Belgian Socialist societies now number 238, with annual sales of \$7,600,000. There are 6 Socialist dailies, notably *Le Peuple* (Brussels) and *Vooruit*, 22 weeklies, and 14 monthlies. These Socialist successes have compelled the Roman Catholic Church to make especial social efforts in Belgium. (See CHRISTIAN SOCIALISM.) Dr. Varlez writes of them (1906):

Especially have the Catholic Conservatives been active, and for every working-class Socialist or Cooperative Society they have organized a similar cooperative society, only in connection with the Conservatives. These cooperative societies, altho with less enthusiasm and vitality than the working-class societies, nevertheless slowly grow. They are largely supported by the Catholic clergy in the villages and country towns of Flemish Belgium. Many, however, of the most conservative Catholics oppose these efforts to organize such societies for fear that they will one day break away from their conservative moorings. They advocate instead, organizing the working class into religious charitable and beneficial societies, in union with the Church and wealthy conservative patrons. Many such conservative and religious societies are organized, particularly in the villages, and take a great variety of forms—organizations for the cooperative purchase of food, grain, machinery, and other supplies; for the improvement in the breeding of horses, cattle, and other animals; for cooperative dairies, breweries, and the like; for mutual relief and benefits, loans and insurance; for a thousand forms—all alike, however, in being organized under the patronage of the Church and opposed to the democratic Socialist organizations. Strenuously opposed by the Socialists, Christian, and non-Christian, attacked by the freethinkers, now numerous in every country of the Latin race, these agricultural religious organizations embrace now some 100,000 of the peasantry and are still growing.

State action for the working classes has been largely on the lines of savings funds and insurance for old age and for the unemployed and also of direct protection of laborers. There are special acts dealing with contract of employment (1900); truck-system (1887); shop regulations (1896); employment of women, children and young persons (1889) with many regal decrees incidental thereto; Sunday rest (1905); safety and security of labor (1899) completed by important decrees of 1905; workmen's compensation for accidental injuries (1903). There are also other institutions created by law on behalf of the working classes, viz.: councils of experts (1889); councils of industry and labor with a view to prevent and settle trade disputes (1887); trade-unions (1898); benefit societies (1894); laborers' dwellings (1889). In 1906 there was established a bureau in aid of the middle classes, dealing with industrial education and other matters concerning the small traders, etc. The State Savings-Bank of Belgium was established by a law of March 16, 1865, and to it was added the Pension Fund, established in 1850. Its total receipts in 1905 were 1,143,900,000 francs. The movement has now become international, and any one depositing in the savings-banks of France, Belgium, or Holland can transfer his account to any of these countries without cost. Savings-banks have had a remarkable development in Belgium, owing to incessant agitation on the part of the teachers, and are due to the initiative of the city of Ghent.

They have spread to almost all the cities and towns of the country, especially since the issue in 1881 of savings cards, to which the children can attach stamps of 10, 5, or 2 centimes (one cent), and which, when they amount to a franc, can be deposited with the savings-bank, in any branch or in any post-office. At the end of 1902 out of a total of 1,151,756 pupils 360,000 had about 10,000,000 fr. in the banks. The bank has also been allowed by different laws to make loans to various funds of social benefit, such as co-operative societies, agricultural banks, and workmen's dwellings. At the end of 1904, seven agricultural banks had loans amounting to 7,873,000 fr., and 166 societies for erecting workmen's dwellings had loans of over 66,000,000 fr., and more than 33,000 houses had by this means been erected.

The Old Age Pension Fund, established in 1850, permits the granting of pensions not above 1,200 francs, and made payable at different ages, between fifty and sixty. This has become of particular importance since the granting by the State, in 1900, of premiums to persons entitled to a pension through the endowment of a friendly society, or to persons of modest means, directly connected with the institution. A Department of Life Insurance was created in 1889, and connected with the savings-bank, but limited to the insurance of those who have borrowed for the construction of a workman's dwelling. In 1894 it widened its scope, and is now open to all, with the maximum limit of 5,000 fr. insurance.

Public Labor Bureaus for the Unemployed (*Bourses du Travail*), mainly of a charitable nature, have existed in Belgium for some years, beginning at Liège in 1888, but have not been favored by the working classes, except at Liège itself, and have only been made use of by the least efficient, and that without large results. Their main effort has been to find places for those out of work. More recently, however, beginning at Ghent in 1901, there has developed a plan of insurance against unemployment, which has had more success, and is being largely copied throughout Belgium and in other countries. This is the creation of a public fund by the municipalities, to be increased by private gifts, and to be used in supplementing the out-of-work benefits given by trade-unions. Thus every trade-unionist receiving a small out-of-work benefit from his union, can, under due restrictions, have this supplemented by a grant from the fund of perhaps 50 or 30 per cent of the amount of his benefit. Non-unionists can get the same aid by paying dues to a special thrift fund. This plan has the advantage of being taken out of the sphere of charity and of cooperating with and calling out the efforts of organized labor. By May, 1904, there were seven such funds established by the principal cities of Belgium. The portion of the plan for trade-unionists seems to have been very successful; whereas that for non-unionists seems to have failed. Labor colonies, for the unemployed, or more truly for vagrants, are maintained by the Belgian Government at Merxplas and Wortel, and are called "Colonies Agricoles de Bienfaisance"; they are practically penal colonies for vagrants, committed by judicial authority or municipalities. They are committed for a certain period, but receive a small wage, which is kept for them. Merxplas is for those who have committed some misdemeanor; Wortel for those who

State
Savings-
Bank

The
Unemployed

have committed none, but are reduced to vagrancy. There is also a private labor colony at Haeren, near Brussels. There is a system of Central Inspection and a Superior Council of Relief. Under these each commune is responsible for its relief work, tho weak communes may combine. "Commissions d'Assistance" are created for each commune, or union of communes, with from five to ten members, among which must be a clergyman, an alderman, and a laborer. No salaries are paid, tho the laborer can be indemnified for time lost. Women are eligible. The indigent are divided into those unable to work, those willing to work, but unable to find it, and those unwilling to work. To the first class is given relief, indoor relief for the most part. Private charity in Belgium is very great, providing for at least one half of the indigents, but is controlled by the State. For the other two classes there are workhouses, refuges, and schools of charity. The workhouses are for persons able to work, but who do not. The refuges are intermediary between the workhouses and the poor-houses, for those willing to work, but unable through sickness, old age, or disability. Persons found begging can be assigned to these for seven years. In 1901 there were 6,384 in these refuges. The schools of charity are compulsory training schools for youths up to eighteen, who have become vagrants or have committed misdemeanors. The expense for these institutions is divided equally between the State, province, and commune. Very low wages are paid in the workhouses and refuges.

Important Belgian societies and institutions for social reform are:

Institut de Sociologie Solvay, founded 1901. Leopold Park, Brussels.

Office du Travail, 2 Lambertmont, Brussels.

Caisse d'Epargne, 50 Rue Fossé aux Loups, Brussels.

La Bourse du Travail, 17 Rue de l'Amigo, Brussels.

La Maison du Peuple, 11 Rue Joseph Stevens, Brussels.

(Socialist Cooperative Society.)

Ligue Belge du Droit des Femmes, founded 1892. Secretary, Mlle. Marie Popelin, Hôtel Ravenstein, Brussels.

Ligue Patriotique contre l'Alcoolisme, founded 1879. Secretary, Dr. de Vaucleroy, 306 Avenue Louise, Brussels.

Société Belge d'Economie Sociale, founded 1881. Hôtel Ravenstein, Brussels.

Société Belge de la Paix et de l'Arbitrage, founded 1885. Secretary, Henry de la Fontaine, Sénateur, 81 Rue d'Arlon, Brussels.

Société Belge de Sociologie, founded 1899. Secretary, Camille Jacquart, 11 Rue Brialmont, Brussels.

Société de Moralité Publique, founded 1881. Secretary, Ed. Belleroche, 65 Rue de Stassart, Brussels.

BELLAMY, EDWARD: American nationalist and author; born in Chicopee Falls, Mass., 1850. He graduated at Union College and studied law, but soon entered journalism, writing for many papers, principally the *Springfield Union*. His first novel was "A Nantucket Idyl." "Dr. Heidenhoff's Process," "The Blind Man's World," and "Miss Ludington's Sister" followed. All are dreamy, fantastic novels, but with such power that Mr. Howells declared that "the mantle of Hawthorne has fallen upon Mr. Bellamy." He then wrote "Looking Backward," upon which his great fame depends, and which many consider to be the ablest socialistic Utopia ever written. (See NATIONALISM.)

In *The Nationalist* magazine he has related how he came to write that book; how it took shape

from an original plan to write a sort of fairy tale of social felicity—"a cloud palace for an ideal humanity"—in the shape of a great world nation. "The idea of an industrial army for maintaining the community, precisely as the military army protects it, suggested the advisability of seeing if a plan which was found to work so well for purposes of destruction might not be profitably applied to the business of production, now in shocking confusion." This idea had been vaguely floating in his mind for a year or two, but it was not until he began to work out the details of his romance that he perceived the full potency of the instrument he was using. This led to a complete recasting of the book, both in form and purpose, and the author was filled with the fervent desire to acquaint the people of his country with its beneficent possibilities—a desire which the popularity of "Looking Backward" has abundantly realized. The form of a romance was reluctantly retained, with a view to obtain a reading for the book.

The year 2000 was fixed upon as the date of the story, at which date Mr. Bellamy believed that nationalism would be in operation.

The book soon made a sensation; a Bellamy Club was started in Boston, and from that grew the Nationalist Club, and then the Nationalist movement. (See NATIONALISM.) The book reached a sale of over 500,000 copies in this country, and has been translated into most of the languages of Europe. In the beginning of 1891 Mr. Bellamy commenced the publication of a weekly, *The New Nation*, as an organ of nationalism. It was suspended, however, at the close of 1893. In 1897 he published "Equality," a continuation of "Looking Backward," and on the same lines, but a larger book. Bellamy died in 1898.

BELLERS, JOHN: Quaker; philanthropist; born about 1654. He was a member of the Society of Friends, joint lord of the manor of Coln St. Aldwyn's, and devoted to philanthropic projects. He wrote numerous pamphlets, the best known of which is "Proposals for Raising a Colledge of Industry," in which he proposed that the rich should provide capital and receive profit by building a college in which destitute men and women could find work. He died in 1725.

BEMIS, EDWARD WEBSTER: Superintendent of water works; economist; born in Springfield, Mass., 1860; graduated from Amherst College, 1880; Ph.D., Johns Hopkins University, 1885; in charge of the departments of history and political economy at Vanderbilt University, 1887-92; assistant professor in economics, University of Chicago, 1892-95; professor of economics and history at Kansas State Agricultural College, 1897-99; head of the Department of Municipal Monopolies in the Bureau of Economical Research, New York City, 1899-1901. In 1901 he was appointed superintendent of water works in Cleveland, O., by Mayor Johnson, a position he still occupies. An investigator and writer upon municipal monopolies and kindred questions, he has appeared frequently before courts and state commissions as expert witness for cities in cases involving the rights of the people with respect to gas companies. Mr. Bemis, while believing in municipal ownership of public-service corporations and public ownership of railways and telegraphs and a few other monopolies of that

character, does not agree with socialism in the operation and ownership of competitive industries, but believes in heavy taxation of all special privileges and in legislation safeguarding the health, education, and welfare of the community. Author: "Municipal Ownership of Gas in the United States," "Cooperation in New England and the Middle States," "The Labor Organizations of America," "Municipal Monopolies," "Reports of the Cleveland Water Works." *Address:* Cleveland, O.

BENTHAM, JEREMY: Political economist; born in London, 1748; graduated at Queen's College, Oxford, at the age of eighteen. He was called to the bar in 1772, but never practised his profession. Bentham became the greatest critic of government and legislation in his day. His first publication was "A Fragment on Government" (1776); and his first important economic treatise was "A Defense of Usury," in which he tried to prove by close reasoning that when the legislature fixes a maximum rate of interest it does not benefit the right persons, but encourages deceit and raises the rate of secret interest by adding the danger of discovery. He urged that every man is the best judge of his own welfare, and that it is for the public good to leave him free to seek it. Bentham published "A Manual of Political Economy," but he influenced economic thought even more by his philosophic writings. Beccaria in 1764 had coined a convenient phrase, "The greatest happiness of the greatest number," and Bentham took this up and made it the ruling principle and chief end of legislation. This, too, he taught to be identical with the extreme *laissez-faire*. Bentham was also a great believer in education, especially of the working classes, whom he considered the most important part of the community. He aided Robert Owen by taking shares in his factory at New Lanark.

Bentham's works and life, edited by Bowring, fill eleven volumes, of which the tenth and eleventh contain the life. His chief economical works are: "Protest against Law Taxes"; "Supply without Burden"; "Tax with Monopoly" (i. e., a tax on bankers and stockbrokers); "Defense of Usury and of Projects in Arts"; "Manual of Political Economy"; "Conversion of Stock into Note Annuities"; "Invention and Discovery"; "Hard Labor Bill"; "Tracts on Poor Laws and Pauper Management." He died in 1832.

BENTLEY, WALTER E.: Founder of The Actors' Church Alliance; born in Sheffield, England, 1864. He came to the United States in the eighties, and entered on a commercial career, but soon forsook that for the stage, toured the country for several seasons as a Shakespearean actor, and attained great success. Later he sought holy orders in the Episcopal Church, was ordained by Bishop Huntington in 1892, and served in the diocese of central New York until 1897, when he was called to be vicar of St. Mark's, New York, afterward becoming assistant to the Rev. Dr. Heber Newton. While at St. Mark's, Mr. Bentley aided in forming "The Peoples Club" No. 1, and for some time was its energetic secretary. In 1899 he founded The Actors' Church Alliance, and as national secretary and organizer he extended it throughout the United States and Canada and all over Great Britain and Ireland. Mr. Bentley is now rector of the Church of the Ascension in Brooklyn,

where, in addition to his religious work, he has a well-equipped theater in full operation as an important adjunct to religious and social effort. *Address:* Church of the Ascension, Kent Street, Brooklyn, N. Y.

BEQUESTS. See GIFTS AND BEQUESTS.

BEQUEST, POWER OF: This is an inheritance of modern nations from the Roman law, which allowed three fourths of the inheritance to be willed away from the next of kin. The Koran allows two thirds, and the Mishna recognizes gifts of property to take effect on death. (See GIFTS.)

BERGER, VICTOR L.: American Socialist; editor of the Milwaukee daily *Forwards*; born at Nieder Rehbach, Austria-Hungary, 1860; educated in Budapest and Vienna. On account of reverses the family emigrated to the United States, where Berger at first worked as a metal polisher, later becoming a public-school teacher. A pioneer organizer in socialism, he became prominent in the Social Democracy and in the Social-Democratic Party, and has been a member of the latter party's executive board from the beginning. Tho a firm Socialist, he has been a leader of the liberal wing, for which he was criticized by members of the "orthodox" wing. He has been the party candidate in Milwaukee for the mayoralty, for Congress, and for the Senate. He has written: "Socialism, What it is and What it is Not" (1900); "The Trust Question" (1900); and "Municipal Socialism" (1902). *Address:* 614 State Street, Milwaukee, Tenn.

BERLIN: Capital of the German Empire; founded in the twelfth century; prominent since the fifteenth century, and a leading city from the time of the Great Elector Frederick William (1640-88). Under Frederick the Great large manufactures grew up, and the city became an industrial center as well as a royal residence. It has recently grown very rapidly in population, as will be seen from the following figures: 1800, 172,138; 1870, 774,498; 1890, 1,578,516; 1900, 1,888,574; 1905, 2,033,900. In 1897 the capital stock of companies doing business in Berlin was 1,100,000,000 marks with an output of nearly 2,000,000,000 mk. There were (1904) 12,967 factories employing 272,768 persons. Cloth printing and dyeing, iron and steel, and clothing are the leading industries. Twelve railways pass through the city, and about 35,000 freight steamers enter the Spree annually. There has been much overcrowding, and tho a great deal has been done the evil still remains. The death-rate, however, has fallen from 32.94 in 1876 to 24.58 in 1901. Municipal lodging-houses provide cheap and sanitary lodgings for the needy, and great efforts are made to make it possible for the poor to live outside the city (see GERMAN MUNICIPALITIES). The poor relief is under strict municipal control, tho about 3,000 unpaid citizens assist the paid workers (see ELBERFELD SYSTEM). In 1904-5 Berlin spent 14,817,364 marks on poor relief, besides 8,288,300 mk. on free hospitals for the poor.

The city government of Berlin is most efficient. The council is composed of 144 members elected for six years, one third of the seats being vacated every two years. The council elects the burgomaster and other chief officials. In spite

of its large population the city has only six seats in the Reichstag, which in 1900 were occupied by four Socialists and two Radicals. In the Landtag it has nine seats, all of which were held by Radicals in 1898. The franchise for city elections, however, divides the voters (all males over twenty-four, who are not criminals or paupers) into three classes according to the taxes they pay, a system which greatly favors the larger taxpayers.

The city has gone very far in the direction of public ownership, and with brilliant success. It owns four immense gas-works, electric-lighting plants, and water-works estimated at 65,000,000 marks; the latter give the city a net income of about 2,000,000 mk., and a sinking-fund for paying off the original cost. The sewage system is considered a model and there is a successful municipal sewage farm which enables the city to carry on a very remunerative garden trade. There are municipal abattoir and fourteen municipal markets. The street-car system is private until the plants revert to the city in 1911; but the companies pay over 800,000 mk. annually in taxes, pave the streets on which the cars run from curb to curb, and are strictly under the control of the municipality. The municipal debt of Berlin was 351,979,367 mk. in 1904, but there were assets of 749,123,593 mk. The receipts and expenditures in the same year were 181,758,962 mk. This was considered favorable, and the taxes on incomes of less than 900 mk. were remitted, and also the rent tax. The taxes in 1904-5 were 75,367,504 mk. or 38.10 mk. per capita. The University of Berlin (founded 1810) and its various educational, literary, artistic, musical, and scientific institutions make it a brilliant intellectual center.

BERNSTEIN, EDUARD: Leader of the REVISIONISTS or evolutionary wing of the German Social Democrats; born in Berlin, 1850, of Jewish parentage, his father a locomotive engineer; educated in the Werder Gymnasium. He held a position in a bank from 1866 to 1878, and then became private secretary to Karl Hochberg, a millionaire supporter of the Social-Democratic Party. Expelled from Germany by the anti-Socialist legislation of 1881, he went to Switzerland and edited the *Sozialdemokrat*, the efficient organ of the Social-Democratic party. He resided in London from 1888 to 1901 when he returned to Berlin, and in the following year was elected to the Reichstag from Breslau (reelected 1903; defeated 1907). In 1899 he published his famous work "Die Voraussetzungen des Sozialismus und die Aufgaben der Sozialdemokratie," the book which has led to the great "Revisionist" controversy in the German socialist party. It was written in defense of a series of articles he had contributed to the *Neue Zeit*, and which contained the following sentences:

The Social Democracy has neither to expect nor to wish an early downfall of the existing economic system, if such is thought to be the product of a great devastating crisis. I openly declare that I have not much concern nor use for what is commonly understood as the "ultimate aim of socialism." This aim, whatever it may be, is of no importance at present; the movement is of all importance to me. And by the term "movement" I understand not only the general movement of society, that is, social progress, but also the political and economic agitation for effecting this progress.

If the Social Democracy should in the present state of society actually take possession of the political power, it would at once be confronted by an unsolvable problem. It could not immediately decree away capitalism; indeed, not even dispense with it. And also, it could not guarantee capitalism the security which it must needs have in order to perform its functions.

Thus the question is raised whether this state of things would not postpone the realization of socialism to a day never to come, or at least postpone it for generations. If under the realization of socialism is understood the establishment of a strictly regulated communistic state of society, then this seems as yet very distant to me. On the other hand, it is my firm belief that the present generation will see the realization of much socialism, if not in a patented form, yet certainly in a very material way. (*Neue Zeit*, No. 18, Jan. 29, 1898.)

Accordingly, Bernstein demanded working for socialistic reforms under the present system, expecting this system to gradually grow into socialism. These views were at once considered heretical by orthodox Socialists all over the world. English life with its practical character, and the work of English and German statisticians and political economists, had had their effect on Bernstein. He follows Marx without considering him infallible.

There was an effort to read Bernstein out of the party, but in the Hanover convention of 1899 the South-German Social Democrats stood by him almost in a body. Auer, the party secretary, was one of his sturdiest defenders. David Peus, Von Elms, Frohme, Heine, and others were with him. Vollmar could well say at the close of the convention, "The renewed attack of the 'party purifier' has been repelled." And altho the Bernstein theory was rejected at the conventions in Lübeck and Dresden, it has obtained such an influence in the party—especially among the trade-union leaders of Germany—that it cannot be driven out of Social Democracy. Bernstein's great opponent is Karl KAUTSKY.

In addition to the work mentioned in the foregoing, Bernstein has written "Zur Theorie und Kritik des Sozialismus," in the *Sozialistische Monatshefte* (Berlin); "Wie ist Wissenschaftliches Sozialismus möglich?" (ib.); and "Die heutige Sozialdemokratie in Theorie und Praxis" (1906), besides numerous articles and essays. He has also edited the writings of Lassalle. Address: 5 Rosenheimerstrasse, Berlin W., Germany.

BESANT, ANNIE (née WOOD): English writer and lecturer; born in London, 1847. Her father dying while she was yet young, she was brought up by her mother under straitened circumstances, mainly at Harrow. She married the Rev. Frank Besant in 1867. Two children were born to them, and during a sickness of the younger Mrs. Besant fell into great doubts as to the goodness and then as to the being of God. She strove to find comfort from High Church fathers and Broad Church thought (consulting, among others, both Dr. Pusey and Dean Stanley), but failed to find relief, and became an avowed atheist. Her husband felt that he must leave her and take her children, even by force of law, from what he considered her pernicious teachings. This not unnaturally embittered her against Christianity and the Church, and she devoted all her energies to writing and lecturing for Free Thought. Becoming acquainted with Mr. Bradlaugh, she spent many years working with him, lecturing through all England, and editing *The National Reformer*. She became convinced of and advocated the necessity of neo-Malthusianism—in

limiting the number of children, especially among the poor. Gradually she came to work more among and for the poor, and at last became an avowed Socialist and was for a time the most famous and active woman worker for socialism in England. She was especially active in work for women, organizing them into unions, and in particular successfully conducted the great strike of the match girls in East London. She wrote continually, becoming a *FABIAN*, and the author of one of their collection of essays. Her socialism finally took her away from Mr. Bradlaugh, and more recently her religious nature has made her embrace theosophy, becoming at first the friend and confidante of Madame Blavatsky, and now practically her successor. At present it is to theosophy that she devotes her main time and thought. Her writings are very numerous, mainly brief essays or tracts on free thought, Malthusianism, socialism, and theosophy. In 1885 she wrote an interesting book of "Autobiographical Sketches."

BESANT, SIR WALTER: English author and philanthropist; born at Portsmouth, 1838; educated at King's College, London, and Christ's College, Cambridge. After graduating, he accepted the appointment of senior professor in the Royal College of Mauritius, but soon after resigned and returned to England. He was the author of numerous works, one of which had an important social outcome. It was due to an ideal pictured in his "All Sorts and Conditions of Men," that the People's Palace in East London was built—a large club house for workmen, where they can find art, amusement, education, bathing, gymnasium facilities, etc. Besant died in 1901.

BETHEL: A remarkably successful colony for epileptics and other unfortunates at Bielefeld, Westphalia, Germany. The colony began with epileptics, tho now it embraces all classes of misfortune, bodily and otherwise. In 1867 a few Westphalian pastors and laymen, following the example of Pastor Bost of La Force, in Dordogne, France, decided that the Church had a duty toward the epileptic. A farmhouse near Bielefeld was bought; a few epileptics came; and the colony was called Ebenezer—"the stone of help." Two years later a home for deaconesses was planted close by to train workers, and was called Sarepta—"the place of purifying metal." The names are important because they show the spirit of the place. Three years later Pastor von Bodelschwingh and his wife were placed in charge. Pastor von Bodelschwingh's father was Prime Minister of Prussia; his wife's father was likewise in the Prussian Cabinet. To-day, instead of one building, there are over 150, and Bethel now receives every class of unfortunates. Indeed, any one in trouble may come. The main branches of the colony are five in number: (1) The home for epileptics, or Bethel proper; (2) Sarepta, the home for training nurses (now numbering about 1,100); (3) Nazareth, the brotherhood for training deacons (about 370); (4) Wilhelmsdorf, the colony for vagrants and the unemployed; and (5) the Workmen's Home Association, an organization for providing homes of their own for the working classes of Germany.

Among the Bethel's 150 buildings there is place for virtually any ill. It has a large idiot colony, nearly one third of the inmates being of

this class. It has two orphanages called "The Good Shepherd" and *Kinderheim*, "the Children's Home." For inebriates there is the *Friedrichshutte*, "Frederick's Cot," named for the late German Emperor, and opened just after his demise. One remarkable spot on the colony grounds is the *Eickhof*, where wealthy voluntary patients, who have made shipwreck of life, through drink or fast living, may come, and, among equals of their own class and surrounded by physical comforts, be compelled nevertheless to labor with their own hands. There is also a house which welcomes those who can find no opening elsewhere, because they have been convicted of dishonesty of some kind. Such are some of the wide charities of this unique colony.

The daily life of the colonists is divided between work and prayer. The whole atmosphere of the place is religious, tho religion is forced upon none. Yet without it Pastor von Bodelschwingh would say Bethel could not live. But even the epileptic children and the noblemen's sons must work. It is the genius of Pastor von Bodelschwingh which finds work which each can do: Almost all that Bethel uses is made by the colonists: houses, furniture, clothing, food, etc. The carpenters live for the most part in a house called Little Nazareth. Near this is the tailors' home, Peniel, "the face of God"; not far away are "Horeb," the shoemaker's house; "Gilgal," the blacksmith's shop; "Sharon," the seedsman's store. There are bookbinding, book printing, and bookselling. Books made at Bethel are sold throughout Germany. There are also saddlers, basket-makers, and other trades. "Hebron" is the farmhouse of the colony. They also make bricks in Bethel, turning out 4,000,000 bricks per year.

A most important part of the colony is Wilhelmsdorf, a colony for the unemployed. But for this see *LABOR COLONIES*. Nor is even this all. The Workmen's Home Association makes loans to working men, on security of land and house, and so enables them to own their homes and a little land. Skilled epileptics are the architects and builders of these houses, tho to-day the work is spreading to different portions of the empire. Bethel largely supports itself by the work done by its members. Little or no pay is given even to those who give the skilled work of overseeing or directing. They are assured a home and livelihood; in case of sickness or need they know that they and theirs will be provided for with loving care; what they need they can have. Out from the training-homes, therefore, pour men and women who, with no thought of pay, give trained effort that guides the multitudinous activities of the colony, and sends out even foreign missionaries to carry on similar efforts in Africa and elsewhere. Yet money is made in many ways. Into one busy house in the colony come cast-off clothing or articles of any nature sent from all over Germany, to go out in most cases renewed and fit for use by somebody in the colony, or to be sold at low price to the peasants in the vicinity. A poor woman in Germany collected from her friends and neighbors a garretful of old corks and sent them to Bielefeld. To-day the traffic in old corks fills several houses at the colony, employs forty clerks, and brings in \$10,000 per year. A wealthy patient arrived at Bielefeld who did not know how to do anything except collect postage-stamps. Bodelschwingh set him to doing this. To-day

the postage-stamp bazaar of the colony occupies a house, employs many clerks, and brings in considerable revenue. Children from all over Germany collect used stamps and send them to the colony. There is at the colony a "fragment man" who has a genius for turning into use and money the fragments which other people throw away. In more ordinary lines of trade, Bethel puts up and sells over the world pure bromide, for which epileptics have such continual need and which it is difficult to get pure. In ten years over 10,000 epileptics have been thus supplied in Germany alone.

Bethel is not, however, wholly self-supporting. It needs gifts and receives them. The royal house of Prussia takes great interest in it and gives it favors and gifts. But more particularly does Bethel rely upon the interest and gifts of the Westphalian farmers who live in the district. Pastor von Bodelschwingh is a skilled solicitor of aid. Once he asked all German parents to give him a *pfennig* for each sound and healthy child, for him to spend on the maimed and unfortunate. At present about \$7,510 per year comes from the school children of Germany. Some \$50,000 per year is collected for the colony by sixty regular collectors. The neighboring provinces appropriate to its use \$15,300 per year. Altogether Bethel has and spends, apart from the labor colony, about \$300,000 per year. It has property valued at 6,562,057 marks net.

BETHEL (SHELBY COUNTY, MO.): A communistic settlement of 4,000 acres, established about 1844 by a German-American, Dr. Keil. With little capital, but great industry, the community by 1854 had a woolen-mill, a grist-mill, several shops, and a church; the population was then 650. In 1855 Dr. Keil, with eighty settlers from Bethel, started a similar community of 18,000 acres at Aurora, Ore. Dr. Keil was president of both; and down to 1872 both properties stood in his name, but were administered by a board of trustees. In 1872, however, Dr. Keil gave each adult member a title deed to one parcel of land, tho the administration remained communistic. The life was simple and uneventful; a strict family life was maintained. Dr. Keil died in 1877, and Bethel dissolved in 1880 and Aurora a year later.

BIBLE AND SOCIAL REFORM, THE: Charles Kingsley called the Bible "the reformer's guide," and declared its keynote to be justice from God to those whom men oppress; glory from God to those whom men despise." Herr Todt, the German Christian Socialist, wrote: "Whoever would understand the social question and contribute to its solution must have on his right hand the works on political economy and on his left the literature of scientific socialism, and must keep the New Testament open before him."

Those who hold that the Bible teaches definite principles as to the formation of human society upon earth, usually maintain that the Old Testament, through its history and in the Mosaic covenant, teaches the general principles of national righteousness, while the New Testament bids us fulfil this righteousness through the life in Christ in the heart. It is held by many Christian Socialists that the Old Testament covenant teaches what may be called the law for society. It founded a theocracy on earth. God was the Universal Father; every man of the theocracy a

brother. Property in land was not absolute; the land was conceived as belonging to God. No individual could own it in fee simple. He could only use it. In its use he was inalienably protected. It came to him through the family as an inalienable inheritance. If, through poverty, or misfortune, he temporarily parted with it, it returned to him in the year of jubilee. No landless, homeless class could, therefore, be *permanently* developed among the Hebrews.

The law went further. It cared especially for the poor, the oppressed, the children, the fatherless, the widow. Usury (or interest; all scholars agree that the two words originally meant the same thing) was positively forbidden between members of His kingdom. The law provided for every one's independence. It not only provided land for the worker, but defended him in the ownership of clothes, tools, etc. (capital), which could not *permanently* be taken from him. If taken as a pledge, they must be returned before night. No permanent mortgage indebtedness was, therefore, possible on either land or capital—that is, the law was truly socialistic in providing in the name of organized society for both land and capital for every family. And this was *not*, be it remembered, a law of mere individual righteousness. *In order to reap its benefits, the family had to belong to the theocracy.* The Jew could take interest from a foreigner; the foreigner could be enslaved, even killed. The law was essentially national and institutional.

Such was the law of the Jewish kingdom, however and whenever developed. These conclusions are not therefore bound up with any view of the Higher Criticism. The Jews did not indeed observe it. They wandered far from it. But the law endured. The psalmists and the prophets are full of blessings on those who keep the law; are full of woes and condemnation upon the nation that wanders from it. The ceremonial was the precious shrine of a moral law still more precious. It is the moral law that is prominent. In the Psalms, Canon Fremantle has told us, there is not one word about circumcision, not a word about the passover, not a word about Sabbaths, not a word about ceremonial uncleanness. Just relation between man and man; God in the natural, the national, and social life—these are the constant themes. The same is true of the prophets. Isaiah says: "Bring no more vain oblations: incense is an abomination to me; the new moons and Sabbaths, the calling of assemblies, I cannot away with; it is iniquity, even the solemn meeting. Learn to do well; seek judgment [justice]; relieve the oppressed; judge the fatherless; plead for the widow." . . . Micah says: "Will the Lord be pleased with thousands of rams or with ten thousands of rivers of oil? . . . What doth the Lord require of thee, but to do justly and love mercy and to walk humbly with thy God?" Such was the kingdom of heaven, of the law, and of the prophets. They thundered, not against the ritual law, but against those who robbed it of its meaning. They witnessed not against sacrifices, but against sacrifices of other people's property.

But the law failed. Law could not save, as law cannot save to-day. And yet it did not fail. It was the schoolmaster to bring us to Christ.

"What the law could not do in that it was weak through the flesh," that Jesus Christ came to fulfil. This is the second half of Bible sociology.

Christ's first preaching was of a kingdom.

"From that time Jesus began to preach, and to say, 'Repent, for the kingdom of heaven is at hand.'" He sent out His disciples and the seventy to preach "the Gospel of the kingdom." Almost all His parables are about the kingdom. Of the kingdom are His main discourses. Just before His crucifixion He entered Jerusalem as a king. Before Pilate He declared that He was a king. On His cross was the inscription in three representative languages of the earth, declaring Him to be a king. After His resurrection He continued forty days "speaking of the things pertaining to the kingdom of God." What did Jesus Christ mean by the kingdom of God? A kingdom implies four things. It implies a *king*, a ruler; it implies a *law*, the law of the king; it implies, *subjects* who obey, or should obey, the king; it implies a *realm*, where the king rules. What king, law, subjects, and realm does Christ refer to? Where is the kingdom of heaven? It cannot be far away, because eighteen centuries ago Christ declared that it was "at hand." It cannot be unknown, because Christ referred to it in His first utterances as something that His hearers perfectly well understood. It must by them have been understood of that kingdom of God which Moses tried to establish; of which David and the kings were faulty symbols; for which the prophets prayed and the poets sang; to which every Jew looked forward with a longing the more passionate the more it seemed deferred. Undoubtedly this was what the Jew understood by Christ's teaching. Yet it was not to be as they thought. It was to be spiritual, and for all nations. It was not to come by earthly might or by any law. It was to be chosen of men in freedom, not forced upon them; it was to come "without observation," and by the power of the Spirit. Such, in brief, is the social teaching of the Old and New Testaments. (See articles CHRISTIANITY; CHRISTIAN SOCIALISM; JUDAISM.)

BIELEFELD. See BETHEL.

BIMETALLISM: Term designating the use of gold and silver as money at relative values set by legislative enactment, or the union of these two metals in circulation as full money, at a fixed rate; specifically that system of coinage which recognizes both coins of silver and coins of gold as legal tender to any amount, or the free coinage and concurrent use of the two metals as a circulating medium at a fixed relative value.

The final report of the (English) Royal Commission on Gold and Silver, reporting in 1888, describes bimetalism as follows: "A bimetallic system of currency to be completely effective must, in the view of those who advocate it, include two essential features: (a) An open mint ready to coin any quantity of either gold or silver which may be brought to it. (b) The right on the part of a debtor to discharge his liabilities, at his option, in either of the two metals, at a ratio fixed by law." It is usually understood to mean that the two metals are used thus at a fixed proportion to each other, as in the countries of the Latin Union, in which the ratio of 1 gold to 15½ silver by weight formed the legal basis, or as in the United States, in which the ratio is 1 to 16.

Bimetalism as an economic question is of recent date, the word having been first used by M. Cernuschi in 1869, altho the concurrent use of gold and silver as money is as old as civilization. (See MONEY.) The modern discussion of it,

however, arose only shortly before the fall in the gold value of silver, which began about 1873.

Up to the year 1819 almost all nations issued coins of both gold and silver, as well as of other metals, and tried to regulate their relative values by royal or governmental proclamations. Altho supply and demand continually tended to change the relative value of the two metals, and altho from about 1760-1810 enormous quantities of silver poured into the world from mines in Mexico and elsewhere (so that in 1800 the world's annual silver product was nearly three times its product in 1700), the actual alteration in the relative values aforesaid was but slight. In 1803, therefore, France adopted her famous law, making fifteen and a half parts of silver equal to one part of gold in all transactions, which had the effect, despite still greater changes in relative production, of maintaining the relative values of the metals almost exactly steady at the figures named until the demonetization of silver by Germany in 1873.

History

England, however, in 1816, under the second Lord Liverpool, took an opposite course, and demonetized silver as a standard, and ever since has used it only as a metal for subsidiary coinage. But now began a contraction of the currency of the world. The silver product of Mexico, owing mainly to revolutions in that country, fell off one half; the total gold product of the world for various reasons declined; paper currencies in France and England were retired; the United States (see CURRENCY) went through marked depressions, with all forms of wild state banking. At the same time increasing discoveries and inventions cheapened production.

By 1849 prices had fallen some 65 per cent, and money (in England, gold) had become by so much the more valuable. Contracting currency (see CONTRACTION) increased the value of loans. But suddenly (1849) came the gold discoveries of California and Australia. In 1850 thirty times as much gold was produced in the world as in 1810. Money became cheap. Prices rose. Gold threatened to be so plenty that monometalists began to talk about demonetizing it. From 1862-1865, moreover, the United States issued paper money (greenbacks, etc.) and liberated \$600,000,000 of gold, which went to Europe, and mainly to England. If the gold-holders and gold-lenders were to retain any advantage from their gold, it was necessary to take some steps. Consequently they sought (the extreme believers in silver say conspired) to get possession of as much gold as possible, and then to induce the various nations of the world to demonetize silver, to make gold the only legal tender. Soon the promise of unlimited outflow of gold from the mines began to fail, and thus to vastly increase the value of their gold.

Gradually the arguments of English economists in favor of the single gold standard began to make impression, and this was deepened by indications that an excessive supply of silver from the Bonanza mines of Nevada might be expected. In 1867, in connection with the Paris Exhibition of that year, an international monetary conference was held at Berlin, and since even delegates from the United States, among others, supported resolutions advocating the demonetization of silver, the idea of gold monometallism spread.

The war of 1870-71, by securing to Germany a large sum of gold and merchantable paper equivalent to gold, in payment of the indemnity of \$1,000,000,000 exacted from France, put Germany into a position to establish the single gold standard for herself. The law of Dec. 4, 1871, completed July 9, 1873, superseding the local coinage by an imperial coinage, demonetized silver by restricting its coinage to the amount regarded as necessary for change. The influence of Germany's action was felt in other quarters than the silver market, and its results everywhere had the effect of increasing the depression of silver. In 1873 Denmark, Sweden, and Norway followed her in adopting the single gold standard. Holland followed in 1875.

In the United States, the influence of the bankers and capitalists had already caused the withdrawal of the greenbacks, the issue of interest-bearing bonds, the vote to pay both capital and interest in gold (altho in some cases it had not been promised to be paid in gold), and, besides all this, the gradual contraction of the currency; and thus, of course, the enhancement of the value of gold. (For the details, see CURRENCY.) Hitherto silver, since the beginning of the war at least, had played a small part in United States monetary affairs. During the war, and till about 1876, it was mainly a question of paper or gold. This led to unforeseen consequences. Silver—hitherto technically, altho not practically, a legal tender and standard of value—was, in 1873, technically demonetized.

**Silver
Demonetized,
1873**

(See CURRENCY.) A bill was introduced into Congress and passed Feb. 12, 1873, nominally to regulate details of coinage at the mint, but which, without mentioning the demonetization of silver, did practically accomplish this by not mentioning silver coins except for small change, and saying that no coins either of gold or silver should be coined except those therein set forth. It elicited at the time small attention. Few knew that it demonetized silver, and the most stalwart friends of silver voted for it. Silver was scarcely an issue.

But gradually, as the country saw the circulation contracting, and the opponents of contraction found that they could not obtain a paper currency, they turned to silver, and then discovered that it had been demonetized. The excitement was intense. Mr. Sherman and the few who knew what had been done were branded as traitors by the growing friends of silver. It was charged that demonetization had been carried by a conspiracy of a few Congressmen with the "gold kings" of Wall Street, to carry out "a world conspiracy" to demonetize silver and make gold the ruler of the world.

A monetary commission was appointed by Congress in 1876, which reported strongly in favor of silver, and led to the call of an international monetary conference at Paris in 1878, to secure the cooperation of the European powers in remonetizing silver. Meanwhile, the development of gold monometallism had gone on.

The Paris conference took no positive action toward silver remonetization. In the United States, however, the Bland Bill of 1878 did to an extent remonetize silver. It did not wholly, for, altho, as originally reported by Mr. Bland from the House Committee on Coinage, it did propose the full remonetization of silver by authorizing its unlimited coinage at the ratio of 1 to 16 on private account, the bill, as finally passed, restricted coinage to \$2,000,000 a month on government account. And the secretaries of our treasury, like the Bank of France, have been agreed in regarding their stock of gold alone as the reserve for the security of the notes they are obligated to redeem on presentation.

This was at length replaced in 1890, after almost annual attempts at a full free-coinage act, by a compromise measure, commonly known as the Sherman Act. This directed the treasurer to purchase silver bullion aggregating 4,500,000 ounces a month, or so much thereof as might be offered at market price, and to issue in payment for such purchases silver bullion treasury notes.

Meanwhile, on the Continent the gold monometalists had succeeded in permanently demonetizing silver. By an international agreement of the Latin Union in 1874, the coinage of silver had been limited; by an agreement of 1877 it ceased. The Paris conference of 1878 had been decided for gold.

We now come to the money crisis of the summer of 1893. The United States was left alone, of the great powers of the world, to deal with silver. Various events conspired to bring on this crisis. Losses on loans in the Argentine Republic compelled England to draw in her gold. Then came the failure of the Australian banks, demanding more gold from England.

Crisis of 1893

Austria-Hungary and Rumania decided to change to a gold standard. On the top of all this, the English Indian Government was induced (June 26, 1893) to stop the free coinage of silver. The crisis in America almost immediately followed. Silver dropt to the lowest point ever recorded. The day after the news from India, silver mines began to close in Colorado, and distress became intense. Meanwhile, some of the banks, not knowing what was coming, had begun a policy for which many of them dearly paid. It is claimed by silver extremists that the banks, or at least some bankers, planned, by reducing their circulation and by refusing credit, to create a slight pinch, to lay this to lack of confidence in the Sherman Act, and so compel Congress to repeal

the Sherman Act and thus put the whole world in the hands of the triumphant gold metalists, as all the great powers, except the United States, were already. However, the banks did not know what elements were uniting to cause, not a slight pinch, but the worst monetary crisis the country had known for at least twenty years. President Cleveland was induced to summon an extra session of Congress to meet the emergency. It became impossible even for perfectly solvent manufacturing concerns to get enough money to pay their wages. Every device was used for money. Clearing-house notes were issued in large quantities. Banks in unprecedented numbers failed, altho with abundant assets, because they could not get currency to meet the demand. The calling of Congress (Aug. 7th) strengthened confidence temporarily. Large amounts of gold were obtained from England, and a little easement made. On Aug. 11th Mr. Wilson, of West Virginia, introduced a bill in the House, repealing the silver-purchasing clause of the Sherman Act, but renewing the pledge to maintain the parity of gold and silver. This passed the House by a vote of 240 to 110. Then came a long contest in the Senate. After much discussion in committee and caucus, Senator Vorhees introduced a bill, repealing the purchasing clause, but more strongly pledging the maintenance of bimetalism. Finally, however, after months of talk, it passed the Senate, was accepted by the House, and approved by the president Nov. 1st. Such is a brief outline of the monetary history from which the bimetalist controversy cannot be separated, and without a knowledge of which it cannot be understood.

Since Nov., 1893, the bimetalist controversy has turned more upon fact than upon theory.

In this country, however, the bimetalists must not be confounded with those friends of silver who have fought for bimetalism, not from any theory or belief in bimetalism itself, but simply from a desire to expand or at least to prevent the contraction of the currency, and believing the use of silver to be the most available means to this end. By no means have all the supporters of silver in the Congressional battle been bimetalists. On the other hand, by no means have all the opponents of silver been monometalists. On the contrary, many of them believe in bimetalism, but have argued that the United States cannot afford to use depreciated silver when all the rest of the world is using gold. They have held that we must adopt the gold standard, and then work for an international agreement to use silver. It will be thus seen how complicated has been the condition of the bimetalic controversy in the United States. And this is but a brief statement of the subject. The intensity of feeling on the matter can only be realized when one reads the violent language of the friends of silver, classing the gold men with the most heinous traitors to the country, and threatening violence and war if silver be demonetized. This feeling can be understood only when one realizes what a contracting currency means, and how these men believe that the demonetization of silver is a deliberate plot to contract the currency. Says one writer:

**Bimetalists
and Free-
Silver Men
not the Same**

All business and productive enterprises are a speculation. The farmer borrows money expecting to sell wheat at a certain price and pay his debt in money. Meanwhile the price of wheat falls 50 per cent. Where one bushel would have

paid his debt when contracted, it now requires two bushels, and the burden of the debt has grown 100 per cent. During the past twenty years this is exactly what has occurred. Our universal, all-important standard of measure has doubled. Every debtor and producing nation except the United States is a bankrupt nation. They borrowed money for private and public enterprises when prices were high, and must pay interest and principal when prices are low. Australia, with its bountiful resources and immunity from war; Egypt, Italy, Portugal, and the Argentine Republic are acknowledged bankrupts. France, Spain, and other nations escape the acknowledgment only by falsely doctoring their books. The reason is, the burden of their debts has nearly doubled. The people of the United States have paid two thirds of their war debt since 1865; yet, measured in wheat, cotton, corn, and many manufactured articles, it will require to-day more of the products of their muscle and brain to pay the remaining one third than it required in 1865 to pay the entire debt. Only a land of fabulous resources can endure this fruitless slavery. When we consider that the private debts of the country are one half the value of the country, it is no wonder that panic, depression, idleness, and despair are upon us.

In following the monetary history of the bimetallic controversy we have already seen many of the arguments *pro* and *con*; but as that history is confused with other questions, we tabulate here the main arguments for bimetallism.

1. That there is not enough gold produced in the world to do the business of the world, and that, therefore, unless silver or some other metal be used, the sufferings must be experienced which all economists are agreed would result from a contracting or insufficient currency.

**Arguments
for
Bimetallism**

2. Bimetallists argue that even if this be not the case, on general principles two metals are not so apt to fluctuate as one, and that if one metal be driven out of circulation temporarily, the other metal will remain, fluctuating perhaps, but still fluctuating less than the vanished metal. Jevons has illustrated this as follows:

At any moment the standard of value is doubtless one metal or the other, and not both; yet the fact that there is an alternation tends to make each vary much less than it would otherwise do. It cannot prevent both metals from falling or rising in value compared with other commodities, but it can throw variations of supply and demand over a larger area, instead of leaving each metal to be affected merely by its own accidents. Imagine two reservoirs of water, each subject to independent variations of supply and demand. In the absence of any connecting pipe, the level of the water in each reservoir will be subject to its own fluctuations only. But if we open a connection, the water in both will assume a certain level, and the effects of any excessive supply or demand will be distributed over the whole area of both reservoirs. The mass of the metals gold and silver, circulating in western Europe in late years, is exactly represented by the water in these reservoirs, and the connecting pipe is the law of the seventh Germinal, An. xi. (1803), which enables one metal to take the place of the other as an unlimited legal tender.

3. Bimetallists claim that the depreciation of silver which has taken place has been due to unfavorable legislation, and that all the financial suffering which it has caused proves what need the world has of silver. If this goes on, they argue, nothing less than a most disastrous shock to the expansion of the world's commerce can be expected. And no remedy except the remonetization of silver has been suggested.

Contrary arguments come from two main sources: (1) From those who believe in a gold monometallism, and (2) from those who consider both monometallism and bimetallism to be faulty, and would meet the monetary need in other ways. The arguments brought by monometallists against bimetallism are very numerous and sometimes from such different standpoints that they seem contradictory, but may be summarized here. It is urged that, however we legislate, two metals cannot be a standard at the

**Arguments
against
Bimetallism**

same time, because at any given time, according to Gresham's law (see MONEY), the poorer metal will drive the better metal out. If then, it is said, we attempt to have a double standard, it really means to choose the poorer standard of the two, and thus to have all the evils of a depreciated and depreciating currency. It is urged that the fall of prices has not been due to the appreciation of gold, as bimetallists assert, but to the cheapening cost of production. Monometallists point to the danger of there being such an increased production of silver as to threaten great depreciation of its value; and therefore, if accepted as a standard, the great lessening of money values, involving general financial ruin. The only way to prevent this, they urge, is to maintain gold as the most fixed and universally accepted measure of value, and then to use various forms of credit to do the exchange of the world where gold is not sufficient, using silver, copper, etc., only for subsidiary coin. Already, they assert, credit performs 93 per cent of the exchanges of the world. (Bimetallists deny this, and say that monometallists consider too much the methods of the financiering class. They say that the vast millions of the earth's population do not use forms of credit; that retail stores use it little, farmers still less, and artisans and day laborers scarcely at all. For these credit is no relief, since they have no credit. Credit, moreover, gives out when it is most needed, and throws the world back on an insufficient amount of gold just when gold is most in demand.)

The argument against bimetallism by those who would have neither bimetallism nor monometallism is (1) that bimetallism has not worked and cannot work without international agreement, and that this is well-nigh impossible to get, it always being the interest of the capitalists of one nation to adopt a gold standard if they can only induce some other nation to adopt a silver standard; (2) that the great need in currency is of a fixed standard, which, to remain fixed in proportion to prices, must be elastic in volume, which is possible neither with gold nor silver; so that we require some better system than either monometallism or bimetallism. (See MONEY.)

On Continental Europe, the most distinguished bimetallists have been: Henri Cernuschi, Prof. A. Wagner, A. Schaeffle, E. de Laveleye, and Baron von Károff; in England: Profs. Marshall, Sidgwick, Nicholson, Foxwell, and Symes, and the Hon. G. J. Goschen; in the United States: Henry C. Carey, President F. A. Walker, Hon. William D. Kelley, Hon. John P. Jones, John B. Howe, W. F. Balch, and Eliza B. Andrews.

Of the present, the situation is so involved that it is hard to speak. The large majority of professorial economists in this country are bimetallists in theory, but believe that to be successful international agreement is necessary; and they feel that this is at present impossible of attainment. In May, 1895, a significant bimetallic conference was held in London, but for all this recent history, see CURRENCY. See also CONTRACTION AND EXPANSION OF CURRENCY.

REFERENCES: The literature on the subject is very extensive, to a great extent in articles and letters in periodicals. The arguments on the subject will be found stated in Jevons, *Investigations in Currency and Finance*, London, 1884; *Money and the Mechanism of Exchange*, 1875; *Report of Committee of House of Commons on Depreciation of Silver*, 1878; *Report of Commission on Trade and Industry*, 1886; and Appendix B to third Report, by R. Andrew, *The Bimetallic System of Currency*, in *Political Science Quarterly*, Sept., 1900.

BIOLOGY AND SOCIAL REFORM: The connection between biology and social reform is one which tends to be brought into greater prominence with the advance of knowledge. It is not long ago since the whole class of phenomena which human society presents was regarded apart in itself and as having little or no connection with those to be observed elsewhere in the history of life. The first consistent attempt on an extended scale to connect together through the principle of development and continuity both classes of phenomena was made by Mr. Herbert Spencer. "Social Statics," which in many respects may be regarded as the starting-point of the synthetic philosophy, dates back to 1850. One of the leading ideas in this system of philosophy—in which *First Principles*, *Principles of Biology*, *Principles of Psychology*, *Principles of Sociology*, and *Principles of Ethics* have been steps in an ascending series—has been to trace this principle of development up to and into human society. Toward the elucidation of the laws at work in this society, all the work of science in lower fields has been regarded as preliminary. It was, however, with the publication of Darwin's "Origin of Species" in November, 1859, that the greatest impetus was given to the study of human society from the biological standpoint. The full effect of this impetus is not yet felt in many departments of knowledge which are almost certainly destined to be eventually profoundly altered by it. For many years after the publication of this epoch-marking book the effect of the fructifying ideas which it contained was necessarily limited to a few departments of knowledge. Gradually, however, the circle of their influence has extended, until one after another of lower sciences, and particularly those connected with life, have been reconstructed and transformed. The principle of the continuity of development, structural and functional, is now well established; but in the long uphill battle which has had to be fought before the ideas connected with it obtained general acceptance, it has necessarily happened

Breadth
of the
Subject

that the sciences connected with man in society have been the last to be influenced. But that they are now beginning to feel the effect of the revolution is evident. What we are coming to see is that in human society we have only the last and most complex chapter in the history of life. The historian, the political philosopher, the economist, and the student of ethical phenomena are all dealing with just the same problems, altho in different form, that science has been concerned with at earlier stages, and even to a large extent throughout the history of life. It is in the proposed solutions to problems connected with the distribution of wealth that we have at the present day the dividing lines which separate most of the various political parties into

which our modern society is split up. It is with these problems, too, that the economist is largely concerned. Yet such problems in themselves constitute only an aspect of the highest and most complex phase of that struggle and rivalry of existence with which the biologist has already dealt on a lower plane. Some of the older economists, indeed, at times saw this more or less clearly. "Only through the principle of competition has political economy any pretension to the character of a science" was a dictum of John Stuart Mill. The point at which the social sciences tend to be most significantly influenced by biology may be indicated. What is becoming more clearly recognized is that, as biology would lead us to expect, the conditions affecting the distribution of wealth, which the evolutionary forces at work in human society are ever tending to develop, are not necessarily those that parties or classes desire for themselves, but rather those which are continually tending to produce the highest efficiency of the whole social organization. The old utilitarian ideal of the greatest happiness of the greatest number is not, therefore, always, or even often, the same as the ideal of the greatest utility. Thus in a sense the whole of the problem before modern socialism can be stated in biological terms: Is it a movement which is tending to produce the highest standard of social efficiency, or is it one the effect of which will be to produce the maximum of ease and comfort to the largest number of individuals? The lesson of biological science for society would appear to be that, so far as it produces the latter to the exclusion of the former, to that extent it must fail of ultimate success (but see EVOLUTION).

BENJAMIN KIDD.

BIRMINGHAM: City of Warwickshire, England; one of the chief industrial centers of England, and the leading hardware city of the world; population (1905) 542,959. It was an Anglo-Saxon town, and became an important industrial city even in the Middle Ages. Its great importance, however, dates from the seventeenth century, in the manufacture of swords and guns. As early as 1727 its hardware manufacturers are said to have employed 50,000 persons. By the end of the century it was known throughout the world. In the industrial revolution of the era of the eighteenth century it became a Liberal center, and in the nineteenth century a leader in reform and chartism. Evils, however, developed, and by 1873 Birmingham's municipal government was considered one of the worst in England.

In 1873 came a change. Mr. Joseph Chamberlain was elected mayor, and commenced an era of municipal activity. The sum of £2,000,000 was paid for the plant of two gas companies, a large price; yet the profits the first year were £34,000, and they have since doubled. The price, too, since 1875 has been reduced from 3s. to about 2s. per 1,000 feet. Since 1889 the employees have had the eight-hour day. In 1874 the city paid £1,350,000 for the existing water-works of a private company, and since then the works have been extended, the daily supply doubled, and the cost to consumers much reduced. In 1875 Mr. Chamberlain laid before the council an Improvement Scheme, which has since been adopted, and whereby the city took forty-five acres of the most crowded and most unwholesome portions of the city, covered by 1,368 houses, condemned the whole district, and has opened in its place the

finest public thoroughfare of the city, "Corporation Street," lined by fine business blocks. These buildings have not been sold, but leased for seventy-five years. The

Improvement Scheme gross outlay April, 1904, was £1,730,303, but the yearly cost is lessening and the rentals are growing. In fifty years from the time of the investment the debt will all have been paid, and the city will own these structures in clear title. Mr. Chamberlain believes that Birmingham will be the richest municipal corporation in the kingdom. The investment already pays, since the death-rate of this district has been lowered, from 60 to 20 or 25 per 1,000. The city has developed a fine sewerage system and a large sewage farm, a wholesome and agreeable tract of land under high cultivation and with rich crops. Birmingham was the first city in England to establish municipal baths. The first was opened in 1851, at a cost of £24,000, and there are now four, besides swimming-baths, Turkish baths, etc. The city has laid and owns several lines of tramway, within the city limits, but leases them to private companies on favorable terms. It is calculated that in twenty-one years this will pay for the whole investment. As the city can borrow at 3 per cent, it is a profitable investment. The companies have to pay all bills for maintenance and repairs, and are minutely supervised as to the furnishing and lighting of the cars. The city owns her own markets, having bought them of the manorial lord in 1824, and they now yield some £10,000 a year profits. The city owns more than ten parks, for its population of 500,000. Its debt, which before Mr. Chamberlain became mayor was small, is now some £15,000,000, but it has assets of £16,000,000, and the rates are almost exactly what they were in 1873.

by the council for six years. The city has a lord mayor who is elected annually by the council. Birmingham is now often spoken of as "the best governed city in the world."

BIRNEY, JAMES G: Abolitionist; Presidential candidate of the Liberty Party (1840 and 1844): born in Danville, Ky., 1792. Originally a slaveholder, and at one time agent for a colonization society, in 1834 he freed his slaves and established an abolition newspaper. Fear of violence compelled him to leave Danville, and subsequently Cincinnati whither he had moved. He came to New York, where he was Secretary of the American Anti-Slavery Society. In 1842 he moved to Michigan, and a fall from his horse disabled him from further political activity. He died in 1857.

BIRTH-RATES: In nearly every civilized country, the numbers of births and deaths are matters of careful record. Unfortunately, however, this is not true of the United States as a whole. The U. S. census calls "registration areas" districts where there are adequate official returns; and the only states whose records were accepted as accurate by the census of 1900 were Massachusetts, Connecticut, Rhode Island, and New Hampshire, in addition to certain counties and cities of New York and New Jersey. In Europe, however, registration has been in the main complete, beginning with England in 1838. The following tables, except where otherwise indicated, are taken from reports of the Registrar-General of England:

BIRTH-RATE PER 1,000 INHABITANTS¹

² *Statistisches Jahrbuch für das Deutsche Reich*, 1906.

In 1899 the electric plant was also municipalized. In 1896 a municipal technical school was erected at a cost of £100,000; it has some 3,000 pupils. The city has other schools, colleges, art school, galleries, etc. Queen's College is connected with the London University. The municipal government is conducted by fifty-four councilors and eighteen aldermen. The councilors are elected once for three years, one third going out of office each year. The aldermen are elected

This table and the following indicate a slowly but steadily decreasing birth-rate. The United States had a birth-rate of 31.5 in the census year of 1880, tho all census birth-rates are admittedly too low. For 1890 it was 26.63. The birth-rate for 1900 was 27.2. Few of the states publish records of births. The birth-rate for Connecticut averaged 23.6 for 1850-60; 22.7, 1861-70; 24.6, 1871-80; 23.0, 1881-90; 24.1, 1891-1900, and 22.4 for 1901-2. In Rhode Island, owing probably to immigration, the birth-rate has somewhat

risen. In 1870 it was 24.0; in 1880, 22.9; 1890, 24.7; 1900, 25.8. In Massachusetts it has fallen. It was 28.08 in 1851; 29.28, in 1860; 26.25, in 1870; 24.80, 1880; 25.81, 1890; 26.16, 1900, and 24.58, 1902.

¹ *Statistisches Jahrbuch für das Deutsche Reich*, 1906.

Concerning the cause of the decreasing birth-rate, the position of MALTHUS is well known. Tho attacked by GODWIN it became universally accepted. Herbert SPENCER agreed with Malthus, but held that the very fact that population tends to increase beyond the means of subsistence is the cause of human progress. He argues that the progress of civilization, produced by the never-ceasing pressure of population on the means of subsistence, leads to a diminishing birth-rate. More modern discussions of the subject have been led by Dr. George Hansen in Germany; M. Levasseur, M. Leroy-Beaulieu, and M. Dumont in France; Dr. George Blundell Longstaff and Dr. J. Milner Fothergill in England; Dr. John S. Billings, Dr. Cyrus M. Edson, and others in the United States.

Levasseur¹ argues that inequalities of production are the cause of changes in the increase of population. M. Dumont² argues that, tho on the surface the decrease of population is an economic question, at bottom it is intellectual, political, and esthetic; that as the desire to rise in the industrial, intellectual, political, or esthetic world increases, the birth-rate diminishes. Dr. Hansen,³ Dr. Longstaff⁴ and Dr. Fothergill⁵ show especially the evil influences of city life upon the population, both in weakening the vi-

talidity and in diminishing the birth-rate. Says J. L. Brownell (*Annals of the American Academy*, July, 1899):

The generalizations tentatively reached by all these inquirers are that civilization in general checks the rate of increase of population, in spite of a diminishing death-rate; that city life is, on the whole, unfavorable to the natural increase of population, and that what the economists call the "raising of the standard of life" operates in the same way.

It has been assumed that the changes in the marriage-rate and the marriage age will account in a great measure for the decreasing birth-rate; but another explanation is more than hinted at in the following quotation from Dr. John S. Billings:⁶

It is probable that the most important factor in the change is the deliberate and voluntary avoidance or prevention of child-bearing on the part of a steadily increasing number of married people, who not only prefer to have but few children, but who know how to obtain their wish.

M. Levasseur and M. Dumont hold the same opinion. Says the former:

"By prevision we understand the human will restraining or directing the reproductive instinct, with a view to bringing children into the world only at such times and in such numbers that the father can hope to support them and to educate them for a position equal to his own.

Voluntary Prevention
Prevision is the characteristic of the man who reflects, and who, conscious of his responsibilities, does not leave his destiny to chance. This virtue is the palladium of human liberty. The philosopher and the economist who believe in that liberty ought, if they are logical, to recommend such prevision, recognizing that if it is useful in the great mass of actions, it is nowhere more opportune than in the grave question of the growth of the family and the education of the child. . . . It is enough to lay down as a general rule that reason should control instinct." M. Dumont says: "The real cause of the decrease of our birth-rate is the wish to have few or no children, and that wish is determined by a combination of intellectual, moral, and esthetic tendencies peculiar to our people."

Dr. Cyrus M. Edson⁷ agrees with Dr. Billings that "the voluntary avoidance and prevention of child-bearing is steadily increasing," but thinks that the principal cause is the physical and nervous deterioration of the women of the United States; and this, he asserts, is largely due to the severe strain of modern life and education. In fact, any one who is at all familiar with the statistical and medical literature of the subject is aware that the voluntary prevention of conception is the explanation of the diminishing birth-rate that is generally accepted by physicians and statisticians.

Comparing the statistics of Europe for 1896 and the U. S. 1890, the countries with the highest birth-rates were Russia, Hungary, and Austria; and those with the lowest, France, Ireland, the U. S., and Sweden. Birth statistics are evidently affected by the extent to which prevention of births is practised in different countries, but generally speaking the more uncivilized the race, the higher the birth-rate. In India the birth-rate is said to be 48. In the U. S. in 1890, it was 26.35 for whites, 29.07 for colored, and 38.29 for whites with both parents foreign.

A large excess of the birth-rate over the death-rate, such as exists in England and in Germany, constitutes an undoubted element of national strength. In France the excess of births over

⁷ Cyrus M. Edson, *American Life and Physical Deterioration* (*North American Review*, October, 1893).

deaths has been constantly diminishing, until in 1890 there was an excess of deaths over births. This condition is viewed with alarm by intelligent French writers, and is termed by M. Cheysson a "national peril." He states as among the causes of the low birth-rate of France, "the growth of large towns, debauchery, overcrowding in manufacturing centers, the French law of inheritance, and the 'moral restraint' of Malthus, practised not by the poorer class, who are prolific, but by the well-to-do classes, who are systematically sterile."

Birth-rates also undoubtedly vary with economic conditions. Von Meyr showed that births in Bavaria from 1835 to 1860 rose and fell diversely with the price of rye.

BIRTHS PER 1,000 WOMEN OF VARIOUS CLASSES, 15-50 YEARS OF AGE¹

Mrs. L. K. Commander, in her recent book, "The American Idea" (1907), has collected a large amount of testimony in regard to the situation in the U. S., and thus sums it up:

- (1) The size of the American family has diminished.
- (2) The decline is greatest among the rich and educated, but also exists to a marked extent among the middle class and the intelligent poor.
- (3) Only the most ignorant and irresponsible make no effort to limit the number of their children.
- (4) Not only has the large family disappeared, but it is no longer desired.
- (5) The prevailing American ideal, among rich and poor, educated and uneducated, women and men, is two children.
- (6) Childlessness is no longer considered a disgrace, or even a misfortune, but is frequently desired and voluntarily sought.
- (7) Opposition to large families is so strong an American tendency that our immigrants are speedily influenced by it.
- (8) The large family is not only individually, but socially, disapproved, the parents of numerous children meeting public censure.

She says that of thirty-eight physicians in New York City replying to questions, thirty said "two children" was the ideal American family; six said "one child"; one said, "having a family is not an American ideal." President Eliot of Harvard University finds that of six classes more than twenty-five years out of college, the number of children surviving born to members of those classes averaged almost exactly two to a family; while twenty-eight per cent are unmarried. Professor Thorndike of Columbia University found that of the women college graduates of Vassar, Smith, and Wellesley, from 1880-84, 55 per cent were married (up to 1903), while of graduates from 1898 to 1899, only 5.5 per cent were married (up to 1903). He says that 45 per cent of all women college graduates marry, while of the general female population who reach the age of forty, 90 per cent marry (*Popular Science Monthly*, May, 1903).

The organ of the New York Church Federation (*Federation*) says that religious belief strongly affects the birth-rate. "The maximum (fam-

ily in New York) is Hebrew; the minimum agnostic. The Roman Catholic average is higher than the Protestant; the positively Protestant than the indefinitely Protestant; the indefinitely Protestant than the definitely agnostic."

BISMARCK, OTO EDUARD LEOPOLD, PRINCE VON: First chancellor of the German Empire; born at Schönhausen, Prussian Saxony, 1815; studied law at Göttingen; Berlin, and Greifswald; elected to the Prussian Landtag (1847), as an ultra-royalist. In 1851 he was chosen a member of the Germanic Diet at Frankfurt and continued as such till 1859, acquiring fame as an opponent of revolution, and as an advocate of a German empire under the lead of Prussia. In 1859 he was sent as minister to Prussia, and in 1862 to Paris. The same year, however, he was recalled to take the Prussian portfolio of foreign affairs. He closed the chambers, and for four years governed without them. Bismarck used the Sleswick-Holstein controversy, the defeat of Austria by Prussia at Königgrätz (Sadowa), and above all the Franco-Prussian War, which he is believed by many largely to have caused, to build up a feeling of national unity in Germany, with Prussia in the lead. King William was crowned emperor over a united Germany at Versailles on Jan. 17, 1871, and Bismarck was made a prince and a chancellor of the empire. He compelled France to cede Alsace-Lorraine and to pay an indemnity of \$1,000,000,000, and then sought to develop the empire by a foreign policy of alliances against France, by building up a strong army and navy, by a high protective tariff, and by developing state monopoly. He thus became opposed both by the Liberals and by the Ultramontanes. In 1872 he expelled the Jesuits and began the so-called "kulturkampf" or contest with Rome. Against the growing power of the Socialists, he enacted strict repressive laws, at the same time fostering the paternal socialism which has had such large development in Germany.

From 1879 at least Bismarck was considered almost the leading spirit of paternal State socialism. This, however, was not to adopt a new policy in Prussia, but simply to carry out, or, rather, revert to the traditional policy of the Hohenzollerns. (See GERMANY.) It was the proud boast of Frederick the Great that he was *le roi des guerres*. Of all the governments of the seventeenth century the Prussian was the first to seek the welfare of the whole community. The Prussian *landrecht* recognizes the State as the protector of the poorer classes, and one of its duties to supply sustenance and work for those lacking means and opportunity of earning a livelihood. It was upon these clauses that Bismarck relied when, on May 7, 1884, he declared to the Reichstag his recognition of the laborer's right to work. His drastic law against socialist meetings and writings dates from 1878. In that year two attempts on the life of the emperor enabled Bismarck to carry through a drastic bill of repression which was rigidly enforced until its failure to be renewed upon its expiration by limitation of time.

Bismarck's State socialism thus seems to have come from mixed motives—partly to take the ground from under the real Socialists, partly, perhaps, from religious motives, mainly to serve and aggrandize the house with which he was so long identified. The religious flavor is not lacking. As early as 1847 he spoke and voted in the United Diet for a State loan to a private railway enterprise, and from that time forward, whether as private deputy or as minister, he never failed, when opportunity occurred, to promote the close connection

¹ Presented by Dr. J. Bertillon, International Statistical Institute, St. Petersburg, 1897.

of the State and the railways, always keeping in view the ultimate end of a thoroughly rationalized system of railway communication. This he finally accomplished (See RAILROADS.) He also established State monopolies in brandy and tobacco. When it was objected in the Reichstag in 1882 that his monopoly projects savored of socialism, he did not deny the imputation, but welcomed it, observing: "Many measures which we have adopted to the great blessing of the country are socialistic, and the State will have to accustom itself to a little more socialism yet. We must meet our needs in the domain of socialism by reformatory measures if we would display the wisdom shown in Prussia by the Stein-Hardenberg legislation respecting the emancipation of the peasantry. That was socialism, to take land from one person and give it to another—a much stronger form of socialism than a monopoly. But I am glad that this socialism was adopted, for we have as a consequence secured a free and very well-to-do peasantry, and I hope that we shall in time do something of the sort for the laboring classes."

Bismarck's return to the principles of protectionism, which movement he commenced in 1877, he also made largely for reasons of State socialism. In 1890, due to a divergence of view with the young emperor, Bismarck resigned his chancellorship and retired to his estates, tho still retaining some influence in the empire and in all Europe. He died in 1898.

BLACK, JAMES: The first candidate of the Prohibition Party for President of the United States; born in Lewisburg, Pa., 1823. Removing with his parents to Lancaster, Pa., in 1836, he worked in a sawmill, until in 1841 he entered the Lewisburg Academy. In 1844 he began the study of law, and in 1846 was admitted to practise at the bar in Lancaster, where he resided all his life. In 1840 he joined the Washingtonians, the first temperance organization in his neighborhood. It was largely due to Mr. Black's personal efforts that the Maine law movement became popular in Lancaster County and resulted, in 1855, in the election of two of the five temperance legislative candidates. He was a Republican in politics until the formation, in 1869, of the National Prohibition Party. At the convention of that party in 1872 Mr. Black was nominated as its candidate for President of the United States, and received 5,608 votes. For the four years from 1876-80 he was Chairman of the National Committee of the Prohibition Party. He was one of the founders of the National Temperance Society and Publication House. Black was the author of: "Is there a Necessity for a Prohibition Party?" (1875); "Brief History of Prohibition" (1880); and "History of the Prohibition Party" (1885). He died in 1893.

BLACK DEATH, THE: The pestilence, or series of pestilences, known by this name took place in the middle of the fourteenth century, and was a partial, if not the chief cause, of vast economic changes in England. So far as can be ascertained, the disease first manifested itself in central China in 1333, and thence spread in a westward direction toward Europe, where its force was first felt in the southern countries.

It appeared first in Italy, then crossed western Europe, and arrived at the English ports of Bristol and Southampton in the summer of 1348. Whole districts were depopulated by its frightful ravages, and altho the old chroniclers give grossly exaggerated estimates of the number of deaths, it is probable that it carried off at least one third of the population. The scenes of horror and desolation which it caused beggar all attempts at description.

One immediate result of the plague was a great scarcity in the number of available laborers, because, while all classes had suffered heavily, the poorest had yielded most rapidly to the dire disease. This scarcity of labor meant, of course, higher wages for the laborer. In the case of agricultural workers, this rise amounted to about 50 per cent, while in the case of skilled artisans, such as carpenters and masons, the same effect was felt, often more markedly. The nobles and landlords objected, and, without waiting to call Parliament together, the king issued a proclamation ordering all men to abide by the rates which had been customary before the Black Death, and neither to demand nor pay higher wages. He also forbade laborers to leave the land to which they were attached, and assigned heavy penalties for so doing. Parliament met in 1349 and made haste to ratify this proclamation by reducing it to the form of a statute—the famous "Statute of Laborers"; but such legislative measures were hopeless against the demand for workers, and the very men who passed these laws were obliged to break them to prevent their land from remaining untilled. The peasants went freely into those districts where workers were most scarce, and found ready shelter and good wages. Complaints were constantly made to Parliament, and the "Statute of Laborers" was again and again enacted with added penalties, but to no purpose.

In spite of the great rise in the price of labor the price of the laborer's food did not rise in proportion. Food did not require much manual labor in its production, and hence the rate of wages was not much felt in its price. What did rise was the price of all articles which required much labor in their production. The landlords were obliged to let their estates to tenants who worked them on their own account, paying rent to the lord, instead of, as formerly, compelling villeins to work them for the master's profit. Thus serfdom practically came to an end. The gain was not all on one side, however, as the peasants began at this time to lose those rights in the "commons" and forests which until then they had enjoyed.

Another of the important effects of the Black Death was the spirit of independence which it helped to raise in the breasts of the peasants, who now began to feel their power. The new spirit led to the preaching of John BALL, the PEASANTS' REVOLT, and the Golden Age of "Merrie England." The revolt was put down, but the victory really lay with the vanquished; and from this time serfdom practically disappears from English history, and wages remain high till the robbery of the land by the landlords in the sixteenth century.

BLACK LIST: A list published or prepared by any body of men of the names of those whom they consider faulty in any way. The term is specifically used of official lists of insolvents and defaulters. In industrial discussions it is used of lists of employees who for one reason or another—perhaps because of having led in labor agitation—employers will not employ. It is used also of lists of firms which are believed to treat their employees unfairly, and which, therefore, the preparers of the black list believe should not be patronized by the friends of fair treat-

ment. (See **BOYCOTTING**; also **WHITE LIST**.) The blacklisting or asserted blacklisting by employers of their employees who have been active in the cause of labor has been a fruitful source of complaint on the part of labor organizations. Says John Mitchell:

Labor leaders and men interested in the labor movement have always been a shining mark for the black list. Many a man has been hounded from position to position, driven as by an invisible wind from one part of the country to another, ceaselessly wandering, ceaselessly asking for positions, doomed inevitably, after the shortest term of service, to be dismissed upon some trumped-up charge. There is nothing so terrible as this weapon of associated employers. Many a man has been driven to change his name and even to alter his appearance in the vain hope of escaping from the omnipresent and omnipotent black list ("Organized Labor," p. 291).

The black-list evil is somewhat diminished, as legislation in England and in many states of the United States has forbidden blacklisting, at least in some of its worst forms, and as a growing sense of justice has to some extent defended the laborer and even the labor agitator; and, above all, as the practise of collective bargaining between organized labor and organized capital has replaced the personal bargain. Nevertheless, blacklisting still exists. It was testified in black-list cases at Chicago that fully half the men who went out in the great railroad strike of 1894 failed to get railway employment again. In the recent Colorado troubles, the black list was widely used. It is easy for employers to avoid the law and, by minute systematic inquiries as to former places of employment and reasons for disgrace, practise a very complete blacklisting. Some employers are even said, in letters of recommendation to discharged employees, to put secret marks showing that they are blacklisted; yet the case is difficult, because employers must of necessity know the references and character of those they employ, especially when the question is of places involving responsibility, or perhaps of safety to life and limb.

In the U. S. blacklisting is prohibited in Alabama, Arkansas, Colorado, Connecticut, Florida, Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Montana, Nevada, North Dakota, Oklahoma, Oregon, Texas, Utah, Virginia, Washington, and Wisconsin. In the case of common carriers engaged in interstate commerce, the federal law on the arbitration of labor disputes makes it a misdemeanor for an employer to attempt or conspire to prevent an employee from obtaining employment after quitting his service. But the laws have many exceptions and are difficult to enforce. Judge Rogers, in the U. S. Circuit Court, August, 1903, refused an injunction against blacklisting, and held that an employer may give to another employer lists of his discharged men with the reasons for their discharge, provided it be honestly done.

BLACKWELL, ALICE STONE: Writer; woman suffragist; born in Orange, N. J., 1857; daughter of Lucy Stone and Henry B. Blackwell. She graduated from Boston University in 1881, and since then has been on the staff of the *Woman's Journal* of Boston, Mass. She has been a prolific writer on woman's suffrage. Address: 3 Park Street, Boston, Mass.

BLACKWELL, ELIZABETH: First woman to receive a medical diploma; born in Bristol, England, 1821. Her father emigrated to New York, and from there to Cincinnati in 1838, where he died, leaving a widow and nine children. The father had left but little money, and Miss Blackwell therefore opened a boarding-school. She was only eighteen years of age, but her school succeeded. In 1844 Miss Blackwell, whose energetic spirit had long been restless under the limitations which society imposed upon women, determined to enter the medical profession. For three years she taught in another school, in order to obtain means for a medical course, and then applied for admittance into the Philadelphia medical schools. She was everywhere refused. After a course of private lessons under medical professors, she finally obtained admission to the University of Geneva, N. Y., where she remained for two years, graduating with the highest honors. Her propriety and discretion won for her the esteem of students and professors alike. After graduation she visited England and France, and studied for some time longer. In 1851 she returned to New York and began the practise of medicine. At first other physicians refused to consult with her; but she overcame all obstacles and secured a large practise. In 1854, with her sister, Dr. Emily Blackwell, she established the New York Infirmary for Women and Children. In 1869 she went to London, where she established the National Health Society, and aided in organizing the London School of Medicine for Women. In 1878 she settled in Hastings, England, working and writing on social purity, municipal reform, the health and education of women, and other social matters. Address: Rock House, Hastings, England.

BLACKWELL, EMILY: Physician; philanthropist; born in Bristol, England, 1826; sister to Elizabeth Blackwell; came to the United States in 1832. She commenced studying medicine in 1848, but was refused admission to the medical colleges, and only allowed to attend lectures for a period in two others, till finally she was admitted to the medical college in Cleveland, O. Graduating triumphantly, she studied in hospitals and attended clinics in Edinburgh, Paris, and London. She returned to New York in 1854, and in connection with Dr. M. E. Zakrzewska (a Polish lady), established a hospital which in 1865 was given college powers. A woman's college, it has been and still is a marked success. Dr. Blackwell was one of the vice-presidents of the Society for the Promotion of Social Purity, and is the author of many tracts upon this and similar subjects. (See **SOCIAL PURITY**.) Address: Montclair, N. J.

BLAKE, LILLIE DEVEREUX: Writer; lecturer; woman suffragist; born in Raleigh, N. C., 1835. Her father dying in 1837, his widow removed to New Haven, and Miss Devereux was educated there by private tutors. In 1855 she married Frank G. Q. Umsted, a young lawyer, and resided in St. Louis and New York City, till she was left a widow with two children in 1859. She had already written stories, and published a successful novel, "Southwold." She now entered literature as a profession, residing in Stratford, Conn., New York City, and Washington. In 1866 she married Mr. Grenfill Blake, a young New York merchant, and made her home in that city.

In 1869 she became interested in the woman's-suffrage movement, and wrote and lectured continually. From 1879 to 1890 she was president of the New York State Woman's Suffrage Association. She has been active in the agitation for police matrons and for laws for the benefit of saleswomen, etc. She has written a volume of lectures entitled, "Woman's Place To-day." Address: 100 Lexington Ave., N. Y.

BLANC, JEAN JOSEPH LOUIS: Writer; communist; born in Madrid, 1811. In 1830 he went to Paris and became clerk in an attorney's office. Two years later he went to Arras to act as tutor. Returning to Paris, he founded, in 1839, the *Revue du Progrès Politique, Social et Littéraire*. In this he brought out his work "L'Organisation du Travail," which may be called a French forerunner of Karl Marx's "Das Kapital." In 1841 he published his "Histoire de dix Ans," which was an overwhelming indictment of Louis Philippe and his ministers, and in 1847 the first two volumes of his "Histoire de la Révolution Française" appeared. The revolution which broke out early in the next year compelled him to delay the completion of this work. His popularity among the Parisian workmen secured him a seat in the Provisional Government, where he brought forward the proposals for universal suffrage and the abolition of slavery. He was also appointed president of a government commission for laborers. In March a procession of 200,000 workmen, headed by Blanqui, offered him the dictatorship, which he refused. The Provisional Government established the ATELIERS NATIONAUX which he had advocated, but they were started on such unsound principles that Louis Blanc opposed them and demanded their abolition. He even charged the government with plotting their failure. In June and again in August, 1848, he was accused in the Assembly of complicity in the Communist outbreak of May. Being condemned by a large majority he fled to England, where he stayed in exile for more than twenty years, finishing his "Histoire de la Révolution Française" and writing his "Histoire de la Révolution de 1848" and other works. In 1870 he returned to Paris and urged the citizens to prosecute the war to the uttermost. Till the time of his death he was elected deputy for Paris, always voting with the extreme Left. He died in 1882.

BLAND, HUBERT: Author; Socialist; born at Woolwich, England, 1856; educated for the army, but on the death of his father took to finance, and at the age of twenty-three was manager of a foreign bank in London. In 1886 he entered journalism chiefly as a critic in art and literature. He was one of the founders of the Fabian Society, has been its treasurer from the beginning, and is the only member who has been continuously on its executive committee. Mr. Bland is a regular contributor to *The London Chronicle* (daily and Sunday), and occasionally to *The National Observer* and *The Saturday Review*. In collaboration with Adeline Serjeant, he has written "A Modern Friendship." Mrs. Bland (E. Nesbit), the well-known novelist and poet, cooperates with her husband in much social reform work. Address: Well Hall, Eltham, Kent, England.

BLANQUI, JÉRÔME ADOLPHE: Professor of political economy; born 1798; brother of Louis

Auguste Blanqui. From 1830 to his death he was the head of the École de Commerce of Paris, and in 1833 replaced J. B. Say as professor of political (and especially of industrial) economy at the Conservatoire des Arts et Métiers. In 1838 he was elected a member of the Académie des Sciences Morales et Politiques, and represented the department of the Gironde in the Chamber of Deputies. His teaching in political economy was liberal and progressive. By no means a Socialist, he yet favored many socialistic principles. The brilliancy and vigor of his language is another characteristic which has aided him much. The most important of his works are: "Résumé de l'Histoire du Commerce et de l'Industrie"; "Précis Élémentaire d'Économie Politique"; and "Histoire de l'Économie Politique en Europe, Depuis les Anciens jusqu'à nos Jours, Suivie d'une Bibliographie Raisonnée des Principaux Ouvrages d'Économie Politique." This last work has been translated into several languages. Tho not of the greatest merit, it has done important pioneer work. Blanqui died in 1854.

BLANQUI, LOUIS AUGUSTE: Communist; Socialist; born at Puget Théniers, 1805; came to Paris in 1824 and became a teacher and student of law and medicine. On the breaking out of an insurrection in 1827 he joined the cause of the people, thenceforth taking his part in every Paris insurrection. He edited *Le Journal de la Société des Amis du Peuple*, and for this was imprisoned. Implicated in various conspiracies, he was, in 1836, sentenced to two years' imprisonment, but was pardoned in 1837. In 1839 Blanqui organized another insurrection, which was quickly put down, and he was condemned to death, but the sentence was changed to imprisonment for life. Confined at Mont Saint Michel, and at Tours, he was freed by the February Revolution of 1848. By Feb. 25th he was in Paris organizing the Central Republican Committee. On May 15th he was captured and imprisoned for ten years at Belle Isle and in Corsica. Amnestied in 1859, he was, in 1861, accused of conspiracy and imprisoned four years. When the republic was proclaimed (September, 1870) he went to Paris and advocated the principles of the extreme Left, publishing his "La Patrie en Danger." After the Commune he was arrested by Thiers, and (1872) condemned to deportation; but on account of ill health was held in Quélern and Clairvaux, until he was pardoned by Grévy, June 9, 1879. He was elected deputy in Bordeaux in 1879, but was declared ineligible. A mystic, a revolutionist, an autocrat, Blanqui was no mean thinker, and a convinced communist. Author: "L'Éternité dans les Astres"; "L'Armée Esclave et Opprimée"; "Critique Sociale," etc. He died in 1881.

BLATCHFORD, ROBERT P.: Author; Socialist; born at Maidstone, England, 1851; apprenticed to a trade in Halifax, 1864, serving seven years. In 1871 he joined the army and served till 1877. Obtaining work as timekeeper and clerk at 30 shillings a week, he married in 1880. He began writing soon after, contributing to *The Yorkshireman* and *Toby*. In 1885 he removed to London to join the staff of *Bell's Life*, and wrote for *The Sunday Chronicle* at its start in August, 1885, under the nom de plume of "Nunquam." He soon declared himself a Socialist, and in 1891, refusing to restrain his pen, he left *The Sunday*

Chronicle, and soon after issued the first number of *The Clarion*, in whose pages his history has since been written. In 1891 he was named as parliamentary candidate for East Bradford, but soon withdrew, having no taste for politics. He originated the "Fourth Clause," which practically laid the foundation of the Independent Labor Party. It reads, at present, substantially as follows: "That all members of the I. L. P. pledge themselves to abstain from voting for any candidate for election to any representative body who is in any way a nominee of the Liberal, Liberal Unionist, Irish Nationalist, or Conservative parties." His "Merrie England," a series of letters on socialism, which first appeared in *The Clarion*, is now sold complete for a penny, and has reached a sale of well over a million copies. Address: Clarion Office, 72 Fleet Street, E. C., London, England.

BLIND, KARL: Revolutionist; born at Mannheim, Germany, 1826. While a student in Heidelberg and Bonn, he began to organize revolutionary societies. In 1847 he underwent a short imprisonment for a tract, "German Hunger and German Princes." In the revolutions of 1848 he played a prominent part at Carlsruhe and Frankfurt. He escaped to Alsace, but took part continually in revolutionary uprisings till he was compelled to flee both from Germany and France. He took up his residence in England, and wrote much on literary and political subjects. His views favored national as opposed to international socialism, and socialism as opposed to anarchism. He was a firm and strong supporter in 1870 of the movement for German unity.

BLIND ASYLUMS: See DEAF AND BLIND.

BLISS, WILLIAM DWIGHT PORTER: Born in Constantinople, Turkey, 1856; son of an American missionary; studied in Robert College, Constantinople; Phillips Academy; Amherst College; and Hartford Theological Seminary. He was settled over Congregational churches in Denver, Col., and at South Natick, Mass. In 1885 he became interested in socialism through seeing the workmen in factory villages and reading Henry George and the *Christian Union*. In 1886 he entered the Episcopal Church, and took a charge at Lee, Mass. Here he joined the Knights of Labor; was Master Workman of the Assembly at Lee, and in 1887 sent to Cincinnati as delegate from the Knights of Labor, being one of the secretaries of the Union Labor Convention. The same year he helped start, with Father Huntington, the Church Association for the Advancement of the Interests of Labor (Cail). In 1888 he took charge of Grace Church, South Boston. He was nominated for Lieutenant-Governor of Massachusetts by the Labor Party, but declined. He was one of the founders of the first Nationalist club in Boston in 1889, and soon after, with other clergymen, organized the SOCIETY OF CHRISTIAN SOCIALISTS. He started *The Dawn* and published it until 1896. In 1890 he established the Christian Socialist (Protestant Episcopal) Church of the Carpenter, which was kept up till 1896. Mr. Bliss also lectured or preached for the CHRISTIAN SOCIAL UNION, presenting the cause of Christian Socialism in almost every state of the Union, and lecturing also in Canada and England. He has had parishes at Alhambra, Cal., 1898-99, and at Amityville, L. I., N. Y., 1902-6. President of

the National Social Reform Union (1899), Secretary of the New York Civic Council (1900). In 1906 he helped organize The Garden Cities Association of America and became its secretary. His views are those of Christian socialism. Author: "Handbook of Socialism" (1895), and numerous tracts and magazine articles on Christian socialism. Editor of "Social Science Series"; "Encyclopedia of Social Reform" (1898 and 1907); and with Dr. Josiah Strong, of "Social Progress." Address: 1 Madison ave., New York.

BLOCH, JEAN DE: Polish writer on peace; born at Radom, 1836, of Jewish parentage. He became government administrator of railways; was active in promoting various Polish industrial movements; and was the head of large lumber and sugar interests, but constantly engaged in philanthropic efforts for the poor. To the world he became known largely by his magazine articles in behalf of universal peace, and by his great work in seven volumes, published in St. Petersburg, 1887, and translated in abridged form into English, first under a fuller title, but in 1890 under the name "Is War Now Impossible?" He died in 1902.

BLOCK, MAURICE: Economist; statistician; born at Berlin, 1816; studied in Paris and in Germany. He was naturalized in France, and in 1843 entered the Bureau of Statistics, where he had charge of the Department of Labor. In 1862 he resigned in order to put to use the knowledge he had gained. He received several scholastic honors, was a Fellow of the Superior Council of Statistics, and was often intrusted with missions for scientific purposes. His "Le Progrès de la Science Economique depuis Adam Smith," Professor Seligman calls "a work which in some respects compares with the best production of recent times in any country." He is best known, however, by his "Traité Théorique et Pratique de Statistique" and his various statistical writings for the French Government, and in his valuable "Annales de l'économie Politique et de la Statistique."

BLOOMER, AMELIA: Temperance advocate; woman suffragist; born in Homer, N. Y., 1818; married (1840) D. C. Bloomer, of Seneca Falls, where she resided till 1855. At first she worked for temperance, later for woman's suffrage. In 1849, after the first Woman's Rights Convention, she commenced the publication of *The Lily*, the first paper ever owned, edited, and controlled by a woman in the interests of women. In 1852 she advocated the use by women of that style of dress which since then has been called by her name. She herself wore it for six years. Selling her paper in 1855 she went to reside in Council Bluffs, Iowa. In 1852 she had begun to lecture; this she kept up until prevented by continued ill health. She died in 1895.

BLUE RIBBON MOVEMENTS: A distinguishing feature of many of the movements for the reformation of drinking men has been the bit of ribbon, generally blue or red, worn by the reformed men and others interested. The red ribbon was adopted by Dr. Henry A. Reynolds, 1874, as the badge of the Bangor (Me.) Reform Club. Throughout the remarkable pledge-signing campaigns that followed in Massachusetts, Connecticut, New Hampshire, Rhode Island,

Michigan, Illinois, and other states, Dr. Reynolds made the red ribbon the sign of membership in the clubs he started, and they came to be known as Red Ribbon Reform Clubs. The white ribbon was adopted by Dr. Reynolds in connection with the red, the former to be worn by women and by young men under eighteen. The blue ribbon was adopted by Francis Murphy.

The idea was borrowed in England. In 1878 a conference of temperance workers was held in London, and a total abstinence campaign was determined on. The blue ribbon was chosen, and the "Blue Ribbon Army" was adopted as the name of the organization. Pledge cards were issued and scattered throughout the British Empire, and have found their way into various countries of Europe and into Africa and the Sandwich Islands. More than 1,000,000 pledges have been officially issued in addition to the pledges issued by independent workers cooperating with the movement. A change in the name from "Blue Ribbon Army" to "Blue Ribbon Gospel Temperance Movement" has been made, and several branch organizations, such as the "Help-Myself Society" among men and the "Help-One-Another Society" among women, have grown out of the original movement.

BLUNTSCHLI, JOHANN KASPAR: Jurist; born in Switzerland, 1808; graduated at Bonn, 1829; was professor in the University of Zurich, a member of the Grand Council of the Local Government, and strongly opposed the civil war of 1847-48. In 1848 he became professor of German and international law at Munich, and in 1861 professor of political science at Heidelberg. In 1864, with Baumgarten and others, he founded the Protestant Union, and subsequently presided over several Protestant conventions, and over the General Synod at Baden in 1867. He was in favor of a union between South and North Germany, and was elected to the Customs Parliament. Bluntschli is the author of many valuable works on politics, laws, and the sciences; his best-known book in the United States being his "Theory of the State" (translated from the sixth German edition by R. Lodge).

BODELSCHWINGH, FRIEDRICH, VON: German pastor and head of Bethel, the very successful industrial colony for epileptics at Bielefeld, Westphalia, Germany; born near Tecklenburg, Westphalia, 1831; son of a Prussian cabinet minister; educated at Basel, Erlangen, and Berlin. Interested before his university studies in agriculture and mining, he became a pastor, officiating at the German community in Paris (1858-64), and later at Dellwig near Unna. In 1866, and again in 1870-71, he served as a division chaplain in the army. In 1872 he was asked to take charge of the BETHEL colony, to which he has since devoted his life, and which he has built up in many directions into a marvelous success. Address: Bethel, Bielefeld, Westphalia, Germany.

BÖHM, von BAWERK, EUGEN: Economist; born at Brünn, Moravia, 1851. He entered the Austrian Ministry of Finance in 1872, where he remained until 1880. In the meantime he had received the degree of LL.D. from Vienna, and had improved his two years' leave of absence in prosecuting his sociological studies at Heidelberg, Leipsic, and Jena, under Knies, Roscher, and

Hildebrand. In 1880, immediately after his installation as privat-docent at Vienna, he was called to Innsbruck. In 1889 he accepted a counselor's seat in the Austrian Ministry of Finance. The best known of the important school of Austrian political economists, his main work is his "Kapital und Kapitalzins" (1884), a critical review of all theories of capital, translated into English by W. Smart (1890), under the title "Capital and Interest" (1889), giving his positive theory of capital, and also translated by Smart as "The Positive Theory of Capital" (1891).

BOILEAU (or BOYLEAU), ÉTIENNE: Born about 1200. He joined the Crusades under Louis IX. (St. Louis), was captured, and ransomed by that monarch at a high price. At one time provost of Orleans, he subsequently became (1258-1270) Provost of Paris. Boileau, a man of noble birth and incorruptible character, suppress venality, meted out justice, established the police of Paris, and hanged his godson for theft, and a friend for dishonesty. St. Louis, as a mark of confidence and approval, sometimes sat beside him at the Châtelet, where he administered justice. The great work of Boileau was his compilation, about 1268, of the "Livres des Métiers," a code of the regulations affecting the various industries of Paris. The exordium states the intention of the compiler to treat of (1) the trades of Paris, their ordinances and the breaches thereof, with the appropriate fines; (2) fees, tolls, taxes, and dues; (3) justice and jurisdictions in Paris and the neighborhood. The third part either was not written or has been lost. The registries so formed constitute a highly valuable record of the condition of industrial society at the time—its trade privileges, masters, apprentices, their number, conduct, terms of service, holidays, quality of work and of goods, prices, middlemen, fines, dues, etc. This compilation has been regarded as a landmark in the history of economics.

REFERENCE: Article in Palgrave's *Dictionary of Political Economy*.

BOISSEL, FRANÇOIS: Born at Joyeux, Vivarais, 1728. Educated by the Jesuits, he became in 1753 parliamentary attorney in Paris, but soon removed to St. Domingo. A contest with the government over his profession brought him back to Paris and kept him there twenty years. On the breaking out of the Revolution he took an extreme Jacobin position. He is best known for his "Catéchisme du genre Humaine" (1789), in which appear many of the germs of later French socialistic thought. His first writing was "Discours contre les Servitudes Publiques" (1786). He died in 1807.

BOOT AND SHOE WORKERS' UNION, THE: Organized under this name in 1889, and affiliated with the American Federation of Labor. The first great organization of the boot- and shoe-workers was the KNIGHTS OF ST. CRISPIN, formed 1867. The Lasters' Protective Union, formed 1879, did not join the Boot and Shoe Workers' Union until 1895. The shoe-workers were among the first to join the KNIGHTS OF LABOR, and in the flourishing period of that order (1886) about half its members in New England were shoemakers. The Boot and Shoe Workers' Union had at its start a strenuous conflict between the advocates of high and low duties, won by the latter, which made the union stronger numerically than finan-

cially. Its dues were only ten cents a week, with no benefits. In 1899, however, the union was reorganized on a high-due basis (twenty-five cents a week), and one third of all its moneys was to go to a sick and death benefit fund. In 1895 a union label was adopted which has had considerable success. (See UNION LABELS.) Its organ is *The Union Boot and Shoe Worker*, published monthly. Reported membership (1905), 32,000.

REFERENCE: *Report of the United States Industrial Commission*, vol. xvii. (1901), pp. 51-60.

BOOTH, BALLINGTON: With his wife founder and head of the Volunteers of America; born Brighouse, Yorkshire, England. Son of GEN. BOOTH, Commander of Salvation Army in Australia (1885-87), and with his wife in the United States (1887-96). In that year he separated from the Salvation Army on the ground that that organization was too autocratic and not sufficiently American, and with his wife, founded THE VOLUNTEERS OF AMERICA, which has developed into a very large and national movement. Address: 30 Cooper Square, New York.

BOOTH, MRS. MAUD BALLINGTON: Wife of Ballington Booth, and with him founder and head of the Volunteers of America; born Limsfield Surrey, England. Entering the Salvation Army at the age of 17, she did a large work in Paris, Switzerland, Great Britain and Sweden. In 1886 she married Ballington Booth and became with him head of the Salvation Army in the U. S. (1887) till they (1896) left that organization and founded The Volunteers of America. In 1895 she began a work among prisoners which has developed The Volunteer Prison League with work in 25 prisons and embracing upward of 50,000 men, with homes for released convicts and a large ground work. Author among other books of *After Prison—What?* Address: 38 Cooper Square, New York.

BOOTH, CHARLES: Sociologist; born in Liverpool, England, 1840; educated at the Royal Institute School in his native city; has been partner in the firm of Alfred Booth & Co., since 1862, and is chairman of the Booth Steamship Company. The great work of Mr. Booth's life, however, has been the careful and scientific investigation into the conditions of the life and labor among the people of London, which he personally directed during a period of more than twelve years. The results of this investigation he has published in eighteen volumes, a mine of inestimable wealth to all who would know London and its peoples. Author: "Pauperism: A Picture"; "The Endowment of Old Age"; "The Condition of the Aged Poor"; "Old Age Pensions"; "Life and Labor of the People in London." Address: 24 Great Cumberland Place, W. London, England.

BOOTH, WILLIAM: Founder of the Salvation Army; born in Nottingham, England, 1829; became a minister of the Methodist New Connection in 1850. He resigned his connection with the Methodist Conference in 1861, and after living for some time in the East End of London, started, in 1865, the "Christian Mission," which was the foundation of his present organization. The movement, which was even then of a semimilitary character, did not make much impression until 1878, when he named it the SALVATION ARMY. Since that time it has grown uninter-

ruptedly and phenomenally in all quarters of the globe. His skill as an organizer is shown by the strict military discipline which he is able to maintain throughout the whole of the organization. In 1890 he published a book called "Darkest England," which contained a scheme by which he proposed to grapple with the destitution that is eating the life out of England. This has led to the important Salvation Army Social Scheme. (See SALVATION ARMY.) Address: 101 Queen Victoria Street, E. C., London, England.

BOSTON: The establishment of Boston as a city, in the third decade of the last century, was a part of the process of social reorganization which was necessary after the Revolutionary War. The first citizens, with the sole exception of John Hancock, had turned Tory and left the town to its fate. After the war the yeoman farmers from the surrounding country moved in and restored the industrial and social institutions of the town. The second mayor, Josiah Quincy, adapted to the city form of administration the old communal functions of the town meetings, and devoted himself unremittingly to clearing away the rather serious sanitary and moral evils which had grown with the new growth of the town.

Boston was fortunate in having from the beginning among its citizens a keen sense of local social responsibility. This led early in the history of the city to the first steps toward that comprehensive and coordinated system of charity which has ever since been characteristic of the city. Joseph Tuckerman and Dorothea Dix are two of the foremost names associated with the development of charitable endeavor in the first half of the last century. The social unrest that was prevalent in Europe in the second quarter of the last century found expression in some rather broad forms of organization among workmen which were encouraged by men like William Ellery Channing and William Lloyd Garrison. On the more romantic side its influence was seen in the establishment of BROOK FARM. The spirit of social reform in Boston, after the success of the movement led by Wilberforce in England, led to the development of the determination to wipe out the national blot of negro slavery. For some thirty years, until after the Civil War, this cause much overshadowed all other philanthropic tendencies. But so far as the life of the city in general was concerned, this period was notable as the golden age of its civilization, during which it numbered among its citizens one of the most remarkable groups of statesmen, orators, literary men, eminent divines, and public-spirited business men that have ever appeared together in any city.

A very important expression of the social spirit in Boston has come about through a series of radical sanitary reforms; the first of which took place after the epidemic of cholera in the "fifties," the others having succeeded several later outbreaks of contagious or infectious diseases. This development reached its climax in the law which gives the Board of Health power not only to condemn but to destroy unsanitary tenements; a power which has been largely used. A correlative law of equal importance is that which has practically abolished the sweating system through requiring good sanitary conditions in and about all houses in which licenses for home work are granted.

Sanitary
Reforms

The growth of philanthropic effort in Boston during the past generation has been affected very largely by the great immigration, first chiefly of Irish, and later chiefly of Jews. The effort to meet the new conditions caused by this incoming tide of population has taken several forms. Thirty years ago most of the relief-giving agencies of the city were effectively organized into the Associated Charities, which has ever since been the foremost agency in securing comprehensive discriminating care of families in distress. Mrs. Mary Hemenway instituted the system of cooking schools which were later taken up by the public-school authorities. She also purchased the historic Old South Meeting House, and provided for its use as a patriotic educational center. Mrs. Quincy Shaw instituted the experimental kindergartens, which, in turn, were later made part of the public-school curriculum. Robert Treat Paine founded the two great workmen's resorts, the Wells' Memorial and the People's Institute. Since 1890 a large number of settlement houses and other similar centers for neighborhood improvement have sprung into existence. There is at present a noticeable tendency toward federation and joint action between these different local centers, so as to secure the maximum economy of force in the detailed work of the neighborhood betterment, and to bring to bear their whole united force upon some of the larger sanitary and moral problems affecting all the more crowded districts of the city.

The tendency toward progressive municipal action in Boston, which was started by the first Josiah Quincy, was strengthened by the second

Municipalism Josiah Quincy, who established the Public Library and the Municipal Water Supply. This was continued, too, in some striking ways by the third Josiah Quincy, who greatly developed the system of public baths, instituted municipal gymnasiums, created a municipal printing plant, and endeavored unsuccessfully to have the city do all its own general repairs. The difficulty about the Municipal Repair Department was that most of the employees were unfortunately appointed through political influence, and their lack of individual skill went with a general lack of effective discipline. The Municipal Printing Plant still continues. It is much criticized; tho after its first year a group of master printers certified that its business had been conducted satisfactorily. The most important step in the direction of municipal ownership which Boston has ever taken is that of completing the subway, first under Tremont Street, then under Washington Street. When the second part of the subway was proposed, the risk having been eliminated, the company made an extremely aggressive attempt to secure for itself from the legislature the privilege of completing and owning it. This effort was frustrated largely through the activity of a body of business men called the Public Franchise League. This league has been successful also in keeping the capitalization of the gas combination down to a proper figure. A new but very promising movement in Boston is that of the Massachusetts Civic League, which is a federation of agencies for local social betterment in city, town, and village throughout the state for the promotion of progressive social legislation.

The building up of the park system of metropolitan Boston has grown into a vast enterprise, and is just now (1907) nearing completion. This

system includes two large marine parks, at Revere on the north and at Nantasket on the south. A series of parkway boulevards runs completely around the city and principal suburbs, ending in and connecting these two marine parks, and including in their course the great Blue Hill Reservation on the south, and the Middlesex Falls on the north. A series of small parks along the Charles River will end in a basin which is being created by the erection of a dam near the outlet of the river. Almost all the districts of the city are now provided with ample local playgrounds.

While certain phases of the organization of labor have, as has already been mentioned, been a part of the social movement in Boston for nearly a century, for all effective purposes such organization dates here, as for the country at large, since the Civil War. The leading spirit in such effort from that time until the present year has been George E. McNEILL, who is particularly known as the champion of the eight-hour day. The Knights of Labor lost their influence in Boston nearly twenty years ago. Since that time trade-unionism proper has had a slow, steady,

Labor and, in the aggregate, comprehensive growth. Boston has probably had as few great strikes as any city in the country, but it may be doubted

whether organized labor is stronger in any other city. On the whole its policy has been that of moderate diplomacy, always heading toward the large end in view by securing ample representation in all the various industrial occupations, and step by step gaining the proper wage and hour conditions for the individual members. This attitude on the part of organized labor has been to a considerable degree the indirect result of the salutary point of view which has been held by many employers and by the general public. While there have been occasional adverse decisions by the courts, on the whole there has been little of that unyielding attitude of the judiciary as to labor questions which has precipitated so much difficulty in some other parts of the country. For many years organized labor has been effective also in securing amelioration of labor conditions through state legislation. In general, the uninterrupted success which organized labor has had in all directions of its activity has removed the inducement to violent or even unduly aggressive expressions.

Partly for these same reasons socialism in any of its forms has never gained substantial footing in Boston. It has been represented from time to time by socialistic propaganda of a more or less abstract or sentimental type. At times movements of this sort have had important educational results; but at present socialism as an avowed cause seems to depend upon the more recent immigrants, and distinctly ebbs and flows with the downfall and rise of the labor market. Besides the discussions of social problems which take place in trade-union and other working-class gatherings, all such questions find a free platform in the Twentieth Century Club, which has now existed for fifteen years, and which has a membership of 600 men and women representing a great variety of interests, all of which, however, have some relation toward the bringing in of a "better public spirit, and a higher social order." The City Club just now being formed will provide a non-partizan meeting-place for men of all classes and nationalities who are interested in promoting the city's public welfare.

Boston has not shown distinct activity in developing systematic educational opportunities for the study of social questions, tho many educational institutions in the vicinity have within recent years greatly strengthened the course which they offer in such subjects. The School for Social Workers, founded by Harvard and Simmons Colleges, is now in its third year, and gives promise of being successful and useful. A significant fact in connection with the life of Boston as a center for social advance is that it is the seat of the state government, the only case in the United States where a large city is also the state capital. To this fact is partly due the progressive social legislation of Massachusetts, which is being added to in greater and greater degree as years go by. This advantage, however, is balanced by the fact that Boston, unlike all other large urban centers in the United States, has not extended its political boundaries so as to include among its electorate the enlightened and responsible suburban population. The fact that the city government has recently fallen into the complete control of those who contrive to gain political power in the downtown congested districts, places the municipality in a position where for the present not much further sound progressive action can be expected. The project of a metropolitan government for Boston and its suburbs is being urged from time to time, but strong local traditions and interests in most of the suburbs make it hardly possible to secure fair consideration for a scheme of administration which the facts of the situation so urgently demand.

Socialism

The following are some of the most important socialistic and charitable organizations in Boston:

- Associated Charities.* 43 Hawkins Street.
- Central Labor Union.* Office, 987 Washington Street.
- City Club.* 9 Beacon Street.
- Demison House.* 93 Tyler Street.
- Massachusetts Civic League.* 3 Joy Street.
- People's Institute.* 1171 Tremont Street.
- School for Social Workers.* 9 Hamilton Place.
- Socialist Labor Party.* 699 Washington Street.
- South End House.* 20 Union Park.
- Twentieth Century Club.* 3 Joy Street.
- Wells' Memorial Institute.* 987 Washington Street.
- Women's Industrial and Educational Union.* 264 Boylston Street.
- Young Men's Christian Association.* 458 Boylston Street.

ROBERT A. WOODS.

BOUCICAUT, JACQUES ARISTIDE: French philanthropist; born in Bellême, Orne, 1810; son of a hatter. Coming to Paris, first as an employee, in 1852, he became proprietor of a small shop which he gradually developed into what is now the great "Au Bon Marché." He built up his trade by thorough organization and by selling at fixt prices and very small profit. He gained the good-will too of his employees, by improving their condition, suppressing fines, inaugurating Sunday and holiday closing, gradual promotion, giving them an interest in their sales, and taking charge of their savings at better interest than could be gotten elsewhere. In 1876 he founded for them a Provident Fund, to enable them to put by for old age. Each employee who has been five years with the house is given a small share of the profits in proportion to his salary, and also 4 per cent each year on his savings. By 1903 there were 2,796 participators, with a capital of 3,902,598 francs, and 2,207,134 fr. had been distributed since the foundation

of the fund. Mr. Boucicaut died in 1877, and his son two years later. His widow ably conducted and developed the work until her death in 1887. The company has continued the work along the same lines, and under the same name, "Au Bon Marché." In 1886 Madame Boucicaut also founded an Employees' Retiring Fund, endowed with 5,000,000 fr. All employees are entitled to a pension after twenty years' service, at the age of forty-five for women, and fifty for men. Before this age limit assistance is given to the incapacitated, and to widows and orphans. In 1892 a third Relief and Pension Fund was established, amounting (1903) to 635,220 fr. To-day the great store is known throughout the world, and employs some 3,000 persons.

BOUNTIES: In social science the term "bounty" is usually applied to a premium given by a government to promote some branch of production or industry which it desires to encourage or aid. It is, however, used also for payments of money to induce men to enlist in the army and navy. In Great Britain the giving of bounties of this latter kind has been common. In the United States it has been adopted to a less extent, but in the War of the Rebellion some recruits of the Union Army received as much as \$500 or more. Some, however, enlisted, received the bounty, and soon after deserted, receiving the merited name of "bounty-jumpers."

The giving of bounties to encourage industry has been practised at times by almost all nations. England, which has now in the main rejected the bounty system, formerly gave bounties for many industries, notably to encourage the herring fisheries, the Irish linen trade, and the exportation of grain. After the founding of the Royal Academy (1769), a bounty was given on the exportation of engravings. For many years, however, under the influence of free-trade ideas, the English Government has given up the bounty system in the main, tho still granting subsidies to steamship companies. (See SUBSIDIES.) France, Germany, and all the greater continental powers have held on to the bounty system much longer, especially as regards bounties upon sugar. In the United States bounties have been given for tree-planting and sugar, with subsidies and land grants to railways and steamship companies. (See SUBSIDIES.) In 1890, for example, Congress voted a bounty of two cents per pound for fifteen years on the production of domestic sugar. This was, however, ended by the tariff of 1894, altho an appropriation of \$5,238,289 was later voted to continue the operation of the bounty on sugar raised before June 30, 1895.

Almost all political economists have condemned bounties in general, altho many have approved of them under particular circumstances. Adam Smith vigorously and Ricardo still more sweepingly condemned bounties, on the ground mainly that they diverted capital perniciously; and their position has been generally followed by free-traders and been criticized by protectionists. Bounties, however, have sometimes been preferred to a protective tariff by free-traders, on the ground that their working is open and direct, not covert, like a tariff. They have been denounced, on the other hand, by some protectionists, as more artificial than a tariff. A tariff, it is argued, makes the foreign exporter pay; a bounty taxes the general citizen for the good of one class. (See FREE TRADE; PROTECTION; SUBSIDIES.)

BOURNEVILLE: A model industrial village, established about five miles from Birmingham, England, by Mr. George Cadbury, the noted cocoa manufacturer, philanthropist, and Friend. Bourneville was founded in 1879, when the works of Cadbury Brothers were moved to that site; but at that time they employed only about 300 hands, and practically most of the village was created in 1895. In 1900 Mr. Cadbury turned over 485 acres of land to the "Bourneville Village-Trust," as an absolute gift, the total value (including the village) being about £200,000, to be administered for the provision of improved dwellings with gardens and open spaces for the amelioration of the condition of the workers. Factories are not to occupy more than one fifteenth of the total area. There are now over 500 cottages with a population of about 2,500. Only about one half the population work in the Cadbury mills. At first land and cottages were sold, but after 150 cottages had been sold, it was decided only to lease, in order to be sure that all should be administered in the spirit of the foundation. The rents range from six shillings and sixpence a week to thirteen shillings, including a local rate of six shillings and fourpence in the pound. Ground rent is calculated at £20 an acre, with about eight houses to the acre. Rents are calculated to return about 4 per cent on the capital. The cottages are semidetached, or in blocks of four, and there is great variety of design with a general similarity of style. Most of the later buildings have one large or two small sitting-rooms, three or four bedrooms, and a kitchen with a bath sunk in the floor, larder, closets, and sometimes an attic. The fireplaces are attractive, with tiled hearths and artistic chimney-pieces.

Gas, water, and sewage are supplied by the city of Birmingham. The roads are forty-two feet wide, with trees. Dwellings may occupy only one fourth of a lot, and one tenth of the land (exclusive of roads) must be used for parks and open spaces. Grass-plots, flower-beds, and shrubs, with low hedges or fences, add to the attractiveness.

The more attractive public buildings are: Ruskin Hall, with lecture-hall, picture-gallery, and library; a bath-house; a boarding-house; a schoolhouse for 540 children; a kindergarten; and a Friends' meeting-house. Adjoining the factory are a twelve-acre recreation ground for girls, with gymnasium, swimming-bath, tennis-court, and cricket and hockey grounds, and a fourteen-acre lot similarly equipped for boys. Various clubs, lecture courses, flower shows, etc., develop the educational, recreative, and artistic life of the village. A cooperative "Bourneville Tenants' Company, Limited" enables workmen to build their own homes.

BOWERMAN, C. W.: English labor member of Parliament; born 1851; learned the printer's trade in London. He has been a member of the London Society of Compositors since 1873; was appointed its news secretary in 1889, and elected general secretary in 1902. He was a delegate to every trade-union congress except that held at Norwich, and in 1897 was elected to the parliamentary committee of the trade-unions, presiding over the annual congress held at Swansea in 1901. He has been on the London County Council for some years, and was elected alderman in 1901. Within the past year he has been ap-

pointed parliamentary secretary to his society. He was elected to Parliament in 1906 for Deptford. Endorsed by the Labor Representation Committee. Address: 4 Battledean Road, Highbury, N. London, England.

BOYCOTTING: A boycott is a combination against a landlord, tradesman, employer, or other person, whereby the persons enforcing the boycott cease social or business relations with the party boycotted, and seek to induce others to withhold having relations with him. It is used also of agreements not to use certain articles or the articles of a certain manufacturer, on the ground that they have been produced in ways or under conditions condemned by the parties dictating the boycott. The word is derived from the name of Captain Boycott who in 1880 was living at County Mayo, Ireland, as land agent to Lord Erne, an Irish nobleman. The population of the region for miles around resolved to have nothing to do with him, and as far as possible to prevent any one else from having anything to do with him. His life appeared to be in danger—he had to claim police protection—and to prevent civil war the authorities had to send a force of soldiers, and Captain Boycott's harvests were always brought in guarded by a little army. Boycotts, tho largely conducted by trade-unions, are by no means confined to them. Manufacturers boycott certain dealers; railroads boycott railroads; temperance people boycott certain persons; clergymen establish boycotts; almost everybody boycotts somebody at certain times. There is record of a boycott in England as early as 1221. Boycotting, if properly conducted by parties for their own advantage, are now generally believed to be legal, tho five states—Alabama, Colorado, Illinois, Indiana, and Texas—have statutes applying expressly to boycotting. Acts usually committed by persons engaged in boycotting are prohibited in other states. Says Dr. Carroll D. Wright: "If A considers a dealer, B, as dishonest, he has a perfect right to say to his friends, 'I do not trade any more with B, and I advise you not to for such a reason.' That is a boycott; we all indulge in it; it is legitimate. But when A says to his friends, 'If you trade any more with B, we trade no more with you, and if that does not succeed, we destroy your business,' that is a crime: that is not a lawful method of prosecuting one's claims." The common law seems to be that workmen associated together in a union may combine to cease dealing with an employer who refuses to comply with the union's rules, since they constitute the party aggrieved and are directly to be benefited by inducing him to yield. Injunctions, however, have been granted against boycotts and "in no case decided by the higher American courts has a boycott by workmen been specifically held legal" ("U. S. Industrial Commission Report," xvii., p. cxix).

BOYS' CLUBS: See CLUBS.

BRABAZON, REGINALD: Twelfth earl of Meath; Baron Chaworth; Baron of Ardee, Ireland; born in London, 1841. He was educated at Eton College and in Germany; and after passing the Civil Service examination he entered the Foreign Office in a clerical capacity (1863). In

1868 he exchanged into the diplomatic service, and passed several years at Frankfurt-on-the-Main, Berlin, The Hague, and Paris. He is interested in the industrial conditions of the people, and has been connected with many of the agencies and societies at work for the betterment of those conditions. He was the first honorary secretary of the Hospital Saturday Fund (1874), and first chairman of the Young Men's Friendly Society (1879). In 1882 he founded the Metropolitan Public Garden Association, and was its first and is its present chairman (1907). He was the first president of the British College of Physical Education, and has been at different times an alderman of the London County Council. In his philanthropic activities he is prominently identified also with the Dublin Philanthropic Reform Association (first president), and with the Christian Union for Social Service (president). He is the author of "Social Arrows" and "Social Aims"; and the editor of "Some National and Board School Reforms," "Prosperity or Pauperism," etc. *Address:* 83 Lancaster Gate, W., London, England.

BRACE, CHARLES LORING: One of the founders of the Children's Aid Society; born at Litchfield, Conn., 1826; graduated from Yale in 1846; studied theology at the Yale Divinity School, 1847-48, and at Union Theological Seminary 1848-49. In 1850 he visited Switzerland, England, and Ireland, giving especial attention to schools, prisons, and reformatory institutions, and returned to the United States in 1852. Here he entered into active missionary labors in New York City, and was one of the founders of the CHILDREN'S AID SOCIETY, remaining its secretary and principal agent from a year after its foundation until his death. In 1854 he established the first newsboys' lodging-house in the city; in 1855 an Italian industrial school; and in 1856 a German industrial school. He devoted the remainder of his life to work among the children and youth of the poor of New York City. He died in the Tyrol, Switzerland, 1890. Among his works may be mentioned: "Hungary in 1851"; "Home Life in Germany"; "Short Sermons to Newsboys"; "The New West"; "The Dangerous Classes of New York, and Twenty Years' Work among Them"; "Free Trade as Promoting Peace and Good Will among Men"; "Gesta Christi, or, A History of Humane Progress under Christianity"; and "To the Unknown God."

BRADLAUGH, CHARLES: English agitator and writer; born 1833; son of a solicitor's clerk in the East End of London. When being prepared for confirmation at the church which he attended, he expressed doubts concerning some of the doctrines taught; and on receiving a severe rebuke for daring to doubt, he turned to the street lecturers, finally becoming a speaker himself. On account of his ideas he was compelled to leave his father's house, and endeavored to gain a living as coal agent. Not succeeding he enlisted in the Dragoon Guards (1850), serving for some time in Ireland. In 1853 he returned to London and became a clerk in a solicitor's office. From that time he was known as an antitheological lecturer, and wrote under the pseudonym of "Iconoclast." He also took an active and often a leading part in the radical movements of the time.

In 1860 Bradlaugh started his paper, *The National Reformer*, which in 1868 was prosecuted

by the government. The prosecution was abortive, and led to a repeal of the law under which the proceedings had been taken. In 1872 he published "The Impeachment of the House of Brunswick," which is, perhaps, his best-known literary work. In 1873 he undertook two lecturing tours in the United States. In 1875 he, with Mrs. Annie Besant, was tried for having republished an old pamphlet, "The Fruits of Philosophy." The result of the trial was that the defendants, tho "exonerated from all corrupt motive," were sentenced to six months' imprisonment, and to pay a fine of £200. On appeal, the sentence was reversed. In 1868 and twice in 1874 he was an unsuccessful candidate for parliamentary honors; in 1880, however, he was elected as junior member for the borough of Northampton. Now commenced the struggle with the House of Commons, by which his name will be best known. Refusing to take the oath of allegiance, and desiring to affirm, his seat was declared vacant. Re-elected in 1881, he was expelled by force. Again elected in 1882, but still debarred from sitting, he resigned, in order to again appeal to his constituency in 1884; and tho again elected, it was not till after the general election of 1885 that he was allowed to take his seat. In 1887 he was instrumental in getting appointed the Royal Commission on Market Rights and Tolls, and carried through Parliament an act amending and extending the truck laws. In 1888 he brought in an "Affirmation Bill," which was carried. In 1889 he was requested by the Indian National Congress to represent their national interests in the English Parliament. A consistent individualist, he combated at every step the growing tide of socialism. He died in 1891.

BRASSEY, THOMAS, BARON: English economist and writer on naval affairs; born in England, 1836; son of a railroad contractor. He was called to the bar in 1864, but never practised. In 1865 he was elected member of Parliament for Devonport, and remained in Parliament for a number of years. Naval matters engaged his chief attention, and he assisted in forming the naval artillery volunteers. He and his wife, in their yacht *Sunbeam*, have made many long voyages to all parts of the globe. In addition to numerous shorter writings on naval affairs and social questions, he has published "Work and Wages"; "British Seamen"; and "Lectures on the Labor Question." Lord Thomas has rendered assistance on various charitable commissions. *Address:* 24, Park Lane, W., London, England.

BRAY, CHARLES: Social reformer; born at Coventry, England, 1811. He became a manufacturer of ribbon; but was early interested in matters of reform on the lines of Robert Owen and Thomas Carlyle. He saw the opening of Harmony Hall in Queenwood Community (see OWEN), but the failure of that experiment convinced him that such attempts were premature. He wrote "The Philosophy of Necessity" (1841), with an appendix by his sister-in-law, Mary Hennell, later published separately as "An Outline of the Various Social Systems and Communities which have been Founded on the Principles of Cooperation." He was also the author of several essays and addresses, notably "An Essay upon the Union of Agriculture and Manufactures, and upon the Organization of Industry," and of an autobiography. He died in 1884.

BRAY, J. F.: An English communist of the school of Owen of whom little is known save his book, written in 1839, "Labour's Wrongs and Labour's Remedy; or, The Age of Might and the Age of Right." This work, to-day almost forgotten, was one of the ablest of its day, and was noticed at some length in Marx's "Philosophy of Misery" (1847) and other writings of the times. Palgrave's "Dictionary of Political Economy" says of it: "The book tries to prove that all those who perform equality of labor ought likewise to receive equality of reward." Imprest by the modern growth of joint-stock companies, Bray proposed a "joint-stock modification of society, admitting of individual property in productions in connection with a common property in productive powers." He also suggested a paper and pottery currency, whose foundation is labor.

BRENTANO, LUJO: Professor of national economy at the University of Munich; born at Aschaffenburg, Germany, 1844. He was one of the founders of the Association for Social Politics, or SOCIALISTS OF THE CHAIR, as they are called in Germany, altho belonging to the extreme right of this school. Outside of Germany he is best known by his "History of English Guilds," and his larger work on "English Trade-Unions," neither of which, however, is considered very complete or satisfactory. Address: Friedrichs-strasse 11, Munich, Germany.

BRETHREN OF SOCIAL LIFE: A fraternity founded by Groote and Radewin in 1376; sometimes called Brethren of the Common Lot, Brethren of the Common Life, or Brethren of Good Will. It professed to imitate the earliest Christian communities, and eventually merged into the sect of Moravians. It was composed of pious persons who sought to elevate their souls by spiritual exercises; and it was sanctioned by several popes and councils. Community of goods, industry, frugality, education of the young, and the use of the vernacular language in religious worship were some of their peculiar usages. They bound themselves by no monastic vow. In 1430 they had 130 societies, chiefly in Germany and the Netherlands. The original founders were opposed to all learning and science that was not moral and practical; but the brethren rendered valuable service to the cause of popular and free education, and have been called the pioneers of the Reformation. Thomas à Kempis belonged to one of these societies. Similar female societies were organized, each under a superior or *Martha*.

The Order of the Brethren of the Common Lot was divided into two classes, the lettered brethren, or clerks, and the illiterate; they lived in separate habitations, but maintained the closest fraternal union. The former devoted themselves to preaching, visiting the sick, circulating books and tracts, etc., and the education of youth, while the latter were employed in manual labor and the mechanical arts. They lived under the rule of St. Augustine, and were eminently useful in promoting the cause of religion and education.

The theory of this community was that unity should be sought rather in the inward spirit than in outward statutes. Vows were not binding for life. Property was surrendered, not on compulsion, but voluntarily. All the brother houses were kept in communication with each other, and the heads of houses met annually for consultation. Particulars of their rule, domestic arrangements, etc., may be found in Ullmann's "Reformers be-

fore the Reformation," ii., 89 sq. Luther and Melancthon spoke with approval and sympathy of the brotherhood in their time. Its flourishing period extended from 1400 to 1500. Most of their houses were built between 1425 and 1451, and they had, in all, some thirty to fifty establishments. During the sixteenth century the Reformation broke them down, in common with other monkish establishments; or, rather, they crumbled to pieces as needless amid the new developments of the age. By the middle of the seventeenth century the brotherhood was ended.

BREWERY WORKERS. See UNITED BREWERY WORKERS.

BRIAND, M. ARISTIDE: French independent Socialist, appointed Oct. 23, 1906, in the cabinet of M. Clemenceau, as Minister of Public Instruction. He has had charge of the important agitation for the separation of Church and State in France.

BRICKLAYERS AND MASONS' INTERNATIONAL UNION OF AMERICA: Organized 1865; one of the largest American trade-unions, not affiliated with the American Federation of Labor. The organization is almost purely protective. Early in its history strikes were numerous, but latterly the union has been among the most successful in developing agreements with employers. In 1886, partly through the efforts of Mr. W. H. Sayward, Secretary of the Mason Builders' Association, a system of joint agreements as to collective bargaining and arbitration was developed, and the system was spread. In 1906 the union reported 90,000 members. Its organ is *The Bricklayer and Mason*.

REFERENCE: *Report of the United States Industrial Commission*, vol. xvii. (1901), pp. 118, 374-75.

BRIGHT, JOHN: English statesman, born at Greenbank, Lancashire, 1811; son of Jacob Bright, a Quaker cotton-spinner. In his sixteenth year he entered his father's factory, but early became interested in temperance, parliamentary reform, and other questions of the day. The reform struggle of 1832 moved him deeply. In 1839, when the Anti-Corn Law League was formed, he and Cobden were the leading members of it, and commenced a free-trade agitation throughout the kingdom. Bright became M. P. for Durham in 1843. His eloquent and energetic advocacy of free trade produced at last the repeal of the corn laws. He was associated with Cobden in a movement for financial reform, and later with a movement to reform the system of electoral representation. He came to be with Cobden the head of the so-called "Manchester School," and vigorously opposed the ten-hour movement and almost all industrial legislation. Being a member of the Peace Society, as well as of the Society of Friends, he strenuously opposed the war with Russia in 1854. Some of the severest denunciations of war ever uttered are to be found in his speeches. In 1857 he was elected from Birmingham, and long represented that city. He strongly condemned the then existing game laws of Great Britain. In 1868 he accepted the presidency of the Board of Trade in Gladstone's administration, and worked for the disestablishment of the Irish Church and the Irish Land Act, aiming at peasant proprietorship. In 1870 he resigned from office on account of ill health, but took office again in 1873-74, and 1882 as chancellor of the Duchy of Lancaster. In 1886 he op-

posed the Home Rule bill introduced by Mr. Gladstone. In 1883 he became lord rector of the University of Glasgow. He died in his boyhood's home, March 27, 1889.

BRINKERHOFF, ROELIFF: Philanthropist; born at Owasco, N. Y., 1828; educated in the common schools and at Auburn and Homer academies; taught school for two years, and at the age of eighteen served as tutor in the home of General Jackson. He studied law with Judge Brinkerhoff at Mansfield, Ohio, and in 1852 began the practise of law. From 1855 to 1859 he was editor and proprietor of *The Mansfield Herald*. At the outbreak of the Civil War he entered the army, attained the rank of colonel, and for meritorious service was made brevet brigadier-general. After the war he resumed the practise of law until 1873, when he became cashier of the Mansfield Savings Bank, of which he is now president. Since 1878 he has been a member of the Ohio State Board of Charities, and is now its chairman. He was president of the national Conference of Charities and Corrections in 1880, and vice-president of the International Prison Congress at Paris in 1885. Officiating for many years as vice-president of the American National Prison Congress, he was made its president at the death of General R. B. Hayes. He is the author of "The Volunteer Quartermaster"; and "Recollections of a Lifetime." Address: Mansfield, Ohio.

BRISBANE, ALBERT: American Fourierite and social reformer; born in Batavia, N. Y., 1809, of wealthy parents of Scotch-English stock. He was liberally educated, and traveled extensively in Europe and in Asiatic Turkey. Becoming deeply impressed with the inhumanity and injustice of the present social system, he studied in Paris the views and philosophy of FOURIER, and then presented them to American readers in two books: "Social Destiny of Man" (1840), and "A Concise Exposition of the Doctrine of Association." These had an immediate effect on the members of BROOK FARM, and contributed largely to turn that colony into a Fourierite phalanx. Horace Greeley, William Henry Channing, Charles A. Dana, and others were also deeply influenced by him. Greeley opened the columns of the *Tribune* to Brisbane by allowing him to purchase for two years (1842-44) a column of the paper in which to advocate Fourierism. Later Brisbane published two volumes of "Sociological Series" (1876). He also invented several mechanical devices of importance. He died in Richmond, Va., 1890.

BRISBANE, ARTHUR: American editor; born at Buffalo, N. Y., 1863; son of Albert BRISBANE; educated in public schools and in France and Germany. He entered the field of journalism as a reporter on the *Sun*, and later became editor of the *Evening Sun*. From 1890 to 1897 he was on the editorial staff of the *New York World*, and since 1897 has been editor of the *New York Evening Journal*. Mr. Brisbane follows in the main his father's socialist views, but believes they should be worked out in opportunist and political methods. Address: Hempstead, Long Island, N. Y.

BRISSOT, JEAN PIERRE (surnamed De WARVILLE): French sociologist and revolutionist; born at Chartres, France, 1754. Educated for the law, he entered the office of a procurator

at Paris, but early devoted himself to political science. His "Théorie des Lois Criminelles" and "Bibliothèque Philosophique de Législateur" brought him notoriety and the favor of Voltaire, D'Alembert, and others. These works were imbued with the philosophy of Rousseau, and contain the saying, afterward made famous by Proudhon, "La propriété, c'est le vol." A facile writer, he wrote for papers unworthy of him, but later went to London and started *Le Journal du Lycée de Londres* to unite all the savants of Europe. Returning to Paris, he was lodged in the Bastille on an unfounded charge. Released after a few months, he recommenced pamphleteering, and, having met some abolitionists in London, he organized in Paris a Société des Amis des Noirs. He visited the United States, but returned to play a leading part in the French Revolution. He edited the *Patriote Française* and in the National Assembly leagued himself with the Girondists, then often called the Brissotins. He bravely suffered death on the guillotine with the Girondists, Oct. 30, 1793.

BRITISH ECONOMIC ASSOCIATION, THE: Founded at a meeting held at University College, London, on Nov. 20, 1890, the Rt. Hon. G. J. Goschen, M. P., being in the chair. The object of the association is the advancement of economic knowledge by the issue of a journal and other printed publications, and by such other means as the association may from time to time agree to adopt. The journal represents all shades of economic opinion, and is the organ not of one school of economists, but of all schools. The annual subscription is one guinea. There is at present no entrance fee. Any member may at any time compound for his future yearly payments by paying at once the sum of ten guineas. The current numbers of the journal, issued in March, June, September, and December, and published by Messrs. Macmillan & Co., are sent to members free of charge. The price is 5 shillings each copy, or 1 guinea (net) for the annual volume bound.

BRITISH EMPIRE, THE: The growth of the British Empire is in many ways the greatest social reform fact in the world. According to Hazell's "Annual":

The area of the British Empire was estimated at 8,329,000 sq. m. in 1837, and in 1861 it was about the same figure. Of the total, 9,115,000 sq. m. are under settled government, the self-governing colonies alone covering about 7,000,000 sq. m.

In 1837 the population of the British Empire was 168,000,000; in 1861 it was estimated at 175,000,000; in 1871 at 235,000,000; in 1881 over 254,000,000; in 1891 nearly 312,000,000; and in 1901 it had reached over 400,000,000.

In 1837 there were about 25,750,000 British in the United Kingdom and about 1,500,000 in the colonies, making a total of 27,250,000. In 1905 there were 43,220,000 British in Great Britain and 10,780,000 in the colonies, giving a total of 54,000,000.

The total revenues of the empire amounted to about £75,000,000 in 1837, the United Kingdom having a revenue of £50,000,000, and India and the colonies about £25,000,000. In 1903 the revenues of the empire amounted to £117,000,000.

Sir Robert Giffen, at the meeting of the British Association in Sept., 1903, put forward the following estimates as to the aggregate income and wealth of the people of the British Empire:

| | AGGREGATE INCOME | CAPITAL OR WEALTH |
|-------------------------|---------------------|----------------------|
| United Kingdom..... | £1,750,000,000 | £15,000,000,000 |
| Canada..... | 270,000,000 | 1,350,000,000 |
| Australasia..... | 210,000,000 | 1,100,000,000 |
| India..... | 600,000,000 | 3,000,000,000 |
| South Africa..... | 100,000,000 | 600,000,000 |
| Remainder of empire.... | 200,000,000 | 1,200,000,000 |
| Totals..... | £3,130,000,000 | £32,250,000,000 |

THE BRITISH EMPIRE 1905 AND 1906.

| NAME AND DATE OF ACQUISITION | Area, Square Miles | Population | Public Revenue £ | Public Expenditure £ | Imports £ | Exports £ | Public Debt £ | Miles of Rail- way | Tonnage Entered and Cleared |

2 £132,887,000 in England; £21,529,000 in India.

BRITISH AND FOREIGN ANTI-SLAVERY SOCIETY: Founded 1839, its first president being Thomas Clarkson. The objects of the society are: "The universal extinction of slavery and the slave-trade; and the protection of the rights and interests of the enfranchised population in the British possessions, and of all persons captured as slaves." The society publishes a journal, *The Anti-Slavery Reporter*. Secretary, Travers Buxton, 51, Denison House, Vauxhall Bridge Road, S. W., London, England.

BROADHURST, HENRY: English trade-unionist; M. P.; born near Littlemore, Oxfordshire, 1840; the son of a journeyman mason. He worked at his father's trade till 1872, when he was elected to the Parliamentary Committee of the Trade-Union Congress, becoming a most indefatigable worker, and serving as secretary of the committee from 1875-90. In 1880 he was returned to Parliament from Stoke-upon-Trent. In 1885 he was elected from the Boardsley division of Birmingham; in 1886 from Nottingham (West), and in 1894-1906 from Leicester. He was re-elected from Leicester Jan., 1906, but retired in March. He has been a member of two royal commissions, and in 1886 was appointed Under Secretary of State for Home Affairs. He is a Liberal in politics, and for a long period opposed the new trade-unionism, eight-hour legislation, etc. He has, however, changed his position on the eight-hour bill, and was in 1894 deemed one of the most progressive members of the Trade-Union Parliamentary Committee. Broadhurst is the author, together with Sir R. T. Reid, of a "Handy Book on Leasehold Enfranchisement," and has written also an autobiography. Address: 4, Elm Gardens, Brook Green, W. London, England.

BROCKWAY, ZEBULON REED: Prison reformer; born in Lyme, Conn., 1827. Became clerk of Connecticut State Prison, 1848; then deputy superintendent at Albany, 1851; and superintendent in Monroe County, N. Y., 1859; in Detroit, Mich., 1861; in Elmira State Reformatory, 1876-1900. It was mainly through his efforts that Elmira introduced the system of the Indeterminate Sentence, which has led to such general and successful reforms in prison systems. See *Elmira*. In 1900 he retired, but in 1905 was elected Mayor of Elmira, being nominated by both parties. Address: Elmira, N. Y.

BROOK FARM: A cooperative association formed in 1842 on a 200-acre farm nine miles from Boston, by a group of highly educated people. The association carried on farming and maintained an excellent boarding school, the pupils being members of the associated family. Owing to the character of the leaders and their friends, the life at Brook Farm took on many refined and charming aspects, which gave it great fascination for the general public, and which rendered the lives of the members exceedingly rich and interesting. Most of the distinguished men and women of the day were visitors at Brook Farm, and it became a center of intellectual and artistic life. All the members were stockholders and took more or less part in the manual labor of the farm. Meals were taken in common in a central hall. There were about 115 members.

The spirit of the place voiced the transcendental religious feeling current at that time, but there

was no distinction made as to creed, and every one was free to worship as he chose. The members were, however, sustained in their efforts by an exalted belief in the possibility of social regeneration, and the founding of a heaven upon earth. Miss Peabody wrote in *The Dial*: "There are men and women who have dared to say to one another, 'Why not have our daily life organized on Christ's own idea? Why not begin to move the mountain of custom and convention?'" Later she further described the group of people who had resolved to make this attempt: "In order to live a religious and moral life they feel that it is necessary to come out in some degree from the world, and to form themselves into a community of property, so far as to exclude competition and the ordinary rules of trade; while they reserve sufficient private property for all purposes of independence and isolation at will. They make agriculture the basis of their life, it being the most direct and simple in relation to nature. A true life, altho it aims beyond the highest star, is redolent of the healthy earth. The perfume of clover lingers about it. The lowing of cattle is the natural bass to the melody of human voices."

Bodily and mental labor were paid at the same rate at Brook Farm, it being believed that since intellectual labor involves higher pleasures than bodily labor, it therefore is to some extent its own reward; while bodily labor involves a greater sacrifice on the part of the individual. The hours redeemed from labor by cooperative work were to be used, not in acquiring wealth, but in intellectual goods. Real wealth consists, so the Brook Farmers declared, in the "leisure to live in all the faculties of the soul."

The first years of the Brook Farm experiment have been called its transcendental period, and it was then that the idealism of the movement and its spiritual vitality seemed to be at their height. A change occurred when Fourierism, then making a stir in the reform world, was introduced and accepted at Brook Farm. A new element came in with the influx of more working-class people, and the building of mechanics' workshops and a large phalanstery. The change, though honestly undertaken, proved in the end fatal. The dream period of the earthly paradise was over, and the Brook Farmers awoke to the painful discovery that they were ill-adapted to carry on practical enterprises. A disastrous fire, unprotected by insurance, compassed the final ruin of the experiment, which had lasted about six years. Its leader throughout, as well as its founder, was George Ripley, accomplished scholar and devoted idealist, who had received encouragement and assistance from men like Dr. Channing, Rev. Theodore Parker, Dr. J. C. Warren, and many others. Ralph Waldo Emerson, Margaret Fuller, and Bronson Alcott were frequent visitors at Brook Farm; while Hawthorne lived there for a time. George William Curtis and Charles A. Dana were both members. The association maintained a periodical called *The Harbinger*.

REFERENCES: *Brook Farm*, by Lindsay Swift, New York, 1900; *Memoirs of Brook Farm*, by J. T. Codman, Boston, 1894. There is also an interesting account of the life at Brook Farm in the *Life of Isaac Hecker* (Father Hecker, founder of the Paulist Fathers), by Eliot. Hawthorne's *Diary* contains references to his experiences at Brook Farm, while his novel *Bleakdale Romance* is to some extent founded upon his impressions of the place.

BROOKS, JOHN GRAHAM: American economist; born at Acworth, N. H., 1846; was graduated

from Harvard Divinity School, 1875; studied for three years at German universities. He became a lecturer on economic subjects, was for two years instructor at Harvard University, and later lectured for several years in the extension department of Chicago University. Mr. Brooks was appointed expert in the United States Department of Labor in Washington, and in 1893 made a report on workmen's insurance in Germany. He is president of the National Consumers' League and of the American Social Science Association, and is the author of a book entitled "The Social Unrest." Address: 8 Francis Avenue, Cambridge, Mass.

BROTHERHOOD OF THE COOPERATIVE COMMONWEALTH: Organized 1805 with headquarters in Maine. Its avowed objects were: (1) To educate people in the principles of socialism. (2) To unite all Socialists in one fraternal association. (3) To establish cooperative colonies and industries, and, so far as possible, concentrate these colonies and industries in one state until said state is socialized. As a result the colony of "Equality" was organized in 1897 in Skagit County, Wash., with 620 acres. In 1898 this colony became autonomous, since when the Brotherhood of the Cooperative Commonwealth has had a nominal existence only. See EQUALITY.

BROTHERHOOD OF THE KINGDOM, THE: This organization, established in 1892, is the outgrowth, mainly in the Baptist denomination, of the earnest work of two men in New York City, but it now holds yearly undenominational conferences at Marlborough, N. Y., and performs considerable practical work through its members. Its aim is to work for the kingdom of God in the most inclusive sense. (See BAPTISTS IN RELATION TO SOCIAL REFORM.) The principles and methods of the brotherhood are thus stated:

- (1) Every member shall by personal life exemplify obedience to the ethics of Jesus.
- (2) Each member shall propagate the thoughts of Jesus to the limits of his or her ability, in private conversation, by correspondence, and through pulpit, platform, and press.
- (3) Each member shall lay special stress on the social aims of Christianity, and shall endeavor to make Christ's teaching concerning wealth operative in the Church.
- (4) On the other hand, the members shall take pains to keep in contact with the common people, and to infuse the religious spirit into the efforts for social amelioration.
- (5) The members shall seek to strengthen the bond of brotherhood by frequent meetings for prayer and discussion, by correspondence, exchange of articles written, etc.
- (6) Regular reports shall be made of the work done by members in such manner as the executive committee may appoint.
- (7) The members shall seek to procure for one another opportunities for public propaganda.
- (8) If necessary, they shall give their support to one another in the public defense of the truth, and shall jealously guard the freedom of discussion for any man who is impelled by love of the truth to utter his thoughts.

No sectarian or theological tests are required of members.

The brotherhood has an executive committee of five, with power to manage all ordinary business. The only officer is the secretary, who is also the treasurer. The annual dues are \$2, and all funds remaining over and above the necessary expenses are employed in the publication and distribution of literature. Chairman of the Executive Committee, Rev. Leighton Williams, D.D., 312 West Fifty-fourth Street, New York City. Corresponding Secretary and treasurer, Rev. Charles L. Carhart, Dorset, Vt.

BROTHERHOOD OF LOCOMOTIVE ENGINEERS, THE: One of the oldest trade-unions in the United States; not affiliated with the American Federation of Labor. After earlier ineffectual efforts at organization, twelve engineers organized in 1863 a Brotherhood of the Footboard, which in 1864 took the name of the Grand International Union of Locomotive Engineers. William D. Robinson, who is called the father of the Brotherhood, was chosen chief grand engineer (1863). Mr. P. M. Arthur was chosen chief in 1874, and so continued till 1903, largely shaping the character of the Brotherhood, making it one of the strongest, but also one of the most conservative of American trade-unions. His policy was to conduct the Brotherhood on purely "business" principles, and strictly in its own interest, not aiding other unions in strikes, etc., unless it could be clearly proved that it would directly benefit the association. The brotherhood has had few strikes, and no other union has been more successful in obtaining agreements with employers. It has an Insurance Fund, begun 1867. It had (1905) 47,000 members. Its organ is the *Brotherhood of Locomotive Engineers' Journal*.

REFERENCE: *Report of the United States Industrial Commission*, vol. xvii (1901), pp. 821-25.

BROTHERHOODS, RELIGIOUS: Societies organized for philanthropic purposes, most numerous in the Middle Ages. Some of them being established without the authorization of the Church, they fell under the charge of heresy, and in several cases assumed the nature of separate sects, such as the Beghards, Beguines, Apostolic Brethren, Flagellants, etc. The last-named society was subjected to severe persecution by the Church.

The old building corporations, from which sprang the Free Masons, belong under this head. Most of them were regarded with fear and suspicion by the Church, on account of their symbolism and secrecy. The brotherhoods that asked and received the sanction of the ecclesiastics were not secret, but devoted to the promotion of religion by stricter and more constant devotional exercises, or to the assisting of strangers, travelers, the unprotected, the destitute, the sick, and the oppressed. The noblest work was often done by these organizations. They were most numerous in Italy, Rome alone containing 100. (See articles COMMUNISM; MONASTICISM.)

BROUSSE, PAUL: French Socialist; born at Montpellier; studied medicine in Paris, becoming doctor in 1867. From 1870 to 1871 he worked on the *Droits de l'Homme*, and in 1871 was condemned to three months' imprisonment. Escaping to Spain, he joined the anarchistic Spanish section of the International. From Spain he went to Switzerland, and meeting there BAKOUNIN, became a leader of the Jura Federation, organizer of the anarchist section in Italy, and editor of anarchist publications. In 1879 he suffered imprisonment in Switzerland, and after his release went to London. Here he met Marx and Engels, and, renouncing anarchism, adopted socialism. In 1880 he returned to France, and edited *Egalité* and *Proletaire* in 1882, with Malon and his followers, separating from the Guidist Socialists, and forming the "Broussist" section, or so-called "Possibilists." In 1887 he was elected to the Paris Municipal Council, and has since been a foremost leader of one section of the French

Socialists, but ever ready to work with any party, a policy which has resulted in his now calling himself Republican Radical. His main writings are "Le Suffrage Universel et le Problème de la Souveraineté du Peuple" (1874) and "La Crise" (1879).

BROWN, JOHN: American abolitionist; born in Torrington, Conn., 1800. Originally intended for the Church, he was compelled to give up study for this purpose on account of inflammation in the eyes. He then took up the business of a tanner, which he carried on for twenty years. In 1840 he started business as a wool dealer in Ohio, and in 1849 removed to Essex County, N. Y., and began to reclaim a large tract of land which had been granted to him. In 1855, having an intense hatred of slavery, he went to Kansas in order to vote, and fight, if need be, against the establishment of slavery in that territory. He soon became renowned in the fierce border warfare carried on between Kansas and Missouri, and gained especial celebrity by his victory at Ossawatimie. A son of his was killed in one of these affrays, and this tended to deepen his hostility to the Southern Party. After the border agitation had been settled by a general vote, Brown traveled through the northern and northeastern states declaiming against slavery, and endeavoring to incite and organize an armed attack upon it. In October, 1859, at the head of seventeen white men and five negroes, he commenced hostilities by a night attack upon Harper's Ferry, overpowering the guard and capturing the arsenal. The next morning he made prisoners of forty or fifty of the chief inhabitants of the town; but instead of at once retreating to the mountains with arms and hostages, as his original design had been, he lingered on in the town till evening. By this time the townsmen had recovered from their astonishment, militiamen began to pour in, and after a short but desperate conflict Brown and his handful of followers were captured. Brown was tried at Charlestown for treason and murder, found guilty, and sentenced to death on the scaffold within forty-eight hours. He met his death calmly Dec. 2, 1859. It may safely be said that his execution hastened the downfall of slavery in America, and his name has become a household word among abolitionists. He was a man of stern and uncompromising moral principle, and singularly brave and honest. Whatever his rashness or fanaticism, there is no question that he offered himself as a sacrifice to the overthrow of a gigantic social and political wrong.

BRYAN, WILLIAM JENNINGS: American editor, lawyer, and politician; born at Salem, Ill., 1860; educated in public schools, Whipple Academy, Illinois College, Jacksonville (valedictorian), and Union College of Law, Chicago. He practised law at Jacksonville from 1883 to 1887, and afterward at Lincoln, Neb. From 1891 to 1895 he was a member of Congress, and from 1894 to 1896 edited the Omaha *World-Herald*. He wrote the "silver plank" of the Democratic platform and was nominated for the presidency by the Democratic Party in 1896. He made a phenomenal campaign, and received 176 electoral votes against McKinley's 271. In 1897-98 he lectured on bimetalism, and at the outbreak of the Spanish-American War he raised a regiment and became its colonel. In 1900 he was again nominated for the presidency by the

Democrats, Populists, and "Silver Republicans," receiving 155 electoral votes against 292 cast for McKinley. "Imperialism" was declared by the platform to be the paramount issue. After the election Mr. Bryan established *The Commoner*, a political weekly, at Lincoln, Neb. In 1904 he supported Mr. Parker, the Democratic nominee for the presidency. From 1903 to 1906 he traveled around the world, and on his return to New York was accorded the greatest ovation ever given to a private American citizen. For his views, see DEMOCRATIC PARTY. Address: Lincoln, Neb.

BUCHANAN, JOSEPH RAY: Labor editor of the New York *Evening Journal*; born at Hannibal, Mo., 1851; educated in the public schools. Having learned the trade of a printer, he went to Denver, Col., and engaged in the newspaper business. He became interested in labor and political reform in 1879, and took active part in the movements. For some time he published a labor paper in Denver under great difficulties. In 1887 he went to Chicago, and in the following year to New York. He became prominent in trade-unions, among the Knights of Labor, and in the Union Labor Party. In 1892 he helped to organize the People's Party at Omaha. He was twice a candidate for Congress from the sixth district of New Jersey. Since 1904 he has been a member of the editorial staff of the New York *Journal*.

Buchanan is a Socialist of the opportunist school. He believes in ultimate ownership and operation by the State of all industries of a public nature, and private ownership of those things which are for private use; but in accomplishing change would pursue line of least resistance. He has written "The Story of a Labor Agitator" and many short stories and economic treatises. He is a public speaker of wide experience. Address: Montclair, N. J.

BUCHEZ, PHILIPPE JOSEPH BENJAMIN: French communist; born at Matagne-la-Petite, 1796; became a doctor of medicine, 1825. He was one of the founders of the French CARBONARI, and barely escaped condemnation to death for his part in the Belfort conspiracy. He then joined the Saint Simonian school, and worked on the *Producteur*. When this passed into the hands of Enfantin, he left it to found, with Roux Lavergne, a so-called neo-Catholic school, combining Catholic and revolutionary ideas; and from 1831-38, altho with some breaks, he brought out his *L'Européen*. A résumé of his ideas appears in his *L'Européen* for 1835, in which he declares that it is time to realize the social principles of Christianity. His idea was to reach communism through industrial cooperation, and in 1831 he founded a cooperative association of cabinet-makers, thus introducing cooperation in France, and to the spread of this movement he devoted the rest of his life. (See COOPERATION.) In the revolution of 1848 he was a follower of Louis Blanc, and was in the chair as president of the National Assembly on the memorable May 15th. After the *coup d'état* of 1851 he returned to his studies and to private life. His main works are: "Essai d'un Traité complet de Philosophie" (1839-40), and "Histoire parlementaire de la Revolution Française" (1833-38 and 1845-47). He died in 1865.

BUFFALO: A city and port of entry in New York State with a population in 1905 of 376,618. Up to the last quarter of the nineteenth century the expression of a social conscience in Buffalo was sporadic. It then began to take form in certain definite movements traceable in the history of the present reform organizations of the city.

Out of the financial stress of 1873 came the Charity Organization Society, the first in America. It was inspired by Rev. S. Humphrey Gurteen, from England, then rector of St. Paul's Church, Buffalo, and it followed the lines of the London Society. Some of the strong men who founded it are still with it, and through them its scope and influence have steadily increased. The society is chiefly remarkable for its church district plan, whereby 122 churches, of all denominations, have accepted responsibility for the relief needed in certain defined neighborhoods.

History

The advantages of this system are the volunteer visitors thus made available and the education and coordination of the usually ineffective church relief. The main disadvantage is the difficulty of insuring that a family placed in care of a church will have the benefit of adequate aid and constructive effort. This is met by careful supervision of the work of uncertain churches, families being removed from their care when necessary. Four of the largest churches have established social settlements in the districts for which they are responsible, thus coming in close touch with the individuals intrusted to them, and bringing to bear upon the neighborhood what social and educational influences are possible. In the last ten years, through the efforts of the Charity Organization Society in these ways, the city outdoor poor relief has been reduced from \$118,000 to \$32,000 per annum, and the number of families thus aided from 4,166 to 880. There being no other strong organizations for improving the conditions of the poor, this society has taken a leading part in attacking the social causes of poverty, in enacting and enforcing laws drawn with this end in view, and in establishing and maintaining such admirable institutions as the Fresh Air Mission and the Fitch Crèche. The following special committees, all of them active, indicate the scope of this broader work: Fitch Crèche, Tenement House, Tuberculosis, Penny Savings, Children, Defective Children, Mendicancy, Public Lodging House, Family Desertion, and Public Playgrounds.

Another of Buffalo's oldest and strongest organizations is the Civil Service Reform Association. Organized in 1881, it took an active part in a campaign for the national civil service law which was passed in January, 1883, and for the state law which was signed by Grover Cleveland in May, 1883. It is worth remarking that George William Curtis said of this campaign, "There is no force in the country more united, enthusiastic, and effective than the Buffalo contingent." Buffalo was one of the first three cities to adopt municipal civil service rules, in Jan., 1885. The progress made since then is found in the fact that in 1884 only 7 per cent of all city offices were filled by competitive examination; in 1889, 49 per cent; in 1894, 75 per cent; in 1900, 84 per cent; and in 1906, 87 per cent.

In 1894 a subcommittee of this association organized the Good Government Club, which had

a useful existence of six years. Three years after this ceased to exist, there arose, as an entirely separate and new movement, the present Municipal League. This organization is energetic and fearless, and has attained a large measure of success. This is due, perhaps, to the fact that it not only publishes before election the records of candidates for office, but openly and actively works for the best men and the best measures.

The status of municipal ownership in Buffalo may be judged by the fact that the Municipal Ownership League has been lost to sight and hearing. The only experiment in this direction is the water-works, and there is small sentiment for anything further. Indeed there is lacking that very public consciousness which it is claimed municipal ownership develops. An example of this is the failure of the public to agree on a site for the much-needed union station, a perennial subject of public discussion. The various reform organizations of the city are able to inspire strong support, however, and though, as in most cities, this is from a limited number of social servants, yet the city as a whole has waked to united action, as at the time of the Pan-American Exposition; and it is through such organizations and special efforts that a public consciousness is developed. The city is divided by Main Street into the East and West sides, and it would take a strong body to fuse these, and other factions, as it would to free the city from the grasp of the railroads. The organization best fitted to fulfil this function is the Chamber of Commerce, and there are already indications that this competent body is waking to its opportunities and responsibility.

An important step for the future of progressive, united public opinion in Buffalo has been taken within the year in the organization of the Civic Conference. The following business and social reform associations are affiliated with this conference and meet monthly for the discussion of problems affecting the common welfare: Chamber of Commerce, Manufacturers' Club, Black Rock Manufacturers' Association, Society for Beautifying Buffalo, North Buffalo Business Men's Association, Builders' Exchange, West Side Business Men's Association, Municipal League, East Buffalo Business Men's Association, Buffalo Credit Men's Association, Retail Grocers' Association, Charity Organization Society, Referendum League, Mutual Progressive Association of Walden Avenue, North East Buffalo Business Men and Citizens' Association, South Buffalo Citizens' Association.

Three fourths of the population of Buffalo are foreigners, largely Germans, Italians, Poles. A

splendid system of schools, a remarkable public library, good tenement laws, well enforced, progressive labor laws, also enforced, and a strong Board of Health have prevented conditions of life and work from reaching the unmanageable stage of larger cities. The death-rate (14.14 per thousand) is phenomenally low. There are but few large tenements, and the houses are detached and present throughout the city an appearance of comfort, thrift, and pleasantness unsurpassed by any city in this country. At the same time there are communities sprung up about some of the large industries—one, especially, just outside the city line—which present conditions that cry for betterment. The city has made a beginning, with two public-bath

Conditions

stations, six playgrounds, and various parks, to meet the growing population in the crowded quarters, but it is only a beginning. The system of parks, most of them out from the crowded districts, is extensive and beautiful, though not yet completed. It includes a zoological garden, a botanical garden, ponds for boating and skating, and a wading pool. In one park is situated the Albright Art Gallery, perhaps the most beautiful in the country, and near it the Historical Building. At both of these buildings frequent public lectures are offered, and are well attended, as are those of the Natural History Society.

The Buffalo Public Library deserves special mention, for hardly a library in the country has a circulation so wide in proportion to the population. Its elaborate system of school libraries is also remarkable.

Another institution common to all cities but beyond the ordinary here is the Young Men's Christian Association. The main building is one of the finest of its kind in the country, and is used in such a way as to make it a strong influence in the community.

Two young but active organizations for social reform are the Consumers' League and the City Federation of Women's Clubs, mentioned together because they are both composed for the most part of women. The former is especially effective in enforcing the child labor laws; and the latter has taken up the cause of children in the matter of school lunches and medical examination.

The Society for Beautifying Buffalo, now in its sixth year, has accomplished something, and is on the way to become a strong organization for making Buffalo a beautiful and healthful community. Its committees are on Sculpture and Monuments, Playgrounds, Home Cultivation of Flowers, Abatement of Smoke Nuisance, Forestry, Architecture, Removal of Overhead Wires, Billboards and Signs.

The labor-unions in Buffalo are not strong. There are 174 local unions with a membership of 29,590, a gain of 4.2 per cent over a year ago. There have been no distinguished leaders, and no great battles to enlist working men. They have had a steady growth, following rather than leading the general development of organized labor, but their influence in the city to-day is not profound. The strongest organizations are to be found in the building trades and railroads. *Progress*, the official organ, has a circulation of 40,000, and does much in the way of education concerning social-reform movements.

Socialism in Buffalo is a wavering light. There are the usual two parties, the Labor Socialists being the more active, but either going little beyond weekly discussion.

Buffalo is on the eve of an important political event in the shape of a new city charter. It was prepared in skeleton form by an eminently fit commission and has the backing of most intelligent citizens. It provides for the election by the people of but two of the administrative officials, the mayor and controller, all others to be appointed, and for the establishment of but one house in place of the present Board of Aldermen and Council. It is believed that this will center the attention of voters upon the vital points, and focus responsibility. It should do much to rid Buffalo of the inefficiency and petty graft that still persist in spite of the fact that the balance of power is held by the independent

voters. Headquarters of some of the civic societies in Buffalo:

Central Labor Union, 37 East Huron Street.
Chamber of Commerce, Chamber of Commerce Building.
Charity Organization Society, 19 West Tupper Street.
City Federation of Women's Clubs, 485 Auburn Avenue.
Civic Conference, Chamber of Commerce.
Civil Service Reform Association, 19 West Tupper Street.
Consumers' League, 404 Seneca Street.
Corrupt Practices Society, Fred Gratiwick, Ellicott Square.
Municipal League, Ellicott Square.
Neighborhood House, 79 Goodell Street.
Referendum League, Louis Stockton, Erie County Bank Building.
Society for Beautifying Buffalo, 37 Allen Street.
Social Labor Party, 29 West Mohawk.
Watson House, 282 Babcock Street.
Welcome Hall, 404 Seneca Street.
Westminster House, 424 Adams Street.
Women's Educational and Industrial Union, 86 Delaware Avenue.
Young Men's Christian Association, 45 West Mohawk Street.
Young Women's Christian Association, 19 West Mohawk Street.

JOHN R. HOWARD, JR.

BUILDING ASSOCIATIONS: Cooperative organizations, created for the purpose of encouraging wage-earners and others in the systematic saving of small sums by making periodic payments on stock; and of utilizing such accumulated sums in making advancements or loans to their members with a view to assisting them in buying or building homes. As commonly applied, the term "building association" includes building and loan associations, mutual loan associations, savings-fund and loan associations, cooperative banks, cooperative savings and building-loan associations, and homestead associations, all of which have the same general features. They derive their rights and powers from the statutes of the different states in which they are organized, and while their general purposes and aims are substantially the same, they differ widely in details of management and methods of operation.

The origin and early history of building associations is a matter of some doubt, altho it is known that they existed and flourished several hundred years before the Christian era. John Henry Gray, in his work on the "Laws, Manners, and Customs of the People of China," gives an interesting account of how these societies were first established by Pong Koong, a man of great wealth during the Hon dynasty. They were recognized institutions of that country as early as the year 200 B.C., having some of the prominent features of later building and loan associations, such as the payment of dues and interest at stated periods, competitive bidding for loans, re-

payment of loans in instalments, a system of fines for non-payment, and an equal division of profits. In England such societies existed as early as 1781 ("Johnson's Universal Cyclopaedia"), and "building clubs" were known in Birmingham in 1795. The first association concerning which there is definite information is the Greenwich Union Building Association, established in 1809, and mentioned in "East's English Reports" (Pratt vs. Hutchinson, 15 East, p. 511). In Scotland, such associations were organized by the Earl of Selkirk in 1815. The first building association in the United States was The Oxford Provident Building Association of Philadelphia County, organized Jan. 3, 1831, at Frankfort, Pa., now within the corporate limits of Philadelphia. The constitution and by-laws provided for a payment of \$5 for membership fee, and a monthly payment

Origin
and Early
History

of \$3 per share. A loan of \$500 per share was authorized to the stockholders offering in writing the highest premium. No member could hold more than five shares; and at the semiannual elections each member was entitled to one vote for each share of stock held. The association was to continue until every member had an opportunity of purchasing a dwelling-house, after which the assets were to be divided. A fine of twenty-five cents per share for failure to pay the monthly dues was provided, as well as a fine of twenty-five cents for appearing intoxicated at a meeting. The Oxford Provident matured in ten years, and a second association, bearing the same name, was organized Jan. 30, 1841; this matured in March, 1852, and was followed by a third association, likewise bearing the same name.

From Pennsylvania the cooperative movement spread with wonderful rapidity, until now there is scarcely a state in the Union in which building and loan associations are not operating. Associations were organized in other states as follows: Maryland, 1843; New Jersey, 1847; Illinois, 1849; New York, 1851; Massachusetts, 1852; Ohio, 1857; Georgia, 1866; Texas, 1867; Kansas, 1868; Minnesota and Arkansas, 1869; North Carolina and Iowa, 1870; Louisiana and Tennessee, 1873.

The fundamental principles underlying these associations may be stated as well given by Judge Seymour Dexter, in an address delivered before the United States League of Building and Loan Associations, at Put-in-Bay, 1902:

FIRST: The bed-rock foundation principle of the successful building and loan association movement in America is direct financial cooperation by men of comparatively limited financial resources in the matter of building and owning homes.

SECOND: The next important principle in the superstructure to be reared on this bed-rock foundation principle, is the payment by these men into a common fund, in regular periodic payments, the sum of which they have severally agreed to pay; to the end that the sum total of such periodic payments will amount to a sum sufficient to be used advantageously by some one contributing to the common fund, in building or buying a home, and for the use of which he pays interest into the common fund and gives a satisfactory security for the accumulated fund thus received, and in addition to the interest continues to pay his regular periodic payments, which are accumulating to pay back the sum he has received, and if continued long enough will equal and cancel such amount.

THIRD: That the necessary machinery may be set in motion to easily, economically, and safely put these principles into operation, the men proposing to contribute such regular periodic payments unite to form an association, under the laws of the state in which they reside, that they may have corporate powers, elect from their own number officers executive, as a president, vice-president, secretary, and treasurer, and a board of directors, and of this board the executive officers are *ex-officio* members—these officers to be elected annually.

In the association the amount of each periodic payment which each is to make is represented by shares, and those contributing to the common treasury are known as shareholders.

FOURTH: The fundamental principles of this association are:

The shareholders are localized; they reside chiefly in the village or city where the association is located.

All the meetings of its board of directors are open and may be attended by any shareholder.

Loans from the common fund are made only to its own shareholders, and if a person wishes to borrow who is not a shareholder, he must unite with the association and become a shareholder before he can become a borrower.

Every shareholder who can give satisfactory security is equally entitled to borrow the funds of the association.

The loaning of its funds is made at periodic times, first by the association, of which every shareholder has due notice, at an open meeting; and in the event two or more shareholders want to borrow the same money, the right of priority to a loan is settled by an open bidding for such right of priority, any sum bid above regular periodic interest inuring to the benefit of the common treasury, and through it to all shareholders alike.

A premium is not a fundamental principle in the building and loan association scheme, except to settle right of priority to a loan when two or more shareholders, having each satis-

factory security to offer, want to borrow the same money at the same time.

A system of fines for default in payment of dues or interest at or before the periodic time first for such payment, such fine not being imposed for the purpose of revenue to the treasury, but as a penalty for tardiness, to stimulate shareholders to prompt payment and the formation of the habit of prompt payment of an obligation at or before the time it is due.

The Board of Directors, except the secretary and treasurer, rendering their services to the association without receiving pay for such services.

No agents paid a commission or other specific sum for securing new shareholders to join the association.

Mutuality in the mode of distributing profits, so that every dollar paid into the common treasury in the form of dues, interest, or other incidental income, shares equally.

That when a free shareholder withdraws his shares and receives his accumulations, he shall be obliged to leave a certain percentage of the profits credited to his shares, which reverts to the association, that percentage being large enough to insure against loss upon the loans in which his accumulations have been invested.

The building and loan association is practically a cooperative savings-bank. It differs from the ordinary savings-bank mainly in its methods of receiving deposits and lending money. Its chief advantage for the people over the ordinary savings institution is that its funds are used by the members themselves to advance their own interests, while the funds deposited by wage-earners in the old line savings-banks are largely borrowed by business men and corporations, and used to advance the interests of capital. Another point in favor of the building and loan association is in the fact that every member has a voice and vote in the management of it, and shares in the total profits. Every member is a stockholder, and therefore entitled to all the rights and subject also to all the liabilities of a stockholder.

There are three forms of these associations: (1) The original, known as "terminating," now no longer in use; (2) the serial; and (3) the permanent. In the terminating association all members were supposed to commence their payments at the beginning of the association; but when stock was issued subsequently, the member was required to pay back dues equal to the payments made by members who started with the association, and usually in addition a bonus

Varieties to make the new shares equal in value to those of his fellow members. There was no distribution of profits. The earnings were kept intact until the association was ready to close its business, when they were divided pro rata to all shareholders. All stock being of equal value, the life of the association was limited to the time required to mature the par value of the shares; when the non-borrower received the full value of his stock, the mortgage of the borrower was canceled, and the affairs of the association wound up.

The serial association was the first attempt to remedy the defects of the terminating society. Under this plan members join the association in series, which are issued at regular intervals of usually three or six months. Each series is practically a terminating association, except that the earnings, instead of being kept intact, are distributed at regular intervals before the opening of a new series, and the principles of copartnership applied in the distribution of profits. Each series of shares runs independently of the other and matures separately, the values of the shares in the same series being kept equal. New members are required to pay back dues only to the date of issue of the last series. This plan obviates the objection of a liquidation of the association every ten or twelve years. Each series is matured whenever the monthly or weekly dues, together with the distributed earnings, equal the face value of the shares. New series being regularly issued, the association itself becomes perpetual. When a person enters the membership of a serial association he pays a membership fee, and subscribes for one or more shares of stock on which he agrees to make a monthly or weekly payment of fifty cents or one dollar per share until maturity of the series or withdrawal before then. Should he fail to pay his monthly or weekly instalment or dues within the required time, he is called upon to pay a fine into the treasury of the association. Should he at any time transfer his shares of stock to another person, payment of a fee is required for making the transfer on the books of the association.

The permanent association differs from the serial association in that a person may become a member of it at any time without paying back dues. In a permanent association the profits are divided annually or semiannually among the members, and credited to their respective accounts. The shares of each member are dealt with separately in conducting the affairs of the association. A person may withdraw from

either a serial or a permanent association at any time with a share of the accumulated profits. In a serial association the percentage of profit that may be taken out by a withdrawing member is generally fixed by the rules of the association at a lower rate than is awarded the member who stays in the association until the series matures. This is done to insure the participation of the withdrawing member in any possible and unforeseen losses that may befall the association. In permanent associations the withdrawing member usually is entitled to receive the actual dividends declared to his shares, provision for the payment of any losses being made by setting aside a portion of the profits at each periodical distribution to a contingent fund from which all losses are paid. In some states both serial and permanent associations are required to set aside to such a fund a certain percentage of their profits before distribution, to insure the equal participation of all members in the losses of the association. Originally, in the permanent associations, all the stock issued was paid for in weekly or monthly instalments of dues. Later, what is now known as "paid-up stock" was also issued. The full face value of this stock is paid for at one time and the member receives thereon regular semiannual or annual dividends in cash. With these exceptions paid-up stock is practically the same as running stock, and shares the same rights and liabilities. It is not issued at all times, but only when the association can profitably loan the money; and it may be called in and paid off if the association has no use for the funds. The member has the right to withdraw it at any time, just as running stock. Paid-up stock is of great advantage to associations in that it furnishes and makes available for loaning purposes larger amounts of money than can be accumulated from instalment stock.

In a building and loan association a member subscribes for one or more shares of stock, on which he pays a certain weekly or monthly amount, denominated "dues," till the aggregate sum paid in, plus the dividends credited, amounts to the face value of the stock; when the member is entitled to receive from the association in cash the face value of the shares held. The difference between a stockholder in a building association and a stockholder in an ordinary corporation, is that in a corporation the stockholder usually pays the full value of the stock upon acquiring it; while in a building association the member, by small payments and dividend accretions, matures the face value of the shares. The funds of a building and loan association are made up of membership fees, dues payments, and moneys received from sale of stock, interest on loans, premiums for priority of loans, fines for non-payment of dues, and fees for transferring stock. The income of the association is augmented by low expenses, the officers (except the secretary, treasurer, and attorney) usually serving without pay.

When a member desires to buy or build a home, he endeavors to borrow from the association as much as he may require for the purpose, by obtaining an advancement of the par value of his shares. He applies to the association when it has money to loan; and if he offers a higher premium for the use of the money than any other member, the loan is awarded him. On securing the right to the use of the money, he designates his proposed real estate security; and when the title has been approved by the association's attorney and the security found ample by the association's appraisers, being usually required to be one third more in value than the loan applied for, the money is advanced him, and he gives the association a mortgage on the property for the amount. He also assigns his stock to the association and agrees to keep up his required payments thereon. After securing the loan, the borrower also pays to the association, in addition to his regular dues, premium and interest on the loan. When the face value of the borrower's stock is equivalent to the amount of money loaned him, the association applies the stock to

the payment of the mortgage, and the member has his canceled mortgage returned to him. The borrower is not, however, required to continue his loan until maturity. Should he desire to pay it off sooner, he can at any time have the value of his shares applied to the cancelation of the loan; and by paying in one sum the balance still due, he can have his mortgage canceled. In case of default in payments for a stipulated time, usually provided in the by-laws, the entire loan becomes due and payable, and the association then has the right to recover for balance due on the loan by foreclosure of the mortgaged premises.

The premium referred to is a payment over and above interest, intended as a bonus for the right of priority in securing a loan, the borrower agreeing to pay a stipulated sum as compensation for the present use of the money advanced him. The original form was known as the "gross premium plan," in which the premium bid was deducted from the loan, the borrower receiving the difference in cash, altho required to pay interest on the face value of the shares loaned until the full face value of the shares was matured. The "net plan," which was the next form, was a modification of the gross plan, the borrower being required to pay interest only on the net amount of money received as a loan, the premium being deducted in advance as under the gross plan. Under the "instalment plan," which became the most popular form, the borrower receives the full face value of his shares, and agrees to pay a certain number of equal monthly or weekly payments as premium, usually a certain number of cents per share, which payments are continued during the term of the loan. The premium is, however, coming in to disuse in the evolution of the building association scheme, mainly because interest rates have declined; and where interest rates are within the legal limit, loans are usually made at a straight interest rate without a premium, the right of precedence to a loan being determined by the board of directors, either according to the order in which the applications were filed, or according to the security offered.

Building and loan associations have long been recognized as exerting a most beneficial influence upon the community, so that the states, and even the national government, have accorded them exemptions from many forms of taxation. Thus, under the War Revenue Act, building associations which made loans only to their members were exempt from stamp taxes on all documents executed by them, except checks and drafts. In most states they are exempt from the usury laws. There are also exemptions from taxation on shares of stock, on mortgages, and on securities. These special favors and privileges are accorded these associations on the theory that they promote thrift, encourage home-owning, and thereby increase the amount of taxable property, so that the state can well afford to grant them these special rights.

The first reliable statistics concerning the building and loan associations of the United States are contained in the ninth annual report of the U. S. Commissioner of Labor, published in 1893. There were at that time 5,598 local and 240 national associations, a total of 5,838. The total assets of the locals were \$473,157,454; of the nationals, \$55,715,431; a total of \$528,852,885. Of the 5,838 associations in the country, 15,796 reported the total shareholders and 4,269 reported

Statistics

the number of male and female shareholders. The total number of shareholders was 1,745,725, an average of 301.2 shareholders to each association. The number reported according to sex was 1,227,442, of whom 919,614 were males and 307,828 females; 5,776 associations reported 456,004 borrowers, an average of 78.9 borrowers to each association; 4,444 associations reported the number of homes acquired by their borrowing shareholders as being 314,775. In 4,422 associations reporting, 28,459 buildings other than homes have been secured. The total number of mortgages foreclosed was reported by 5,440 associations as 8,409, having a value of \$12,217,126, the loss on such foreclosures being \$449,599. The department also undertook to ascertain facts as to the kind of people who patronize building and loan associations, to learn if the original purpose of these associations, which is to enable persons of small means to secure homes for themselves and to save their earnings, had been preserved. It was impossible to learn the occupations of all the shareholders in all such associations; but it was learned that in 909 local associations, reporting 159,223 shareholders, 111,383, or 69.96 per cent, were practically working people. In 12 national associations, reporting 15,547 shareholders, 8,403, or 54.06 per cent, belonged to the working class. The department therefore concludes that "these figures show conclusively that the building and loan associations of the country are being used by the classes for which they were originally established."

In November, 1904, the Department of Commerce and Labor issued a bulletin (No. 55) on "Building and Loan Associations of the United States," in which is considered very fully the origin and growth of these associations, their fundamental principles, plans of issuing shares and making loans, treatment of distribution of profits, withdrawal plans, etc. The report says:

Some estimate of the great financial importance of these institutions may be gained by an inspection of the following table, which shows the assets of building and loan associations for each year from 1893 to 1903, inclusive. The figures in this table have been compiled from the reports of the various states exercising supervision over these associations, and have been estimated from the remainder of the country. These assets consist chiefly of loans secured by real estate owned by members of the associations, although a certain proportion consists of loans on other collateral, cash on hand, real estate, and property owned by the associations, etc.

Reference to the total of this table shows that in the year 1893 the assets of these institutions had reached the enormous figure of \$28,852,885. As was observed in the report which covered the year 1893—

A business represented by this great sum, conducted quietly with little or no advertising, and without the experienced banker in charge, shows that the common people, in their own ways, are quite competent to take care of their savings, especially when it is known that but thirty-five of the associations now in existence (1893) showed a net loss at the end of their last fiscal year and that this loss amounted to only \$23,332.20.

In 1894 the assets had increased by 74 millions of dollars to a total of nearly 603 millions; in 1895 they had increased by 22 millions to nearly 625 millions; in 1896 an increase of 27 millions brought the total up to nearly 652 millions; while in 1897 the year in which the greatest assets are shown, an increase of 13 millions of dollars brought the total up to nearly 665 millions. During the following four years, 1898 to 1901, the assets of these institutions had decreased by 59 millions of dollars, a relatively small amount, bringing the total down to approximately 606 millions, but in 1902 an increase of nearly 4 millions is shown—the assets for this year being \$609,599,096, or over 80 millions more than the assets shown for 1893, the first year of the decade, by the report of the Department of Labor.

In 1903 there was a considerable decrease in the total assets, due to the failure of a large company in New York and to the fact that several large building and loan associations in Ohio were organized into trust companies.

Considering the figures shown for 1903 for the various States, it is seen that Pennsylvania ranked first with 1,196 associations, having assets of nearly 118 millions of dollars.

* Figures for 1905 not being available, those for 1904 are used as being approximately correct.

The principal periodical in the United States devoted exclusively to building and loan association interests is *The American Building Association News*, published monthly in Chicago and Cincinnati. This is the official organ of the United States League of Local Building and Loan Associations, and of a large number of the state leagues. Its files are a valuable source of information regarding building associations.

The United States League of Local Building and Loan Associations, composed of representatives of the several state leagues of building associations, was organized in Chicago, Ill., April 15, 1892, and meets annually in different parts of the United States. Judge Seymour Dexter, of Elmira, N. Y., was its founder and first president. It has for its motto: "The American Home: the Safeguard of American Liberties." Its proceedings are printed yearly, and form a valuable contribution to the literature on the subject.

Building associations exist also in Europe in considerable numbers, tho not to such an extent as in the United States. For information in regard to them, see COOPERATIVE BANKS.

H. F. CELLARIUS.

Thompson, Chicago, 1892; *How to Manage Building Associations*, by Edmund Wrigley, Philadelphia, 1880; *The Working Man's Way to Wealth*, ib.; *Building and Loan Associations in Bulletin* (No. 55) of the Bureau of Labor (Department of Commerce and Labor), Nov., 1904; *Proceedings of the United States League of Local Building and Loan Associations* (published annually since 1893).

BUILDING TRADES, UNIONS IN THE:
These are among the larger and more important

developed in various cities, and especially in Chicago and New York.

There seem to be two reasons why the building trades have had more labor difficulties than in most lines of industry. The first is the large number of distinct trades and crafts, often engaged at the same time on the same building, each with its separate local and national organization, any one of which is able, by calling out its men, to embarrass the contractor and seriously delay if not render impossible the work of the other crafts engaged upon the building. The second reason is that since in the United States, unlike methods in England and Europe, the various processes of building are usually sublet to subcontractors by the general contractor who does perhaps the masonry, the subcontractor, doing often only a few days' work on a building, can if he will violate a trade agreement with a union and yet finish his job before the union can hold a meeting and call a strike, with the result that the various building trade-unions have been compelled to lodge more authority with their agents as to strikes than is the case in most trades. The result of these two facts, the number of distinct trades involved in one place at one time, and each with a walking delegate entrusted with unusual power, has developed situations of extreme complexity and confusion, alike to employers and employees. This situation has led to more factional and jurisdictional fights between crafts, and even between rival organizations in the same craft, than in most trades. Sometimes contractors have had to endure vexatious delays while rival unions have fought as to which should do a certain job. The United Board of Building Trades in New York has had generally some 70 local unions represented in it. The Building Trades Council of Chicago represents 32 trades with some

30,000 members, while the distinct Building Material Trades Council of Chicago has some 43 unions with 33,000 members. These boards and councils, composed of the walking delegates of these unions, meeting originally simply to consult unofficially and to aid one another in getting the best conditions for their unions from various contractors, have almost invariably developed great power. The building trades represent to a large extent skilled laborers quickened and not seldom demoralized by city commercial life. A contractor wanting a large number of skilled men, but perhaps only for a few days, must get his men through collective bargaining. He cannot take time generally to engage a man here and a man there. Hence the power of the walking delegate, who has his men in hand, a power probably generally used by the walking delegate for the good of the men—hence largely high wages in the building trades—but also a power admitting of great evils. Walking delegates have learned to sell their power usually for the benefit of their unions but sometimes for their own pockets. Contractors have been willing to pay large sums—many believe that the first offers came from contractors—to call off strikes. Contractors have even been willing to pay to have strikes called upon rival contractors or to have paid emissaries in the ranks of the walking delegates. (See WALKING DELEGATES.) "Graft" has undoubtedly largely been used both by walking delegates and contractors.

The first Board of Delegates in the building trades in New York dates from 1884, but had little power. By 1890, however, it had become strong, till in 1894 it divided into two hostile boards which in 1902 merged in the United Board of Building Trades of New York, and it was hoped both by employers and employees that this would end the confusion of the building situation. Corruption, however, soon developed. One firm was said to have paid \$2,000 to have a strike called off.

Sam Parks (see WALKING DELEGATES), business agent of the structural iron workers, developed his phenomenal power and began his corrupt career. The George A. Fuller Company was accused of having brought him from Chicago and of backing him financially to secure immunity for their enterprises, which, honestly or dishonestly, they certainly had. Charges and counter charges were made.

The year 1903 saw protracted and almost continual strikes in the building trades. Finally, through the efforts of the New York Civic Federation, a Board of Governors of the employers and representatives of eighteen unions held a conference and a General Arbitration Board was organized composed of two arbitrators elected by each employers' association and two elected by each union. Only members of unions party to the agreement are to be employed, and the employees are to enforce this clause on all contractors. Employers cannot order a lockout nor the unions a strike before the matter in dispute is brought before the General Arbitration Board and settled.

In Chicago there were conditions at least as complicated, a strike much more violent, a connection with disreputable politics, and corruption probably much more open and general, ending in a victory for the employees, tho the better elements in the unions have combined with the contractors to form a new Chicago Building

Trades League, largely on the same lines as the New York agreement.

For main unions in the building trades, see under their respective names.

J. R. COMMONS.

REFERENCE: *Trade Unionism and Labor Problems*, ed. by John R. Commons (1905), chapters iii. and iv.

BUONARROTI, PHILIPPO: Communist; born in Pisa in 1761. On account of his revolutionary ideas he was early compelled to flee to Corsica, and published there his "Friend of Italian Liberty." In 1792 he came to Paris, and was naturalized. For complicity with the conspiracy of BABEUF he was condemned to deportation. After much suffering he escaped to Geneva, and later to Brussels, where he wrote his "History of Babeuf's Conspiracy" (1828). In 1830 he returned to France, and secretly worked for communism, exerting much influence upon Blanqui and other leaders. He died in 1837.

BUREAU OF ECONOMIC RESEARCH: Established in New York, 1899, by Geo. H. Shibley; removed in 1900 to Washington, D. C. It has conducted investigations into railroad consolidations in Massachusetts and into trusts, wholesale prices, freight rates, and certain gas plants. Since 1901 Mr. Shibley has devoted the efforts of the Bureau mainly to direct legislation, having established also a People's Sovereignty League, of which he is president. Address: 11 Bliss Building, Washington, D. C.

BURGESS, JOSEPH: English Labor leader; born at Failsforth, Lancashire, England, 1853. At the age of eight he worked part time in a cotton mill; at eleven, he worked full time. In 1884 he became a journalist in the interests of labor, editing *The Oldham Operative*. From 1885 to 1889 he was on the editorial staff of *The Cotton Factory Times*, from 1890 to 1891 he was manager of *The Yorkshire Factory Times*, and from 1891 to 1894 editor of *The Workman's Times*, London. In 1892 he published proposals for the founding of an independent labor party. This party was founded in 1893, and Mr. Burgess was elected a member of the first national administrative council. He was the party's candidate for Parliament at a by-election in Leicester, 1894, and at the general election in 1895, and has served as organizer for the Independent Labor Party both at Leeds and in Glasgow. Elected in 1902 to Glasgow Town Council, he contested, in 1906, the Camlachie Division of Glasgow. Mr. Burgess has fought all his elections as a Socialist, against Liberal and Tory candidates. He is the author of several stories evidencing his interest in labor. Address: Factory Times Office, Huddersfield, England.

BURIAL SOCIETIES: Friendly societies found mainly in England, constituted in the usual manner, but with the express object of supplying a fund for paying the funeral expenses of the members on their death. (See FRIENDLY SOCIETIES.) It became customary to enter the names not only of adults, but of children, in such societies. The proceedings of the criminal courts have shown that, in some instances, children on whose lives such an insurance was effected have been killed or allowed to die of neglect, and the alarm created by such instances was enhanced by the discovery

that children were frequently insured in more than one society. Legislation in England was enacted to remedy this. In the United States burial societies have had little development, their place having been filled by provisions embodied in the various friendly societies, secret orders, or trade organizations.

BÜRKLI, KARL: Swiss Socialist, born in Zurich, 1823. He became a tanner, and was converted to socialism (1845) by the writings of Fourier. Bürkli founded the first *Konsumverein* in German Switzerland, and in 1851 was elected to the Cantonal Council because of his socialist program, and advocacy, for the first time in Switzerland, of direct legislation. Since then he has played an important part in Swiss politics as a firm Socialist. In his seventieth year he opened the Zurich International Congress. He has been a voluminous writer from 1851-91.

BURNS, JOHN: Political labor leader, born at Battersea, London, 1858; son of an engineer. He began to earn his own living at the age of ten, working in a candle factory, his first wages being three shillings a week. Later he was apprenticed to a local engineering firm. Burns early became an enthusiastic trade-unionist, and in 1877 was arrested for persistently speaking on Clapham Common. On being released (in 1879) he joined the Amalgamated Society of Engineers, and prominently advocated shorter hours. In 1880-1881 he was engaged as an engineer in West Africa. In 1883 he became a Socialist, and joined the Social Democratic Federation, becoming its leading working-class member, but also an omnivorous reader and student. In 1885 he stood as Socialist candidate for Nottingham, and received 598 votes. For two years he led the "unemployed" agitation in London. In 1886 he was arrested with Hyndman and others for speaking in Hyde Park, and on acquittal his speech ("The Man with the Red Flag") was printed and widely sold. On Nov. 13, 1887 ("Bloody Sunday"), he was imprisoned six weeks for breaking through the police lines, and speaking in Trafalgar Square. In 1889 he was elected to the London County Council from Battersea. The same year he showed marvelous skill in managing the Dock Strike, and in organizing the unorganized; and he became the foremost leader of the "new unionism." Coming to believe in the "progressivist" policy of advancing socialism through any party, he left the Social Democratic Federation, and has been criticized by its leaders ever since, at times even being considered by them a traitor to their cause. At the general election in 1892 he was easily elected M. P. for Battersea, and in 1893, receiving the highest number of votes at the Trade Union Congress, became chairman of the Parliamentary Committee.

On the London County Council Burns's work has been continuously good and increasingly onerous, and he has had a large share in its onward march. The attitude of its Works Committee, with fair wages, hours, and conditions of labor, and its system of direct employment without contractors, is largely due to him. In Parliament his work has been none the less solid: witness the adoption of the eight-hour day in government workshops, and his interest in all reforms. Burns has been steadily reelected from Battersea, including the election of 1906. He is an independent trade-unionist and Socialist, and

altho increasingly denounced by the extremists in the labor movement, who do not believe in his opportunist methods, he has gained the admiration and confidence of all parties wherever he has served: on boards of arbitration between employers and employees, in Parliament, and in positions of trust. He is a total abstainer and strenuous for justice to all. In December, 1905, he was asked by the Liberal prime minister, Mr. Campbell-Bannerman, to enter the Cabinet as president of the Local Government Board, the first English workingman to be a Cabinet officer. He has a salary of £2,000, and has charge, among other things, of the great movement and fund authorized by Parliament for the unemployed. Address: 37 Lavender Gardens, Battersea, London, S. W., England.

BURROWS, HERBERT: English Socialist, born in Suffolk, England, 1845. The son of a Methodist local preacher, he studied at a private school and entered the civil service. He was one of the original founders of the Social Democratic Federation, of which he is still a member, and to the cause of which he has devoted himself so energetically as on occasions to deliver seven addresses a day. He was one of the organizers of the dock laborers, and has represented the federation in several Socialist congresses. In 1895 he was treasurer for the Match Girls' Union, and a very active friend of its cause. He is interested in theosophy, as well as socialism, and secretary of the Match Makers' Union. Address: 99, Sotheby Road, Highbury, London, N., England.

BURT, THOMAS: Member of Parliament; born in Northumberland, 1837; the son of a miner. Following his father's profession, he became secretary of the Northumberland Miners' Union in 1865. In 1874 he was elected to Parliament from Morpeth, with Alexander Macdonald, the first "labor member" to sit in Parliament. He has represented Morpeth ever since. Burt is president of the Miners' National Union (since 1882); was British representative at the Labor Conference in Berlin, 1890; president at the Trades Union Congress in Newcastle-upon-Tyne, 1891; and has been active on various commissions, etc. In politics he is a Liberal. Address: 20, Burdon Terrace, Newcastle-upon-Tyne, England.

BUTLER, BENJAMIN F.: American lawyer; politician; born at Deerfield, N. H., 1818; was graduated at Waterville College, Maine; studied law at Lowell, Mass., and was admitted to the bar in 1841. He soon became distinguished as a criminal lawyer and Democratic politician. In 1853 he was elected to the Legislature, and in 1859 to the State Senate. A brigadier-general of militia, at the outbreak of the Civil War he marched at once to the South with the Eighth Massachusetts Brigade. In February, 1862, he commanded the military forces sent from Boston to the mouth of the Mississippi, and for seven months held military command of New Orleans. His administration here has been violently denounced, and brought down upon him the intense hatred of the Southern people, because, altho he maintained order and enforced sanitary regulations, he compelled the rich secessionists to relieve the wants of those whom their rebellion had impoverished. Relieved of his command he was moved to Virginia and North Carolina, and cooperated with General Grant in his movement upon

Petersburg. In 1866 he was chosen member of Congress from Boston, and two years later was one of the managers in the impeachment of President Johnson. Butler had been a Republican; but as soon as the Greenback and Labor movement began he fell in with it, and in 1878 he was the candidate of this movement for governor of Massachusetts. He received 109,435 votes as against 134,725 for the Republican candidate. In 1879 he was again defeated; but in 1882 was

successful as the Democratic nominee. Two years afterward he was the presidential candidate of the Greenback-Labor and Antimonopoly parties, receiving about 133,000 popular and no electoral votes.

Altho very wealthy, General Butler kept near to the heart of the "common people," and few men of his time had as large a following among the working men, especially in Massachusetts. He died in 1893.

C

CABET, ÉTIENNE: French communist; born at Dijon, France, 1788. The son of poor parents, he received little education, but worked his way up till he became a teacher in the *Lycée*. Later he studied both law and medicine. In 1815 he became founder and director of the "Fédération Bourguignonne" for the defense of the national territory, and became connected with the Carbonari, his father before him having been a fiery patriot. About 1820 he went to Paris, and the Revolution of 1830 found him in the first line of its adherents. Up to 1839 he followed the varying fortunes of a Parisian extreme republican, writing various histories of the French revolutions and defending the most extreme acts of the "Mountain." Being tried for this and condemned, he fled to England. Here he read Moore's "Utopia," and devoted henceforth his life to the cause of communism. In 1840 he published his "Voyage en Icarie," an attractive communistic romance. In this he proposed, first, a transitional period of fifty years, and then a complete communism. In the transitional period taxation was to be more and more levied upon the wealthy. Wages favorable to the poor were to be fixed by law. Five hundred million francs were to be spent in providing work and dwellings for the poor. The army was to be disbanded as rapidly as possible, and employed on public works. Under Cabet's full communism all over 65 were to be retired on an allowance. All others able to work were to be set to compulsory work—men from 18 to 65, women from 17 to 50. Everything was to be done to make the work attractive. The family was to be maintained intact, save that at the age of five years children were to be educated in communism by the State. There was to be one official journal; none others were to be allowed. The city of Icaria is described with minute detail.

Great interest was created by the thoughts voiced in Cabet's work, and it was decided to establish an Icaria in America. Cabet bought 1,000,000 acres of land in Texas, and sent, in 1848, sixty-nine trusted followers to prepare the way. Arriving in New Orleans in March, they heard of the revolution in Paris, and debated whether or not to return. They decided to go on; but their ranks were soon decimated by fever, and they returned to New Orleans, where they met Cabet. There was a stormy interview and Cabet was much denounced; but in March, 1849, Cabet, with 280 followers, went to Nauvoo, Ill., where they hoped for a better climate than in Texas. Meanwhile, Cabet had been condemned in Paris to imprisonment on a trumped-up charge of fraud. He returned to Paris, and had the sentence reversed. Returning to Nauvoo, he found the

community prospering, having, in 1855, 500 members. There was, however, continual dissension, and Cabet, with 200 followers, left for St. Louis, where he died (1856). The colony, however, survived, and only finally disbanded in the year 1895. (See ICARIA.) Cabet, it should be added, gave a somewhat religious cast to his thought, writing a book, "Le Vrai Christianisme suivant Jésus Christ," and indeed several other books arguing that Christianity is communism.

REFERENCES: *Icaria*, by Albert Shaw; *French and German Socialism*, by R. T. Ely, and other histories of socialism. (See COMMUNISM.)

CADBURY, GEORGE: English manufacturer and philanthropist; born at Edgbaston, Birmingham, 1839; educated under the auspices of the Society of Friends, to which his family belonged. One of the most successful and prosperous cocoa manufacturers in the kingdom, his relations with his employees would seem to be almost ideal. He is chairman of the firm of Cadbury Brothers, Limited, and also of the *Daily News* Publishing Co. His great title to fame rests upon his splendid achievement in the founding of Bourneville, which is known all over the world as "the model village." Address: Manor House, Northfield, Worcester, England. (See BOURNEVILLE.)

CAIRNES, JOHN ELLIOT: Political economist; born at Castle Bellingham, County Louth, Ireland, 1823; graduated at Trinity College, Dublin, and called to the bar in 1857, but never seems to have practised. In 1856 he competed successfully for the Whately professorship of political economy in Dublin, and held it for five years, the full period during which it was tenable. During this period he published several essays and lectures, especially one on "The Slave Power," defending the cause of the North in the American Civil War, and winning by it a high reputation for economic thought and analysis. In 1865, he was appointed professor of political economy at University College, London; and when, in 1872, ill health compelled him to resign, he was made professor emeritus. Of the Ricardo-Mill school, Cairnes ranks perhaps second to Mill himself. He maintained sharply that political economy has to do only with what is, not with what ought to be; and his whole treatment was conservative and of the old, orthodox, and *a priori* school, having little to do with the induction of the historical school. While of the school of Mill, he criticized him very sharply on many points, so that the "Dictionary of Political Economy" declares the effect of Cairnes's last and greatest book to have been mainly destructive in shaking faith in the

finality of Mill's conclusions. Cairnes's literary skill and his logical ingenuity are perhaps his most marked characteristics. He was the author of: "Political Essays"; "Leading Principles of Political Economy Newly Expounded"; and "The Slave Power." He died in 1875.

CALVIN, JOHN: French Protestant theologian; born at Noyon, Picardy, France, 1509. His influence on social reform, whether for good or for ill, was far from slight. Prof. John Fiske says of him ("The Beginnings of New England," p. 58): "It is not easy to speak of Calvin with enthusiasm, as it comes natural to speak of the genial, whole-souled, many-sided mirth- and song-loving Luther. Nevertheless, it would be hard to overestimate the debt which mankind owes to Calvin. The spiritual father of Coligny, of William the Silent, and of Cromwell must occupy a foremost rank among the champions of modern democracy. Perhaps not one of the medieval popes was more despotic in temper than Calvin; but it is not the less true that the promulgation of his theology was one of the longest steps that mankind has taken toward personal freedom. Calvinism left the individual man alone in the presence of his God. . . . In the presence of the awful responsibility of life all distinctions of rank and fortune vanished; prince and pauper were alike the helpless creatures of Jehovah, and supplicants for His grace."

It is easy to see from this in what direction Calvin's contribution to human thought and life must lie. By crushing the individual under the sovereign decrees of God, he frees him from all lesser bondage. Calvin's sociology becomes intensely individualistic. He defends private property as morally necessary, as tests of justice and integrity. The communism of the New Testament he tries to prove was not communism. He is the first theologian to defend interest. The State and the Church he regarded as wholly independent, yet alike in Church and State the one supreme ruler is God. Luxury he condemned as sin. He considered it the duty of the Church to provide for the poor, and to this end he revived the temporal duty of the diaconate. He died in 1564.

CAMPANELLA, TOMMASO: Italian monk; born 1568; entered the Dominican Order when quite a boy, but devoted much of his time to the study of philosophy. In 1599 there arose a conspiracy in Calabria against the Spanish rule. Campanella, as an Italian patriot, was charged with conspiracy and heresy, and imprisoned in a dungeon in Naples for nearly twenty-seven years, being repeatedly tortured to make him confess his heresy, but with no avail. During his confinement he wrote several works, one of which was his "Civitas Solis" (published 1623). When released he retired to Rome, and afterward to Paris, where, enjoying the friendship of Richelieu and a pension from the king, he ended his days in peace. The "City of the Sun" is a dialogue between a Knight Templar and a sea captain. The captain tells of a wonderful city he had visited, and describes minutely all that he saw, especially the methods of education and the laws by which the city is governed. It much resembles Plato's "Republic." Work is common to all, but the hours are to be only four, and slavery is repudiated. There is to be community of wives and of goods. Money is not received, even from

foreigners. A translation of the "City of the Sun" may be found in Morley's Universal Library. Campanella died in 1639.

CAMPBELL, HELEN STUART: American author; born at Lockport, N. Y., 1839; educated in public schools. Her interest in social problems was first aroused in 1877. She became convinced that the improper preparation of the food of the poor was at least partly responsible for the craving for intoxicating drinks, and in 1878 she went South, organizing the first cooking-schools there, and publishing a book on housekeeping and cookery. Through the reading of her book, "Miss Herndon's Income," published in 1885, the editor of the *New York Tribune* was moved to engage Mrs. Campbell to make a thorough investigation into the conditions of the working women and children of New York City. After a year's work the result was published in "Prisoners of Poverty." She then went abroad to investigate the same conditions in London, Paris, and several Italian cities, resulting in her "Prisoners of Poverty Abroad." Later she received the prize offered by the American Economic Association for the best treatise on "Women Wage Earners." She was one of the organizers and first officers of the Consumers' League of New York, and was associated also with the first clubs established for working girls. Mrs. Campbell is interested in all social questions: the child-labor problem, arts and crafts movements, etc. In addition to the works already mentioned, she is the author of "Household Economics" and many other books. Address: 170 West Seventy-sixth Street, New York City.

CANADA: The largest of the British possessions, having an area of 3,653,946 square miles. It includes the provinces of Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba and the Northwest, British Columbia, and Prince Edward Island. Newfoundland is not in the Dominion and to Newfoundland belongs a part of Labrador. The population of the Dominion in 1901 was 5,371,315. Of these, 1,649,371, mainly in Quebec, speak French; 108,112 are Indians.

Statistics are Indians. Ontario has a population of 2,182,947 (capital, Toronto, 262,149). Quebec 1,648,898 (capital, Quebec, 68,840). Montreal 267,730, Nova Scotia 459,574 (capital Halifax, 40,832). New Brunswick, 331,120 (capital, Fredericton, 7,000. St. John 40,711). Manitoba, 360,590. British Columbia, 250,000. Prince Edward Island, 103,259; Alberta has 183,000; Saskatchewan, 300,000; Kewatin, 9,800; Yukon, 27,219; Mackenzie, 5,216; Ungava, 5,113. Vital statistics are not collected.

A so-called "American invasion of Canada" began in 1898-99. In 1902, out of 67,379 immigrants into Canada 26,388 came from the United States. In 1903 there were 49,473 out of 128,364; in 1904 it was 45,229 out of 130,331, and in 1905 it was 43,652 out of 146,246. It is estimated that they brought with them five to ten million dollars. One hundred and twenty-two U. S. factories have branches in Canada.

Education is advanced. There were in 1905 20,225 schools, 1,114,878 pupils, and expenditures of \$12,407,876. There are 18 degree-granting bodies, with 30 colleges. All schools are under government and almost wholly supported

by government grants and local taxation. Education is compulsory, but the law is not very thoroughly enforced. In Ontario, Quebec, and the Northwest territories there are separate schools for Roman Catholics.

There are 1,249 papers (117 dailies).

The most important industries of Canada are agriculture, forestry, fisheries, mining. Out of 63,422,338 acres of occupied land, 30,166,033 are improved. Wheat and oats are the main crops. The forest area is estimated at 1,248,798 square miles. The total value of the fisheries (1904) was \$23,500,000. The total value of mineral produce (1905) was \$68,574,707; gold, \$14,486,833; coal, \$17,658,615.

In 1901 the income from manufactures was \$569,817,720, or \$106.08 per head. Manufactures are carried on extensively and increasingly, employing over 400,000 persons.

Income (1906), \$80,139,360. Expenditures, \$67,240,641. Public debt, \$377,678,580. Canada has a protective tariff with a preferential, adopted 1897, in favor of the United Kingdom and colonies, and more than half her revenue is derived from duties.

Exports (1906), \$256,586,630. Imports, \$294,267,616. The leading exports and their values in millions of dollars were (1906): wood and manufactures, 34; cheese, 24; gold-bearing quartz, 12; wheat, 33; bacon, 11; cattle, 11; wheat flour, 6. The leading imports were iron, steel, and manufactures of, 41; coal and coke, 21; wool, manufactures of, 15; cotton, manufactures of, 8; sugar, molasses, 9. The imports (1905) from the U. S. were, in millions of dollars, 166; from Great Britain, 73; Germany, 6; France, 7. The exports to Great Britain were 113; the U. S., 77.

Of the railways "Hazell's Annual" (1907) says: "There were in 1905 65 railway lines working in the Dominion of Canada, with a total mileage of 20,601. The government own about 1,519 miles of railway, and a magnificent system of canals. In 1905 there were 767 miles of electric railways. The principal railway systems are those of the Canadian Pacific, with 8,298 miles; Grand Trunk of Canada, 3,570 miles; Intercolonial, 1,449 miles; Canadian Northern, 1,880 miles. The Grand Trunk Pacific Railway, which was approved by Parliament in 1904, and is being built with government aid, will extend across the Dominion from Moncton, New Brunswick, on the east coast, to a terminus on Kaien Island, at the mouth of the Skeena River, on the Pacific coast. Its total length will be 3,500 miles. The contract between the government and the Grand Trunk Pacific Company is that the company shall construct in eight years the western division of the line, from Winnipeg to the Pacific, the government guaranteeing the principal and interest of three fourths of the bond issue necessary for construction, and paying a cash subsidy for the mountain section, which will eventually amount to between £1,600,000 and £2,000,000. The company guarantees the remaining one fourth of the bond issue, and becomes proprietor of this section. As to the eastern division, from Winnipeg to Moncton, the government will construct it and when complete it is to be leased to the company (who are to have free use of the line for the first seven years) for fifty years, when it reverts to the government, tho the company are then to retain the terminals and such branch lines as they may select.

The company will work both sections when they are completed."

In 1905 the receipts of the Canadian railways were \$106,467,199, and their working expenses \$79,977,574. Their paid-up capital was \$1,248,666,414. They carried 25,288,723 passengers and 50,893,957 tons of freight.

Telegraph lines (1905), 37,808, of which 6,590 were government lines. Post-offices, 10,879.

Canada has a network of canals and river and lake navigation making 2,700 miles. In 1905 30,811 vessels passed through the Canadian canals carrying 233,545 passengers and 9,371,744 tons of freight.

CONSTITUTION AND GOVERNMENT

The crown is represented by a governor-general with a privy council chosen by himself. Each province has a lieutenant-governor appointed by the governor-general in council and a separate Parliament. The Federal Parliament has a Senate nominated for life (from Ontario 24 members, Quebec 24, Nova Scotia 10, New Brunswick, 10, Manitoba 4, British Columbia 3, Prince Edward Island 4, Alberta 4, Saskatchewan 4), and a House of Commons, elected every five years on a low suffrage (from Ontario 86, Quebec 65, Nova Scotia 18, New Brunswick 13, British Columbia 7, Prince Edward Island 4, Manitoba 10, Saskatchewan 5, Alberta 5, Yukon 1). Bills passed by Parliament must receive the assent of the governor-general, and may be disallowed by the king within two years. The governor-general is Earl Grey; premier, Sir Wilfrid Laurier. From 1867 to 1896 the Conservatives were in power except for five years. In 1896, largely on the Manitoba schools question, the Liberals, under the lead of Sir Wilfrid Laurier, won 118 seats to the Conservatives' 86, and the Independents' 8. This lead was increased in 1900. In 1904 Sir Laurier's government won a majority of 52 in a house of 214. The chief issue was the railroad question, the Conservatives favoring steps toward state ownership.

The Canadian militia is under the command of a major-general of the British army. Its peace training strength is 46,000. There is no active marine militia.

Postal savings-banks, under charge of the government, were established in 1868. In 1905 they had 165,518 depositors and \$45,368,320 on deposit. The growth of the general banking business shows the prosperity of the Dominion.

SOCIAL REFORM

Social reform in Canada is not largely advanced, perhaps because the need has not seemed pressing. Land has been easy to get and employment has been good. The wages are not high. Free grants of 160 acres in Manitoba are readily secured.

Nor have such reform movements as have developed had marked characteristics. For the most part they have been connected with the

reform movements of the U. S. Most American trade-unions have branches in Canada as in the U. S., and the statistics of the American Federation of Labor include many Canadian unions. Nevertheless an Annual Trades and Labor Congress of Canada has held twenty-two meetings, and the organization of labor has recently made considerable progress. The recent English labor political successes have had influence in Canada.

As the result of a general Trades Congress held in Victoria, B.C., 1906, an Independent Labor Party has been formed. It is to work after the model of the English party. Although socialistic, it is not called upon to accept the Socialist program at the present juncture. The Socialist delegates mainly voted with the majority on this matter. There is, however, a small Socialist party with some successes in British Columbia. The Socialist vote in 1903 was 8,025. Canada, however, is in the main individualistic. Municipalism and cooperation are little developed, though the Dominion Government has made some experiments in the direction of State socialism. It has established agricultural experiment stations at various points. Cooperative creameries, under State supervision, are now found all through the Northwest. When a shipping ring threatened to monopolize the cattle trade, the government slipped in and ran cattle steamers of its own.

Nevertheless trusts have much power. The Hudson Bay Company, with stores in almost every town and city, largely controls retail trade. Cooperation, apart from the dairies, consists only in a few bakeries, stores, and credit societies. At Marysville, near Fredericton, New Brunswick, Mr. Alexander Gibson has developed a sort of "Canadian Pullman" for the employees of his saw and cotton mills.

Charity organizations exist in most cities.

Strictly speaking, Canada has no poor law, and no "poor rates," but the relief institutions, though mainly private, are largely supported by municipalities. In the cities large numbers receive outdoor relief, usually with some work test. There are in the Dominion 75 hospitals, 18 asylums for the insane, with many other institutions of various kind, for relief or prevention.

CANALS: Artificial waterways for the purposes of navigation or irrigation. (See **IRRIGATION**.) Navigable canals may be divided into those used for inland navigation and those used for shortening sea voyages. With a long and honorable history canals have for the last fifty years been overshadowed in importance by the railway, but are now experiencing a deserved and needed revival.

Canals are of importance, because, first, they can carry certain freight cheaper and better than railroads; secondly, by carrying goods where speed of transport is of small moment, they free

the railroads to do more rapid work; thirdly, for certain lines of commerce they can compete with railroads in rates, and so lower railroad rates.

It is evident, therefore, that the railroads should be allowed no longer, through a mistaken policy, to ruin canals, or buy them and control them. Many therefore, not Socialists, hold that government should care for, own and operate canals on some large, comprehensive system. Every argument for the nationalization of railroads applies to canals with added force. (See **RAILROADS**.)

The oldest large canals known were the royal canal of Babylon, at least 3500 B.C., and some in Egypt, probably 7000 B.C. Important canals were later built at Alexandria and Rome. The Grand Canal of China, 650 miles long, was constructed in the thirteenth century. Canals, were, however, of small use till the invention of locks in Italy in the fourteenth century, after which several important canals were constructed, particularly in Italy and France.

History

Peter the Great began in 1700 the immense system of canals in Russia which connect St. Petersburg and the Caspian Sea and afford continuous navigation, 1,434 miles. The modern era of canal construction dates, however, from the success of the Duke of Bridgewater's Canal, from Worsley to Manchester, commenced in 1759, and lengthened to Liverpool in 1772. A canal mania at this time broke out. Dividends in some of the canal companies amounted to 100 per cent. In Ireland the Grand Canal was built in 1765. Louis I. of Bavaria in 1846 completed a project of Charlemagne in connecting the Main and the Danube by a canal 108 miles long. The Danish Canal, connecting the North Sea and the Baltic, was finished in 1855. The great Gotha Canal in Sweden was completed in 1832. The first canal in America was built at South Hadley, Mass., in 1793. In 1817 the Erie Canal in the United States was commenced, and finished amid great enthusiasm in 1825. The original cost was \$5,700,000. In 1852-53, altho the tolls had been reduced to about one third the original amount, the revenue was over \$3,000,000 per year.

From 1825-70 interest in canals was wholly eclipsed by that in railroads. In 1870, however, interest in them revived. In October, 1884, an International Inland Navigation Congress was held in Bremen, and has met nearly every year since. The great Manchester Ship Canal, which enables the largest steamers for India or America to load at Manchester, was commenced in 1885, and opened January 1, 1894, costing \$75,000,000. It is mainly controlled by the city, which has a majority of the directors. The North Sea Baltic Canal was commenced in 1887, and finished in July, 1895.

The Erie Canal is by far the most important long canal of the world, tho not the longest, it being, with feeders, 352 miles long. It was long paralyzed by the adverse interests and influences of the New York Central Railroad, but in 1883 all tolls were removed and an active agitation commenced to make it an effective competitor of the railroads. In 1896 a referendum was taken of the state to spend \$9,000,000 to deepen it to 9 feet. This was carried, but the amount was insufficient, and in 1903 a referendum was carried authorizing the expenditure of enough to make it a great barge canal, navigable by vessels of 1,000 tons. It has been estimated that this will cost \$101,000,000, or \$41,000,000 more than the cost to date.

Other great canal systems in the U. S. are the Chesapeake and Ohio, opened in 1850, and 184 miles long, and the Illinois and Michigan, connecting the Great Lakes with the Mississippi. It was opened in 1898, and is 96 miles long. It has been vastly improved by the Chicago Drainage Canal, begun in 1892 and completed 1900. It has also been mooted to make it a great ship canal, allowing ocean steamers to ascend to Chicago from New Orleans. The Morris Canal, 101 miles long (1830), connects the Hudson and the Delaware. The Delaware and Raritan, 43 miles long (1831-34), connects those rivers, and, therefore, New York and Philadelphia. Canada has im-

portant canals besides the Welland Canal. The following table shows

THE GREAT SHIP CANALS OF THE WORLD

| CANAL | Completed | Length miles | No. of Locks | Cost ¹ |
|-----------------------------------|-----------|--------------|--------------|-------------------|
| Suez..... | 1869 | 90. | None | \$100,000,000 |
| Cronstadt and St. Petersburg..... | 1890 | 16. | None | 10,000,000 |
| Corinth..... | 1893 | 4. | None | 5,000,000 |
| Kaiser Wilhelm..... | 1894 | 35.50 | 5 | 75,000,000 |
| Elbe and Trave..... | 1895 | 61. | | 40,000,000 |
| Welland..... | 1900 | 41. | | 25,200,000 |
| Sault Ste. Marie (American)..... | 1833 | 27. | 26 | 6,000,000 |
| Sault Ste. Marie (Canadian)..... | 1855 | 1.6 | 1 | 6,033,533 |
| | 1895 | 1.125 | 1 | 3,770,621 |

¹ Cost of construction to state.

The Suez Canal is usually considered the most important completed canal, tho more vessels pass the Sault Ste. Marie canals. It is much the longest and without locks. In 1900 there passed through it 3,441 vessels with 13,509,237 tonnage. The net profits in 1899 were 54,153,500 francs.

For the Panama Canal, see PANAMA.

CANTILLON, RICHARD: A writer of Irish race, living in Paris in the first half of the eighteenth century, of whose life little is known, but whose little book, "Essai sur la Nature du Commerce en Général," the earliest edition of which was published in Paris in 1755, seems to have exerted a very profound influence upon the economic thought of his century. For what is known of his life, see article "Cantillon" in Palgrave's "Dictionary of Political Economy." Cantillon's opinions were those of the mercantilist school, modified by the ideas of the Physiocrats, and all stated with unusual scientific precision and method. For a very favorable estimate of his work, see the article by Jevons upon "Richard Cantillon and the Nationality of Political Economy," in the *Contemporary Review*, 1881. (See POLITICAL ECONOMY.)

CAPE COLONY: See SOUTH AFRICA.

CAPITAL may be briefly defined as "that part of wealth which is devoted to obtaining further wealth" (Alfred Marshall, "Economics of Industry," p. 5). Says J. S. Mill ("Political Economy," i., iv., sec. 1): "What capital does for production is to afford the shelter, protection, tools, and materials which the work requires, and to feed and otherwise maintain the laborers during the process. Whatever things are destined for this use, destined to supply productive labor with these various prerequisites, are capital."

Definitions Knies defines capital as "wealth set aside for the satisfaction, directly or indirectly, of future needs. This satisfaction may be obtained by the individual by lending his wealth at 'usury'—usury of money, usury of victuals, usury of anything that is lent upon usury—or by reserving means for future production, as in the case of the husbandman and his corn or cattle, or by laying up for himself a treasure which will be a delight for many days." President Francis A. Walker ("Political Economy," sec. 73) defines capital as "that part of wealth, excluding unimproved land and natural agents, which is devoted to the production of wealth."

E. v. Böhm-Bawerk defines capital as "the complex of goods that originate in a previous process of production, and are destined, not for immediate consumption, but to serve as means of acquiring further goods. Objects of immediate consumption, then, and land (as not produced) stand outside our conception of capital."

There are three questions which are still in dispute in connection with the concept of capital: (1) *Is all capital the result of labor, and ought we to exclude the forces and free gifts of nature?* This question is important when attention is directed from the consideration of the function of capital to that of the function of the capitalist, or owner of capital. The ownership of land and gifts of nature that have merely been appropriated must be defended by somewhat different considerations than the ownership of wealth that has been deliberately produced and saved. For this reason it is probably best with the above authors not to include under the term capital any of the so-called free gifts of nature. Of course it is not always easy to draw the line, as in the case of made land, between the free gifts of nature and the work of man, and yet, altho in some cases the line may be invisible, and therefore hard to place, there is a line and an important line, and usually it can be at least approximated. (2) *Does the distinction between capital and non-capital depend on the intention of the capitalist, or, in other words, the owner of the potential capital?* Thus Professor Marshall, in the "Economics of Industry," argues that a doctor's carriage, when used on professional visits, would be capital, but when used for pleasure merely would not be capital. To this it may be answered that the distinction lies not so much in the intent as in the use that actually is made; tho of course usually what is intended for production of wealth is used for that purpose, so that the same article may sometimes be used as capital and sometimes not. The final question is, (3) *Does capital include what are called immaterial, as distinct from material qualities?* This question is somewhat similar to the first. In a general sense immaterial qualities are certainly often, and perhaps usually, the truest capital. Thus we say a man's capital is his health, skill, strength; but in political economy it is more usual and probably wiser not to speak of immaterial capital, because it is different from material capital, and obeys different laws. Capital, therefore, is generally used in political economy in the restricted sense of *material wealth, not the free gift of nature, used for the production of more wealth.*

We now come to consider some different kinds of capital, and first the common distinction made between Circulating and Fixed Capital. In the words of Mill: "Capital which fulfils the whole of its office, in the production in which it is engaged, by a single use is called *Circulating Capital*. 'Capital which exists in any durable shape, and the return to which is spread over a period of corresponding duration, is called *Fixed Capital*.' " Another convenient distinction is made by Professor Marshall ("Economics of Industry," p. 19) into *Remuneratory Capital* and *Auxiliary Capital*. He says:

"*Remuneratory Capital* or *Wage Capital* consists of the food, clothes, shelter, etc., which support labor.

"*Auxiliary Capital* is that which aids labor. It consists of tools, machines, factories, and other buildings that are used for trade purposes, railways, canals, roads, ships, etc.; also raw materials.

Passing now to the theory of capital, we are met at once by the utmost diversity of opinion, and have therefore to consider the history of theories of capital.

¹ "Political Economy," Book I., chap. vi.

The word capital (connected with the Latin *caput*, or head) was originally a mere adjective in the phrase "capital stock," and so used as late as Adam Smith. But it soon came to be used elliptically for the whole phrase, and the single word capital is used in the modern sense at least as early as 1635, in Dafforne's "Merchant's Mirrour." This gives us some clue to the history of the treatment of capital by economists. It has been mainly connected with interest, the phrase "capital

stock" being contrasted with the interest accruing from it. In a primitive society there is little capital. Weapons and implements for the hunt and for fishing constitute the total equipment. Later, in the pastoral stage, flocks and herds represent the chief forms of capital, while developing agriculture calls for somewhat more complicated tools and implements. Only after the invention of machinery, however, does capital emerge as an independent factor in production. It is because of the capitalistic system which they ushered in that the inventions which were made in England during the latter half of the eighteenth century may without exaggeration be said to have caused an "industrial revolution." Since Watt perfected the steam-engine in 1776, machine methods of production and the factory system have displaced hand methods and the domestic system in nearly every department of manufacturing industry. With every step in this development the importance of capital has increased until to-day in the Western world the man who is without capital and who is unable to command it is forced almost of necessity to become the hired employee of the man who has capital. The wage system is thus the natural supplement to privately owned capital and is rightly included in the conception of the capitalistic system of production.

The best history yet written of the various theories of capital is undoubtedly Böhm-Bawerk's "Capital and Interest: A Critical History of Economical Theory," a translation from the German "Kapital und Kapitalzinsen." This book has been largely used in the following account. The problem of capital Böhm-Bawerk states substantially as follows:

He who owns capital can generally obtain from it a permanent net income called interest. This has notable characteristics. It owes its existence to no personal activity of the capitalist. It flows into him even where he has not moved a finger. It seems in

a peculiar sense to spring from capital, or, to use a very old metaphor, to be begotten of it. It may be obtained from any capital, from goods that are barren, as well as those that are fruitful; from perishable goods, as from durable; from goods that can be replaced, and from goods that cannot be replaced; from money, as from commodities. Finally, it flows into the capitalist without ever exhausting the capital from which it comes, and therefore without any necessary limit. It presents the remarkable picture of a lifeless thing producing an everlasting and inexhaustible supply of goods. Whence and why this endless flow of wealth? This is the theoretical problem of capital and interest. This is different, says Böhm-Bawerk, from the social and political problem. The theoretical problem asks why there is interest on capital; the social and political problem asks whether there should be. Yet it is doubtful if we can keep the two questions apart. "Whether there should be" certainly depends upon "why there is," and "why there is" is not unaffected by "whether there should be." Yet there are two questions, and for the sake of clear thought we should try to keep them separate, and to answer the first question first. Yet, historically, in political economy, the second question received the first treatment. Ancient political economy evidenced a deep disapproval of interest, as witnessed in the prohibition of interest between Jews

in the Mosaic code and in many passages from classic literature. (See *USURY*.) The reason is not far to seek. Credit had little place in production. Machinery was simple. Almost all loans were for immediate consumption, and, as a rule, to people in distress. The creditor was usually rich, the debtor poor, and the former, therefore, in the light of a man squeezing something from the poor man. Yet was there little study of the question. Plato, Aristotle, the two Catos, Cicero, Seneca, Plautus—all condemn interest, and yet assign little reason for so doing. Aristotle's argument was: Money is by nature incapable of bearing fruit. The lender's gain, therefore, must come from a defrauding of the borrower. The strong condemnation of interest by the Mosaic law and the early Christian Church is well known. Yet there was usually but little reason given, and some of the reasons that were given are far more rhetorical than logical. Gradually Greek and then Roman legislation came to allow interest, and so the practice spread. The Middle Ages, however, witnessed a revival of the condemnation of interest. The Church strenuously condemned it (see *CANON LAW*), first categorically, and then, as the desire for interest and the seeming need of interest increased, with more show of argument and attempt at reason. Gonzalez Telles falls back on Aristotle's argument. Thomas Aquinas (*q. v.*) does the same in a different form. He argues that he who loans money passes over money and all that comes from it, and therefore has no right to the interest that springs from

it. Interest again he considers as the hypocritical and underhand price asked for a good common to all—time. Time is simply a pretext used by usurers to get more than they give. But time is a common good, given to all equally by God. This was the general position of the canonists, tho steadily and quietly exceptions and excuses were introduced permitting interest under this pretext or that.

The Protestant reformers usually approved of interest, altho with more or less reserve; at least this is so with Zwingli, Luther (in his later days), Melancthon, and Calvin. The last named, however, is the only one who gives careful reason for his approval. His argument is that interest is legitimate, because, tho money itself be barren, money is used as a house is used, for gain of convenience or rent, and therefore that the lender of the money is entitled to interest as his share of the gain.

Molinæus, taking somewhat the same ground, opposed the canon prohibition of interest. Besold and Grotius followed hesitatingly in the same line till Salmasius (about 1640) poured out a flood of writing defending interest, and was followed by Bacon, North, Locke, Stewart, Hume, Galiani, Vasco, Beccaria, Mirabeau, and Bentham.

But this already brings us to modern times, when capital and interest, having become matters of such vast moment, have elicited far more careful and scientific study. Turpin comes first. He defends interest on the ground that capital is always the equivalent of rent-bearing land, and therefore should receive interest as land brings forth fruit. This theory Böhm-Bawerk calls the "Frustration" theory, and condemns because, in his opinion, it explains nothing.

Smith has no definite position, but throws out various hints about the origin of interest, some of which are contradictory. Adam Smith's neutral position could not be long held. The question of labor and capital became the burning question of the nineteenth century. Five answers have been developed through the century, and more or less side by side; so that we shall do best not to attempt to follow chronological order, but to see the separate schools as markedly and distinctly as possible.

First, Böhm-Bawerk puts what he calls the "colorless" answer, which, like Adam Smith's, is a confused answer, altho made by Ricardo, Torrens, McCulloch, and several continental writers. Ricardo, for example, tho he sharply and at length gives his conception of the law that governs the rate of return to capital, scarcely gives any

reason for the return, save that, if capitalists did not receive any interest, they would not invest.

We come, next, to what Böhm-Bawerk calls the "Productive" theory, that capital actually produces wealth, and that therefore the capitalist who gets his interest simply gets what his capital produces. This theory is subdivided into four theories: (1) That capital serves toward the production of goods; (2) that it serves toward the production of more goods than could be produced without it; (3) that it serves toward the production of more value than could be produced without it; (4) that it serves toward the producing of more value than it has in itself. The first two of these theories Böhm-Bawerk calls the "Naive Productive" theories; the third he calls the "Indirect Productive" theory, and from the last theory spring such important theories that he considers them by themselves as "Use" theories.

Among the "Naive Productive" theories we have those of J. B. Say, who first broached this theory in 1803, brilliantly but not clearly, and more recently of Roscher, Leroy-Beaulieu, Scioleja, and others. Böhm-Bawerk's answer to this theory is simply that it has not been proved that capital in itself produces goods. Capital undoubtedly, as Roscher argues, enables labor to produce more goods; but the amount of return to capital has by no means been proved to be equal to the amount of value of the increased amount of goods it enables labor to produce.

The "Indirect Productive" theory, that capital produces more value, was first taught by Lord Lauderdale in 1804, and then by his greater follower, tho not disciple, Malthus. Malthus carefully defines profit as "the difference between the value of the advances necessary to produce a commodity, and the value of the commodity when produced" ("Principles of Political Economy," 3d ed., p. 362); but he does not equally carefully show why there should be this difference of value, tho he does in general point to capital as the producer of more value. Henry Carey and Peshine Smith in America and the painstaking Thünen and Strassburger in Germany Böhm-Bawerk assigns to this school.

We come now to the "Use" theories, which, tho an offshoot of the "Productive" theories, quickly grew into an independent life of their own. This theory is that capital, apart from its substance value, has a use value, and that the capitalist who draws interest is thus rewarded for sacrificing the use of capital during the period of production. J. B. Say first suggested this, together with his "Naive Productive" theory. Hermann worked it out, and Menger gave it its best form. It is largely a German theory, Nebenius,

Protestant Views

The Frustration Theory

Ricardo

The Productive Theory

Ancient Theories

Medieval Theories

Mario, Bernhardt, Mangoldt, Schäffle, Kneis, besides Hermann and Menger, all following it in one form or another. Böhm-Bawerk, however, rightly maintains that there is no independent "use" of capital aside from capital, and that therefore this non-existent "use" cannot be the cause of interest; but even if it does exist, as apart from the substance of capital, it simply adds to the problem by raising two problems in place of one. What is this independent use of capital?

Next in order is the famous "Abstinence" theory, made prominent in the lectures of N. W. Senior at Oxford University, and later in his "Outlines of the Science of Political Economy" (1836). Adam Smith and Ricardo declared labor to be the source of value. Senior amended this by saying that value is due to scarcity (utility being assumed), and that labor *and* abstinence account for scarcity. Hints of this had appeared before in Ricardo and in Adam Smith's opposition of "future profit" to

Abstinence Theory

"present enjoyment," but Senior first worked it into a careful and logical system. According to this, capital is the result of labor, but of labor applied not to immediate results, but to far-off results; and, therefore, since its owner has sacrificed immediate results to distant ones, he is indemnified by interest. He is able to secure this indemnification because the exchange value of goods depends, according to Senior, partly on the usefulness of the goods, partly on the limitation of their supply; and the limitation depends upon the number of those willing to abstain from immediate consumption of wealth to devote it to capital. The "maximum of price" is the sacrifice with which the buyer could himself produce or procure the goods; and the "minimum of price" is the cost of production. Under competition these approximate. But the cost of production consists of the sum of labor and abstinence requisite for the production of the goods. If abstinence is always requisite for production, it can always command its money return.

The trouble with this theory is that it makes too sweeping a generalization from an idea containing an element of truth. Like the other theories it mistakes a part of the truth for the whole explanation. The theory is now generally discarded (see ABSTINENCE, REWARD OF), yet it has had many followers, and some of them most distinguished, such as J. S. Mill, Jevons, Cairnes, Roscher, Schütz, Max Wirth, Rossi, Molinari, and Garnier. Bastiat accepted the doctrine under a developed form. Bastiat's great social law is "service for service." He argues that he who provides capital not only sacrifices present enjoyment, but does positive service by allowing the laborer to have now what otherwise he could only obtain later by great sacrifice of his own tools. But this only confuses. He who sacrifices in order to prevent sacrifice certainly does so, but this is only one sacrifice, and cannot receive return for two.

We pass then to the next group, which Böhm-Bawerk calls "Labor" theories, because under various forms they try to prove that interest is payment to the capitalist for labor performed. The main advocates of this are James Mill, McCulloch, Courcelle-Seneuil, Rodbertus, Schäffle. Under one form or another they all argue that capital is stored-up labor, and that interest and profit are simply the price paid for stored-up labor. But how, then, does it happen that the capitalist eventually gets back all his capital; that is, all his stored-up labor, and yet gets interest too? Courcelle-Seneuil argues that interest is payment for the labor of storing up capital. This is artificial. Its falsity may be seen in the fact that interest has no connection with this, being often greatest where this so-called labor is least, and vice versa.

We come then to what may be called the Socialist, or the "Exploitation" theory. According to this, all goods that have value are the product of human labor, and indeed, economically considered, are exclusively the product of human labor. The laborers, however, do not retain the whole product of their labor, because capitalists, taking advantage of their command over the indispensable means of production, as secured to them by the institution of private property, secure to themselves a part of the laborer's product. The means of doing so are supplied by the wage contract, in which the laborers are compelled by hunger to sell their labor-power to the capitalist for a part of what they, the laborers, produce. Interest is thus a portion of the product of other people's labor, obtained by exploiting the necessitous condition of the laborer.

Exploitation Theory

The way had been prepared for this by Adam Smith and Ricardo, in teaching that labor is the source of value; tho Ricardo abandoned this doctrine before his death. Hodgskin in England and Sismondi in France were the first to really state the theory, and they only in a mild and general way; but it was soon taken up with strength and in earnest by Proudhon in France and Rodbertus in Germany, and then by the great Socialist leaders, Lassalle and Marx. Of the Socialists, Rodbertus and Marx have worked out the theory most carefully. Rodbertus is considered by most political economists the most careful, altho Marx has worked out the theory the most brilliantly and the most popularly. Rodbertus accepts almost as axiomatic the premise that labor, economically speaking, is the source of all value. Rent he defines as "all income obtained without personal exertion, solely in virtue of possession" ("Soziale Frage," p. 146). It includes two kinds of rent—land rent and profit on capital.

Rent owes its existence to two facts: economically, that, with machinery and division of labor, laborers can produce more than they require to support life; and legally, that private property in land and capital enables their owners to employ laborers who, not having land and capital, and needing them for production, are unable to work except in service for these capitalists, and are driven by hunger often to give to the capitalists all they produce except what is barely necessary to support life. The form which this compulsion originally took was slavery, the origin of which was contemporaneous with that of agriculture and landed property. To-day contract has taken the place of slavery; but since capitalists own substantially all the land and capital, they have the laborer as equally at a disadvantage as under slavery, and can take from him under contract as much as before under slavery. Thus, says Rodbertus, "The contract is only formally and not actually free, and hunger makes a good substitute for the whip. What was formerly called food is now called wage" ("Soziale Frage," p. 33).

Thus all rent is an exploitation, or, as he says in effect, a robbery of the product of other people's labor ("Soziale Frage," p. 150). The amount of rent increases with the productivity of labor; for under the system of free competition the laborer can receive little more than his maintenance, no matter how much he produces. The division between rent of land and rent of capital Rodbertus believes depends upon how much labor value is represented in land and in capital, since labor is the measure and source of all value, even rent being the product of labor, tho conditioned by the possession of wealth. Nevertheless, except in a posthumous tract on "Capital," Rodbertus does not favor the abolition of private property in either land or capital. He ascribes to it an educating power, a "kind of patriarchal power that could only be replaced after a completely altered system of national instruction, for which at present we have not got even the conditions" ("Erklärung," p. 303).

Marx's theory is the same, tho worked out in a different way. The utility of a thing, he argues, is its *value in use*. But this value is not something in the air. It is limited by the properties of the commodity, and has no existence apart from that commodity. The commodity itself is the use value. Now use values exchange.

Karl Marx

They are measured. To be measured they must have some characteristic in common. What is this? It is not in their *qualities*;

their qualities are very different. Things that exchange must have the same *quantity* of exchange value. What is the thing that they have the same quantity of? If we discard their qualities as use value, they have only one common property left, that of being products of labor. This must be the measure of their exchange value. So the value of all goods is measured by the quantity of labor contained in them or in labor time. But labor is of different value in different individuals; therefore, we must take the "socially necessary labor time"—i. e., the labor time required to produce a use value under the conditions of production that are socially normal at the time, and with the socially necessary degree of skill and intensity of labor. Now the problem of capital and of interest and profit is this: One man sells the commodity which he possesses for money, in order to buy with the money another commodity which he requires. This course of circulation may be expressed by the formula: Commodity, money, commodity. But there is another course of circulation. Men buy commodities in order to sell, or—money, commodity, money. But in this circuit, men buy commodities in order to sell at an advance. The real circuit is M, C, M' (M' representing the sum advanced plus an increment). This is the characteristic circuit of capitalist industry. It applies seemingly only to the merchant's capital, but it is true of all industrial capital. The manufacturer, every one in commerce, even the farmer, buys something—invents, that is—in order to sell what he buys, or what springs from what he buys, at an advance. Whence the advance? This is the problem. He buys material at its market value; he sells the material at the market value; how is he enabled to sell at a higher price than he buys? Whence this surplus value? This is the problem of Marx's book—his famous "Capital."

The surplus value cannot originate in anything outside the circuit, for nothing pours economic value into his hands. It cannot originate in the circuit itself, for he cannot continually buy commodities under their value, nor continually sell above their value. Whence his profits? He can only sell for more than he buys by adding labor to it. Labor is thus the only source of *surplus value*. But if he put labor into it, either his own or hired, he pays for that. How does the capitalist sell for more than he puts in? He must buy material and labor at their value, sell the result at its value, and yet draw out more than he puts in. How? Marx answers this by saying that there is one use value which possesses the peculiar property of being the source of exchange value; this is labor or labor-power. It, labor-power, is offered for sale on the market on the double condition that the laborer is personally free—for otherwise he would be a slave, not a seller of labor-power; and that, secondly, he is deprived of all means of independently using his labor-power, otherwise he would work for himself. The present condition of society furnishes these conditions. The capitalist makes use of this. The value of the commodity labor-power, like that of all other commodities, is regulated by the labor time necessary for its reproduction;

in this case, by the labor time necessary to produce the maintenance of the laborer. The capitalist gets the laborer to work for him. He gives him his labor-time value—that is, maintenance, the value necessary to maintain and reproduce him. But the laborer gives the capitalist more labor time than this. If in six hours the laborer produces enough to maintain him, and works ten hours, in the four hours he produces for the capitalist this "surplus value." Surplus value, therefore, according to Marx, results from the capitalist getting the laborer to work a part of the day for him without paying for it. In the laborer's day, thus, we have "necessary labor time" and "surplus labor time," the source of "surplus labor value." Capital is not thus a command over labor, but a command over *unpaid* labor. All surplus value, in whatever form it be disguised, as profit, interest, rent, or any other, is only the material shape of unpaid labor. Bitterly, upon this foundation, does Marx trace the history and expedients of capital to lengthen the time and intensity of the working-day in order to get more surplus value.

The answer to this theory, which will be seen to be, in another form, the same as Rodbertus's, may be very varied. It is perhaps sufficient, however, to say that it has not been proved that labor is the source of value. Exchange is not based simply upon labor-time value. Use value does affect exchange. A good natural value, uncultivated by any labor, has exchange value. Unimproved natural commodities have exchange value. Scarcity affects exchange value. The whole theory that labor is the source of value is untenable. Rodbertus does not attempt to prove it. Marx appeals not to facts, but to the above dialectics, which can be shown to be faulty. Marx says use values in exchange are disregarded. This is not the case; but if it were, his conclusion does not follow that their being the product of labor is the only characteristic left which can be the basis of exchange. Many other elements enter in—scarcity, demand, appropriation of them, etc. Marx's analysis contains truth, but by no means the whole truth, and its fundamental proposition is not true.

The last theory of capital and interest that merits consideration is that of Böhm-Bawerk himself as expounded in his second volume, "The Positive Theory of Capital." According to this view, the key to the interest problem is found in the time element involved in capitalistic production. Men normally undervalue future goods in comparing them with present goods. Thus as future goods ripen into present goods their value is enhanced in accordance with a psychological law. Interest is simply this addition to the value of goods that results from advancing them nearer the period when they are to satisfy wants. As men normally discount future goods so they are always willing to pay a premium in future goods for command over present goods. The current rate of interest is thus determined by the comparative valuations which men collectively place upon present and future goods. When the rate on safe investments is 4 per cent, for example, this means that in the estimation of the marginal men who take part in capitalistic production \$100 in hand, with the immediate command over want-satisfying goods which it gives, is equivalent to \$104 a year hence. This theory is explained and defended with great dialectical skill, but it cannot be said to have commanded the assent of many economists as an adequate solution of the interest problem.

The fact seems to be that no one theory is complete; that almost every theory yet advanced has had its element of truth and made its contribution to science. It is *man* who pays, and *man* who asks interest for capital. Men are not simple "economic men." The reasons that move the will to demand and pay interest are not simple, but numerous, intricate, and varying at different times. In the Fructuation theory, the Productivity theory, the Use theory, the Abstinence theory, the Exploitation theory, the Time theory, there is truth, but the whole truth lies only in the correct synthesis of all theories. It should be added, however, that whatever be the theory as to the origin of capital and interest, neither the believers nor the disbelievers in interest question the fact of the contribution, and the necessary contribution, that capital makes to production. Socialists, no less than the most conservative economists, admit the necessity of capital to production. Socialists simply assert that work (personal effort of head or hand) should be required from every member of society (save from the young, aged, or infirm), and that there should be no class of society whose economic function is simply

The Socialist Contention

to furnish capital and live on the interest. They declare that all capital should be owned and furnished by the community, and that all individuals should furnish work and receive therefor, their rightful share in the product. (See SOCIALISM.) Those Socialists who do not hold with Adam Smith and Marx that labor is the only source of value, do not hold either that capital comes wholly from unpaid labor; they perceive that capital may come from the personal labor of one's ancestors, or from personal saving, or by speculation or investment—in a hundred ways, some of them moral, some immoral; but they hold that the unity of society is the key to the freedom of the individual, and that that freedom demands that, however gained, capital be held and operated collectively for the equitable good of all, each man and woman being in some way a worker for the general good. This holding of capital is, in their opinion, a step not based

on any theory, but called for by the conditions of human life, in the process of evolution, developing a higher organism out of lower organisms. Those Socialists who look to divine sanctions for their acts argue that capital should be held in common and each work for the good of all, as in a family property is held in common and each works for each. Interest on capital they say is "natural," because capital performs a natural function, and can therefore obtain a portion of the product, as conditional to its being forthcoming; and when capital is monopolized by a portion of the community, it can, subject to competition between capitalists, dictate its own terms, because he who has it is not dependent upon him who has. What such Socialists assert is that, the interest is natural, it is socially indispensable, since God has made all men one, and given to all the duty of labor; that therefore for one portion of society to furnish the capital and be able to live without labor, while another portion of society can scarcely live by the hardest toil, is a plain violation of the law of God. Such are the various theories as to capital that have prevailed at various times and are held to-day by various schools of thought.

The Christian Socialist View

Turning to the laws that govern the growth of capital, we present two representative treatments of the subject, and first, one by Professor and Mrs. Marshall. In chap. vi. of their "Economics of Industry," they say:

"The growth of capital depends upon the power and the will to save.

"The power of saving depends on the amount of wealth out of which saving can be made. Some countries, which have a large population and produce a great amount of wealth, have very little power of saving. The whole continent of Asia, for instance, has less power of saving than England has. The total produce indeed of its industry is larger than that of England; but the number of people among whom this is divided is so great that they are compelled to consume almost the whole of it in supporting life.

"As Mill says, 'the fund from which saving can be made is the surplus of the produce of labor after supplying the necessities of life to all concerned in the production (including those employed in replacing the materials and keeping the fixed capital in repair); more than this surplus cannot be saved under any circumstances; as much as this, though it never is saved, always might be. This surplus is the fund from which the enjoyments as distinguished from the necessities of the producers are provided, it is the fund from which all are subsisted who are not themselves engaged in production; and from which all additions are made to capital. It is the real net produce of the country.'

"Since the requisites of production are land, labor, and capital, the conditions on which the total produce of industry depends may therefore be classed as, first, fertility of the soil, richness of mines, abundance of watercourses, and an invigorating climate; secondly, the number and the average efficiency of the working population; this efficiency depending on moral as well as mental and physical qualities; thirdly, the abundance of the means which the industry of the past has accumulated and saved to help the industry of the present; that is, the abundance of roads and railroads, of canals and docks, of factories and warehouses, of engines and machines, of raw material, of food and of clothing; in short, the already accumulated capital of the nation. . . .

"Next as to the will to save.

"The strength of the desire of accumulation depends on moral and social conditions which vary widely in different times and countries.

(a) The intellect. The inclination to save arises from the hope of obtaining some future advantage, and this future advantage, if it is to afford motive for action, must be realized. . . .

(b) Affection for others is one of the chief motives if not the chief motive for the accumulation of capital. . . .

(c) The hope of rising in the world. . . .

(d) The opportunity to gain great social advantages by the possession of wealth. . . .

(e) Political and commercial security. . . .

Lastly, Mr. and Mrs. Marshall inquire how far the accumulation of capital depends upon the rate of profits, and the rate of interest which the owner of capital can obtain by lending it to others, and they answer:

"A high rate of interest no doubt affords a liberal reward of abstinence, and stimulates the saving of all who are ambitious of earning social position by their wealth.

"But the history of the past and the observation of the present show that it is a man's temperament, much more than the rate of interest to be got for his savings, which determines whether he makes provision for his old age and for his family or not. Most of those who make such a provision would do so equally whether the rate of interest were low or high. And when a man has once determined to provide a certain annual

income, he will find that he has to save more if the rate of interest is low than if it is high.

"Again, a high rate of interest is a great inducement to retire early from business, and live on the interest of what has already been accumulated. Sir Josiah Child indeed said two centuries ago, 'We see that generally all merchants in countries in which the rate of interest is high, when they have gotten great wealth, leave trading and lend out their money at interest, the gain thereof being so easy, certain, and great; whereas in other countries, where interest is at a lower rate, they continue merchants from generation to generation, and enrich themselves and the State.' It is more true now than it was then, that many men retire from business when they are yet almost in the prime of life, and when their knowledge of men and things might enable them to conduct their business more efficiently than ever. Thus a fall in the rate of interest would in some ways promote the production and the accumulation of wealth.

"But it would diminish the power of saving from a given amount of capital, because the larger the income a man derives from his business, the larger are the means he has of saving."

Such is an admirable example of the treatment of the subject from the standpoint of the most progressive orthodox economics. As an example of the treatment of the subject from the socialist standpoint, we give a quotation from the lecture on "The Industrial Basis of Socialism," by William Clarke, and included in the "Fabian Essays." Says Mr. Clarke:

"The capitalist was originally an *entrepreneur*, a manager who worked hard at his business, and who received what economists have called the 'wages of superintendence.' So long as the capitalist occupied that position he might be restrained and controlled in various ways, but he could not be get rid of. His 'wages of superintendence' were certainly often exorbitant, but he performed real functions; and society, as yet unprepared to take those functions upon itself, could not afford to discharge him. Yet, like the king, he had to be restrained by the legislation already referred to, for his power involved much suffering to his fellows. But now the capitalist is fast becoming absolutely useless. Finding it easier and more rational to combine with others of his class in a large undertaking, he has now abdicated his position of overseer, has put in a salaried manager to perform his work for him, and has become a mere rent or interest receiver. The rent or interest he receives is paid for the use of a monopoly which not he, but a whole multitude of people, created by their joint efforts.

Growth of Capital, Socialist View

"It was inevitable that this differentiation of manager and capitalist should arise. It is part of the process of capitalist evolution due to machine industry. As competition led to waste in production, so it led to the cutting of profits among capitalists. To prevent this, the massing of capital was necessary, by which the large capitalist could underbid his small rivals by offering, at prices below anything they could afford to sell at, goods produced by machinery and distributed by a plexus of agencies initially too costly for any individual competitor to purchase or set on foot. Now for such massive capitals, the contributions of several capitalists are needed; and hence has arisen the joint-stock company or *Compagnie Anonyme*. Through this new capitalist agency a person in England can hold stock in an enterprise at the Antipodes, which he has never visited and never intends to visit, and which, therefore, he cannot 'superintend' in any way. He and the other shareholders put in a manager, with injunctions to be economical. The manager's business is to earn for his employers the largest dividends possible; if he does not do so, he is dismissed. The old personal relation between the workers and the employer is gone; instead thereof remains merely the cash nexus. To secure high dividends, the manager will lower wages. If that is resisted there will probably be either a strike or lockout. Cheap labor will be, perhaps, imported by the manager; and if the work-people resist by intimidation or organized boycotting, the forces of the State (which they help to maintain) will be used against them. In the majority of cases they must submit. Such is a not unfair picture of the relation of capitalist to workman to-day, the former having become an idle dividend-receiver. The dictum of orthodox political economy, uttered by so competent an authority as the late Professor Cairnes, runs:

"It is important, on moral no less than on economic grounds, to insist upon this, that no public benefit of any kind arises from the existence of an idle rich class. The wealth accumulated by their ancestors and others on their behalf, where it is employed as capital, no doubt helps to sustain industry; but what they consume in luxury and idleness is not capital, and helps to sustain nothing but their own unprofitable lives. By all means they must have their rents and interest, as it is written in the bond; but let them

take their proper place as drones in the hive, gorging at a feast to which they have contributed nothing."

"That joint-stock capitalism is extending rapidly every one knows. In the United States, according to Mr. Bryce, the wealth of joint-stock corporations is estimated at one fourth of the total value of all property. In England every kind of business, from breweries, banks, and cotton-mills down to automatic sweetmeat machines, is falling into the hands of the joint-stock capitalist, and must continue to do so. Twenty years ago who would have supposed that a brewery like that of Guinness, or such a banking firm as Glyn, Mills & Co., would become a joint-stock company? Yet we know it is so to-day. Capitalism is becoming impersonal and cosmopolitan. And the combinations controlling production become larger and fewer. Barings are getting hold of the South African diamond fields. A few companies control the whole anthracite coal produce of Pennsylvania. Each one of us is quite 'free' to 'compete' with these gigantic combinations, as the principality of Monaco is 'free' to go to war with France should the latter threaten her interests. The mere forms of freedom remain, but monopoly renders them nugatory. The modern State, having parted with the raw material of the globe, cannot secure freedom of competition to its citizens; and yet it was on the basis of free competition that capitalism rose. Thus we see that capitalism has canceled its original principle—is itself negating its own existence."

Prof. John B. Clark, in his "Distribution of Wealth" and other works, has ably treated the part played by capital in production.

Concerning statistics as to the large part played by capital in the modern world, see WEALTH; TRUSTS; MACHINERY; FINANCE. Exact statistics in regard to the value of the capital of different countries as distinguished from their wealth in general are not available, and even statistics of wealth must be accepted with a good deal of caution. The figures which follow are the most trustworthy that are available for the United Kingdom and the U. S.

According to the elaborate calculations of Sir Robert Giffen, the total wealth of the United Kingdom increased from £4,000,000,000 in 1845 to £6,000,000,000 in 1865; £8,500,000,000 in 1875, and £10,000,000,000 in 1885. Compared with the population this indicates an increase in average per capita wealth during the whole period of forty years from £143 to £270. How much of this wealth was capital in the restricted sense of our definition it is impossible to say with exactness. Thus, of the estimated wealth in 1885 of £10,000,000,000 some £1,700,000,000 is credited to land and £1,900,000,000 to houses, but there is no way of determining what part of the value of land was a gift of nature and what part the result of investments of capital in improvements, or what proportion of the houses served as workshops and thus contributed to the further production of wealth. The amount of income derived by inhabitants of the United Kingdom from land and capital, that is, from investments of all kinds, may be estimated from the annual income tax returns. Thus for the year 1902, the income from the ownership of lands and houses was returned as £238,000,000, the income from government securities at £44,000,000, and from business enterprises, except farming, at £488,000,000. Estimating that at least one third of the latter income was in the form of interest and dividends to investors having no active part in the businesses concerned and allowing for false returns, it appears probable that the total income from investments was not less than £500,000,000, or about £12 per capita.

The total wealth of the U. S. for the years 1900 and 1904, as estimated by the Census Bureau, was \$88,517,000,000 in the former year, and \$107,104,000,000 in the latter. Comparing the total estimated wealth in 1900 with the population as determined by the census in that year gives \$1,150 as the average per capita wealth. The principal items in the total for 1904 were as follows: Real property and improvements, \$62,000,000,000; live stock, \$4,074,000,000; farm implements and machinery, \$845,000,000; manufacturing machinery, tools, and implements, \$3,298,000,000; gold and silver coin and bullion, \$1,999,000,000; railroads and their equipment, \$11,245,000,000; street railways, shipping, waterworks, etc., \$4,841,000,000; all other, \$18,462,000,000. From the form in which these estimates are given it is impossible even to make an intelligent guess as to what part of them represents capital in the narrow sense. There are no statistics for the U. S. comparable with the income tax returns for the United Kingdom.

For a discussion of whether the profits or capital are falling, see PROFITS, WEALTH.

CAREY, HENRY CHARLES: American economist, born in Philadelphia, Pa., 1793; the son of Matthew Carey, an Irish refugee and publisher who had written on economic themes. The son succeeded the father, but retired with a competency in 1835, and devoted his life to economics. Thirteen octavo volumes and 3,000 pages of tracts, besides newspaper articles, perhaps twice as voluminous, attest his industry, while the fact that many of his writings have been translated into seven different languages speaks for his ability and originality of thought. Says Palgrave's "Dictionary of Political Economy":

Carey began his scientific career at a juncture when the English school appeared to have exhausted its deductions from assumed premises, and to shrink from adjusting its conclusions to the conditions of actual life. His treatment of social science was original, and led him to a series of supposed discoveries, the order of which he has stated in the introduction to his most important work, "The Principles of Social Science." His point of departure was a theory of value which he defined as the "measure of the resistance to be overcome in obtaining things" required for use, or the measure of nature's power over man—in simpler terms, the cost of reproduction. This theory Carey applied to every case of value—to commodities, services, and land, and in some passages seemingly to man himself. Reasoning that every gift of nature is gratuitous, he found a universal tendency to a decline of value as the arts advance, and to a decrease in the value of accumulated capital, as compared with the results of present labor, with a resulting harmony of interests between capitalist and laborer. This theory Carey enunciated in his "Principles of Political Economy," published in 1837-40, and its appearance in slightly modified terms in Bastiat's "Harmonies Economiques," in 1850, led to a sharp distinction between the two authors in the *Journal des Economistes* for 1851.

Ten years later, in his "Past, Present, and Future," Carey expounded his notorious land theory, which was the exact reverse of the Ricardian; but he argued by Carey with great vigor and at great length, and eliciting much interest because of its novelty, it has been accepted by scarcely any other careful economist. It laid down the principle that men first till the poorer and more easily worked lands, and then descend upon richer lands as capital increases, so that with the advance of civilization the rate of returns from land rises instead of falls. He deduced from this a rejection of the Malthusian doctrine, since rising returns from land could support more and more men.

Carey's cardinal principle, however, is found in the second chapter of his "Social Science," where he states, "the great law of molecular gravitation as the indispensable condition of the being known as man." This law of being he declares to be the same in matter, man, and communities. As, in the solar world, attraction and motion are in the ratio of mass and proximity, so in the social world, association, individuality, responsibility, development, and progress are proportionate to each other. This theory, not of analogy, but of absolute identity of law, Carey maintained with great vigor in the "Unity of Law," published in his seventy-ninth year. This theory led Carey first to adopt and advocate those theories of free trade for which he is perhaps the best known in the United States; tho afterward, from the same principles, to retreat from this position. The central point of his social philoso-

phy being association, as the primary condition of progress, in the commerce of exchange of commodities and of ideas between countries, Carey thought he saw the opportunity for closer association, economic efficiency, and general efficiency, and hence argued strongly and determinedly for free trade, giving a strong impulse to the arguments now becoming common in this country. It was only later that he abandoned this belief, from a conviction that in the present state of the world the coordinating power of the government must be used in order to preserve economic harmony and to arrive at ultimate freedom. So great was his ability and so distinctive his views, that his school of thought is sometimes called the American School of Political Economy.

Carey's main works are: "Essay on the Rate of Wages" (1835); "Harmony of Nature" (privately printed, 1836); "Principles of Political Economy" (3 vols., 1837, 1838, 1840); "The Past, the Present, and the Future" (1848); "Harmony of Interests, Agricultural, Manufacturing, and Commercial" (1850); "Slave Trade, Domestic and Foreign" (1853); "Principles of Social Science" (3 vols., 1858-59); "Manual of Social Science" (edited by Miss McKean, 1864); "The Unity of Law, as Exhibited in the Relations of Physical, Social, Mental, and Moral Science" (1872). He died in 1879.

CARLYLE, THOMAS: Scottish writer; born at Ecclefechan, Dumfries County, Scotland, 1795. In the present article he is considered simply from the standpoint of social reform; yet this element forms no small portion of his life, and his contribution to social reform gave no slight impulse in the advance of the century. From the standpoint of the social movement, the nineteenth century must be divided into two nearly equal, yet very diverse, parts. The first fifty years were, socially considered, negative, destructive, characterized by the freeing of the individual. Its outcomes were democracy, free trade, competition, individualism. The last fifty years of the century were, socially considered, positive, constructive (or at least seeking construction), characterized by the collective thought supplanting individualism and developing in its place the social organism. Its outcomes were unity, co-operation, monopoly, centralization, socialism. Carlyle belongs to the first half of the century, yet with no little trace of transition to the second. Living till 1881, his genius was matured, and his greatest works were written before 1850. He was an individualist, and his writings are full of undeveloped socialism. In more than his denunciation of wrong he was a John the Baptist, the last of the old prophets, and a forerunner of the new. Mazzini's magnificent essay on Carlyle pronounces a just criticism. He says:

Mr. Carlyle comprehends only the *individual*; the true sense of the unity of the human race escapes him. He sympathizes with all men, but it is with the separate life of each, and not with their collective life. . . .

The nationality of Italy, in his eyes, is the glory of having produced Dante and Christopher Columbus; the nationality of Germany, that of having given birth to Luther, to Goethe, and to others. The shadows thrown by these gigantic men appear to eclipse from his view every trace of the national thought, of which these men were only the interpreters or prophets, and of the people, who alone are its depository. All generalization is so repugnant to Mr. Carlyle that he strikes at the root of the error, as he deems it, by declaring that the history of the world is fundamentally nothing more than the biography of great men ("Lectures"). This is to plead, distinctly enough, against the idea which rules the movement of the times. . . .

In the name of the democratic spirit of the age, I protest against such views. History is not the biography of great men; the history of mankind is the history of the progressive religion of mankind, and of the translation by symbols or external actions of that religion.

The great men of the earth are but the marking stones on the road to humanity; they are the priests of its religion. What priest is equal in the balance to the whole religion of which he is a minister? There is yet something greater, more divinely mysterious, than all the great men, and that is the earth which bears them, the human race which includes them, the thought of God which stirs within them, and which the whole human race collectively can alone accomplish. Disown not, then, the common mother, for the sake of certain of her children, however privileged they may be; for at the same time that you disown her you will lose the true comprehension of these rare men whom you admire. Genius is like the flower which draws one half of its life from the moisture that circulates in the earth, and inhales the other half from the atmosphere. The inspiration of genius belongs one half to heaven, the other to the crowd of common mortals from whose life it springs.

Yet we doubt if this does full justice to the work that Carlyle accomplished. It was Carlyle's great mission to discover and to proclaim to this generation the world's need of God. And this he did as no other man in all this century, not even excepting the great Italian himself. "The beginning and the end of what is the matter with us," writes Mazzini, "is that we have forgotten God." This is also the beginning and the end of Carlyle's teaching. He saw through all the shams of his day. He was the great unmasker. He showed the pettiness and the selfishness and the nothingness of the Manchester economy. He blew the clouds away that hid God from the world. Above all, Carlyle saw God in man. "Thou, too, art man," he said, "the breath of God is in thee; thou art here below to develop thy being under all its aspects; thy body is a temple; thy immortal soul is the priest, which ought to do sacrifice and ministry for all."

Carlyle's social writings were not his first. They belong to his best period. "Signs of the Times" was first published in the *Edinburgh Review*, and written perhaps at the very time he was writing "Sartor Resartus." "Chartism" (1839), and "Past and Present" (1843) appeared soon after "The French Revolution" (1837). These are his main writings on social themes. He died in 1881.

CARNEGIE, ANDREW: American manufacturer and philanthropist; born at Dunfermline, Scotland, 1835. His father, a weaver in humble circumstances, but ambitious to rise, and an ardent republican, came with his family to the United States in 1845, and settled in Pittsburg. Two years afterward Andrew began his career by tending a small stationary engine, later becoming a telegraph messenger and operator, and being one of the first to read telegraphic signals by sound. He became clerk to the superintendent of the Pennsylvania Railroad, and manager of the telegraph lines. In this position he began making small investments, and so gained the nucleus of his wealth. Promoted to be superintendent of the Pittsburg division of the Pennsylvania Railroad, he was one of a syndicate who purchased property on Oil Creek, which cost \$40,000, and in one year yielded over \$1,000,000 in cash dividends. He was subsequently associated with others in establishing a rolling-mill, from which has grown the most extensive and complete system of iron and steel industries ever controlled by any individual. He was the first in any large way to introduce the Bessemer process (1868). Mr. Carnegie was the principal owner of the Home-

stead and Edgar Thomson Steel Works and of other large concerns. In 1899 these interests were consolidated in the Carnegie Steel Company, and two years later Mr. Carnegie sold out to the United States Steel Corporation and retired from business.

Besides directing his great industries, Mr. Carnegie was for a long time the owner of eighteen English newspapers which he controlled in the interests of Radicalism. He has devoted large sums of money to benevolent and educational purposes. In 1879 he erected commodious swimming-baths for the use of the people of Dunfermline, Scotland, and in the following year gave \$40,000 for the establishment of a free library, which has since received other large donations. In 1884 he gave \$50,000 to Bellevue Hospital Medical College to found a historical laboratory, now called the Carnegie Laboratory. Since then he has endowed libraries to many towns and cities in the United States and Great Britain. His total benefactions have been put at \$75,000,000, including \$10,000,000 to the Carnegie Institution, Pittsburg; \$10,000,000 to the Carnegie Institution, Washington (for advance research work); \$10,000,000 to Scottish universities; \$10,000,000 for a collegiate professors' pension fund; and \$5,200,000 for branch libraries in New York City. His total library donations aggregate more than \$40,000,000 for some 1,500 public libraries. In addition to numerous contributions to periodicals, on the labor question and similar topics, Mr. Carnegie is the author of: "An American Four-in-Hand in Britain" (1883); "Round the World" (1884); "Triumphant Democracy" (1886); "The Gospel of Wealth" (1900); "Empire of Business" (1902). Address: 2 East Ninety-first Street, New York City.

CARPENTER, EDWARD: English writer; born at Brighton, England, 1844; graduated at Cambridge in 1868, and took orders in 1869. He was for a time curate to the Rev. F. D. MAURICE, at St. Edward's, Cambridge, where he also held a fellowship. About 1871, he changed his religious views, and, resigning his fellowship and curacy, was for seven years a university extension lecturer on science, music, etc. In 1877 he visited the United States, seeing Walt Whitman among others. In 1881 he took to a simple yet artistic farm life, somewhat after the idea of THOREAU, near Sheffield, and began writing "Toward Democracy," issued in 1883, when he first definitely joined the Socialist movement. In 1886 he commenced making sandals, in which he now carries on quite a trade. His farm is at Holmsfield, Sheffield. As an example of Mr. Carpenter's thought and style we quote the following passage from his "Civilization: Its Cause and Cure" (pp. 39, 40):

To-day it is unfortunately perfectly true that man is the only animal who, instead of adorning and beautifying, makes nature hideous by his presence. This was the great glory of the Greeks, that they accepted and perfected nature as the Parthenon sprang out of the limestone terraces of the Acropolis, carrying the natural lines of the rock by gradations scarce perceptible into the finished and human beauty of frieze and pediment. And some day we shall again understand this which, in the very sunrise of true art, the Greeks so well understood. Possibly some day we shall again build our houses or dwelling-places so simple and elemental in character that they will fit in the nooks of the hills or along the banks of the streams or by the edges of the woods without disturbing the harmony of the landscape or the songs of the birds. No need for private accumulations. Gladly will each man, and more gladly still each woman, take his or her treasures, except what are immediately or necessarily in use, to the

common center, where their value will be increased a hundred and a thousandfold by the greater number of those who can enjoy them, and where far more perfectly and with far less toil they can be tended than if scattered abroad in private hands. At one stroke half the labor and all the anxiety of domestic caretaking will be annihilated. The private dwelling-places, no longer costly and labyrinthine in proportion to the value and number of the treasures they contain, will need no longer to have doors and windows jealously closed against fellow-man or mother nature. The sun and air will have access to them, the indwellers will have unfettered egress. Neither man nor woman will be tied in slavery to the lodge which they inhabit; and in becoming once more a part of nature, the human habitation will at length cease to be what it is now for, at least, half the human race—a prison.

Among Carpenter's works may be mentioned "Toward Democracy"; "England's Ideal"; "Chants of Labor"; "Civilization: Its Cause and Cure"; "Love's Coming of Age." Address: Holmsfield, Sheffield, England.

CARPENTERS AND JOINERS, AMALGAMATED SOCIETY OF: An important English trade-union with branches in the United States. Organized in England in 1860. It reported in 1905 62,212 members in 883 branches in Great Britain and 8,551 members abroad, of which 4,800 were in the U. S. In 1904 the total income of the society was £181,449, and it had funds of £156,627 at the beginning of the year. Its working expenses were £32,301, with £189,249 spent in benefits, of which £90,814 were unemployed, traveling and emigration benefits.

CARPENTERS AND JOINERS OF AMERICA, BROTHERHOOD OF: One of the most important of American trade-unions, organized at Chicago, 1881. Prior to this there had been attempts at a national union, the first as early as 1854, but none had succeeded. This organization, however, met with large success. As early as 1886 the general secretary writes:

In twenty-one cities our local unions have gained twenty-five cents per day advance in wages, making in all fifty-three cities where our local unions have made gains the past year, either in more wages or in reducing hours, while only in nine cities have our local unions failed to secure their demands, and in these cities they demanded the eight-hour system last May. A résumé shows that 2,486 of our members are working eight hours per day, 5,824 are on nine hours per day, and 1,118 are having shorter hours on Saturdays. This makes a total gain to these members of 65,894 hours per week, adding to the gains on the Pacific coast, which amount to 6,540 hours per week, makes a sum total of 72,434 hours per week gained to our members through organization.

It was because of their complete organization and success that to the carpenters was given the honor of leading off in the great strikes of the American Federation of Labor on May 1, 1890.

The movement was successful in 137 cities and benefited 46,197 men. In other cities it failed, or only partially succeeded. By 1894 the Brotherhood had 824 lodges and 65,000 members. By 1903 the union had 109,000 members, and in 1905, 143,200. It paid out in that year \$189,045 in death benefits. In some cities it has had some contests with the rival, tho much smaller Amalgamated Society of Carpenters and Joiners, a society originating in England. The secretary is F. Duffy, P. O. box 520, Indianapolis, Ind.

CARR, EDWARD ELLIS: American editor; Christian Socialist; born near Hidalgo, Ill., 1866; entered ministry of Methodist Church in 1887; officiated successively as missionary in Utah, and as evangelist and pastor in Illinois. In 1898, for theological reasons, he honorably withdrew from the Methodist Church; and in the following year

he became pastor of the People's Church, Kalamazoo, Mich. He joined the Socialist Party in 1900, and is now its state committeeman and national organizer. Carr lectures on socialism and popular themes; besides which he is manager of two summer Chautauqua Assemblies. He is a careful student and an able speaker, and stands uncompromisingly for the union of religion and socialism. In 1906 he was influential in starting the CHRISTIAN SOCIALIST FELLOWSHIP. Address: 5406 Drexel Ave., Chicago, Ill.

CARTER, JOHN: Secretary of The (English) Christian Social Union; born in Toronto, Canada, 1861; educated at Upper Canada College, Trinity University, Toronto, and at Exeter College, Oxford (M.A., 1887). After serving for two years as curate in East London, he returned to Oxford, to Pusey House, under its first principal, the Rev. Charles Gore, now Bishop of Birmingham. He was one of the founders of the Christian Social Union, and has been closely identified with its work since its inception in 1889. Besides being general secretary of the main body, he has acted also as honorary secretary of the Oxford University branch. Since its foundation in 1891, he has been editor of the quarterly *Economic Review*. He has been also for several years a member of the Oxford Town Council, as one of the representatives elected by the university. He is in favor of municipal and State socialism, but is most of all concerned to bring the Christian conscience to bear upon modern social problems without being necessarily committed to any particular economic system or political party. Address: Pusey House, Oxford, England.

CASSON, HERBERT N.: Magazine editor; born at Ontario, Canada, 1869; educated in Victoria College, Coburg; came to Boston in 1891, and became prominent through his advocacy of public employment of the unemployed. In 1893 he founded at Lynn, Mass., the first labor church in America. Later he joined the Socialist colony at Ruskin, Tenn. In 1898 he was on the editorial staffs of *The New York World* and *The Journal*, and is now (1907) one of the editors of *Munsey's Magazine*. He is an Opportunist Socialist, and is strongly opposed to the Marxian political party. Altho in favor of public ownership of public necessities, he thinks that this should be brought about gradually as the people become competent for such responsibilities. He is the author of: "Organized Self-Help," a history of American trade-unions; "Crime of Credulity"; and "The Romance of Steel and Iron." Address: Care of Frank A. Munsey & Co., Flatiron Building, New York City.

CASTRATION: Members of the medical profession frequently recommend castration as a punishment for certain offenses, and as a method of treatment for "sexual perverts." Boies's recent work on "Prisoners and Paupers" culminates in this recommendation. While advances in modern surgery make this a comparatively safe and painless operation, it is doubtful if it will be permitted by modern communities.

Prof. A. G. Warner thinks it may ultimately be very widely used in the treatment of the diseased and criminal classes. He says ("American Charities," p. 133):

"It is likely to be introduced first as a curative treatment in the cases of the insane and the

feeble-minded. Dr. Kerlin, in addressing the Association of Medical Officers of Institutions for the Feeble-Minded, said: "While considering the help that advanced surgery is to give us, I will refer to a conviction that I have that lifelong salutary results to many of our boys and girls would be realized if before adolescence the procreative organs were removed. My experience extends to only a single case to confirm this conviction; but when I consider the great benefit that this young woman has received, the entire arrest of an epileptic tendency, as well as the removal of inordinate desires which made her an offense to the community; when I see the tranquil, well-ordered life she is leading, her usefulness and industry in the circle in which she moves, and know that surgery has been her salvation from vice and degradation, I am deeply thankful to the benevolent lady whose loyalty to science and comprehensive charity made this operation possible."

CATHOLIC TOTAL ABSTINENCE UNION OF AMERICA (1872): A confederation of all the Catholic temperance societies in the country that are approved by the pastors of their respective churches. It embraces 89,400 members, enrolled in 1,042 societies. Its objects are to secure to its members the privilege of being received into societies connected with the union in any part of America; to encourage and aid communities and pastors in establishing new societies, and to spread, by means of Catholic total abstinence publications, correct views regarding total abstinence principles. President, Rt. Rev. J. F. R. Canevin, Bishop of Pittsburgh, and General Secretary, J. W. Logue, 1313 Stephen Girard Building, Philadelphia, Pa.

CENTRAL PUBLIC HOUSE TRUST ASSOCIATION: This association was formed in 1901 "for the purposes of promoting temperance by the elimination of private profit from the retail sale of liquor and of securing to the public the monopoly value of licenses."

Its objects are:

- (1) To secure the establishment in every county or in other sufficient area of a local trust company or association for the purpose of undertaking the disinterested management of the liquor trade.
- (2) To promote the interests of such trust companies wherever formed; to watch on their behalf the administration of the licensing laws; and to secure such amendments as may facilitate the development of the trust system.
- (3) To collect information of all experiments whether in this country or abroad in the disinterested management of the liquor trade.

The origin of the movement dates from 1877 when the Rev. Osbert Mordaunt on his appointment to the parish of Hampton Lucy in Warwickshire found himself sole trustee of the village inn. He determined to manage it on the Gothenburg system, the main principles being: (a) that the liquor sold should be pure; (b) that the person who sells the beer should have no interest in the profits.

This experiment was followed by others, and in 1896 the Bishop of Chester and the late Colonel Craufurd formed the People's Refreshment House Association to manage public houses on reformed lines.

The success of this association's work led Lord Grey to form in 1901 the Central Public House Trust Association.

There are now 32 Public House Trust Com-

panies in England and Wales, 5 in Scotland, and 1 in Ireland, managing 210 public houses, a number which is constantly increasing.

The principle underlying the temperance reform at which these trust companies are aiming is the elimination of the element of personal profit from the sale of alcoholic liquors. Accordingly, the dividend payable on the capital subscribed is limited to five per cent per annum, and thus the shareholders have only a nominal monetary interest in the trade. All surplus profits are handed to a council to be applied to objects of public benefit other than those properly chargeable to the rates, the provision of counter-attractions to public houses being especially kept in view.

The houses under trust management are conducted as refreshment houses rather than as mere drinking bars; food, as well as non-intoxicating drinks, including tea, coffee, and cocoa, are as readily served to customers as beer or spirits; and the food and drink supplied are of the best quality obtainable. The managers are paid a fixed salary. They have no interest whatever in the profits arising from the sale of intoxicants, and are, in consequence, under no inducement to push this part of the trade. On the other hand, they are encouraged to promote the sale of food and non-intoxicants.

Further, the elimination of the element of private profit in the sale of alcoholics places the interest of a manager on the side of law and order, and removes the antagonism which at present exists between the interest of the retailer of drink and the public welfare.

The assertion of Messrs. Rowntree and Sherwell, never yet disputed, that the net profits realized during the year 1899 by the public houses and beer shops of the United Kingdom amounted to the huge figure of £19,400,000, shows how great a loss the nation has sustained from a licensing system which has allowed the high profits resulting from monopoly rights to be diverted from the pockets of the community to whom they belong to those of privileged individuals.

It has been recently ascertained that between seventy and eighty per cent of the public houses are now in the hands of the big brewery companies; that is to say, these companies have either bought the houses outright or have by other means obtained a financial hold on the establishment, so that the house is "tied" to the brewery. The first object of this "tie," and its first consequence, is the condition that all liquors shall be bought from the brewery.

The following are extracts from the instructions drawn up by the People's Refreshment House Association for the use of their managers and adopted by the various Public House Trust Companies.

The manager placed in charge of a public house belonging to the association must bear in mind that he has been appointed by the Council to conduct the management on certain fixed principles.

These principles are:

- (1) That the general arrangement and management of the house shall be on the lines of a house of refreshment instead of a mere drinking bar.
- (2) That food and a good variety of non-intoxicant drinks shall be as easily accessible to customers as beer and spirits.
- (3) That the licensing laws enacted by Parliament for the regulation of public houses, and the promotion of temperance, shall be most strictly carried out in every particular.

(4) That the holder of a license is in a sense a servant of the public, and that he must study the comfort, well-being, and health of his customers; that his house must therefore be scrupulously clean, and that the rooms most used by the public must be comfortably arranged, well warmed in winter, and well ventilated.

The tariff of prices is to be placed conspicuously in the bar, taproom, and parlor, and the prices thereon advertised must not be departed from.

Intoxicants are not to be exposed with a view to attract customers, but every means is to be taken on the other hand to expose food and non-alcoholic drinks, so as to encourage their consumption.

In addition to the registered companies with a total subscribed capital of over £300,000, committees have been appointed in those parts of the United Kingdom which are not yet provided with trust companies for the purpose of promoting their formation.

Further, the promises of landowners to hand over to the trust companies of their respective counties the licensed houses on their estates, on the expiration of current leases, warrant the anticipation that the number of licensed houses that will come under trust management from this source alone will in the near future more than double the number of those already secured.

In various parts of Great Britain, in Ontario, Manitoba, South Australia, New Zealand, Tasmania, Mauritius, Natal, and the Transvaal, active agencies are at work forming a public opinion in favor of applying trust principles to the management of monopoly houses.

From individual reports all pointing one way, we give the following:

"The Waterman's Arms," Bankside, Southwark (the first "Trust" house in London), was opened for business, after rebuilding, on Jan. 14, 1904. Situated in a working-class district, it now does a busy trade in cheap breakfasts, dinners, and teas. At the bar in the workmen's dining hall about eight gallons of tea and coffee are sold by 10 A.M. each day. There is a saloon dining-room on the first floor, in which luncheons and teas are provided at a moderate price. The takings for food and temperance drink are frequently larger than the sales at the bar, though under the previous tenant practically nothing was sold but beer and spirits.

It is to be noted that the takings for alcoholics in 1903 were about £420 less than in 1902 at the houses managed throughout the two years, and that the years 1902 and 1901 had already shown a decrease of nearly £500 as compared with 1900. On the other hand, every facility is given for the supply of tea, coffee, etc., and there has been a steady demand for bowls of cheap soup at several of our country inns.

The secretary of the association is Hugh A. Paget, 15, Dean's Yard, London, S. W.

FURNISHED BY EARL GREY.

CENTRALIZATION is used in social science for the tendency to administer, by the sovereign or the central government, matters which might be placed under local management. The legitimate application is to a state of change from local to central management. Europe to-day is profoundly moved by the tendency, and has been ever since the existing European states began to grow out of the chaos of the fall of the Roman empire. That empire itself was, however, the greatest instance of centralization which the world has yet seen. In it the numerous municipalities and other local organizations originally existing in Italy, and communicated to the colonies, were entirely centralized. In England we can trace centralization from the time when there were about a dozen kings in Britain, and

perhaps as many in Ireland, till the United Kingdom came under the rule of one monarch. In other countries—as, for instance, in France, notwithstanding her desperate struggles for freedom—the process long tended to a pure irresponsible despotism, but now has issued in a centralized republicanism. The British Constitution turns the process to use instead of mischief. While administrative authority has been centralizing in the crown, the controlling power of Parliament has been increasing more rapidly, so that the vesting of a function in the crown means the putting it under the control of Parliament, and especially of the House of Commons. There is nothing done in any of the offices under the government for which a secretary of state, or some other member of the ministry, may not at any time be called to account. The creation of the county councils is a recent step in this direction in a somewhat different line.

In the United States the problem of centralization or decentralization has, under different names (see **STATE RIGHTS**), played a very important part. It may be said to be the distinguishing point between the two great political parties which, under different names, have from the beginning divided this country.

In the first continental congresses, the fundamental problem was how much power to give each state, and when the Constitution was proposed, this was still the burning question.

In the United States

Led by Hamilton, the men who believed in a somewhat strong central government gradually took the name of Federalists, gaining their ideas mainly from England; while, largely under the lead of Jefferson, those who believed in giving much power to the states and little to the central government took the name of Republicans or Democratic-Republicans, and are the direct ancestors of the present Democratic Party. Washington, though in reality of neither party, was by force of circumstances a Federalist, and during his presidency (1789-97), with that of Adams (1797-1801), this party was in power, giving us the necessary unifying elements of our Constitution, especially as regards financial measures. Then, owing to Federalist errors, the Republican-Democratic Party came into power with Jefferson (1801-1809), Madison (1809-17), and Monroe (1817-25). During this long period of "Jefferson democracy," the decentralizing state-rights influence was in power. The doctrine that that was the best government which governed least applied to the states, but especially to the central government. The Jeffersonian party was strong with the masses and the agricultural interests. Jefferson did away with much of the ceremonialism of Washington. The Federalists were strong with the commercial and manufacturing interests and the Puritanism of New England, which, in spite of worship of the local "town-meeting" self-government, revolted at the atheism of the French Revolution, and connected it with the Democratic-Republican Party. In general the Federalists stood for a loose construction of the Constitution, since this gave them opportunity to expand the central power, although they were ready to resist Congress when it stood in their way (there was even talk of a secession of the trading states from the union), while the Jeffersonians generally favored strict construction, since that would limit the powers of government; yet they were willing even to violate the Constitution, if that were necessary, to effect the purchase of Louisiana. Hamilton, however, died in 1803, and the Federalists had no leader.

In 1825, however, there came a change. Sectional quarrels under Monroe led to the election of John Quincy Adams (1825-29), who was, on the whole, a Federalist, though he had toyed with the Republican-Democrats; and under the personal influence of Clay and Jackson, two great parties were again developed—the one, under the name of Democrats, maintaining the traditions of the old Democratic-Republican Party, and electing its candidate, Andrew Jackson (1829-37); the other, under the name, first, of National Republican and then Whig, maintaining the principles of the Federalists. The question of centralization was at this time carried out in another direction, in Jackson's vehement attack upon the National Bank of North America, which had been chartered by Congress. (See **BANKS AND BANKING**.) Resting mainly upon the Southern and agricultural vote, the Democrats were inclined to free trade, while the Whigs, with their manufacturing interests, favored protection. Meanwhile, another great question, which, while it had existed from the beginning, only now became so serious, was modified by the same

contest between centralizing and decentralizing tendencies. The South, mainly Jeffersonian, or Democratic, believed in state rights and slavery. The North, more Federalist, or Whig, gradually came to oppose slavery. Nevertheless, the Southern Democrats feared to break with Northern Democrats, and the Northern Whigs feared to alienate the South, and, therefore, temporized. The result was a complication of issues, the springing up of new parties—Abolitionists, Free Soilers, etc.—and the election of Van Buren (1837-41), Democrat; W. H. Harrison, who died shortly after his inauguration (1841), Whig, leaving John Tyler President (1841-45), who was only nominally a Whig, and really a Democrat; James K. Polk (1845-49), Democrat; Zachary Taylor (1849), Whig, who also died soon after inauguration, leaving Fillmore President (1850-53), Whig; Pierce (1853-57), Democrat; Buchanan (1857-61), Democrat.

The War of the Rebellion was fought not directly to abolish slavery, but to preserve the union by conquering the states which had pushed the decentralizing state-rights doctrine to the extreme of secession. The Whig Party had now given place to a new party, the Republican, made up of Whigs, Free Soilers, and others, which yet on questions of centralization, protection, etc., carried out Whig principles. The election of Lincoln (1861-65), Republican; the victory of the North; Lincoln's assassination, Andrew Johnson, Vice-President, becoming President (1865-69), Republican, are well known.

Since the war the state-rights question has been less prominent, it having been largely settled by the war; but the centralizing or decentralizing question has still remained. The tendency, however, too much criticized, is strongly toward centralization. The federal government almost inevitably steadily extends its control and its legislation over whole domains formerly left too exclusively to state action, e. g., interstate commerce, proposals for federal control of banking, insurance, etc., propositions for federal divorce laws, etc.

The present growing problems of social reform are also affected by the same tendencies, some advocating a highly centralized government; others (even most Socialists and nationalists) advocating a decentralized government, with great emphasis on local self-government, as developed in the old Saxon folk-mote and the New England town-meeting, giving us municipalism as even more important than the national element of nationalism, which includes all governmental action, state and municipal. Many Socialists, and notably William Morris in England, favor a government so decentralized as to be little more than a confederation of communes.

This brief résumé will indicate how far this question has entered into our national history and how far it may yet affect our national politics and procedure.

CHALMERS, THOMAS: Scottish clergyman; political economist; born at Anstruther, Fife County, 1780. He was early destined for the Church, and at the age of eleven was enrolled as a student in the University of St. Andrews. In 1803 he was ordained as minister of Kilmarnock, a small parish near St. Andrews. He taught classes at St. Andrews, and gained great popularity and fame throughout all Scotland. In 1815, after a battle over his evangelical views, which were then much opposed, he became minister of the great Tron parish, in Glasgow, and in 1819 of the parish of St. John's. In 1828 he accepted the chair of theology in Edinburgh. Here he finished, in three volumes, his "Christian and Civic Economy in Large Towns," and his "Political Economy," besides many theological and philosophical works. Here, too, he had more leisure for general church activities, and he was placed at the head of the Church Extension Committee. After the withdrawal from the General Assembly (1842), Dr. Chalmers was the first moderator of the Free Church of Scotland.

In visiting his first Glasgow parish, which contained a population of about 11,000 souls, Chalmers speedily discovered that nearly a third of them had relinquished all connection with any Christian church, and that their children were growing up in ignorance and vice. The appalling magnitude of the evil, and the certainty of its speedy and frightful growth, at once arrested and engrossed him. To devise and execute the means of checking and subduing it became thenceforth one of the ruling passions of his life. Attributing the evil to the absence of those parochial influences, educational

and ministerial, which wrought so effectually for good in the smaller rural parishes, but which had not been brought to bear upon the overgrown parishes of great cities, from all spiritual oversight of which the members of the Establishment had retired in despair, his grand panacea was to revivify, remodel, and extend the old parochial economy of Scotland. Taking his own parish as a specimen, and gaging by it the spiritual necessities of the city, he did not hesitate to publish it as his conviction that not less than twenty new churches and parishes should immediately be erected in Glasgow. All, however, that he could persuade the town council to attempt was to erect a single additional one, to which a parish containing no fewer than 10,000 souls was attached.

In 1819 he became minister of the parish of St. John's. This parish contained 2,000 families, chiefly weavers, factory operatives, and laborers. More than 800 families had no connection with any church; and nearly all the children were uneducated. He at once established two large school-houses, in which 700 children were taught at very low fees. For those too poor to afford even a small school fee he opened forty or fifty Sabbath-schools. In a short time these Sabbath-schools contained 1,000 children. Dr. Chalmers then divided his parish into twenty-five districts, and placed over each an elder, to watch over the spiritual interests of the people, and a deacon, to care for their temporal interests. He retained control and direction of all, not only overseeing the work of others, but making 1,000 visits among the families annually, and holding evening meetings. It was his special desire to test the old Scotch method of caring for the poor—by voluntary contributions taken at the church door and administered by the kirk session. He was strongly against the English system of compulsory assessment; and obtained permission of the Glasgow magistrates to try the Scotch plan with St. John's. His experiment was a complete success. When he took the parish its poor cost the city about \$7,000 a year; but after four years of his management this sum was reduced to less than \$1,400 a year. This was done by his thorough organization of the parish, his rejection of the idle, drunken, and vicious, his personal visits among the poor and kindly sympathy with them, and his stimulation of the needy to self-respect and industry.

Chalmers's "Political Economy" seeks to secure the economic elevation of society by moral means. He defined political economy as the "diffusion of sufficiency and comfort." He believed that without a Christian education to give self-control, progress would be impossible. He felt the need of a more radical cure than philanthropy and a more sympathetic one than legislation. He favored home trade rather than foreign trade. His economic idol was agriculture, as giving both occupation and maintenance. He died in 1847.

CHARITIES, STATE BOARDS OF: State Boards of Charities, under one name or another, but with the same general purposes, exist in a number of the states. They are branches of their respective state governments, usually created by legislative enactment, altho in some states provided for in state constitutions, because it has been found desirable, in the interest of good administration, to exercise independent supervision over charitable and kindred institutions. As a rule, these boards are composed of philanthropic citizens, appointed by the governor, and in some cases confirmed by the legislature, who are independent of partizan influences and render practically unpaid service to the state.

Generally speaking, the chief functions of these boards are to visit and inspect charitable and reformatory institutions in order to secure the correction of evils and abuses in their administration and to encourage the adoption of progressive methods in their management. Such boards have, usually, but limited powers of administration or control, in so far as the actual management of the institutions within their jurisdiction is concerned. Their powers and duties are, however, continually being added to as the growth and complexity of charitable work in their respective states makes this appear to be necessary. For this reason the duties of the several boards

differ materially in some of the details of work, while in the main they are the same.

The influence they exert, while almost entirely a moral one, is shown by experience to be both efficient and useful. This will readily be apparent to those who study the conditions at the almshouses and other public institutions of charity both previous to and since the establishment of State Boards of Charities. At the same time, it is also true that other social forces have cooperated to secure the great improvements that have been made during recent years in the administration of this general class of institutions.

The first State Board of Charities was established in Massachusetts in 1865, and is still in existence. Other like boards are to be found in New York, 1867; Ohio, 1867; Pennsylvania, 1869; Illinois, 1869; North Carolina, 1869; Michigan, 1871; Connecticut, 1873; Nebraska, 1877; Indiana, 1889; South Dakota, 1890; Colorado, 1891; New Hampshire, 1895; Tennessee, 1895; Missouri, 1897; District of Columbia, 1900; California, 1903; and in Wyoming and Montana.

State Boards of Control are found in some of the states, but these boards are primarily administrative in their character, and take the place of the individual boards of trustees of the state institutions, rather than that of the boards of charities.

Such State Boards of Control are to be found in Kansas, 1868; Rhode Island, 1869; Arizona, 1894; Iowa, 1898; Minnesota, 1901; Washington, 1901. Fuller information with relation to the composition and work of these two classes of state boards may be found in the published proceedings of the National Conference of Charities and Corrections.

It is the custom of the State Boards of Charities and of the State Boards of Control to issue annual or biennial reports according to the legislative custom in their respective states, and to publish from time to time other useful documents with relation to their work. These reports and documents are usually to be found in the public and other principal libraries, and copies may be obtained upon application sent to the offices of the boards at their respective state capitals, where complaints calling for investigation and other communications should also be sent.

ROBERT W. HEBBERD,

Commissioner of Public Charities of the City of New York.

CHARITY ORGANIZATION SOCIETIES, or ASSOCIATED CHARITIES, are in their present form a distinctly modern movement. In 1819 the Rev. Dr. Chalmers (*q. v.*), in his parish at St. John's, Glasgow, comprising 10,000 souls, in the poorest part of the city, became convinced that miscellaneous almsgiving did more harm than good; and, with the consent of the civic authorities, he undertook to stop all such bestowal of alms, and instead to institute a system of friendly visiting among the needy by a corps of workers, who were only to give relief in case of extreme necessity, but to do all they could to enable the poor to help themselves. The result was considered very favorable; the amount of pauper relief was very much diminished, and yet there was less suffering than before. After Dr. Chalmers, however, left the parish, in 1823, the experiment dragged on for fourteen years and then came to an end. Meanwhile similar experiments on a smaller scale were made elsewhere. From 1828-1844 district visiting societies were formed in sev-

eral London societies, while societies for repressing mendacity in begging were much older. In 1868 Edward Denison (*q. v.*), a son of the Bishop of Salisbury, went to live in the East End of London to study for himself at first hand the problems of the poor. He became convinced of the same principles at which Dr. Chalmers had arrived. He wrote:

"I am beginning seriously to believe that all bodily aid to the poor is a mistake; whereas by giving alms you keep them permanently crooked. Build schoolhouses, pay teachers, give prizes, frame workmen's clubs, help them to help themselves, lend them your brains, but give them no money, except what you sink in such undertakings."

As a result, in 1869 a society was formed to act upon these principles, organized by Denison and some friends spurred on by his words and the experience of Octavia Hill (*q. v.*) in her work with her poor tenants. The society was called the London Society for Organizing Charitable Relief and Repressing Mendicity, soon popularly abbreviated into the Charity Organization Society. The movement rapidly grew, and aimed at bringing all the vast charitable relief of London, whether legal, corporate, or individual, into one administration. It has not done this, but has become a vast and thoroughly organized system, with a network throughout England.

In England and Wales there are at present nearly 100 charity organization societies (under different names), nine in Scotland, and two in Ireland. There are also seven in Canada, six in Australia, three in India, and nine in other British colonies.

The (London) Charity Organization Society has headquarters at Denison House, Vauxhall Bridge Road, S. W., with district committees in each of the forty Poor Law Unions. It declares its object to be "to give a definite aim to and to direct into most effective channels the large amount of benevolent force at work in England and particularly in London."

In England. The central committee does not relieve directly, but aims at propagating sound views on the subject of charity by publication and discussion, promoting cooperation, suggesting new institutions on good principles, collecting information relating to individuals and of general import, and preventing misapplication. Its principles may be summed up as follows: (1) That all relief should aim at making the recipient independent of relief. (2) That no relief should be given without thorough inquiry and investigation. (3) That existing institutions should be utilized as far as possible. (4) That all relief should be adequate to secure the object with which it is given.

According to the Annual Charities Registry for 1906 the total income of the various charitable agencies reported that year in London was £8,720,986.

The history of charity organization in the United States has closely followed that of England. In the fifties there had been organized in almost all the large cities relief societies, usually called Societies for the Improvement of the Condition of the Poor. They were often conducted in theory upon principles of modern charity, but in practise, says Mr. Kellogg, "they sank into the sea of common almsgiving, appealing to their patrons for support on the ground that the money given to them would enable them to enlarge the number of their beneficiaries or increase the amount of their gifts, and attracting the needy to their doors with the hope of loaves and fishes. . . . From every quarter testimony arises that the system was without adequate safeguards of investigation, tests of destitution or means of hindering duplication of relief from several sources simultaneously, or of making the relief adequate to the necessity."

It was under such conditions that the movement toward charity organization commenced.

Altho the movement traces its origin to the London Society there were several independent centers in which it appeared nearly simultaneously in this country.

Beginnings. In 1874 Rev. Charles G. Ames led in the formation, upon London models, of an association in Germantown, a suburban ward of Philadelphia, which employed household visitors to investigate applicants for aid, availed itself of the soup-houses, fuel societies, churches, and especially of the

outdoor municipal relief in procuring the requisite assistance, and supplemented it as need indicated from its own resources.

In the same year a Bureau of Charities was formed in New York City, of which Mr. Henry E. Pellw was chief promoter and secretary, that proposed to register persons receiving outdoor relief, either from the city, benevolent societies, or individuals; but the scheme was frustrated the next year by the refusal of the largest relief-giving society in the city to cooperate. This plan met with better success in Boston. In the autumn of 1875 the Cooperative Society of Visitors among the Poor was formed in Boston, whose theater of operation was in the North End. The plan was a modification of the Elberfeld system as proposed by Octavia Hill for London. No visitor was to have more than four "cases" on hand, and lists were obtained from a physician of that congested and poor district. The society held weekly conferences of visitors and representatives of other charities.

Buffalo has the honor of being the first city in the United States to produce a complete Charity Organization Society of the London type. The Rev. S. H. Gurteen, an English clergyman, who had been active in the London Society, proposed in 1877 the creation of a clearing office to which the charitable agencies of the city should send daily reports. On Dec. 11, 1877, the Charity Organization Society was set afoot at a public meeting.

In the spring of 1876 a Registration Committee was formed by private citizens of Boston, and work was begun in the autumn, carried on until the spring of 1878, and then abandoned in view of the larger enterprise then under discussion. The large relief societies knew the worth of registration, but doubted the value of "friendly visiting." They were willing to support the new movement, provided "the visitors had no power of relief." This condition was fortunately acceded to, and on Feb. 26, 1878, a provisional commission was formed by delegates from many charities, which carried on the work until December 8th, when the present constitution of the Associated Charities of Boston was adopted and went into effect.

New Haven was next in line, May 23, 1878. Philadelphia brought forward its type in 1878. A large committee was appointed to draw up a plan, and on June 13, 1878, a constitution was adopted and a provisional organization set on foot. This instrument was dominated by the idea of reproducing in each of the thirty wards of the city a complete association like that existing in Germantown.

Cincinnati was in the field, Nov. 18, 1879.

Brooklyn was another center where the movement arose spontaneously. In 1877 a commission of citizens undertook the investigation of outdoor relief, which in that year comprised 46,350 beneficiaries and involved an expenditure of \$141,207. This resulted in restricting municipal out-relief to coal in 1878, and in its total abolition the next year. In 1879 Mr. Seth Low, who had been providentially and unpremeditatedly present at the inauguration of the Buffalo Society and deeply impressed thereby, enlisted Mr. Alfred T. White, and they, with others who had been instrumental in abolishing the outdoor relief of the city, together with the volunteer visitors of the out-poor, organized the Brooklyn Bureau of Charities, which does not give relief, but maintains wood-yards, laundries, workrooms, and a woman's lodging-house.

New York demands especial notice here. The difficulties encountered in securing influential cooperation in 1874 for a time paralyzed further effort, altho the necessity for some organization was long discussed by persons interested in charitable enterprises. In 1881 the matter was taken up by the State Board of Charities, and through its initiative the Charity Organization Society of the City of New York was founded in January, 1882, and incorporated on May 10th following. It followed the Boston plan in respect to the important features of giving no relief and of creating district associations maintained from a common treasury and under central control.

The movement found an expression of its unity in the National Conference of Charities and Corrections when, in 1879, Mr. Seth Low presented a description of the work in Brooklyn and a committee was appointed upon charity organization.

There are at present some 300 associations, representing charity organizations in the world. Two hundred of these are in the U. S. and Canada. They are not organically connected, and perhaps the best way briefly to study them is to give a concrete statement of the objects of one of them, the Charity Organization of the City of New York. It is a society:

- (1) For organizing and coordinating charitable work.
- (2) For receiving applications for aid, carefully sifting and testing them, and obtaining from the proper sources prompt and adequate relief of such as are in need.
- (3) For encouraging the establishment of new agencies where they are required; for giving expert confidential advice to the benevolent in their benefactions, and for giving accurate information in regard to charitable institutions, almoners, or agents that appeal for contributions.
- (4) For helping the poor through wise counsel based upon experience, through personal service of volunteer visitors,

and through all such means as will make them at the earliest possible moment self-supporting and self-respecting members of the community.

In addition to the Central Offices and Application Bureau in the United Charities Building, and the ten district offices in various parts of the city, the society conducts ten main departments, as follows:

(1) Investigation Bureau, United Charities Building. Investigations are made for private persons, hospitals, dispensaries and other institutions. For this purpose and to ascertain whether new families that make application are in need of aid, the society maintains a special corps of investigating agents in connection with the Registration Bureau.

(2) Registration Bureau, United Charities Building. A confidential record of all investigations made by the society, and of the action taken on behalf of families under its care. Information is given through the Central Office or by mail to those who have a legitimate charitable interest in the families concerned.

(3) Wood-yard, 516 West Twenty-eighth Street. To provide work for residents with families for a cash remuneration, and to test their willingness to work. Homeless men may earn meals and lodgings.

(4) Laundry, 516 West Twenty-eighth Street. To provide temporary employment for women with families. Expert laundresses are supplied through the employment registry of the laundry.

(5) The Penny Provident Fund, United Charities Building. For the encouragement of small savings through the stamp system.

(6) Publications. *Charities*, a weekly periodical of local and general philanthropy and of social activities; a means of communication among workers and of information to the public. Annual subscription, \$2. "The Charities Directory," cloth, \$1, published annually. It gives reliable information concerning the various charitable and beneficent institutions of New York City, carefully classified and fully indexed. "Handbook on the Prevention of Tuberculosis," 388 pp.; cloth, \$1; paper, fifty cents. "The Directory of Institutions and Societies Dealing with Tuberculosis in the United States and Canada," 270 pp.; cloth, \$1.

(7) Library, United Charities Building. A public reference library of applied sociology. All who are interested in charitable subjects are made welcome.

(8) Tenement House Committee, United Charities Building. To improve the condition of tenement-houses by securing proper legislation, by securing the enforcement of the existing laws, and by encouraging the building of model tenements.

(9) The Committee on the Prevention of Tuberculosis. By research into the social aspects of tuberculosis, by the publication of information concerning the curability and the communicable character of the diseases through lectures, leaflets, and otherwise; by the promotion of movements for the erection of sanatoria; by obtaining special relief for those whose chances of recovery will thus be increased and in other ways to aid in the movement for the prevention of the disease.

(10) The School of Philanthropy. To fit men and women for social service either as professional or as volunteer workers. Full information contained in the "Handbook of the School," which will be sent on application.

(11) The Department for the Improvement of Social Conditions. A complete list of the 200 charity organization societies in the U. S. and Canada is published each year in the annual report of the New York Charity Organization Society. In Germany there are 29; France, 19; Austria, 9; Italy, 9; Belgium, 6; Russia, 5; Holland, 5; Switzerland, 4; Sweden and Norway, 3; Spain, 2; Denmark, 1; Greece, 1; Turkey, 1. (See also ELBERFELD SYSTEM.)

Revised by EDWARD T. DEVINE, Secretary of the New York Charity Organization Society.

CHARTISM: A movement in England for political and social reform, beginning about 1837 and extending over about seventeen years till 1854. The word is a shortened form of "Charterism," and rose from the "Charter" which was demanded by the advocates of reform at that time. [A copy of this may be found in Gam-mage's "History of the Chartist Movement," Appendix B, p. 411. It bears this title: "The

People's Charter. Being a bill to provide for the just representation of the people of Great Britain and Ireland in the Commons House of Parliament. Revised at a conference of the people, held at Birmingham, December, 1842.") The origin of this charter was both political and social, and illustrates how social and political causes were at the bottom of the Chartist movement.

The reform movement of 1832 had proved unsatisfactory to the working classes of England in that it had not done for them what they had been led to expect. It was indeed essentially a middle-class movement, and not a working-class movement at all. It accomplished this, that it established the representative principle as beyond question that of the English Constitution. It is but a step from this to manhood suffrage, but the Liberal Party was not yet ready to take this step. Only the radical members were ready for it in the House of Commons. At the same time the wretched condition in which the mass of the working people of England found themselves—such a condition as Charles Kingsley has described in "Yeast" and in "Alton Locke"—made the working classes ready for any scheme which would hold out to them any hope of relief. This led to the formation about this time in London of the Working Men's Association. Naturally enough this association and the radical element in the House of Commons came together. A committee was appointed, consisting partly of members of Parliament and partly of members of the association, which committee molded their views into a bill, afterward adopted at a public meeting. This bill was called

Six Points

"The People's Charter." Its principal demands were these, which may be called the six points of Chartism: (1) Universal manhood suffrage; (2) Annual Parliaments; (3) vote by ballot; (4) no property qualification; (5) payment of members; and (6) equal voting districts.

With the members of Parliament who took part in thus inaugurating the movement it would seem largely to have been a matter of politics rather than of deep conviction. Perhaps they were scared at the specter which they raised. But it is certain that in a short time they ceased almost to a man to give it their support. Daniel O'Connell, for example, who is said to have handed the charter to Lovett with these words, "There, Lovett, is your charter; agitate for it and never be content with anything less," soon after did all he could to oppose it, and continued to the day of his death a bitter opponent of the Chartist movement.

But with the workmen the case was very different. With them it was a question of paramount importance—a cause to which they devoted themselves with unbounded enthusiasm, if not always with discretion. Missionaries went out from the metropolitan association into all the great cities of England to form similar associations and to agitate for the charter. Some of these were men of exceptional ability. Perhaps the ablest as a writer and a man of business was William Lovett, the secretary of the association, a native of Cornwall, who had come in utter poverty to London and picked up the trade of a joiner. Another was Henry Vincent, a man gifted with singular powers as an orator. He is described as being extremely graceful in person, with a fine mellow, flexible voice, a most winning expression except in moments of passion, of great

fluency of speech and rare power of imitation. He was regarded by his admirers as the young Demosthenes of English democracy. But the man who came to be regarded as perhaps most representative of the movement was Fergus O'Connor, an Irishman, who had first come into prominence in the Irish elections of 1831. Gaining the ear of the operatives in the manufacturing district he launched a paper called *The Northern Star*, which more than any other became the organ of the movement. O'Connor was its proprietor, but the Rev. William Hill its editor, which shows that some at least of the clergy were drawn in. Nor was *The Northern Star* the only paper devoted to the propaganda of the Charter, for the Workmen's Association already had its journal in *The London Despatch*, while *The Northern Liberator* in Newcastle-upon-Tyne, *The True Scotsman* in Edinburgh, *The Birmingham Journal* in Birmingham, *The Operative*, *The Charter*, and *The Champion*, each presented some special aspect of the common cause.

During the summer and fall of 1838 the movement made rapid progress. Meetings were held in the great cities, where the number of people gathered would seem almost incredible, and where the enthusiasm was unbounded.

Growth

At Glasgow there was a mighty demonstration on May 28th, when "it was computed that not fewer than 200,000 of the stalwart sons of labor displayed their toil-worn faces in this gigantic gathering. . . . "The very heavens rang with the lively strains of music and the shouts of the enthusiastic multitude. There were forty bands of music, and more than 200 flags and banners waved gracefully in the breeze." On June 27th a monster meeting was held on the Town Moor at Newcastle, where it was estimated that 80,000 people were assembled. Birmingham followed with a still larger meeting, and Manchester, not to be outdone, answered on Sept. 27th with a gathering which the reporter of *The Morning Advertiser* estimated at not less than 300,000. At these gatherings speeches were made on the wrongs of the working classes, and the good that would come from securing the charter. The speeches were always fervid, not seldom inflammatory, sometimes passing the bounds of right and reason. Delegates were also chosen to attend a convention to be held the following winter (Feb., 1839).

At this convention the weaknesses inherent in a movement of this sort began to show themselves. The convention was divided into two parties, one of which favored only

Weaknesses of the Movement

peaceful methods, the other an ultimate appeal to force. The authorities could not pass by such language as was often used by agitators of the latter class, particularly when the great meetings, which had been held in the daytime, began to give place to torchlight processions at night, when it was plain that liberty of speech might easily pass over into license of action. Collisions between the authorities and the Chartist leaders or speakers became of frequent occurrence. At Birmingham Dr. Taylor, Lovett, and Collins were arrested, when the mob retaliated by setting fire to the property of some obnoxious individuals. Meanwhile the petition for the charter, signed by 1,280,000 persons, had been presented, on Jan. 14th, to the House of Commons, and turned down by the overwhelm-

ing vote of 237 to 48. This summary rejection of their demands, together with the frequent arrests of their members and the harsh treatment which they received, still further embittered the Chartists. At Newport, on Nov. 4, 1839, occurred what has been called "The Welsh Insurrection." A large body of the working people of the district (their number is variously estimated from 1,000 to 20,000), marched into Newport. Just what they had in mind seems uncertain, but it was probably a movement to release Vincent and other prominent Chartists who, it was reported, were being treated harshly in prison. Falling in with a company of the Forty-fifth Regiment, some shots were fired by the Chartists, and returned by the soldiers with deadly effect, ten of the Chartists being killed and fifty wounded. The leaders were arrested and tried for high treason, and three of them—Frost, Williams, and Jones—were sentenced to death, but their sentences were afterward commuted and they were transported. In other parts of England similar severe repressive measures were resorted to, while the movement was even more effectually checked by the divisions among its leaders. This appears from the fact that the second petition for the Charter, on its presentation to the House of Commons, had but 33,000 signatures.

The agitation for the Charter continued, however, till 1848, when it received its death-blow. The French revolution of that year for a time infused new hope and courage into the Chartists. Why could not that be done in England which had been done in France? It was determined to make an new appeal for the Charter to the House of Commons, and to back it up with such a display of members that it would be sure to receive the consideration it deserved. But, warned by what had taken place in France, the authorities determined to run no risk. The

The Final Struggle

Duke of Wellington was put in charge of seeing that due precautions were taken. With his accustomed energy and wisdom the troops at his command were so disposed that they should not irritate the sympathizers with the movement, but would be ready at strategic points for immediate action. More than 200,000 special constables were sworn in, men of all ranks and conditions vying with one another in seeking the office. The marching in procession to the House of Commons, which had originally been planned, was forbidden, tho the Chartists were allowed to hold their meeting, so that the monster petition was presented on April 10, 1848, with little or no noise or tumult. The petition was so huge that it was carried in three cabs. It was presented by Fergus O'Connor, who claimed that it was signed by 5,700,000 people; but on being counted the actual number of signatures was found to be only 1,975,496. A considerable portion of these were palpable frauds, as among them were such names as Victoria Rex, the Duke of Wellington, and Sir Robert Peel; and multitudes of fictitious names were signed, such as Pugnose, Longnose, Flatnose, Punch, Snooks, Fubbs, etc. A petition thus discredited received but scant attention; and tho the Chartist movement struggled on for six or seven years longer, it had passed from the domain of practical consideration.

It is difficult to estimate the value and importance of the Chartist movement. Judged by what was immediately accomplished it would

seem to have been a great failure, starting in an imposing manner and resulting in next to nothing. But it would be but a superficial judgment which would thus estimate the movement. The fact is that a large part of what the charter claimed has since been brought about. How much of what advance toward democracy England has made in the last twenty-five years is due to the Chartist movement it is impossible to say; but the reading of history would lead us to believe that the fruition of the close of the nineteenth century, Liberalism, was in no inconsiderable measure due to the seeds planted at that time.

PHILO W. SPRAGUE.

CHASE, JOHN CALVIN: State secretary of Socialist Party of New York; born in Gilmonton, N. H., 1870. At the age of eight years he began work in a woolen mill, and at thirteen took up the trade of a shoemaker. He became a member of the Boot and Shoe Workers' Union in 1888, and was elected delegate to the National Convention in Boston. In 1890 he removed to Haverhill, Mass., where he worked as a shoemaker, and became an active trade-unionist and Socialist. He was elected Mayor of Haverhill in 1898, and reelected in 1899, being the first Socialist mayor elected in the United States. For two years he traveled as national organizer and lecturer for the Socialist Party of America. Mr. Chase believes that the working class should organize as a political party for the purpose of taking control of the government, so that through and by such control they may abolish private ownership of the means of life, and establish a system of collective ownership and operation. Address: 66 East Fourth Street, New York City.

CHAUTAUQUA INSTITUTION: In August, 1874, Lewis Miller, of Akron, O., and Bishop John H. Vincent organized the first Chautauqua Institution. Its name was derived from Chautauqua Lake, in New York State, on the shore of which the meeting was held. It began as a summer school for the better training of Bible teachers, and endeavored to lay most emphasis on the "week-day forces" in religious culture. Its two founders desired to give Sunday-school teachers a continued, progressive, and thorough study of biblical literature and pedagogical principles. The first meeting was a success; and by a gradual and natural growth the plan has been broadened to include instruction in almost all branches of knowledge; the session has been extended from two weeks to two months (July and August); and a town has been built up which presents an interesting study to the educator and sociologist in its municipal government and its ideals of life. All the essential features of the institution were adopted by 1878, tho various important changes and additions have promoted its consistent development from year to year. It is at present incorporated as Chautauqua Institution under the laws of the State of New York. Its management is entrusted to a board of twenty-four trustees, elected either by the owners of property at Chautauqua, or in case a quorum of such electors cannot be secured, by the board itself. The institution is not a stock company, nor are the

trustees interested in the land beyond the ownership of lots for private use. By the provisions of the charter, all surplus funds must be used for the improvement and extension of the institution's work. The president and chancellor never received compensation for their services. Those officers upon whom falls the management of details are paid ordinary salaries.

Chautauqua has become a city where municipal functions are extended to include free public instruction and entertainment. This expense is defrayed by a system of taxation which falls upon all within the town, however brief the term of citizenship. The tariff is: one day, 40 cents; one week, \$1.75; two weeks, \$2.80; four weeks, \$4; season, \$6. Citizenship includes the privilege of attending all exercises of the general program, and access to the museum, the reading-room, the models, etc.

The educational activities of Chautauqua Institution include the work done in connection with the Summer Assembly and the all-year-round instruction offered by the Chautauqua Library and Scientific Circle, and described hereafter.

The summer work of the assembly falls under two general heads: the Summer Schools and the General Program. The Summer Schools are thirteen in number, and in 1905 enrolled a total of over 2,300 students who were registered in nearly 5,000 courses. These schools may be described as including six academic departments and seven professional departments. Under the first head fall English language and literature, modern languages, classical languages, mathematics and science, psychology and pedagogy, and religious teaching. Under the second are included library training, domestic science, music, arts and crafts, expression, physical education, and practical arts.

The Faculty of the Summer Schools is in a measure as permanent as that of any college, the majority of the ninety members returning from year to year. A census of the last faculty shows representatives from Yale, Princeton, Columbia, Cornell, Michigan, and Chicago universities; from Amherst, Haverford, Bowdoin, and Rockford colleges; from Buffalo, New York, and West Chester (Pa.) normal schools; and from a large number of other educational institutions.

The second division of the summer work—the General Program—offers a regular and systematic series of religious and secular lectures, entertainments, and concerts, extending over sixty days. Under the head of lectures those which are most genuinely educational in their nature are a large number of lecture series on subjects of literary, historical, scientific, and pedagogic interest. In addition to these series many single addresses by persons of note are interspersed throughout the program. While the series are most often presented by educators, the single addresses are more frequently from men of affairs. During the history of the institution, three presidents of the United States, twelve or fifteen governors, thirty or more college presidents, and a long list of United States congressmen, distinguished jurists, and leaders in the world of commerce and civics have addressed Chautauqua audiences.

The musical features of the General Program have assumed significant proportions as the institution has developed. At present a chorus which at the height of the season numbers 500 or more, in conjunction with a regular orchestra of twenty

pieces and with different groups of well-known vocal soloists, present during the season not only a large number of miscellaneous concerts, but at least three well-known opera scores, three great oratorios, and three or four of the best-known masses. Thus an opportunity is provided for people who ordinarily hear little of the best music; and the musical feature of the summer becomes distinctly educational. It is estimated that, through all of these means, over 50,000 people are reached each summer at Chautauqua itself.

One of the most important departments of the institution is the Chautauqua Literary and Scientific Circle. This was started in 1878, and offers aid to self-educating people, either as individuals or in groups known as "local circles." The essential features of the plan are:

1. A definite four years' course of history, literature, science, etc.
2. Specified volumes approved by the counselors.
3. Allotment of time. Reading apportioned by week and month.
4. A monthly magazine with additional readings, notes, and general literature.
5. A membership book, with suggestions, review outlines, etc.
6. Time required, forty minutes to an hour a day for nine months.
7. Certificates granted to all who complete the four years' course.
8. Advanced courses, for continued reading in special lines.
9. Pedagogic course for secular teaching.
10. Young People's Reading Course to stimulate the reading of good literature by the young.

Further details may be obtained from Chautauqua Institution, Chautauqua, N. Y.

CHERBULIEZ, ANTOINE ELYSÉE: Swiss professor; born in Geneva, 1797. He was in the Cantonal Legislature from 1831 to 1846, and till 1848 in the Great Council. From 1848 to 1851 he was in Paris, and then professor at Zurich, where he died in 1869. His main work is, "Précis de la Science Économique et de ses Principales Applications."

CHEVALIER, MICHEL: French engineer, editor, economist; born at Limoges, 1806. Commencing as a mining engineer, he gave this up in 1829 to join SAINT-SIMONISM and became editor-in-chief of the *Globe*. In 1832 he was condemned to a year's imprisonment, as the responsible agent of the *Globe*, for articles branded as being outrages on morality. His intentions were worthy, and his habits of life more strict than appearances led the world to suppose; hence the government itself, which at this time discovered M. Chevalier's abilities, remitted half the penalty, and entrusted to him the mission of studying the railways of the United States. He devoted himself henceforward to writing on engineering and economic subjects, and gradually but very materially changed his economic views. In 1841 he succeeded Rossi in the chair of political economy at the College of France.

In the Revolution of 1848 he opposed the socialism of the Commission du Gouvernement pour les Travailleurs. He wrote at that time in the *Journal des Débats* a series of letters called "Lettres sur l'Organisation du Travail," which were collected under this title. This and the "Lettres sur l'Amérique du Nord" may be considered his most characteristic and remarkable works.

Chevalier believed liberty to be more in peril under parliamentary government than under a personal government. He was called to the council of state February, 1852. In the same

year he published the "Examen du Système Commercial connu sous le nom de Système Protecteur," a work in which the advantage of commercial liberty was shown. He induced Napoleon III. to sign the famous commercial treaty with England of Jan. 23, 1860.

In 1859 Michel Chevalier published a new volume with the significant title, "De la Baisse probable de l'Or," in favor of the demonetization of gold. He resumed his duties as professor in 1866 and carried them on till 1878. He died in 1879.

CHEYSSON, EMILE: French engineer and economist; born at Nîmes (Gard) in 1836; became civil engineer in 1859, director of the machinery supply at the Paris exhibition 1867. From 1871 to 1874 he was general manager of the famous "Creuzot" mines and foundries. After this he left practical affairs to devote his time to studies and teaching. He has since been professor of engineering at the National School of Engineers and professor of statistics at the Free School for Political Sciences, and also inspector-general of bridges and highways. He has made a study of the labor question, and believes its solution lies in the forming of workmen's unions, which will act as savings-banks and in case of accident, loss of work, etc., as insurance companies. He does not believe in the German system of compulsory workmen's pensions. He has given especial attention to working men's dwellings and antialcoholism. He has written numerous reports and works bearing on statistics.

CHICAGO: In warring on the one hand against the greed of wealth and on the other hand against the lawlessness of labor, Chicago is developing a real democracy in government which its people believe bodes well for the future. This city of 2,000,000 inhabitants is truly cosmopolitan. The number of its citizens of foreign birth or parentage is large. It is a railroad and industrial center of great importance.

Like other American cities, Chicago has suffered from attempts to rule it from the state capital. More vigorously than most other cities has Chicago fought for the right of home rule in municipal affairs. The most acute phase of this struggle was in connection with the street-railway question, which for ten years has been the chief issue in municipal politics. In 1897 Mr. Charles

Railway Question

T. Yerkes, the traction magnate, sought to have the legislature of Illinois give to him outright renewals of franchises which he desired in the city of Chicago. Mr. Yerkes was not only ultimately beaten at the state capital, but the public opposition which his policy aroused made it impossible for him to secure the desired franchise renewals from the city of Chicago, and in 1899 he sold out his interests and went to London. In 1903 the legislature passed a law, commonly known as the Mueller Law, conferring upon Chicago the right to own and operate street-railways. The Speaker of the House, by trying to kill this bill under the gavel, provoked a riot in the House, and was literally driven from the chair by infuriated members. He was not allowed to return until he agreed to grant a roll-call on the Mueller Bill. The demand for the Mueller Law came not only from advocates of municipal ownership, but from all the citizens of Chicago, who believed the city should have from the legislature

the power to work out the problem in the way that seemed best to its people. In 1905 Mr. E. F. Dunne was elected mayor on the issue of immediate municipal ownership of street-railways. The practical difficulties in the way of immediate municipalization were too great to be overcome, and at the time this article is written it is probable that the question will be settled by the passage of an ordinance authorizing the companies to rehabilitate and operate the street-car system under an agreement to sell to the city at any time on six months' notice. An important instrumentality of the people in making their will effective has been the Public Opinion Law, under which, on petition of twenty-five per cent of the voters, any question of public policy may be submitted to the electorate. Under this law several referendum votes were taken upon various phases of the street-car question, all of which showed a surprisingly strong sentiment in favor of municipal ownership.

A struggle somewhat similar in nature, tho not so prolonged, was made to secure from the Illinois Legislature an act authorizing the City Council to regulate the price of gas and electric light. Under authority of this law the council, at the beginning of 1906, reduced the price of gas from \$1 to eighty-five cents per 1,000 cubic feet. In the summer of 1906 the electric-light companies made material reduction in the price of light. The city of Chicago has the largest municipal electric-lighting plant in the country, but it provides light for public use only.

Chicago's water-plant has been owned and operated by the city since 1853. The water is taken from Lake Michigan. As the sewers also entered the lake the water-supply was contaminated. To purify the water-supply, and also to lay the foundation for a great ship canal connecting Lake Michigan with the Mississippi River and the Gulf of Mexico, the Sanitary District Canal was planned. A canal capable of accommodating large draft vessels has been con-

Water-Plant structured, connecting the Chicago River near its mouth with the Illinois River near Joliet. The current in the Chicago River is reversed, and water from Lake Michigan now flows through the Chicago River, the Sanitary District Canal, the Illinois River, and the Mississippi River into the Gulf of Mexico. The cost of the project has been about \$48,000,000. The demand is now made that the Federal Government take the Sanitary District Canal as a basis, and build a ship canal connecting Lake Michigan with the Gulf of Mexico. Altho Chicago has only a very small debt, it has no additional borrowing power because of the limitations of the state constitution. As a means of evading this limitation, to make possible the raising of funds by bond issues for the construction of the canal, a new municipality was created, known as the Sanitary District of Chicago, having nearly the same territorial limits as the city.

The present constitution of Illinois, adopted in 1870, is essentially a constitution of restrictions. It was framed by a convention made up for the most part of high-minded gentlemen, known as reformers in their day, whose main idea seemed to be to tie the hands of government and to prevent things being done. The proper development of Chicago has been greatly hampered by the restrictions imposed by this instrument. For one thing, the convention gave the justice court system of Chicago a status in the constitution, and

provided a complicated and indirect method of selecting justices—the main purpose of which was to remove control as far as possible from the people—which has been productive of very bad results. The justice courts of Chicago—the poor man's courts—have long been a travesty upon justice. In 1904 the constitution was amended so as to authorize the legislature to make special charter laws for the city of Chicago, on condition that no such law should become operative until approved by the people of the city. The first law adopted under this constitutional amendment was one abolishing the justice courts and establishing a municipal court system in their place. The new system went into operation in December, 1906. A semiofficial charter convention, created by resolution of the city council, has been framing a comprehensive new charter for the city of Chicago, which the legislature of 1907 will be asked to enact and submit to the people of Chicago for their approval or rejection. This charter is primarily a grant of broad home-rule powers, under which it is expected the city of Chicago will be able to work out its own problems without further interference in local matters from the state capital.

A feature of the constitution of 1870 which has not worked as its framers intended is the minority representation plan of electing members of the lower House of the General Assembly. Each legislative district sends three members to the House, and the constitution provides that a voter may cast one ballot for each of three candidates or cumulate his votes in any manner he sees fit. He may, if he so desires, cast three ballots for one candidate. The effect of this system in practical operation has been to limit the choice of electors on election day, and to make a nomination equivalent to an election, for the reason that the party organizations nominate only the number of candidates they expect to elect. In a district normally republican, for example, the Republican Party nominates two candidates for member of the legislature, and the Democrats only one. The result is that all three party nominees are practically certain to be elected, except in rare instances where an independent or a minor party candidate develops unusual strength. The working of this provision has been very disappointing, except to the professional organization politicians, and there is a strong demand for its abolition.

In 1906 the saloon license fee was raised from \$500 to \$1,000. Almost immediately thereafter an ordinance was passed limiting the number of saloons to one for every 500 of population. Chicago now has about 7,300 saloons, which is about one to every 300 of population. This means that no more saloon licenses can be issued for a number of years to come.

A few years ago the City Homes Association made a report on housing conditions, which was an important factor in bringing about a revision of the building code.

Chicago was one of the first cities in the country to adopt a thorough going civil-service law. The act in operation was passed by the legislature in 1895, and approved by the people on a referendum by a vote of about two to one. The civil-service principle is well supported by popular sentiment.

Among the bodies classed as reform organizations, the Municipal Voters' League has perhaps attracted most attention. The league was formed in 1896 to improve the personnel of the

City Council, of whose sixty-eight members at that time not more than ten were believed to be honest. A great transformation has been wrought. The Chicago City Council to-day is looked upon as one of the best bodies of its kind in the country. For the past five years the council has been organized on non-partizan lines. More than five sevenths of the present members were elected with the indorsement of the Municipal Voters' League. The league does not make nominations, but it investigates and issues to the voters reports and recommendations upon the various candidates for aldermen. In January, 1906, a conference was held in Chicago, at the call of the Municipal Voters' League, of the so-called militant civic organizations of the United States. Sixteen cities were represented. The conference by unanimous vote adopted the following recommendations:

First.—That cities should be granted the largest possible measure of home rule, subject only to such general statutory safeguards and restrictions as may be necessary to protect the general interests of the state as distinguished from the local interests of the municipality.

Second.—That the party column on the ballot should be abolished; that the names of candidates for a single office should be printed on the ballot under the designation of that office, and that it should be made impossible to vote a straight party ticket by a single mark or cross.

Third.—That municipal nominations and elections should be completely separated from state and national nominations and elections and should occur at different times, and that nominations for all municipal offices be made by petition or by an efficient method of direct primaries.

Fourth.—That the number of elective municipal officers should be reduced as far as practicable, always preserving the right to elect members of the municipal legislative body or city council.

Fifth.—That the merit principle should be applied to all departments of city administration under practical and efficient civil-service laws.

Within the past few years there have been created in the south division of Chicago fourteen new parks that are notable for their equipment. The parks themselves are of varying areas, but all contain buildings constructed on substantially similar plans. Each building contains a gymnasium for men and another for women. Bathing facilities are abundant, and in some cases outdoor swimming pools are provided. Each building has a large assembly hall and several smaller rooms for club and social purposes. The aim is to make the building a neighborhood center. The use of the rooms may be had without cost for meetings or social purposes. Each building has a reading-room, and the park management conducts in each a restaurant in which refreshments are served at moderate prices. About most of the buildings are wading pools, sand piles, and other special accommodations for children. Some outdoor gymnastic apparatus is provided, as well as playground facilities. The office of the South Park Commission which has installed these new parks is at Fifty-seventh Street and Cottage Grove Avenue.

Chicago has a large number of social settlements, the best known being the following: *Hull House*—Miss Jane Addams, founder and head; *Chicago Commons*—Prof. Graham Taylor, founder and head; *University of Chicago Settlement*—Miss Mary McDowell, head.

Addresses of institutions, societies, and social settlements in Chicago:

Municipal Voters' League, 228 South Clark Street.
Legislative Voters' League, 92 La Salle Street.
Chicago Bureau of Charities, 79 Dearborn Street.

Civic Federation, 184 La Salle Street.
Citizens' Association, 93 La Salle Street.
City Club of Chicago, 238 South Clark Street.
Chicago Federation of Labor, 277 La Salle Street.
City Homes Association, 1001 Monadnock Block.
Socialist Headquarters, 163 East Randolph Street.
Hull House, 335 South Halstead Street.
Chicago Commons, 180 Grand Avenue.
University of Chicago Settlement, 4630 Gross Avenue.

GEORGE C. SIKES.

CHICAGO ANARCHISTS, THE: The arrest, trial, and execution of the so-called "Chicago anarchists" mark an epoch in the development of the labor movement in America. The facts of the case, gathered out of the somewhat contradictory statements made by those who believe that the anarchists were rightly and those who believe that they were wrongly condemned seem to be as follows:

The year 1886 was one of wide-spread social industrial agitation in the United States. In 1884 the Federation of Trades and Labor Unions of the U. S. and Canada had issued a manifesto calling on all trades to unite in the demand for an eight-hour day, and setting a day for a general strike to gain that end. May 1, 1886, was the day appointed when the new system should be inaugurated.

In Chicago the excitement ran the highest. Here was a little group of men more or less loosely banded together, and popularly called anarchists. As a matter of fact, they were of various economic views. They gathered around a section of the American International, which had become an anarchistic organization, and must not be confused with the old European Socialist International. They had two principal organs: the *Alarm*, with Parsons as its editor; the English organ, and the *Arbeiter Zeitung*, the German organ, with Spies and Schwab as its principal writers, and Fischer as foreman. Fielden and Engel were also prominent in the group. Not agreed in their economic views, they were agreed in denouncing the present system as the parent of cruel wrongs, and in being willing to go to extremes in agitating against this system.

They felt that the labor movement was dying of inertia. They felt that the working people were being utterly ground down, and submitting too easily. They thought that, without really committing violence, if they threatened violence and "talked" murder and dynamite, they could frighten the capitalists into either valuable concessions, or such a policy of restriction as would make the people rise. They therefore began in the *Alarm* to write incendiary articles; and in order to frighten the capitalists, they reported the working people as preparing to rise in vengeance. Some of them, at least, believed that by "talking violence" they would "really prevent violence." They argued that "if it did cost a little bloodshed now," it would "save bloodshed in the end." Some of them were themselves the gentlest of men.

The eight-hour movement gave the anarchists opportunity for agitation. An eight-hour association was formed in Chicago. Open-air meetings were continually held. Bitterest language was used. On their side, the employers drew closer together against the movement. Some firms, however, granted some reduction of hours. At McCormick's reaper works there was a prolonged struggle, commencing in February and continuing many months. Twelve hundred men were thrown out of work. On May 1, 40,000 men and women struck in Chicago for the eight-hour day. The Central Labor Union of Chicago held a mass-meeting attended by 25,000 people. Spies, Parsons, Fielden, and Schwab spoke. On May 2d a great meeting of the locked-out men from McCormick's was held to protest against the Pinkertons he employed.

Parsons and Schwab spoke at the meeting. Among the strikers were the lumber-shovers, most of them Poles, Bohemians, and Germans. May 3d, the Lumber-Shovers' Union called a meeting to discuss the terms of proposals to be submitted to their employers.

The Strike The meeting was held near McCormick's. Spies, being known as a good speaker, was invited to attend. When he appeared, a protest was heard against letting a Socialist speak. But Spies began, and was soon listened to in quiet. At four o'clock the bell of McCormick's began to ring, and the "scabs" were seen leaving. Some of the bystanders at the meeting then made a move toward the factory, while Spies went on quietly with his speech for another fifteen minutes. The crowd outside the factory began throwing stones. The police were telephoned for, and arrived in large numbers. They were received with stones, and replied with their revolvers. A few shots were returned by the crowd, and the police opened a general fire upon all in sight—men, women, and children, who fled in terror, leaving four dead and many wounded.

Burning with indignation, Spies rushed back to the *Arbeiter Zeitung* office and wrote a manifesto, the so-called "Revenge Circular." This was distributed at the different workmen's meeting-places.

Among the many meetings that took place the same night was one of the Socialist association, the Lehr und Wehr Verein. Gottfried Waller, who turned informer afterward, was elected chairman. Engel and Fischer were present. The events of the afternoon at McCormick's were discussed. It was resolved to call a meeting the following night in the Haymarket to protest against the police assaults. Fischer informed Spies, at the *Arbeiter Zeitung* office, of the proposed meeting and asked him to speak; he consented. Shortly afterward he saw, for the first time, the circular calling the meeting, which contained the words, "Working men, arm yourselves, and appear in full force." Immediately on reading the circular Spies said that this must be struck out, or he would not speak or attend the meeting. Fischer at once agreed, and had the line taken out. The circular with that line omitted was printed, and about 20,000 copies distributed.

Parsons had been away from Chicago to Cincinnati, from Sunday, May 2d, and returned Tuesday morning. His wife asked him to help her in organization of the sewing girls of Chicago, and Parsons, knowing nothing of the Haymarket meeting, called a meeting of the American group at the *Arbeiter Zeitung* office. In the evening Spies went to the Haymarket, but seeing no English speakers, went away, with a few friends, to find Parsons; but soon returned, without having found him, and opened the meeting.

Meantime, a few members of the American group had assembled at the *Arbeiter Zeitung* building. There were Fielden, Schwab, and at about 8.30 o'clock Parsons arrived.

In company with Mrs. Parsons, his two children, and Mrs. Holmes, Schwab soon left to address a meeting at Deering. Schwab stayed at Deering until 10.30 o'clock. The discussion on the girls' movement was soon over, when somebody arrived from the Haymarket, stating that English speakers were wanted. Parsons, with his company, Fielden, and most of those present, at once went there.

The Riot On their arrival Spies ceased speaking, and Parsons got up and spoke about one hour. The meeting was a quiet one, and at the close of Parsons' speech, the Mayor of Chicago, who attended the meeting for the purpose of dispersing it, if need should arise, left the meeting, and went over to the police station, and told Captain Bonfield that he had better issue orders to his reserves at the other stations to go home. Parsons was followed by Fielden. When he had been speaking some ten minutes the weather clouded, and the wind blowing cold, Parsons suggested that they adjourn to Zepf's Hall; Fielden said he would be through in a few minutes. Many, among them Parsons, with his family, crossed to Zepf's Hall, where they found Fischer. Fielden went on speaking, when suddenly about 180 police turned out of the station, marching with a quick step, in fighting formation, and with arms in readiness, to the Haymarket, where only a few hundred persons remained. The captain of the first row of the police had just ordered the meeting to disperse, and his men, without waiting a reply, were advancing to the attack, when a small bomb was thrown by some one, alighted between the first and second companies of the police, and exploded with a loud report. About sixty of the police were thrown to the ground, and one, named Matthias J. Degan, was killed. Instantly firing began; people fled in all directions, followed by the police, who fired at random as they followed.

The Haymarket speakers, except Parsons, who had left Chicago, were arrested; those who had taken a prominent part in labor meetings, and were known as labor organizers, were hunted and imprisoned. The *Arbeiter Zeitung* was suppressed, and all its printers and editors put in jail. When the friends of the arrested men tried to restart it, it had to pass under the censorship of the chief of police. The meetings of workmen were prohibited or broken up. The most exciting tales about infernal conspiracies against the life and property of the citizens were circulated. The daily papers called for the hanging of the leading anarchists, as if they had been already proved guilty.

After the Haymarket meeting, May 4, 1886, some 300 leading American capitalists met secretly to plan the destruction of anarchy. They formed themselves into The Citizens' Association, and subscribed \$100,000 in a few hours.

On May 17th the grand jury came together. "The body is a strong one," says a telegram from Chicago to a New York daily, "and it is safe to aver that anarchy and murder will not receive much quarter at the hands of the men composing it. It is certain that Spies, Parsons, Schwab, and the other inciters to outrage will be indicted."

The Trial Indicted they were. The indictment contained sixty-nine counts, charging the defendants, Spies, Schwab, Fielden, Parsons, Fischer, Engel, Lingg, Neebe, Schnaubelt, and Seliger with the murder of M. J. Degan. Schnaubelt and Parsons were not in the hands of the police, but when the trial came on Parsons presented himself at the bar of the court. Seliger had turned informer. On June 21st the impelling of the jury before Judge Joseph E. Gary began. About 1,000 were examined. Of this number only five or six belonged to the labor class, and they were all challenged and refused by the state. The remainder were all employers of labor, or men de-

pendent upon that class, as clerks or the like. Most declared they had a prejudice against anarchists, socialists, and communists as a class. This, however, Judge Gary ruled, was no cause to exclude them from the jury. On the motion for a new trial, an affidavit was produced wherein it was sworn that the special bailiff, Henry Ryce, had said to well-known men in Chicago that he was managing this case, and well knew what he was about; that those fellows would hang as certain as death, and that he was only summoning such men as jurors as would not be acceptable to the defendants.

The most important witnesses for the state were Waller, Schrader, and Seliger, all formerly comrades of the defendants, now turned informers. The theory for the prosecution was that the defendants were, with others, actively engaged in a conspiracy to overturn the existing authorities, and advocated bloodshed and violence in order to gain their ends, and that the meeting on May 4th in the Haymarket was only one step in their program. The evidence brought forward to support such a theory was, however, extremely contradictory, and much of it broke down completely on the first examination. It was never proved who threw the bomb, and, as some of the men indicted were not at the Haymarket meeting, and had nothing to do with it, the prosecution was forced to proceed on the theory that the men indicted were guilty of murder because they had at various times in the past uttered and printed incendiary and seditious language, practically advising the killing of policemen, of Pinkerton men, and others.

Said Judge Gary:

"If the fact be that a large number of men concurred with each other in preparing to use force for the destruction of human life, upon occasions which were not yet foreseen, but upon some principles which they substantially agreed upon, as, for example, taking the words of this witness, if a large number of men agreed together to kill the police if they were found in conflict with the strikers—I believe that is the phrase—leaving it to the agents of violence to determine whether the time and occasion had come for the use of violence; then, if the time and occasion do come when the violence is used, are not all parties who agreed beforehand in preparing the means of death, and agreed in the use of them upon time and occasion, equally liable?"

The Prosecution

The prisoners argued that, as some unknown persons threw the bomb, it was impossible to know beyond a reasonable doubt that he had been led to do it by any public speech of theirs or any editorial they had published. They also claimed that to punish them because of the effect of any public speech they had delivered or any newspaper article they had written or published would be a violation of the law that forbids any abridgment of speech or press in the U. S. The prisoners had counsel, but also defended themselves in speeches rather of defiance than defense.

After a prolonged trial the jury brought in the verdict:

"We, the jury, find the defendants August Spies, Michael Schwab, Samuel Fielden, Albert R. Parsons, Adolph Fischer, George Engel, and Louis Lingg guilty of murder in manner and form as charged in the indictment, and fix the penalty at death. We find the defendant Oscar W. Neebe guilty of murder in manner and form as charged in the indictment, and fix the penalty at imprisonment in the penitentiary for fifteen years."

The Verdict

The case was carried to the Supreme Court, and was there affirmed in the fall of 1887. November 10th Lingg committed suicide by exploding a bomb in his mouth. The sentence of Fielden and Schwab was commuted to imprisonment for life, and Parsons, Fischer, Engel, and Spies were hanged Nov. 11, 1887. They suffered calmly and without flinching. Parsons's last words were, "Let the voice of the people be heard."

The hanging excited great agitation over the world. The major part of the daily press and of the capitalist community welcomed it as a necessary stamping out of anarchy in this country. On the other hand, many thoughtful men, including judges, lawyers, clergymen, and others, while expressing dissent from all sympathy with anarchists, declared their belief that the trial had not been a fair one. By the world of labor the anarchists were lauded as martyrs to the cause of labor and of liberty, and their trial and hanging denounced as an outrage upon justice and upon freedom. Mrs. Parsons went through the land lecturing to crowded audiences. Anarchism was made almost popular among many classes. Anarchists and the more radical Socialists and labor reformers of all schools of thought, who will unite on no other occasion, have met on both sides of the Atlantic to commemorate the hanging of "the Chicago martyrs."

In June, 1893, the recently elected Democratic Governor of Illinois, John P. Altgeld, having thoroughly examined the evidence, pardoned Neebe, Fielden, and Schwab, on the ground that they had not been fairly tried.

We give a synopsis of Governor Altgeld's published argument for believing the trial not to have been a fair one, and then a synopsis of Judge Gary's statement upon the other side.

Says Governor Altgeld in substance:

The record of the trial shows that the jury in this case was not drawn in the manner that juries usually are drawn; that is, instead of having a number of names drawn out of a box that contained many hundred names, as the law contemplates shall be done in order to insure a fair jury and give neither side the advantage, the trial judge appointed one, Henry L. Ryce, as a special bailiff to go out and summon such men as he, Ryce, might select to act as jurors.

Gov. Altgeld's Statement

While this practice has been sustained in cases in which it did not appear that either side had been prejudiced thereby, it is always a dangerous practice, for it gives the bailiff absolute power to select a jury that will be favorable to one side or the other.

While no collusion is proved between the judge and state's attorney, it is clearly shown that after the verdict, and while a motion for a new trial was pending, a charge was filed in court that Ryce had packed the jury and that the attorney for the state got Mr. FAVOR to refuse to make an affidavit bearing on this point, which the defendants could use, and then the court refused to take any notice of it unless the affidavit was obtained, altho it was informed that Mr. FAVOR would not make an affidavit, but stood ready to come into court and make a full statement if the court desired him to do so.

These facts alone would call for executive interference, especially as Mr. FAVOR's affidavit was not before the Supreme Court at the time it considered the case.

The second point urged seems to me to be equally conclusive. In the case of the People vs. Coughlin, known as the Cronin case, recently decided, the Supreme Court, in a remarkably able and comprehensive review of the law on this subject, says among other things:

"The holding of this and other courts is substantially uniform, that where it is once clearly shown that there exists in the mind of the juror at the time he is called to the jury box a fixt and positive opinion as to the merits of the case, or as to the guilt or innocence of the defendant he is called to try, his statement that, notwithstanding such opinion, he can render a fair and impartial verdict according to the law and evidence, has little, if any, tendency to establish his impartiality."

Applying the law as here laid down in the Cronin case to the answers of the jurors above given in the present case, it is very apparent that most of the jurors were incompetent, because they were not impartial, for nearly all of them candidly stated that they were prejudiced against the defendants, and believed them guilty before hearing the evidence; and the mere fact that the judge succeeded by a singularly suggestive examination in getting them to state that they believed they could try the case fairly on the evidence did not make them competent.

No matter what the defendants were charged with, they were entitled to a fair trial, and no greater danger could possibly threaten our institutions than to have the courts of justice run wild or give way to popular clamor; and when the trial judge in this case ruled that a relative of one of the men who was killed was a competent juror, and this after the man had candidly stated that he was deeply prejudiced and that his relationship caused him to feel more strongly than he otherwise might, and when in scores of instances he ruled that men who candidly declared that they believed the defendants to be guilty; that this was a deep conviction and would influence their verdict, and that it would require strong evidence to convince them that the defendants were innocent, when in all these instances the trial judge ruled that these men were competent jurors simply because they had, under his adroit manipulation, been led to say that they believed they could try the case fairly on the evidence, then the proceedings lost all semblance of a fair trial.

Does the Proof show Guilt?

The state has never discovered who it was that threw the bomb which killed the policeman, and the evidence does not show any connection whatever between the defendants and the man who did throw it. The trial judge in overruling the motion for a new hearing, and again, recently, in a magazine article, used this language:

"The conviction has not gone on the ground that they did have actually any personal participation in the particular act which caused the death of Degan, but the conviction proceeds upon the ground that they had generally by speech and print advised large classes of the people, not particular individuals, but large classes, to commit murder, and had left

the commission, the time and place and when to the individual will and whim, or caprice, or whatever it may be, of each individual man who listened to their advice, and that in consequence of that advice, in pursuance of that advice and influenced by that advice, somebody not known did throw the bomb that caused Degan's death. Now, if this is not a correct principle of the law, then the defendants of course are entitled to a new trial. This case is without precedent; there is no example in the law books of a case of this sort."

The judge certainly told the truth when he stated that this case was without a precedent, and that no example could be found in the law books to sustain the law as above laid down. For, in all the centuries during which government has been maintained among men and crime has been punished, no judge in a civilized country has ever laid down such a rule before. The petitioners claim that it was laid down in this case simply because the prosecution, not having discovered the real criminal, would otherwise not have been able to convict anybody; that this course was then taken to appease the fury of the public, and that the judgment was allowed to stand for the same reason. I will not discuss this. But taking the law as above laid down, it was necessary under it to prove, and that beyond a reasonable doubt, that the person committing the violent deed had at least heard or read the advice given to masses, for until he either heard or read it he did not receive it, and if he did not receive it, he did not commit the violent act in pursuance of that advice, and it is here that the case for the state fails; with all his apparent eagerness to force conviction in court, and his efforts in defending his course since the trial, the judge, speaking on this point in his magazine article, makes this statement: "It is probably true that Rudolph Schnaubelt threw the bomb," which statement is a mere surmise and is all that is known about it, and is certainly not sufficient to convict eight men on. In fact, until the state proves from whose hands the bomb came, it is impossible to show any connection between the man who threw it and these defendants.

Again it is shown that various attempts were made to bring to justice the men who wore the uniform of the law while violating it, but all to no avail; that the laboring people found the prisons always open to receive them, but the courts of justice were practically closed to them; that the prosecution officers vied with each other in hunting them down, but were deaf to their appeals; that in the spring of 1886 there were more labor disturbances in the city, and particularly at the McCormick factory; that under the leadership of Captain Bonfield the brutalities of the previous years were even exceeded.

While some men may tamely submit to being clubbed and seeing their brothers shot down, there are some who will resent it, and will nurture a spirit of hatred and seek revenge for themselves, and the occurrences that preceded the Haymarket tragedy indicate that the bomb was thrown by some one who, instead of acting on the advice of anybody, was simply seeking personal revenge for having been clubbed, and that Captain Bonfield is the man who is really responsible for the death of the police officers.

It is also shown that the character of the Haymarket meeting sustains this view. The evidence shows there were only 800 to 1,000 people present, and that it was a peaceable and orderly meeting; that the mayor of the city was present, and saw nothing out of the way, and that he remained until the crowd began to disperse, the meeting being practically over, and the crowd engaged in dispersing when he left; that had the police remained away for twenty minutes more there would have been nobody left there, but that as soon as Bonfield learned that the mayor had left, he could not resist the temptation to have some more people clubbed, and went up with a detachment of police to disperse the meeting, and that on the appearance of the police the bomb was thrown by some unknown person, and several innocent and faithful officers, who were simply obeying an uncalled-for order of their superior, were killed. All of these facts tend to show the improbability of the theory of the prosecution that the bomb was thrown as the result of a conspiracy on the part of the defendants to commit murder. If the theory of the prosecution were correct, there would have been many bombs thrown; and the fact that only one was thrown shows that it was an act of personal revenge.

It is further shown here that much of the evidence given at the trial was a pure fabrication. In addition to the evidence in the record of some witnesses who swore that they had been paid small sums of money, etc., several documents are here referred to.

First, an interview with Captain Ebersold, published in the *Chicago Daily News*, May, 10, 1886.

Ebersold was chief of the police of Chicago at the time of the Haymarket trouble, and for a long time before and thereafter, so that he was in a position to know what was going on, and his utterances upon this point are therefore important. Among other things he says: "It was my policy to quiet matters down as soon as possible after May 4th. The general unsettled state of things was an injury to Chicago. On the other hand, Captain Schaack wanted to keep things

stirring. He wanted bombs to be found here, there, all around, everywhere. I thought people would lie down and sleep better if they were not afraid that their homes would be blown to pieces any minute. But this man Schaack, this little boy who must have glory or his heart would be broken, wanted none of that policy. Now, here is something the public does not know. After we got the anarchist societies broken up, Schaack wanted to send out men to again organize new societies right away. You see what this would do. He wanted to keep the thing boiling, keep himself prominent before the public. Well, I sat down on that, I didn't believe in such work, and of course Schaack didn't like it.

"After I heard all that I began to think there was perhaps not so much to all this anarchist business as they claimed, and I believe I was right. Schaack thinks he knew all about those anarchists. Why, I knew more at that time than he knows to-day about them. I was following them closely. As soon as Schaack began to get some notoriety, however, he was spoiled."

This is a most important statement. When a chief of police, who has been watching the anarchists closely, says that he was convinced that there was not so much in all this anarchist business as was claimed, and that a police captain wanted to send out men to have other conspiracies formed in order to get the credit of discovering them and keeping the public excited, it throws a flood of light on the whole situation, and destroys the force of much of the testimony introduced at the trial.

It is further charged with much bitterness by those who speak for the prisoners that the record of the case shows that the judge conducted the trial with malicious ferocity; that every ruling throughout the long trial on any contested point was in favor of the state; and, further, that page after page of the record contains insinuating remarks of the judge, made in the hearing of the jury, and with the evident intent of bringing the jury to his way of thinking; that these speeches, coming from the court, were much more damaging than any speeches from the state's attorney could possibly have been; that the state's attorney often took his cue from the judge's remarks; that the judge's magazine article, recently published, although written nearly six years after the trial, is yet full of venom; that, pretending to simply review the case, he had to drag into his article a letter written by an excited woman

to a newspaper after the trial was over, and which therefore had nothing whatever to do with the case, and that, not content with this, he in the same article makes an insinuating attack on one of the lawyers for the defense, not for anything done at the trial, but because more than a year after the trial, when some of the defendants had been hung, he ventured to express a few kind, if erroneous, sentiments over the graves of his dead clients, whom he at least believed to be innocent. It is urged that such ferocity or subserviency is without a parallel in all history; that even Jeffreys in England contented himself with hanging his victims, and did not stoop to berate them after they were dead.

These charges are of a personal character, and while they seem to be sustained by the record of the trial and the papers before me, and tend to show that the trial was not fair, I do not care to discuss this feature of the case any further, because it is not necessary. I am convinced that it is clearly my duty to act in this case for the reasons already given, and I therefore grant an absolute pardon to Samuel Fielden, Oscar Neebe, and Michael Schwab, on this 26th day of June, 1893.

JOHN P. ALTGEL,
Governor of Illinois.

In *The Century Magazine* for April, 1893, Judge Gary gives, in a 30-page article, a defense of the verdict.

Judge Gary's statement in substance is this:

Mr. Gary reviews the events and scenes of the trial in detail, stating his motives to be a justification of the verdict and an effort to prove that the anarchists did not represent the laboring classes, but simply made a show of friendship to the latter in order to bring them into their own ranks. He asserts that the seven men sentenced to death were beyond all cavil guilty of murder, and that it would have been a great misfortune if society had not maintained its right to defend itself. The most noted legal authorities are adduced to show that the men who argued on every occasion for anarchy and destruction, in their press and through their orators, and who "incited, advised, encouraged the throwing of the bomb that killed the policemen," were clearly within the condemnation of the law. To further support this, facsimile and other long extracts are given from the more rabid anarchistic press, and pictures appear of the bombs and apparatus of the desperate men.

Mr. Gary shows carefully and fairly the evidence which led to the conviction of the ringleaders, and takes the ground that they were sentenced not because they were anarchists, but because they were parties to murder.

On page 335 the judge says: "The conviction proceeded upon the ground that they had generally, by speech and print, advised large classes to commit murder; and had left the com-

Was it Personal Revenge?

The Chief of Police's Statement

mission, the time and place, and when to the individual will and whim or caprice, or whatever it may be, of each individual man who listened to their advice; and in consequence of that advice, in pursuance of that advice, and influenced by that advice, somebody, not known, did throw the bomb that caused Degan's death."

On pages 830 and 831 the judge says: "It is probably true that Rudolph Schnaubelt threw the bomb. He was twice arrested; but, having shaved off a full beard immediately after that fatal night, was discharged. After the second arrest he disappeared and has gone to parts unknown. But whether Schnaubelt or some other person threw the bomb is not an important question."

The case is the more remarkable because it was not claimed that either of the prisoners threw the bomb or gave any person any secret advice to throw it. The case proceeded on the ground that the prisoners gave all their advice from public platforms and in the columns of newspapers. On page 830 the judge says: "Secrecy is not essential to a conspiracy."

On page 812 the judge says: "They incited, advised, encouraged the throwing of the bomb that killed the policeman not by addressing the bomb-thrower specially, and telling him to throw a bomb at that or any special time or occasion, but by general addresses to readers and hearers."

On the same page he also says: "The sincerity of the anarchists in their belief of the benefits to accrue from anarchy (if they were sincere) is not to be considered when the question is whether they were murderers."

On page 812 the judge says that "every reader (of the anarchist papers), following the advice to arm himself, would—must—understand that he must exercise his own discretion in using his weapons."

He concludes: "For nearly seven years the clamor, uncontradicted, has gone round the world that the anarchists were heroes and martyrs, victims of prejudice and fear. Not a dozen persons alive were prepared by familiarity with the details of their crime and trial, and present knowledge of the materials from which those details could be shown, to present a succinct account of them to the public. It so happened that my position was such that from me that account would probably attract as much attention as it would from any other source. Right-minded, thoughtful people, who recognize the necessity to civilization of the existence and enforcement of laws for the protection of human life, and who yet may have had misgivings as to the fate of the anarchists, will, I trust, read what I have written, and dismiss those misgivings, convinced that in law and in morals the anarchists were rightly punished, not for opinions, but for horrible deeds."

The main sources of evidence for the facts are, of course, the official records of the court. A history of the trial has been written by Dyer D. Lum, and the speeches of the anarchists in court have been printed many times in pamphlet form. For a brief notice of the condemned, see the first edition of this encyclopedia.

CHILD, LYDIA MARIA (née FRANCIS): American champion of antislavery; writer; born in Medford, Mass., 1802. Attended the common schools, and studied with her brother, Rev. Convers Francis, D.D. Until her marriage, in 1828, she taught in Medford and Watertown, Mass; and in 1826 she began the publication of the *Juvenile Miscellany*, the first monthly periodical for children issued in the United States.

In 1831 both Mr. and Mrs. Child became deeply interested in the subject of slavery. Mrs. Child's "Appeal for that Class of Americans called African" (Boston, 1833) was the first antislavery work published in America in book form, and was followed by several smaller works on the same subject. Mrs. Child had to endure social ostracism, but from this time was a steady champion of antislavery. On the establishment of the *National Antislavery Standard*, in New York City, in 1840, she became its editor and conducted it till 1843, when her husband took the place of editor-in-chief, and she acted as his assistant till May, 1844. In 1859, she wrote a letter of sympathy to John Brown, then a prisoner at Harper's Ferry, offering her services as a nurse, and enclosing the letter in one to Governor Wise. Brown replied, declining her offer, but asking her to aid his family, which she did. She also received a letter of courteous rebuke from Governor Wise,

and a singular epistle from the wife of Senator Mason, author of the Fugitive Slave Law, threatening her with future damnation. She replied to both in her best vein, and the whole series of letters was published in pamphlet form (Boston, 1860), and had a circulation of 300,000. She also wrote two small tracts on the "Fugitive Slave Law" and "Emancipation in the British West Indies." During her latter years she contributed freely to aid the national soldiers in the Civil War, and afterward to help the freedmen. She died in 1880.

Mrs. Child's works are voluminous and treat of a great variety of subjects. Besides those already mentioned are the following: "The Rebels, or Boston before the Revolution"; "The American Frugal Housewife" (1820); "The Family Nurse," or companion of "The Frugal Housewife"; "The Mother's Book" and "The Girl's Own Book" (1831); "History of Woman" (1835); "Biographies of Good Wives" (1833); "The Oasis" (1834); "The Anti-Slavery Catechism" (1836); "Authentic Narratives of American Slavery" (1838); "The Evils of Slavery and the Cure of Slavery" (1836); "Philothes: A Grecian Romance" (1845); "Letters from New York" (2 vols., 1843-44); "Fact and Fiction" (1846); "Flowers for Children" (1852); "Isaac T. Hopper: a True Life" (1853); "The Progress of Religious Ideas through Successive Ages" (3 vols., 1855); "Autumnal Leaves: Sketches in Prose and Rhyme" (1857); "Looking toward Sunset" (1864); "The Freedman's Book" (1865); and "The Romance of the Republic" (1867).

CHILD HELPING: Classification is the first condition of rational study and treatment of this social task. Normal children in normal homes are not here considered; their education is entrusted to the general forces which make for progress. The exceptional child becomes the subject of special philanthropic attention. The primary classification is made on the basis of physical and psychic condition: (1) The normal in body and mind; (2) the defective in sight or hearing; (3) the lame, deformed, feeble, and slow who are educable; (4) the abnormal, feeble-minded, idiotic, imbecile, epileptic, and insane who are educable only within narrow limits, and who all require close supervision; (5) the vicious, depraved, and delinquent. Subclasses are formed by consideration of age, stage of development, sex, and domestic situation.

Observation under friendly detention is the first stage of social dealing with neglected or delinquent children; it is like the physician's diagnosis which precedes prescription of medicine or hygienic direction. The attempt to make a census of all defective and abnormal children has not been successful; the ordinary census canvassers are not competent to make the diagnosis. A more satisfactory result has been secured by the study of pupils in schools, and making a record of the defective and abnormal, as in Switzerland. Institutions and temporary homes for the care of foundlings, abandoned and abused children, orphans and half-orphans frequently have quarters for quarantine and observation. Thus, the *Ecole Théophile Roussel* at Montesson, near Paris, and the *Asile d'Observation* in the shelter of the *Assistance Publique* in Paris (rue Denfert-Rochereau) furnish examples. Uniform records and reports to central authority are desirable. Our juvenile courts and certain societies for preventing cruelty have medical inspection and useful records of history and condition. On the basis of classification made through observation, certain principles of treatment have been applied as the result of experience and discussion.

Social care begins with prevention. The measures taken indicate the existing evils and dangers, and show also the guiding ideas of practical men.

Associations and governments have begun to ameliorate the conditions of existence; to improve the external and internal sanitary condition of the house; to enact and administer truancy laws to keep children in school, and factory laws to keep them out of unsuitable industries and save them from premature industrial exploitation; to provide baths and medical care, ice, and pure milk; to wage war on tuberculosis and other communicable and preventable diseases; to improve and extend educational agencies and adapt them to the industrial needs of working people; to provide insurance so that families may not be impoverished or pauperized in time of sickness, accident, or death. More direct methods are such as dispensaries for training mothers in the care of infants, as those of Dr. Budin in Paris; the provision of Pasteurized and sterilized milk, gratuitously or at low cost; and charitable supply of food and clothing for school pupils whose parents are too poor to supply their wants. Judicial intervention has, in recent years, been vastly extended and improved, as in the educational measures for neglected children in Germany since 1900, the councils of tutelage in Norway and Holland, the Children's Courts in the United States, and similar activity of judges in France and Austria. This judicial intervention becomes the center of the philanthropic activities of associations, probation officers, institutions, and industrial schools. Defective parental influence is improved, and when it becomes incurably vicious it is removed. One statement of the principle is this: "If it can be done without sacrificing the interests of the child, he should remain with his own parents, who should be stimulated and helped to meet their parental obligations, as far as possible. Every reasonable effort should be made to repair breaches and defects in the home before breaking up the family relation." (N. C. C., 1906, Report of Committee on Child Saving.)

The mother who refuses natural nourishment and physical care greatly increases the probability of her infant's death. The unmarried mother should be offered help to care for her offspring; and the father, when possible, should be sought out and required to carry his share of the burden of support. If the infant has been separated from the mother by reason of her death or flight, the best chance of life is the breast milk of some other mother; and next to that, at a long distance, the prepared milk or artificial foods recommended by physicians. Infants should not be kept together in large numbers, for they infect each other with disease; but they should be scattered in selected homes which are kept under supervision. When the first months of infancy are safely passed, the homeless child is to be cared for on the principles stated in the following paragraphs:

Half-orphans, children of parents in hospitals and asylums, and of others temporarily unable to support them, may properly be boarded out in families or kept for some weeks in institutions, the parents paying for the cost as far as they are able. Permanently dependent children, as orphans, children taken by legal process from cruel or immoral parents should not be retained in institutions longer than is necessary to observe them, prepare them physically and otherwise for family life, and find them suitable family homes. Temporary homes should be prevented by state law and inspection from becoming asylums. The natural place for a normal child is in a good fam-

ily. The foster home must be selected, examined, and supervised for a time by trained agents of a responsible society approved by state authority. Inquiry by letters is entirely inadequate protection. Supervision should not be discontinued except upon authority of a court of record. The cost of board and education may be met by a charitable society, or by families taking such children for care or adopting them outright. All acts of charitable associations should be under judicial and state control.

The special methods of education suitable for deaf, blind, crippled, and deformed children are considered in pedagogic science. Social responsibility centers in modes of placing and support. Generally the states provide boarding-schools for the instruction of the blind and deaf, and these are supported partly or entirely at public cost. In large cities experiments are being made with special rooms and teachers for defective children. Crippled children require orthopedic treatment and special hospital care.

When observation has shown that a child is so imperfectly developed mentally as to be incapable of training for competitive life and self-control, the only course open is segregation in special schools which gradually become asylums for life. Such persons never become fit for marriage and parenthood, and by segregation in colonies, which may be made in great part self-supporting, society is protected against the propagation of the unfit. Epileptic children, when the disease is marked and seated, require treatment and life-long asylum in their own colonies, apart from the insane and the feeble-minded. The modes of treatment in such colonies are subjects of surgical, medical, and pedagogic science.

Neglected and dependent children are exposed to moral peril, and are tempted to satisfy wants by means harmful to society. The judicial intervention already mentioned represents the modern tendency in all civilized countries to place young persons under responsible discipline before evil habits have become fixt and have issued in depravity and crime. Only when family, school, probation officers, and church have failed, is there recourse to the institution. Reformatory education begins with ungraded rooms under special teachers and methods; proceeds to parental schools where temporary discipline seeks to restore the delinquent to the ordinary schools; and then follow, for more difficult cases, the industrial or reform school with its farm and trades, and later still the reformatory and the prison. Incarceration must be the last resort. In all institutions outdoor life, with rural occupations, seems the most hopeful environment. (See REFORMATORY.)

Most of the agencies of child-helping have sprung into existence through the initiative of individuals, and only slowly has general organization been effected. In each city and county there is need of local cooperation in order to prevent duplication and waste of means and effort, to avoid neglect of need, and to sustain general interest. Public institutions should be visited and encouraged. The center for local cooperation may be the associated charities, a society for protecting children, a juvenile court association, a board of guardians, or a committee created by all the agencies which are seeking to help children in the community.

By central organization is here meant that of the state. Each commonwealth ought to have a

board of charities and correction which can supervise all agencies and activities in this field and propose laws and regulations for the furtherance of sound methods and the prevention of abuses. An important aid to this central organization is the State Convention of Charity and Correction which is held annually in some states.

The chief educational organization is the National Conference of Charities and Correction, whose proceedings, as printed, are a mine of information on all phases of this subject. The National Children's Home Society is a federation of state societies, twenty-eight in number, which holds two meetings annually, and strives, through its executive committee and superintendents, to extend the organization in territory not yet properly organized, and to improve the character of the work already attempted. The oldest of these societies, and the mother of all, has recently (1906) joined the federation. This is the New York Children's Aid Society, founded by the distinguished philanthropist, Mr. Charles Loring Brace. The National Child Labor Committee, organized in 1904, has for its object the education of the public in relation to the extent and effects of injurious employment of children, and the promotion of legislative and administrative methods of diminishing the evils connected with industrial exploitation of young persons.

CHILD LABOR (see also CHILD SAVING, CHILD LABOR IN ENGLAND, NATIONAL CHILD LABOR COMMITTEE): UNITED STATES.

Bulletin 69, Department of Commerce and Labor, Bureau of the Census (Washington, D. C., Jan., 1907), gives the following table of the extent of Child Labor in the United States in 1900:

TABLE I

CHILDREN TEN TO FIFTEEN YEARS OF AGE REPORTED AT THE TWELFTH CENSUS AS HAVING A GAINFUL OCCUPATION

United States (area of enumeration). 1,752,187

| | | | |
|---------------------------------|-----------|--------------------------------------|-----|
| Continental United States | 1,750,178 | Hawaii | 998 |
| Alaska | 1,002 | Military and naval service abroad .. | 9 |

A classification by year of age is also given for the following reason: "In the age period ten to fifteen occurs the transition from childhood to adolescence, and normally each year included in that period marks important changes in the child's growth and development; hence in any question relating to the education and welfare of the child, a difference of only one year is significant" (p. 7).

TABLE II

BREADWINNERS TEN TO FIFTEEN YEARS OF AGE IN CONTINENTAL UNITED STATES, 1900

| AGE | NUMBER | PER CENT |
|----------------|-----------|----------|
| 10 years | 142,105 | 8.1 |
| 11 years | 158,778 | 9.1 |
| 12 years | 221,313 | 12.6 |
| 13 years | 268,427 | 15.3 |
| 14 years | 406,701 | 23.2 |
| 15 years | 552,854 | 31.6 |
| Total | 1,750,178 | 100.0 |

The proportion these children bear to all children of the given ages is shown in the following table:

TABLE III

CHILDREN TEN TO FIFTEEN YEARS CLASSIFIED BY SEX AND YEAR OF AGE, WITH PERCENTAGE OF BREADWINNERS OF EACH SEX, FOR CONTINENTAL UNITED STATES, 1900

| AGE | BREADWINNERS | | |
|-------------------|--------------|-----------|----------|
| | Total | Number | Per cent |
| Both sexes | | | |
| Total | 9,613,252 | 1,750,178 | 18.2 |
| 10 years | 1,740,628 | 142,105 | 8.2 |
| 11 years | 1,583,131 | 158,778 | 10.0 |
| 12 years | 1,637,509 | 221,313 | 13.5 |
| 13 years | 1,550,402 | 268,427 | 17.3 |
| 14 years | 1,568,564 | 406,701 | 25.9 |
| 15 years | 1,533,018 | 552,854 | 36.1 |
| Males | | | |
| Total | 4,852,427 | 1,264,411 | 26.1 |
| 10 years | 882,052 | 105,580 | 12.0 |
| 11 years | 798,193 | 119,628 | 15.0 |
| 12 years | 828,008 | 163,649 | 19.8 |
| 13 years | 781,448 | 196,830 | 25.2 |
| 14 years | 793,340 | 389,055 | 36.5 |
| 15 years | 769,386 | 389,069 | 50.6 |
| Females | | | |
| Total | 4,760,825 | 485,767 | 10.2 |
| 10 years | 858,576 | 36,525 | 4.3 |
| 11 years | 784,938 | 39,150 | 5.0 |
| 12 years | 809,501 | 57,664 | 7.1 |
| 13 years | 768,954 | 71,597 | 9.3 |
| 14 years | 775,224 | 117,046 | 15.1 |
| 15 years | 763,632 | 163,785 | 21.4 |

The opinion is so prevalent in America that child labor in agricultural pursuits is never injurious that the above table should at the outset be divided to distinguish those engaged in agriculture from those engaged in all other occupations. This is done in the following table:

TABLE IV

BREADWINNERS TEN TO FIFTEEN YEARS OF AGE IN CONTINENTAL UNITED STATES, 1900

| AGE | TOTAL | | IN AGRICULTURAL PURSUITS | | IN ALL OTHER OCCUPATIONS | |
|----------------|-----------|----------|--------------------------|-----------------------|--------------------------|-----------------------|
| | Number | Per cent | Number | Per cent distribution | Number | Per cent distribution |
| Total | 1,750,178 | 100.0 | 1,061,971 | 100.0 | 688,207 | 100.0 |
| 10 years | 142,105 | 8.1 | 121,422 | 11.4 | 20,683 | 3.0 |
| 11 years | 158,778 | 9.1 | 131,807 | 12.4 | 26,971 | 3.9 |
| 12 years | 221,313 | 12.6 | 171,643 | 16.2 | 49,670 | 7.2 |
| 13 years | 268,427 | 15.3 | 179,393 | 16.9 | 89,034 | 12.9 |
| 14 years | 406,701 | 23.2 | 215,678 | 20.3 | 191,023 | 27.8 |
| 15 years | 552,854 | 31.6 | 242,028 | 22.8 | 310,826 | 45.2 |

There are no official returns of child labor in the U. S. subsequent to 1900—excepting Census Bulletins of Manufacturers (1905) and reports of labor commissioners and factory inspectors in several individual states. It is to be regretted that students of this subject in America are compelled to refer, for comprehensive statistics, to

figures compiled seven years ago, the "children" reported in those returns being now from seventeen to twenty-two years of age.

Some approximate view of the present extent of child labor in the U. S. can be had, however, by a study of the increase in the number of wage-earning children in recent years. The following table compiled from the Twelfth Census (1900) by the National Child Labor Committee shows the number of children ten to fifteen years of age in the five chief groups of occupations, the increase in the twenty years, 1880 to 1900, and the present number estimated on that basis of increase:

manufacture is reported in the manufacture of paper and printing, liquors and beverages, food and kindred products, and in shipbuilding. The principal increase is shown in textiles, leather and its finished products, tobacco, and in miscellaneous industries.

When it is considered that these census figures must be gathered from available data and that the laws in many states are so defective as to defeat the true purpose of enumeration, while other states are devoid of any agency for gathering official information, the reports of the Census Department are less convincing than is desirable.

TABLE V

SOME UNITED STATES CENSUS STATISTICS OF CHILD LABOR

| | 1880 | 1900 | Increase per cent | 1906 estimated |
|---|------------|------------|-------------------|----------------|
| Population of continental United States | 50,155,783 | 75,568,686 | 50.6 | 83,189,736 |
| Total number of children 10 to 15 (inclusive) years of age | 6,649,483 | 9,613,252 | 44.5 | 10,502,380 |
| Number of children 10 to 15 (inclusive) years of age engaged in gainful occupations | 1,118,356 | 1,750,178 | 56.5 | 1,939,524 |
| Boys | 825,187 | 1,204,411 | 53.2 | |
| Girls | 293,169 | 485,767 | 65.7 | |
| Per cent which children 10 to 15 (inclusive) years of age at work constitute of all children 10 to 15 inclusive | 16.8 | 18.2 | | |
| Total number of children 10 to 15 (inclusive) years of age engaged in trade and transportation | 38,657 | 122,362 | 216.5 | 147,352 |
| Boys | 35,609 | 100,174 | 181.3 | |
| Girls | 3,048 | 22,188 | 627.9 | |
| Total number of children 10 to 15 (inclusive) years of age engaged in manufacturing and mechanical pursuits | 133,007 | 283,869 | 113.4 | 329,127 |
| Boys | 86,171 | 170,653 | 98.0 | |
| Girls | 46,836 | 113,216 | 141.7 | |

| | Children 10 to 15 (inclusive) | Children 14 to 15 (inclusive) |
|---|-------------------------------|-------------------------------|
| All gainful occupations | 790,623 | 959,555 |
| Agricultural | 604,265 | 457,706 |
| Trade and transportation | 21,875 | 100,487 |
| Mechanical and manufacturing pursuits | 62,532 | 221,337 |
| Domestic and personal service | 101,513 | 177,518 |
| Professional service | 438 | 2,507 |

The Director of the Census, in the "Letter of Transmittal" (Jan. 25, 1907) accompanying Census Bulletin No. 69 on "Child Labor in the U. S.," says, "With the growth of population there has probably been a considerable increase since 1900 in the number of children who are working for wages, except possibly in those communities where new laws imposing greater restrictions upon the employment of young children have been enacted and are being efficiently enforced, but it is unlikely that, aside from the increase in numbers, a census taken at the present time would show conditions differing materially from those existing at the date of the twelfth census."

A series of Census Bulletins on Manufactures (1905) shows a total decrease in the number of children ten to fifteen years of age engaged in manufacturing pursuits, of nine tenths of 1 per cent in the five years 1900-5, twenty-five states and territories showing a decrease and twenty-six showing an increase. The largest percentage of decrease in the employment of children in

The belief is general among those familiar with child-employing industries that the number of children employed in some states and in particular industries considerably exceeds the number reported either in the census returns or in the inspection reports of these states. This belief is based upon the known tendency of manufacturers to underestimate the number of children employed, the tendency of parents to overstate the ages of their working children, and upon the school census reports in a large number of industrial communities.

The Census Bulletins (1905) report 32,826 children employed in the manufacturing establishments of the four cotton-manufacturing states, North Carolina, South Carolina, Alabama and Georgia. These figures are based on information furnished by the manufacturers in those states. The *Blue Book* (1905), also compiled from information given by the manufacturers, shows, according to Dr. A. J. McKelway, assistant secretary of the

**Real
Number
Probably
Larger**

National Child Labor Committee, a number far in excess of the census returns. He says:

How many children, of what ages, are now employed in Southern cotton-mills, nobody knows. The manufacturing organs that are inclined to boom the industry, as to capital invested, the sum of wages paid and the number of factories and spindles and looms, are apparently trying to convince the public that this vast industry is run with an insignificant body of human workers. The census statistics just issued for 1904 are far below, in the statistics of employees, the statements made by the same manufacturers to the textile publications. And yet the percentage of children under sixteen reported by the manufacturers is enough almost to rouse a people to arms in their defense.

The *Blue Book*, a recognized authority on cotton-mill statistics, whose publishers send out every year to the cotton manufacturers blanks to be filled out by them, stating the number of operatives employed, reports in actual numbers, or by fair computation for the few mills that do not report the number of operatives, the total of 208,940 operatives for 1906. Taking the Georgia percentage of children under sixteen to the whole number of employees as conservative for the whole South, we would have 70,412 children under sixteen in the Southern mills, and other disinterested persons have testified that these children are of all the ages from sixteen to six. I quote again the statement made by Mr. R. M. Miller, Jr. of Charlotte, N. C., formerly president of the Southern Cotton Spinners' Association, later president of the American Cotton Manufacturers' Association, considered an expert in cotton-mill matters, that 75 per cent of the spinners of the North Carolina mills were fourteen years and under, while his predecessor in office, Mr. George B. Hiss, of Charlotte, told me that the usual calculation was that only 30 per cent of the operatives were adults.

Another example of the defectiveness of official returns is the Anthracite report of the Department of Mines, Pennsylvania (1905). This report shows that there were 760 boys of whose ages the deputy inspectors were in doubt, though the chief of the department says "the boys of doubtful age number a little over 9 per cent of the total number employed, . . . it is very probable, however, that many of the 760 classed as doubtful by the inspectors are over fourteen." Yet the chief admits the impossibility of securing reliable data in the following words:

The difficult thing is to get at the correct ages of these boys, as at least 75 per cent of them were born in foreign countries. Besides this, the department has neither the time nor the money to spend in prosecuting the parents or guardians of these children. If the next legislature could be induced to appropriate about \$50,000 for this purpose, the department could enter proceedings to get at the true facts in the matter.

The law is emphatic in its requirement of properly attested certificates for children applying for employment, but unfortunately, under the present system no protection is afforded in cases where the age is falsely represented. The inspectors may frequently have doubts as to the eligibility of the boys who are given employment, but as the certificates have been accepted by the mine foremen, they are without authority to take action in the matter.

From towns and boroughs representing not more than one sixth of the anthracite field, the National Child Labor Committee (1906) compiled returns from school superintendents familiar with the family life and childhood of these communities, showing not less than 2,460 boys under fourteen years of age working in the mines and breakers of these towns and boroughs. While the conclusion would be unwarranted that the total number of boys under fourteen years of age employed in the anthracite field is six times the 2,460 reported (14,760), it is evident that the 760 reported by the department of mine inspection is based on inadequate knowledge. This defect, as explained by the writer (*Annals of the American Academy of Political and Social Science*, Jan., 1907, p. 43), arises from the difficulties surrounding the work of the factory inspector on account of the very defective law of Pennsylvania governing child labor in the mines:

The mine inspectors have been hampered in their work by the fact that nearly all the boys have sworn certificates to their legal age for employment; by the fact that the records at the mines show all boys to be of proper age; by the fact that the visiting inspector is usually known to the boys, who are thus on their guard against any compromising confession; and also by the extent of the field to be covered. The department reports an average of forty-five mines for every deputy inspector, which, as every one familiar with the industry knows, would require superhuman speed and strength of every one of these fifteen representatives of the state. In his report for 1903, the chief criticizes the law requiring every mine to be inspected at least every two months in these words: "This requirement defeats the very purpose of the act and reduces the inspector to a mere walking machine with time only to note the most trivial matters."

A complete statistical report of child labor in the U. S. would include also a large number of children under ten years of age who are at work but who are not included in the census returns. There would also be included the large number of children employed in sweat-shops ("home industries"), street trades and a multitude of unclassified and informal occupations who are not reported as gainfully employed, but are reported either as at home, or in school, or are omitted altogether.

The variety of commercial pursuits into which the labor of children enters is partly indicated by the list of 315 gainful occupations reported by census enumerators.

The New York State Bulletin of the Commissioner of Labor for March, 1907, contains returns from an investigation of tenement-house labor in certain streets in New York City. In seven streets visited there were found 193 children engaged in gainful labor—the manufacture of clothing, artificial flowers, etc. These children ranged in age from five to fourteen years, the report showing the following numbers for each year of age:

Five years of age, 4; six years of age, 8; seven years of age, 20; eight years of age, 17; nine years of age, 25; ten years of age, 27; eleven years of age, 25; twelve years of age, 37; thirteen years of age, 30.

Many of these children were reported as working only occasionally, while others were employed regularly for the entire day and some until nine or ten o'clock at night.

Legislative. No two states in the union have identical laws. Statutes differ as to minimum age limit for employment, hours of labor, educational requirements, methods of age certification, scope of regulation, etc. It is therefore impossible to present in detail the specific laws that govern child labor in the various states, especially since the statutes in several instances are complicated and extensive.

The principal features of the various laws are noted in the following table, from which many special features (hours of closing stores and factories, catalogue of industries affected by the law, description of kinds of educational tests or proofs of age required, and equipment and effectiveness of factory inspection departments) are necessarily omitted. A few important exceptions are noted supplementary to the table.¹ The age limit given does not in every state apply to all its industries, but applies in industries coming chiefly under the jurisdiction of the inspectors. The more important educational requirements appear in the column "Compulsory Education."

¹ For a detailed analysis of state laws (to Jan. 1, 1907), see "Consumers' League Handbook," 1907, by Josephine C. Goldmark, National Consumers' League, 105 East Twenty-second Street, New York City.

CHILD LABOR LAWS. BY STATES

| State | Age limit in factories, stores, etc. | Exemptions | | Hours | | Night-work prohibited | Compulsory education | Proof of age | Officials for enforcement | Special |
|-----------------------|--------------------------------------|---|---|------------|-----------------------|--|--|----------------|---------------------------|---|
| | | For poverty, dependent parents, etc. | Certain industries and periods | Per day | Per week | | | | | |
| Alabama..... | 12 | Age limit 10 for orphans and for poverty. | | | 48 night, 66 day-work | Under 13 in factories. | | Affidavit..... | | Age limit 14 in mines. |
| Alaska..... | | | | | | | | | | |
| Arizona..... | | | | 8 in mines | | | to 14, 12 weeks each year | | | |
| Arkansas..... | 12 | | | 10 | 60 | Under 14 in factories. | to 14, 16 weeks each year | Affidavit..... | | Age limit 14 in mines; if illiterate 16. |
| California..... | 14 | Age limit 12 for poverty. | No age limit for all agricultural and viticultural work in vacation. | 9 | 54 | Under 16 in factories, offices, laundries. | to 14, entire school year | Documentary | Special state officials | |
| Colorado..... | 14 ² | | | 8 | | | to 14, entire school year | | School officials. | |
| Connecticut..... | 14 ¹ | | | 10 | 60 | | to 14, entire school year | Documentary | School officials. | |
| Delaware..... | 14 | Children of widows. | All places of employment except factories. | 9 | 54 | | | Affidavit..... | Special state officials | |
| District of Columbia | | | | | | | to 14, entire school year | | | Under 16 may not be employed more than 60 days without consent of legal guardian. |
| Florida..... | See Special | | | | | | | | | |
| Georgia..... | 13 | Age limit 10 for orphans and for poverty. | | | | Under 14 in factories after Jan. 1, 1908. | | Affidavit..... | | |
| Hawaii..... | | | | | | | to 15..... | | | |
| Idaho..... | 14 ¹ | | | 9 | 54 | Under 14 | to 14, 12 weeks each year | Affidavit..... | | |
| Illinois..... | 14 ¹ | | 12 in vacation | 8 | 48 | Under 16 in all gainful occupations. | to 14, 110 days each year | Documentary | Special state officials | Age limit 16 in mines and dangerous occupations. |
| Indiana..... | 14 | | | 10 | 60 | Girls in factories | to 14, entire school year | Affidavit..... | Special state officials | |
| Indian Territory..... | | | | | | Minors under 16 | to 14, 16 weeks each year | | Special state officials | |
| Iowa..... | 14 | | | | | | to 15, entire school year (some exemptions). | Affidavit..... | Special state officials | Age limit includes factories, mines and packing-houses |
| Kansas..... | 14 | | | | | | | | | |
| Kentucky..... | 14 | Exemptions for poverty. | Handling fruits and vegetables in season and delivery and preparation of tobacco. | 10 | 60 | Under 16 in factories and mines. | to 14, 5 months each year | Affidavit..... | Special state officials | |

¹ Also all employments during school hours.² In all employments during school hours, unless school requirements have been complied with.³ Night-work prohibited: From 7 P.M. to 6 A.M. children under 14 in all gainful occupations and under 16 in textile mills.

After 8 P.M. to 6 A.M. children under 14 in all street trades.

⁴ Night-work prohibited: From 10 P.M. to 6 A.M. minors in manufactures.

From 5 P.M. to 8 A.M. children under 16 in factories.

From 7 P.M. to 7 A.M. children under 16 in mercantile establishments in New York City and Buffalo.

From 10 P.M. to 7 A.M. children under 16 in mercantile establishments except in New York City and Buffalo.

After 10 P.M. for newsboys under 14 in cities of first and second class.

⁵ Under 16 in all gainful occupations (except boys over 14 in certain industries, who may work not more than 9 hours at night).

The record year in child labor legislation was 1905, when twenty-two states and one territory enacted laws regulating the employment of children. This unusual harvest of legislative improvement may be looked upon as the fruit of many years of activity on the part of labor-unions, women's clubs, the National Consumers' League, the experience of states already having effective laws and efficient factory inspectors, and especially the organization of public sentiment against the practise of child employment since the formation of the National Child Labor Committee in April, 1904.

Promoted by these same forces, together with an awakened interest among the churches, improved child labor laws were passed in six states in 1906, Georgia and Iowa having for the first time placed on the statute books a law against child labor. The National Child Labor Committee cooperated in all of this work through distribution of literature, correspondence, and general support. In Iowa it was instrumental in bringing together into a state committee the various elements that had, unorganized, struggled for years without success. In Maryland, Georgia, and Kentucky representatives of the committee appeared before the legislative assemblies in active support of the bills, and the work of the Southern office, opened in Atlanta early in 1906, was concentrated on the situation in Georgia, which presented the most difficult legislative battle that has yet been fought for the protection of childhood in this country.

Since Jan. 1, 1907, important amendments have improved the child labor laws in Alabama, Florida, Maine, Missouri, Nebraska, New Jersey, New York, and Idaho.

In addition to these state activities interest in this subject has been expressed in a growing demand for national regulation of child labor. A bill was introduced in Congress in Jan., 1907, authorizing the federal government (under the provisions of the Interstate Commerce law) to exclude from interstate transportation goods offered for shipment from mines or factories employing children under fourteen years of age. The discussions of this measure on the floor of the

Legislation

Senate and by the press throughout the country have developed the encouraging fact that all well-informed people admit the existence of the evil and grant the urgency of some thorough method of regulation—the division of opinion turning only upon the question whether it would be expedient, and if so, whether the national government has the power to legislate in a matter heretofore regarded as wholly within the limits of state jurisdiction.

In a country composed of a number of almost independent commonwealths the disparity in state laws is a source of great confusion. Not only does such inequality render enforcement of law difficult, but the states with regulation well advanced lay burdens upon merchants and manufacturers as against their competitors across the state line which they consider unfair. The glass manufacturer of eastern Ohio protests against the enforcement of the law against employment of boys under sixteen at night, when he knows that just across the river his competitor, whose expenses for fuel, material, and shipping are identical with his own, can employ boys in Pennsylvania at night at fourteen years and in West Virginia during vacation at twelve.

The enforcement of the law is felt to be an injustice and the violation of a well-recognized economic principle.

In view of the halting action that may be expected in many states where the need of reform is greatest, many believe that some national action is necessary if the present generation is to be safeguarded. Despite the strong predisposition of the National Child Labor Committee to favor state regulation of the conditions of industry, it appears to have become the prevailing sentiment of its members that the national government should at least take steps to secure the entire elimination of children under fourteen years from the field of gainful occupation, leaving the individual states to take such further action as seems justified. This would establish a standard below which the nation cannot safely permit any of its parts to fall.

In some respects the most important measure dealing with the employment of children is the law enacted by Congress in February, 1907, authorizing an investigation

A Federal Investigation

of the conditions of working women and children. This law is a direct result of the persistent activity of the General Federation of Women's Clubs, the Woman's Trade Union League, the National Consumers' League, the National Child Labor Committee, and other organizations interested in the protection of children. An appropriation of \$150,000 was devoted to this investigation and the Commissioner of Labor is authorized to add to his regular staff of investigators a sufficient force to make this special study. The value of such an investigation can hardly be overestimated. Heretofore, in default of reliable and complete statistics either from the census bureau or the departments of labor and factory inspection in the various states, it has been necessary for private organizations like the National Child Labor Committee to secure through their own agents the statistical data necessary for arousing public interest in the evils against which they are organized. The objection to this private investigation is obvious. No matter how thorough the agents of a private organization may be, their reports are always open to the charge of being unofficial or "irresponsible." These committees recognize the responsibility of private organizations in arousing public interest, promoting improved legislation, and aiding in law enforcement. But they believe the duty of discovering to what extent the citizens of our country are subjected to unfavorable or injurious conditions is distinctly a duty of the federal government and the various commonwealths. They have therefore been active in urging this government investigation which will lay an authoritative foundation for the work they are organized to conduct.

This report will have a special value in that the investigation is not limited to a statistical study, but is designed to cover the whole field of research into the conditions surrounding wage-earning women and children. It is this larger social phase of the investigation which distinguishes it from a mere census report and which led the director of the census to declare so emphatically that such an investigation lies entirely outside the appropriate exercise of the powers of the census bureau.

The labor organizations have for many years protested against the employment of young chil-

dren in gainful occupations, and may be regarded as the first, in point of time, among the forces arrayed against this system. The General Federation of Women's Clubs has been so active in promoting better conditions that at

**Agencies
Opposed
to Child
Labor**

present nearly all enterprising local clubs have a special committee on child labor, and these committees keep the club members informed of the work of the National Consumers' League and the National Child Labor Committee. Leading educators, social

settlement workers, business men and many manufacturers and other employers of labor are joined together for the purpose of securing better conditions for working children, all these classes of citizens being represented in the *personnel* of the National Child Labor Committee, while latterly the churches throughout the country are awakening to the existence of this menace to the intellectual and moral interests of society.

The National Consumers' League, and its local branches, seeks the improvement of industrial conditions through the means of a systematic boycott on producers and purveyors of goods manufactured in unsanitary factories or sweat-shops, or where child labor is employed, or offered for sale in places

**National
Consumers'
League**

ignoring certain well-defined rules for the treatment of employees. The earlier activities of the league were mainly devoted to the improvement of conditions in the manufacture and sale of white underwear for women, but more recently a vigorous campaign has been entered against the manufacture and sale of impure foods. While this has been the avowed purpose of the league, perhaps its greatest service has been in the positive efforts aiming to secure higher standards of legislation regulating the employment of children and women, and to the Consumers' League should be accorded the honor of having first undertaken, in a systematic manner, the adequate legal protection of working children in America.

Since the National Child Labor Committee may be regarded as the direct outgrowth of the conviction, promoted by many interested agencies, that a problem of such dimensions requires treatment by the coordinated efforts of an organization of national scope, the National Child Labor Committee, formed in 1904, has become the most important organization working on this question. For its work, see NATIONAL CHILD LABOR COMMITTEE.

**National
Child Labor
Committee**

In the course of the investigations conducted under the direction of this committee we have made the following observations of the relation of child labor to social welfare, and these have, in part, determined the policy of the committee in its activities:

I. Children in Agricultural Pursuits Need Protection.

It has been customary heretofore to exclude children in agricultural pursuits from the discussion of the child labor problem, on the ground that work on the farm is always beneficial. The open fields and pure air and educational opportunities have been set in bright contrast to the environment of the overworked child in the factories and tenements of our large cities. There is a

contrast, but not strong enough to justify the neglect of the child in agriculture. The investigations of this committee, while as yet incomplete, are sufficient to indicate the poverty and ignorance of children in many country communities. This is not chiefly in those sections of the country where families live in a degree of isolation, tho even here are many whose lives are devoted to hard manual labor during years that should be given to education and play. But action taken to regulate child labor in agriculture should be directed especially toward those phases of the industry in which people work in large groups. In the fruit and vegetable gardens and canning farms of Maryland, New Jersey, New York, Pennsylvania, and other Eastern states, as well as in sections along the Pacific slope, there are conditions which demand careful regulation.

Children whose ages range from nine to twelve years have been found working eleven or twelve hours a day during the rush of the canning season, the hours often reaching sixty or seventy a week. The chief objection to this form of employment is not so much in the labor itself, as in the housing and sanitary conditions. A description of living conditions reported by one of the investigators is fairly typical of what have been found in several sections of the country.

"As you enter the door of one of these shanties you see a long line of straw divided into bunks. These straw bunks are the beds of the workers. The bunks are divided by small boards not more than eight inches high, just high enough to prevent one family rolling over on another. Each bunk represents a family—man, wife, and children. There is no privacy, and the influence on the young boys and girls is wretchedly degrading. These bunks are probably seven feet long by five broad, and in each one there are from four to six people. From the ceiling or on ropes stretched across the room hang the clothes of the men and women, unclean and nasty looking; on the other side of the room are the trunks and traveling paraphernalia of the residents. Some of these shanties are reasonably decent, but even in these a whole family sleeps in a small room. Usually the shanties are far enough from the canning-house to escape the odor, but in two cases I found the drainage from the canning-house so close to the shanty that the rotten tomatoes and stagnant juice and seeds, turned into a moldy and festering mass, raised an odor that was absolutely repulsive."

No industry in which evil conditions may reach such an extreme should be left unregulated, especially when utilizing so large a majority of all working children. The investigation of this form of child labor has not yet been extensive enough to warrant an appeal for uniform legislation. Even the total prohibition of child labor in these large groups would not wholly mitigate the evil. The parents come for the season accompanied by their children, and the improvement of sanitary and housing conditions would be the greatest safeguard to childhood, while any law establishing a minimum age for employment should be accompanied by adequate provision for the care and education of the children excluded from labor.

From other parts of the country where there is truck-gardening and fruit-picking are such reports of the possibility of serious immorality among children working in groups, although returning to their homes at night, that strength is added to the conclusion that agricultural pur-

suits should not be left unregulated. It has been necessary thus far, however, for the committee to devote its principal attention to those forms of child labor confessedly more serious in their effects—employment in factories, mines, workshops, mercantile establishments, street trades, and transportation.

II. *The Demand for Child Labor appears to be Industrial rather than Economic.*

As soon as childhood shows its capacity for any specific form of labor, industry at once seizes it and posits an economic necessity for so doing. This takes the form of a demand from both the employer and the parent. It is urged in the cigar factories of Pittsburg, the coal-breakers of Pennsylvania, the glass factories of West Virginia and Maryland and the cotton-mills of the South, that neither cigars, glassware, cotton goods nor coal can be produced for the market without the employment of child labor. The need of the child is also made the defense of his toil. It is urged that without such employment the child will suffer want because of the poverty of the parents who depend on his labor.

Our research leads us to deny the validity of both arguments. No form of legitimate manufacture depends on child labor—the often finding it an economy and a convenience. Cotton is produced as successfully in Massachusetts without the labor of young children as in Maine or Rhode Island with their labor partially limited, or in the South where child labor is almost without restriction. The glass industry is demonstrating that child labor is incidental rather than essential, and many large factories are being equipped with mechanical devices which will almost entirely supplant the children. The same is true in the coal fields where the widest disparity in conditions prevails, some collieries depending largely on men and automatic slate-pickers for the work performed in others by small boys. We have repeatedly observed that when laws are enacted so restricting child labor as to render it more expensive or inconvenient than machinery the latter is adopted without serious inconvenience. We are proving, even by the halting legislative steps taken in our states, what was apparent in England before 1850—that regulated industries, far from suffering in comparison with others, have continually improved their machinery and methods and developed higher standards of comfort and industrial achievement than have their exempted and unregulated rivals.

As to the economic prosperity of the homes of cheap labor, we observe that the influx of poverty drawn by forms of industry which bring quick returns without the investment of capital or skill peoples the regions promoting such industries with an ever-increasing number of hungry mouths, to the despair of philanthropic agencies. Instead of being benefited by such industries the average toiler grows poorer every year while his family falls ever farther below the standard of decent living. Great industries, like the glass, iron, steel, and railroad industries, often bring in their train the small merchant and pedler, the cheap garment worker and stogie roller who live in abject poverty and work in cramped tenements of unventilated filth. Poverty is never decreased by being congested, and the orphan and the poor widow are never permanently relieved by industries that bid for cheap labor.

To meet the immediate needs of such families as depend for support on children obviously unfit for hard labor, a system of relief has been established in several large cities by which private agencies undertake to pay to the family in the form of a scholarship a weekly sum approximating the amount the child could earn, on condition that the child is kept in school. This has the effect of relieving a number of worthy cases where the welfare of the child would otherwise have been menaced, and also of demonstrating how small a percentage of working children are really essential breadwinners of the families they represent.

III. *The Physical Effects of Child Labor Demand an Exhaustive Investigation.*

The brief industrial history of this country and the meager official data available prevent a comprehensive conclusion as to the physical effects of premature labor. While dogmatic assertions as to physical deterioration should not be based on insufficient data, there is a strong presumption that the same effects will follow the heavy and unregulated toil of children in America which were long ago demonstrated to be the fruit of child labor in England and other older countries.

Pictures and physical descriptions of factory children filed in the office of the National Child Labor Committee, showing the effects of a single year, or two years, of work are sufficiently striking to justify the demand for a thorough physical examination of all children entering industry, and at regular intervals thereafter—the results to be systematically compared with the results of an examination of children not gainfully employed. This should be undertaken by every state maintaining child-employing industries, and if necessary by the national government. Massachusetts has already adopted a system of examination for all children whether entering school or labor.

Among the specific indications of the physical effects of premature labor may be mentioned the following observations on child labor by Dr. Albert H. Freiberg, Cincinnati, Ohio:

Lawmen usually underestimate the physiological importance of the play hours of children between the ages of ten and sixteen years. Work during this period of life in factory and workshop has the effect of causing excessive fatigue in certain groups of muscles. This fatigue results in muscular degeneration and the assumption of certain faulty attitudes which are at first habitual but later assume the place of the normal, leaving the child more or less permanently deformed and to some extent incapacitated.

These deformities are to be regarded on the one hand, however, not simply as disfiguring but as interfering with wage-earning capacity later on, or as menaces to health and the normal tenure of life.

The work of boys is for the most part done in the standing position. This work usually constitutes an apprenticeship for work to be done in the same position as journeymen adults. A very frequent result of such premature and excessive toil in boys is the breaking down of the feet which results in what is popularly known as "flat foot." Under these circumstances, it is seen quite frequently in its severest forms, and thus often results in permanently forbidding the continuance of the trade learned as a boy.

The girl, on the other hand, does her work in the factory in a sitting position, as a rule. The effect is frequently the development of what is known as "rotary lateral curvature of the spine." This results in disabling the expansive power of the chest, crowds the heart and lungs abnormally and even affects the capacity and shape of the pelvis. For this reason it is well known that severe cases of lateral curvature result in bringing the tenure of life far below the average by its effect upon the heart and lungs. The deformity of the pelvis has long been known as being productive of serious harm in the maternal function.

While these deformities are not confined to one sex or the other, and while they do not occur in the greater number of toiling children, they are known to be particularly frequent among them. The baneful effects of these deformities are

greatly intensified by unfortunate home environment and improper nourishment. Finally, it is not to be overlooked that they are not the only, or even the most common evidences of physical deterioration to be observed among working children.

This testimony is amply corroborated by professional judgment in all countries having child employing industries. The English medical authorities on the subject are familiar to the American student.

In France careful attention has been given to specific effects of child employment and Dr. Grancher, member of the Academy of Medicine, declares that a ten-hour day of labor for a child of thirteen or fourteen years is a physiological error. Dr. Letule, of the Paris Hospital, says:

Children ought not to work in a closed-in space. The child needs his portion of play. . . . To make use of the growing strength of the child, to transform his gestures into remunerative work, gestures which are indispensable to his physical development, is to wither the species in its future hopes, is to condemn to tuberculosis thousands of poor beings who ought to become robust workmen.

Dr. Sevestre, member of the Academy of Medicine and Inspector-General of the Sanitary Service, says:

It appears possible to me that if the hygienists and doctors who give special attention to the physical development of children had been consulted the legal duration of work for children in workshops or in establishments more or less healthful would have been diminished.

In 1846, in the British Parliament, Lord Macaulay delivered this condemnation of premature and excessive child labor:

Rely on it that intense labor, beginning too early in life, continued too long every day, stunting the growth of the mind, leaving no time for healthful exercise, no time for intellectual culture, must impair all those high qualities which have made our country great. Your overworked boys will become a feeble and ignoble race of men, the parents of a more feeble progeny; nor will it be long before the deterioration of the laborer will injuriously affect those very interests to which his physical and moral energies have been sacrificed.

Yet one will find among American employers of labor, and American legislators, the same defense of the virtue of overwork for young children that has been advanced since the earliest days of factory legislation in England, Germany, and France.

Such state reports as give the number and ages of children in various forms of labor show a remarkable similarity in the percentage of accidents to children under sixteen as compared with accidents to adults. Whether in glass factories, textile, steel or iron mills, mines or quarries, the ratio of about two and one half to one prevails. The report of the Department of Mines in Pennsylvania, 1905, shows 16,774 slate-pickers employed in that year, 8,124, or 48 per cent, of whom were under sixteen. Yet of the slate-pickers killed by accident 75 per cent were under sixteen, the ratio of risk being three to one. The report also demonstrates that the steady increase in the number of accidents in and about the mines (the percentage to the number employed being greater in 1905 than in any year since 1880) is due either to the youth or the ignorance of the workers.

IV. Child Labor Diminishes Family Income.

The direct effect of child labor upon the family income follows the recognized tendency of the cheaper article to drive the better from the market. A comparison of wages in industries that

utilize child labor with industries demanding only adult labor shows that the total income of the family in the former—as in the silk and cotton factories, cheap cigar and tobacco factories, and the unskilled departments of the glass and coal-mining industries—is not equal to the income of the family in the trades—iron and steel, bridge building, railroad and lumber industries—where only adult members of the family are employed.

When the natural breadwinner is no longer able to maintain his family as an economic unit but must impose upon each member the burden of semi-independent industrial existence, we are brought to a sociological problem of far-reaching import. The institution we call the family cannot survive the crumbling of its economic foundation.

A comprehensive tabulation of the birth-rate as related to family income and to the income of the head of the family is greatly to be desired. But such a tabulation is impracticable until our commonwealths are better equipped with records of vital statistics. And men who work in the social laboratory—especially teachers and physicians—bring to us startling evidence of the reluctance of intelligent and virtuous people to bear children, when they observe skilled employments steadily being divided into unskilled branches which bid for child labor, while the ignorant, the vicious, and the physically unfit continue to propagate their own kind.

It has been abundantly demonstrated by investigations recently conducted that the finding of the Committee of the House of Lords in England in 1889 has its counterpart in this country to-day—that the worst conditions, the longest hours, and the lowest wages existed in the domestic workshops which we have been so concerned to leave free from any government regulation.

V. Child Labor Tends to Industrial Deterioration.

The effects of child labor are seen in the cheapening of industrial products, due to unskilled labor on the one hand, and on the other to the unfitting of the adult for the proper consumption of goods, because of his defective mental and physical training. The Massachusetts Committee on Industrial and Technical Education, 1906, shows that those who too early in life enter industries that bid for cheap child labor are doomed to spend their future years in such labor at wages that will never afford adequate support. It is shown, for example, that while the cotton-mills offer about \$4 a week to children beginning as against about \$2.50 in the leather industries, and thus win the larger number of children, the wages do not increase in the same proportion. In the cotton-mills the weekly wages advance to about \$6 or \$6.50 and there rest, while in the shoe factories the advance proceeds from \$2.50 to \$11 or \$12 a week, with a higher percentage of special opportunities for advancement. No other state has made so careful a research into this problem, but there is abundant evidence to the same effect from other countries. If the child laborer progresses in years but not in earning capacity his poverty precludes his participation in the fruits of industry. He becomes a poor purchaser, fails to consume his share of the goods offered for sale, and thus promotes that commercial congestion from which the markets of the world so frequently suffer.

The condemnation of the unregulated domestic

and street trades is even more emphatic. All the witnesses who gave evidence recently before the Inter-Departmental Committee of the British Government "concurred in the view that 'once a street trader always a street trader' and that the streets manufacture the casual worker, the unemployed, and the loafer." (Nettie Adler, 1906, "Juvenile Wage Earners and their Work," p. 7).

VI. Child Labor not a Problem of Foreign Labor.

A special study of the relation of our foreign populations to child labor has been made for the purpose of testing the validity of the claim often advanced that this system, even granting its evil, affects only the foreigners. This claim is well founded only in those localities in which recent arrivals from foreign countries constitute the lower and more helpless element in the community. There their ignorance and traditional subjection to industrial injustices make their children the easy prey of the unscrupulous or the misguided employer. Boroughs in the coal regions of Pennsylvania are found in which not more than 3 per cent or 5 per cent of the school pupils enrolled ever reach the high school, and of these few if any are of the foreign-born children who abound in these communities. But the exploitation of young children is no respecter of race distinctions and, where legal safeguards are wanting, the coal-mine and the glass factory and the silk- and cotton-mill take the children of the community, whether Lithuanian, Pole, Portuguese, French Canadian, or native Cavalier or Puritan stock. But were this evil limited to foreign-born races, they so soon become an integral part of our national life that an injury to them is an injury to all.

VII. A Working Plan.

We must recognize the possibility of misjudging the character of the phenomena that have thus far impressed us. Certain phases of child-labor research must be carried on systematically for some years before more than tentative results should be announced.

Meanwhile we are convinced that the results of the investigations thus far conducted, when interpreted by the experience of older industrial communities, justify as a working hypothesis a program of opposition to child labor along the following general lines:

(1) The regulation of all branches of industry in which children are employed. The experience of older industrial communities proves that in the absence of regulation there will be some trades in which at least some workers will be driven to exist under conditions so exhausting and demoralizing as to be injurious to the community. This excessive burden will fall most heavily upon the laborers least able to protest against injustice—namely, the children.

(2) The elimination of the child under fourteen years of age as an industrial factor.

(3) The restriction of employment for children between fourteen and sixteen years of age, excluding the physically or mentally defective and the illiterates; forbidding the employment of others at night, for more than eight hours a day, or in any employment dangerous to life, limb, health or morals.

The requisites of a good child-labor law are

best set forth by Mrs. Florence Kelley, General Secretary of The National Consumers' League (in "Some Ethical Gains Through Legislation," The Macmillan Company, New York, 1905, pp. 93 seq.) as follows:—

What Constitutes Effective Child-Labor Laws

Effective legislation dealing with child labor involves many differing elements, including the child, the parent, the employer, the officials charged with the duty of enforcing the statutes, and finally the community which enacts laws, provides schools for the children when they are prohibited from working, supports and authorizes officers for the enforcement of the laws, prescribes penalties for their violation, assists dependent families in which the children are below the legal age for work. In the long run, the effectiveness of the law depends upon the conscience of the community as a whole far more than upon the parent and the employer acting together.

With the foregoing reservations and qualifications duly emphasized, the following summaries are believed to outline the substance of the effective legislation which it seems reasonable to try to secure in the present and the immediate future. They deal only with provisions for the child as a child, taking for granted the provisions for fire-escapes, safeguards for machines, toilet facilities and all those things which the child shares with the adult worker.

An effective child-labor law rests primarily upon certain definite prohibitions, among which are the following:

Labor Is Prohibited: (1) for all children under the age of fourteen years; (2) for all children under sixteen years of age who do not measure sixty inches and weigh eighty pounds;¹ (3) for all children under sixteen years of age who cannot read fluently and write legibly simple sentences in the English language; (4) for all children under the age of sixteen years, between the hours of 7 P.M. and 7 A.M., or longer than eight hours in any twenty-four hours, or longer than forty-eight hours in any week; (5) for all children under the age of sixteen years in occupations dangerous to life, limb, health or morals.

The Child.—Effective legislation requires that before going to work the child satisfy a competent officer appointed for the purpose, that it (1) is fourteen years of age, and (2) is in good health, and (3) measures at least sixty inches and weighs eighty pounds, and (4) is able to read fluently and write legibly simple sentences in the English language, and (5) has attended school a full school year during the twelve months next preceding going to work.

The Parent.—Effective child-labor legislation requires that the parent (1) keep the child in school to the age of fourteen years and longer if the child has not completed its required school work, and (2) take oath as to the exact age of the child before letting it begin to work, and (3) substantiate the oath by producing a transcript of the official record of the birth of the child, or the record of its baptism, or some other religious record of the time of the birth of the child, and must (4) produce the record of the child's school attendance, signed by the principal of the school which the child last attended.

The Employer.—Effective child-labor legislation requires that the employer before letting the child begin to work: (1) obtain and place on file ready for official inspection papers showing (a) the place and date of birth of the child substantiated by (b) the oath of the parent corroborated by (c) a transcript of the official register of births, or by a transcript of the record of baptism, or other religious record of the birth of the child, and by (d) the school record signed by the principal of the school which the child last attended, and by (e) the statement of the officer of the Board of Education or the Board of Health designated for the purpose, that he has approved the papers and examined the child; (2) after permitting the child to begin to work, the employer is required to produce the foregoing papers on demand of the school-attendance officer, the health officer, and the factory inspectors; (3) in case the child cease to work, the employer must restore to the child the papers enumerated above; (4) during the time that the child is at work, the employer must provide suitable seats, and permit their use so far as the nature of the work allows; and must (5) post and keep posted in a conspicuous place, the hours for beginning work in the morning, and for stopping work in the middle of the day; the hours for resuming work and for stopping at the close of the day; and all work done at any time not specified in such posted notice constitutes a violation of the law. The total number of hours must not exceed eight in any one day or forty-eight in one week.

The Officials.—Effective legislation for the protection of children requires that the officials entrusted with the duty of enforcing it (1) give their whole time, not less than eight hours of every working-day, to the performance of their duties, making night inspections whenever this may be necessary to insure that children are not working during the

¹ This measure is not now specified in any statute, tho it is implied in the statute of New York, enacted in 1903.

prohibited hours; and (2) treat all employers alike, irrespective of political considerations, of race, religion or power in a community; (3) prosecute all violations of the law; (4) keep records complete and intelligible enough to facilitate the enactment of legislation suitable to the changing conditions of industry.

The School.—The best child-labor law is a compulsory education law covering forty weeks of the year and requiring the consecutive attendance of all the children to the age of fourteen years, and until sixteen years, unless they have meanwhile completed a specified portion of the curriculum, as eight years in Colorado or five years in New York. It is never certain that children are not at work, if they are out of school. In order to keep the children, however, it is not enough to compel attendance—the schools must be modified and adapted to the needs of the recent immigrants in the North and of the poor whites in the South, affording instruction which appeals to the parents as worth having, in lieu of the wages which the children are forbidden to earn, and appeals to the children as interesting and attractive. No system of child-labor legislation can be regarded as effective which does not face and deal with these facts.

The vacation school and camp promise reinforcement of the child-labor laws; which are now seriously weakened by the fact that the long vacation leaves idle upon the streets children whom employers covet by reason of the low price of their labor, while parents, greedy for the children's earnings and anxious lest the children suffer from the life of the streets, eagerly seek work for them. Nothing could be worse for the physique of the school child than being compelled to work during the summer; and the development of the vacation school and vacation camp alone seems to promise a satisfactory solution of the problem of the vacation of the city child of the working class.

The Community.—Effective child-labor legislation places upon the community many duties, among which are: (1) maintaining officials—men and women—school-attendance officers, health officers, and factory inspectors, all of whom need (a) salary and traveling expenses, (b) access at all reasonable times to the places where children are employed, (c) power to prosecute all violations of the statutes affecting working children, (d) tenure of office so effectively assured that they need not fear removal from office in consequence of prosecuting powerful offenders; (2) maintaining schools in which to educate the children who are prohibited from working; (3) maintaining vital statistics, especially birth records, such that the real age of native children may be readily ascertained; (4) maintaining provision for the adequate relief of dependent families in which the children are not yet of legal age for beginning work.

More important, however, than the enactment of the foregoing provisions is the maintenance in the community of a persistent, lively interest in the enforcement of the child-labor statutes. Without such interest, judges do not enforce penalties against offending parents and employers; inspectors become discouraged and demoralized; or faithful officers are removed because they have no organized backing, while some group of powerful industries clamors that the law is injuring its interest. Well-meaning employers grow careless, infractions become the rule, and working men form the habit of thinking that laws inimical to their interest are enforced, while those framed in their interest are broken with impunity.

Upon parents there presses incessant poverty, urging them to seek opportunities for wage-earning, even for the youngest children; and upon the employers presses incessant competition, urging them to reduce the pay-roll by all means, fair and foul. No law enforces itself; and no officials can enforce a law which depends upon them alone. It is only when they are consciously the agents of the will of the people that they can make the law really protect the children effectively.

AUSTRIA

Statistical.—The statistical returns of the factory inspectors show only the number of persons employed in the establishments visited by them. For the years 1902 and 1903 the data are as follows:

NUMBER OF YOUNG PERSONS AND ADULTS IN AUSTRIA EMPLOYED IN ESTABLISHMENTS VISITED BY THE FACTORY INSPECTORS, 1902 AND 1903

[Source: "Soziale Rundschau" 1904 (Bd. II), p. 412.]

| | Number | | Per cent | |
|--------------------|---------|---------|----------|------|
| | 1902 | 1903 | 1902 | 1903 |
| Adults..... | 728,408 | 744,264 | 94.2 | 94.2 |
| Young persons..... | 44,948 | 45,619 | 5.8 | 5.8 |

Legislative.—The labor of children in factories and workshops is regulated by the laws of June 4, 1884, and March 8, 1885. (An establishment employing more than twenty persons or equipped with machinery is considered a factory, while other industrial establishments are designated workshops.)

Age.—The age limit for employment in workshops is twelve years, provided that under fourteen years the work shall be such as is not injurious to physical development and does not prevent school attendance. Children under fourteen years are not to be employed in factories, and those from fourteen to sixteen only in the lighter forms of factory labor. The age limit for employment in mining enterprises is fifteen years, provided that by special permit children over twelve years of age may be employed in the "lighter work" when such employment does not interfere with school attendance. The form of labor permitted to males under sixteen and females under eighteen is limited, by executive officers, to such as does not retard physical development.

Hours of Labor.—For children under fourteen employed in workshops, not to exceed eight hours a day. The hours of labor for other persons may not exceed eleven. There must be a recess of not less than one hour and a half a day. Night work is prohibited from 8 P.M. to 5 A.M. for males under sixteen and for all females. The law of January 16, 1895, forbids (with certain specific exceptions) all industrial labor on Sunday.

Certificates.—Employers must keep lists of all employees subject to the provisions of the child-labor laws, and all children must comply with the regulations regarding school attendance and health qualifications, as a condition for employment.

Exemptions.—The Minister of Commerce may grant temporary or permanent exemptions from the provisions of the law, or may place added restrictions on industries or occupations regarded as dangerous for children.

BELGIUM

Statistical.—

NUMBER OF WOMEN AND CHILDREN IN BELGIUM EMPLOYED IN INDUSTRIAL ESTABLISHMENTS VISITED BY THE FACTORY INSPECTORS, 1897 TO 1900

[Source: "Rapports annuels de l'inspection du travail," Office du Travail, Bruxelles, 1897-1900.]

| YEAR | Number of protected persons under 21 years of age | | | | Females over 21 years of age | Total number of workers of all ages and both sexes | Per cent of total number of work- ers protected |
|------|--|--------|--------------------------------------|--------|---------------------------------|---|---|
| | Children 12 to 16 years | | Fe- males 16 to 21 years | Total | | | |
| | Boys | Girls | | | | | |
| 1897 | 15,398 | 9,452 | 17,229 | 42,073 | 19,365 | 210,767 | 19.96 |
| 1898 | 16,939 | 10,761 | 18,993 | 46,693 | 19,380 | 235,867 | 19.80 |
| 1899 | 19,810 | 11,761 | 21,978 | 53,549 | 23,276 | 252,965 | 21.17 |
| 1900 | 19,031 | 13,560 | 23,429 | 56,020 | 25,269 | 273,363 | 20.49 |

Legislative.—The labor of children is regulated by the law of Dec. 13, 1889, supplemented and modified by a number of royal decrees. The law and decrees affect mines, quarries, factories, and industrial establishments using mechanical motive power, and transportation by land or water.

Age.—Labor in any of these establishments is forbidden under twelve years of age, while females under twenty-one are forbidden to labor underground.

Hours of Labor.—Limited to twelve per day for males under sixteen and females under twenty-one (except where special regulations have been issued by royal decree). The regulation of hours of labor is based upon an analysis of the kinds of labor performed, varying from eleven and one-half to ten per day in different specified industries, with rest periods fixed by law (e. g., in the mining industry males under sixteen working underground may not work more than ten hours and a half, including descent, rest period, and ascent. The rest period must not be less than one eighth of the total time spent underground).

Night and Sunday Labor.—Prohibited 9 P.M. to 5 A.M., males under sixteen and females under twenty-one (except in certain specified industries). One day rest in seven is enjoined, though not necessarily Sunday.

Certificates.—Required of males under sixteen and females under twenty-one, showing age, educational and other qualifications. Furnished free by local authorities. Employers must keep files of all protected employees.

Exemptions.—Exceptions or additions to the provisions of the law may be made by royal decree.

FRANCE

Statistical.—The following table presents the results of a special enumeration made in 1900 of persons subject to the law of March 30, 1900:

NUMBER OF CHILDREN AND OTHER PERSONS IN FRANCE EMPLOYED IN ESTABLISHMENTS SUBJECT TO THE LAW OF MARCH 30, 1900, IN THE YEAR 1900

[Source: "Bulletin de l'Office du Travail," 1901, p. 856.]

| AGE AND SEX | Number of workers | Per cent |
|-------------------------------|-------------------|----------|
| Children under 18: | | |
| Male..... | 238,498 | 8.5 |
| Female..... | 220,027 | 7.8 |
| Females over 18..... | 623,565 | 22.3 |
| Total women and children..... | 1,082,990 | 38.6 |
| Males over 18..... | 1,719,916 | 61.4 |
| Total..... | 2,802,006 | 100.0 |

The Minister of Commerce and Industry in France made a report in 1903 upon the industries employing children under eighteen years of age, and the number employed, as follows:

| INDUSTRIES | Male | Female |
|-----------------------------------|---------|---------|
| Food preparation..... | 9,146 | 8,291 |
| Chemical..... | 3,316 | 2,381 |
| Rubber, paper, pasteboard..... | 4,817 | 7,131 |
| Books and printing..... | 12,802 | 5,026 |
| Textile..... | 43,847 | 80,192 |
| Cloth and clothing..... | 6,805 | 100,776 |
| Straw, feathers, hair..... | 845 | 2,196 |
| Leather and hides..... | 11,548 | 5,501 |
| Wood..... | 30,117 | 4,943 |
| Metallurgical..... | 8,099 | 106 |
| Ordinary metals..... | 58,609 | 6,569 |
| Fine metals..... | 2,331 | 1,367 |
| Cutting precious stones..... | 128 | 156 |
| Cutting and polishing stones..... | 1,538 | 223 |
| Stove construction..... | 17,539 | 49 |
| Crockery, glass, etc..... | 21,715 | 5,766 |
| | 233,238 | 230,636 |

This makes a total of 463,874. In the same industries there were employed 627,051 women and 1,676,607 men.

Legislative.—The laws of November 2, 1892, amended March 30, 1900, regulating the labor of children applies to factories, workshops, mines, and quarries. Agriculture, mercantile establishments, and workshops in which only members of the family are employed, are exempt. In forty-seven distinct occupations the labor of women and children is forbidden, while ten others permit women but forbid children under eighteen. In ninety-four other kinds of establishments the employment of children is strictly regulated.

Age.—Limit, thirteen years for children who have completed the common-school course. No female of any age may be employed underground.

Hours of Labor.—Limited to ten per day for males under eighteen and females of all ages. In mines for boys thirteen to eighteen the shift must not exceed eight hours.

Night and Sunday Labor.—Labor prohibited 9 P.M. to 5 A.M., or for more than six days per week, males under eighteen and all females.

Certificates.—Required of all children under eighteen, showing age, educational qualifications, and physical ability to perform the work desired. Children under sixteen may be required to undergo special physical examination before employment in certain industries. Employers must keep file of all employees subject to the child-labor laws.

Exceptions.—Certain specified exceptions may be made by executive officials. A ministerial decision in 1895, modified by various decisions, to July 4, 1902, makes the following exemptions to the prohibition of night and extra work:

1. In mills where "fire burns continually" male children may be employed ten hours out of the twenty-four, on condition that they have two hours' rest.

2. In certain industries, such as butter, dairies, ready-made clothing, fruit and fish preserveries and toy manufactories, the inspectors may, during the busy seasons in these trades, permit overtime work until eleven o'clock at night, providing the total day's work does not exceed twelve hours, and may temporarily abrogate the provisions requiring periods of rest and one day's rest per week; but in no case are such special privileges to extend over sixty days in any one year.

Serious Defects.—The more important defects in the otherwise excellent child-labor laws of France are: (1) the entirely inadequate force of factory inspectors (there are 110 inspectors to cover the field of more than 159,060 establishments employing more than 3,000,000 people) and the imposition of penalties for violation of law so slight as to often invite the risk of detection; (2) the failure to properly guard the employment of apprentices, or of children who are boarded with their employers; (3) the failure to properly regulate employment in tenement-house sweat-shops.

The regulation of apprenticeship is under an antiquated law of Feb. 22, 1851. The law provides against certain abuses of overwork, etc., and requires that ignorant apprentices shall be given an opportunity (not over two hours a day) to study. But the apprenticeship system is dying as in other countries, there being but 180 trades in France in which apprentices are received, supervision of apprentices by justices of the peace is a dead letter, and parents have been

found generally indifferent to the violation of contract governing their apprenticed children. It is also possible, without infraction of law, for children to be sent to board with an employer, without being protected even by the apprenticeship contract. As a boarder he becomes a member of the family and thus devoid of protection. In this way many children work without learning a trade and are developed into cheap, inefficient workmen. Francis H. McLean, of the International Committee of the Consumers' League, says (*Charities*, April 22, 1905, New York):

"It is estimated that there are about 50,000 children so employed in the capital city alone. The Consumers' League of Paris has undertaken an investigation into the condition of children employed by pastry cooks. Their ages generally run from thirteen to sixteen years. The Superior Council of Labor, the labor-unions, and the Consumers' League have joined in an agitation to so amend the present laws that all the children so exploited shall work only under apprenticeship contracts strictly regulated, and furthermore, that the factory inspectors shall have jurisdiction over them.

"There is reason to believe that the legislation which will come in the years just ahead will even up French child-labor regulation, and make it in many more details as progressive as it is now in the points enumerated above. There are strong and influential bodies, the great Association for the Legal Protection of Workmen and the active Consumers' League of Paris among others, who are leading the fight. And most significant of all, the intelligent labor-unions of France are vitally

and deeply interested in the suggested reforms. In all probability the first step in advance will be to still further curtail the power of a parent to act against the best interests of his child and therefore against the best interests of the State itself. In a country which is so strongly committed to the idea of the superior importance of the common weal over the welfare of any single individual or group in the nation, there can scarcely be any doubt of the early evolution of a model child-labor law."

GERMANY

Statistical.—In 1898 the German ministry of the interior made a special investigation of the employment of children under fourteen years of age in establishments other than factories, but not including agricultural establishments. The investigation was not a census, as several districts were not canvassed, and the methods followed were not entirely uniform throughout the empire, but the figures show approximately the extent of such child labor and its distribution in the several branches of industry.

The total number of children under fourteen years of age engaged in industrial establishments other than factories in 1898 was found to be 532,283. Making allowance for the territory omitted, the report estimates that this number formed 6.53 per cent of the children of school age.

The branch of industry and the number and per cent of children employed in each in 1898 are shown in the first of the following tables, while the second shows the number of children employed in factories for the years indicated:

NUMBER AND PER CENT OF CHILDREN IN GERMANY UNDER 14 YEARS OF AGE ENGAGED IN INDUSTRIAL (I. E., NONAGRICULTURAL) ESTABLISHMENTS OTHER THAN FACTORIES IN 1898

Legislative.—Laws regulating employment of children over thirteen years of age are in the industrial code, amended June 30, 1900, and the ordinance of the federal council, July 13, 1900. The labor of children under thirteen is restricted by the law of March 30, 1903, and of child labor in the coal-mines of Prussia, Baden, and Alsace-Lorraine by the ordinance of the federal council, March 24, 1903. To these general regulations individual states of the empire may add further restrictions. The laws of the empire apply to mines, factories, workshops, commercial establishments, and all industries connected with transportation. Other establishments may be included at the discretion of the federal council. The laws do not apply to workshops in which only members of the family labor under the direction of the parent.

Age.—Employment in mines, factories, building operations, and workshops designated as unsuited to the employment of children, is forbidden children under thirteen, or children over thirteen who have not completed the common-school course. The employment of children under thirteen or those who have not completed the common-school course is regulated according as the child is, or is not, a member of the employer's family.

Children not related to the employer may not be employed under thirteen in any of the above establishments or in theatrical performances. Those over twelve may be employed in certain workshops, in commerce or transportation, and in hotels and restaurants. Children related to the employer may be employed at ten years in industries permitted to the non-related children under thirteen, though the hours are carefully regulated. Such children may not be employed in industries forbidden other children under thirteen. In certain classes of workshops children under ten years may be employed under strict regulations. Related children may be employed under thirteen in the delivery of milk, newspapers, etc., though this may be at any time restricted by local officials.

No female may be employed underground.

Hours of Labor.—All children under thirteen are compelled to attend school regularly, and may not be employed after 8 P.M. or before 8 A.M. Work may not begin before the school session, nor earlier than an hour after the close of the session. Hours of labor may not exceed three per day, except in regular vacation when they may extend to four hours. Children under fourteen may not work in factories more than six hours per day, and children between fourteen and sixteen not more than ten hours. Specific restrictions also regulate the rest periods and higher age limits for employment in certain industries, also special hours for closing on days preceding Sundays and holidays. In the coal-mines of Prussia, Baden, and Alsace-Lorraine children fourteen years old may work eight hours per day, one hour of which must be a period of rest, while the eight-hour shifts must be separated by at least fifteen hours (thirteen hours before Sundays and holidays).

Night and Sunday Labor.—Prohibited 8.30 P.M. to 5.30 A.M., males under sixteen, females of any age. Females may not work after 5.30 P.M. on days preceding Sunday and holidays. Children under fourteen may not work between 8 P.M. and 8 A.M.

Certificates required of all minors seeking em-

ployment, supplied free by local police officials. Employers of children must first file a statement of location of establishment, number of women and children desired, character of work to be done, hours of labor, rest periods, etc. The employer must keep posted in his establishment a list of employees subject to the child-labor laws, showing hours of labor and rest periods. Before employment in mines (Prussia, Baden, Alsace-Lorraine) children under fourteen must be specially examined and obtain a certificate from an authorized physician, that physical development and health will not suffer by such employment.

Exemptions.—The federal council may make certain exceptions to special restrictions contained in the law, but only for a limited period, and may also forbid absolutely the employment of women or children under sixteen in occupations they consider dangerous to health or morals.

These imperial laws are regarded merely as a minimum standard of protection for children, and it is expressly provided that nothing shall prevent the separate states from enacting more stringent laws.

GREAT BRITAIN

FOR CHILD LABOR AND LEGISLATION IN GREAT BRITAIN see separate article on the subject.

ITALY

Statistical.—The following table shows the number and age of the children employed in the establishments visited by the factory inspectors in the years 1897 to 1900. It should be stated that the factory inspectors are few in number and the number of factories visited in one year is not large. The statistics show the extent of the employment of children under the law of 1886, now superseded by the law of 1902:

NUMBER OF CHILDREN IN ITALY EMPLOYED IN FACTORIES VISITED BY FACTORY INSPECTORS IN 1897 TO 1900

[Source: Relazione sull' applicazione della legge 11 febbraio 1886, sul lavoro dei fanciulli, etc.]

| YEAR | Number of children employed | Per cent | | |
|-----------|-----------------------------|-------------------|--------------------|--------------------|
| | | 9-10 years of age | 10-12 years of age | 12-15 years of age |
| 1897..... | 15,592 | 1.30 | 18.07 | 80.63 |
| 1898..... | 11,642 | .96 | 7.79 | 91.34 |
| 1899..... | 1,086 | .18 | 12.34 | 87.48 |
| 1900..... | 6,291 | 1.34 | 13.86 | 84.80 |

Legislative.—The labor of children is regulated by the law of June 19, 1902, and the administrative decree of Jan. 29, 1903. It affects factories, workshops, mines, quarries, work of construction (including buildings and roads). The government may also, on advice of the superior council of hygiene and the council of industry and commerce, entirely forbid, or place under special restrictions, labor of children in industries considered dangerous or unsanitary.

Age.—Labor is forbidden in the above industries under twelve, except that no child under fourteen (unless mechanical traction is used) and no female may work underground. By special decree children under fifteen may be forbidden employment in any establishment or occupation considered dangerous or unsanitary.

Hours of Labor.—Limited to eleven per day

for children twelve to fifteen years old, and not more than twelve for any female. The length and frequency of rest periods is also established by law. The minister of agriculture, industry, and commerce may, with the advice of the provincial council of hygiene, extend the hours of labor for children to twelve per day for a limited period and for specific cause.

Night and Sunday Labor.—Night-work forbidden (8 P.M. to 6 A.M. in winter, 9 P.M. to 5 A.M. in summer) males under fifteen and females of any age. Special regulations may be issued regarding night-work in specific localities. Children under fifteen and females of all ages must have one entire day of rest each week (not necessarily Sunday).

Certificates.—Required of males under fifteen and all minor females subject to the provisions of this law, showing that applicant has proper age, health, and educational qualifications. Certificates furnished free. Lists of protected employees must be kept and annual reports made by employers.

SWITZERLAND

Statistical.—

NUMBER OF CHILDREN IN SWITZERLAND EMPLOYED IN FACTORIES IN 1901

[Source: "Statistisches Jahrbuch der Schweiz," 1902, p. 99.]

| INDUSTRIES | CHILDREN 14 TO 18 YEARS OF AGE | | | PERSONS OF ALL AGES | | |
|------------------|--------------------------------|--------|--------|---------------------|--------|---------|
| | Male | Female | Total | Male | Female | Total |
| Textile | 4,552 | 12,122 | 16,674 | 33,192 | 64,001 | 97,193 |
| Other industries | 12,117 | 6,481 | 18,598 | 117,011 | 28,330 | 145,341 |
| Total | 16,669 | 18,603 | 35,272 | 150,203 | 92,331 | 242,534 |

Legislative.—Child labor is regulated by the federal law on factories of March 23, 1877, supplemented by cantonal laws and administrative decrees by the federal council. The law applies to factories, defined (decree 1891) as industrial establishments (1) employing more than ten persons; (2) using mechanical motive power and employing more than five persons, or employing minors under eighteen, or offering danger to life or health of employees; (3) certain other establishments. The decree of 1897 specifically forbids employment of children under sixteen in certain employments, e. g., attending steam boilers, motors, dynamos, cranes, draw-bridges, circular or band saws, and similar machinery; also work with explosives, harmful chemicals, or processes producing much dust.

Age.—Employment in factories forbidden all children under fourteen.

Hours of Labor.—Limited to eleven per day for all persons employed in factories. For children under sixteen the eleven hours must also include such time for school and religious instruction as required by local authorities. On days preceding Sunday and holidays hours of labor are limited to ten.

Night and Sunday Labor.—Night-work forbidden (8 P.M. to 6 A.M. in winter, and 8 P.M. to 5 A.M. in summer) males under eighteen and all females. Sunday work also forbidden. Under special conditions the federal council may authorize the employment of boys fourteen to

eighteen years, for work in which a continuous process is necessary.

Certificates.—No requirement for employment certificates is contained in the general law, but cantonal governments establish regulations, and all employers are required by law to keep lists of all persons employed.

Exceptions.—May be granted by the federal council in certain cases, and establishments may be designated in which the employment of children is prohibited.

OWEN R. LOVEJOY

CHILD LABOR AND LEGISLATION IN GREAT BRITAIN: The employment of children in Great Britain is regulated by a series of enactments which may be roughly classified under three heads:

- (1) Factory and Workshop Legislation (1802-1901).
- (2) Education Acts and By-laws (1870-1900).
- (3) Employment of Children Act and By-laws (1903).

These measures deal with three classes of children and young persons:

- (a) Young persons from fourteen to eighteen years, employed full time and exempt from school attendance.
- (b) Children from twelve to fourteen years, who have reached a certain standard of education or have made a certain number of attendances during five years of school life, and who are consequently permitted to work either full or half time.
- (c) Children under fourteen, at school during the whole session, whose employment out of school hours is regulated by the Employment of Children Act.

The earliest Factory Act was passed in 1802, and applied almost entirely to apprentices employed in cotton and woolen mills. It was framed to deal with a specific evil, and at that time there was no intention of a general regulation of industrial work. The apprentices were pauper children, sent from the London workhouses by the parish guardians, who paid a small premium to the manufacturers as an inducement to relieve them of the burden of caring for these unfortunate young people. The employers were glad to obtain cheap labor on such terms, for the discovery of the application of power to the spinning and weaving looms had given an immense impetus to the manufacture of textiles. The children were treated as slaves, were frequently worked to death, and, it was said, even murdered, that fresh children and new premiums might be obtained.

The Act of 1802 limited the hours of work to twelve per day; that of 1819 prohibited the employment of children under nine years in factories, and restricted the hours of employment of children between nine and sixteen years to twelve per day. There were, however, no means of enforcing the law, and the evidence given before the Royal Commission of 1833 showed that children were being worked fourteen, fifteen, and even sixteen hours daily. Four factory inspectors were, however, appointed

Early Legislation

In that year. The Act of 1834, which followed as a result of the Royal Commission, instituted the distinction between children under thirteen and young persons between thirteen and eighteen years. It limited the hours of work for children between nine and thirteen years to nine, prescribed two hours' schooling daily, and enforced a weekly maximum of seventy-eight hours. The legal day, however, was from 5.30 A.M. to 8.30 P.M., and children were often detained the entire fifteen hours in the factory, on the plea that they were sent out for three hours' recreation. Moreover, the schools established could only be described as an impudent evasion of the law. Factory hands, disabled or past work, who could neither read nor write, were not infrequently appointed "schoolmasters."

The Act of 1842 prohibited the employment of girls and women in coal mines, a step necessitated by the terrible revelations of the Royal Commission of 1841. In the factories a new principle was introduced—that of the *Half Time System*. Factory children were to work either ten hours on alternate days of the week, and were to attend school on the other days, or were to complete six and a half hours' factory and three hours' school attendance daily. The employer was required to obtain from the schoolmaster a certificate of the child's attendance.

The regulations hitherto promulgated only applied to children employed in mills. The Children's Employment Commission of 1863 showed, however, that large numbers of boys and girls, too young to be employed in factories, were set to work at home or in small workshops at lace dressing, fustian cutting, and other occupations, for fourteen or fifteen hours a day. The Factories Extension Act and the Workshop Act of 1867 regulated certain industries, not hitherto dealt with by law, and placed under control workshops defined as "any room or place in which any handicraft is carried on by any child, young person, or woman and to which the employer has access."

The value and utility of the Factory Act of 1878, which consolidated all previous regulations and removed ambiguities in the existing law, were greatly enhanced by reason of the compulsory system of national education which had come into existence during the years 1870-76. A ten hours' day for women, young persons, and children was imposed in textile, and a ten and a half hours' day in non-textile factories. The working day had to be placed within a defined period of twelve hours, beginning at 6, 7, or 8 A.M. Half-time employment by children under ten was prohibited. The Act of 1891 raised the age to eleven, and charged the local sanitary authorities with the duty of regulating the hygiene of workshops.

The Factory and Workshops Act of 1901 touches the high-water mark of British protective legislation in regulated industries. It consolidates all previous legislation on the subject. No child or young person under sixteen may be employed in a factory without a certificate of fitness from the certifying surgeon of the district. Such certificate may also be required for those employed in certain workshop trades; and the number of these was increased on Aug. 31st 1906 so as to include certainly the most important trades in the country. No girl or

woman may be employed at any night work whatever. The regulations as to the employment of boys over fourteen or over sixteen are very stringent. In paper-mills and furnaces they may not be on night duty more than seven times in two weeks, and then only in shifts of eight hours, a shift of employment alternating between two rest shifts. No young person under sixteen may be employed in silvering mirrors and in white-lead making, nor may any girl work at brick or tile finishing or salt making. No child, altho exempt from school attendance, may be employed in match dipping or metal grinding. The maximum limit of humidity in the atmosphere of cotton factories is carefully regulated. No child or young person is allowed to clean any machinery when in motion. By the Mines Regulation Act of 1887, no lad under thirteen years may be employed under ground.

The Education and Employment Acts of 1876 and 1880 gave power to local authorities to make by-laws permitting children between eleven and thirteen years to be exempted from school attendance if they had reached a certain standard of educational efficiency. The Act of 1899 made these regulations more stringent. It prohibited half-time employment for children under twelve years, and then only permitted it if 300 attendances had been made in not more than two schools during the previous five years. The attainment of a standard fixt by a by-law sanctioned by the Board of Education also secured half-time exemption. For employment in agriculture the age is eleven, but no standard of education lower than the fourth grade for half-time, or the fifth grade for full-time exemption is permitted. The Act of 1900 raised the age for exemption by by-law from thirteen to fourteen years, increased the fine for contravention of the Act from five to twenty shillings, and prohibited full-time exemption under fourteen years, unless 350 attendances had been made in the previous five years.

Out of a total number of 6,870,832 children on the registers of schools in England and Wales in the year 1904-5, 80,368 were partial-exemption scholars. This number showed an increase of 1,492 against the number of half-timers at work in 1903-4. During recent years all the more progressive cities have gradually prohibited half-time employment, and have raised the educational requirements for full exemption to the highest or seventh standard. London and the surrounding suburbs, Liverpool, Bristol, Southampton, Portsmouth, Norwich, and a large number of smaller municipalities, have led the way. The manufacturing counties, Lancashire and Yorkshire, are unfortunately responsible for more than half the partial-exemption scholars in England.

In spite of stringent factory and educational legislation, extending over a period of more than a century, there has grown up, side by side with school attendance, a system of employment out of school hours, a system which has interfered sadly with efficient education. The case of children engaged in theatrical entertainments has been dealt with under the Prevention of Cruelty to Children Act of 1889, which prohibited the performance of children under seven, and required licenses for child actors under eleven and for young persons under sixteen employed as acrobats. The Act also proscribed street selling by

School Children

girls under sixteen and boys under fourteen between 9 P.M., and 6 A.M., but this provision was inoperative, the measure being so worded as to render it a matter of extreme difficulty to secure the conviction of a parent or guardian. But in addition to the children thus employed, there were known to be many thousands of children engaged in errand running, in shop and domestic work of various kinds, and in home industries, who, in addition to 27½ hours in school, were spending from forty to fifty, or even sixty, hours weekly in unremitting toil for very small wages. Accordingly, in 1899, a small society was formed, called the Committee on Wage-Earning Children, which had for its object the reform of legislation for the protection of children of school age. As a result of a deputation to the Minister of Education, Sir John Gorst, a parliamentary inquiry was instituted, which showed that over 144,000 children were engaged out of school hours in work of various kinds, while attending school full time. Further investigation was considered desirable; and in 1901 an Interdepartmental Committee was appointed consisting of representatives of the Board of Education, the Home Office, and the Board of Trade. The Commission sat for nearly six months, and took evidence from representatives of public and private organizations interested in the welfare of children, from employers, school managers and teachers, and social workers. The Committee found that the number of children returned by the parliamentary inquiry as employed was well below the number actually at work, and estimated that at least 200,000 were attending school full time, and were at the same time engaged in various occupations. The recommendations of the Commissioners were embodied in the Employment of Children Act, 1903, of which the most important provisions are as follows:

Act of 1903

are as follows:

- (1) No child may work before six in the morning or after nine at night.
- (2) The carrying of heavy weights, and employment in occupations likely to prove injurious to health are prohibited.
- (3) The age for the prohibition of the employment of children in theatrical performances is raised from seven to ten years.
- (4) Local authorities (the councils of county boroughs, municipalities of over 10,000 inhabitants, urban districts with over 20,000 inhabitants, elsewhere the county council) are empowered to make by-laws, regulating all occupations of children. Separate regulations for street trading may be enacted.

The measure came into operation on Jan. 1, 1904, and by-laws have already been framed and sanctioned by the Home Office in the case of about sixty large towns. About forty-seven other municipalities have regulations under consideration. The by-laws made by the London County Council may be quoted as a model. Doubtless other cities will base their regulations upon those of the metropolis. The most important clauses are:

- (1) No child under eleven years may be employed.
- (2) Children engaged in industrial work at home may only be employed between 5 and 8 P.M.
- (3) No child may be employed for more than three and a half hours per day, or for more than twenty hours per week.
- (4) A child may not be employed in a laundry, or in connection with the sale or delivery of intoxicating liquors, except where such liquors are sold in sealed vessels.
- (5) A child under twelve years may not be employed as a lather boy in any barber's or hairdresser's shop.
- (6) A girl under sixteen may not be employed in street trading except in the company of a parent or guardian.
- (7) A child liable to attend school full time may not engage in street trading before 7 A.M., between 8 A.M. and 5 P.M., or after 8 P.M., except when in company of a parent or guardian.

Between April 1st and Sept. 30th, the hour may be extended to 9 P.M.

(8) A boy engaged in street trading must wear a badge on the upper part of his right arm in such manner as to be conspicuous.

These regulations will be administered by inspectors appointed by the council for the purpose, by school attendance officers, and, in the case of street traders, by the police, if necessary. Children employed in shops will be under the supervision of the inspectors under the Shop Hours' Act. This measure, passed in 1892, limits the hours of employment of young persons exempt from school attendance and engaged as shop assistants to seventy-four weekly, including meal hours.

NETTIE ADLER.

CHILDREN'S AID SOCIETY (of New York City), THE: A Society organized in Feb., 1853, by the late Charles L. Brace (q. v.), who with a few other gentlemen had already been working for the vagrant boys of New York City. The society was incorporated in 1854 "for the education of the poor, by gathering children who attend no school into its industrial schools, caring and providing for children in lodging-houses, and procuring for them homes in the rural districts and in the West."

The fundamental idea upon which the society was founded, and which has been its governing motive ever since, was that of self-help—of teaching children how to help themselves. Its twenty-one industrial schools have trained and given aid and encouragement to over 100,000 children of the very poor. In the boys' and girls' lodging-houses about 200,000 homeless and vagrant boys and girls have found shelter, instruction, and the kindly advice and admonition of experienced superintendents.

Since the founding of the Children's Aid Society in 1853, it has rescued and placed in family homes 23,528 orphans or abandoned children, provided situations at wages in the country for 25,527 older boys and girls, restored 5,857 runaway children to parents. Of those placed in family homes in the West the vast majority have become farmers or farmers' wives. Of the others we know of the following noteworthy careers:

| | |
|------------------------------------|-----|
| Governor of a state..... | 1 |
| Governor of a territory..... | 1 |
| Members of Congress..... | 2 |
| Sheriffs..... | 2 |
| District attorneys..... | 2 |
| City attorney..... | 1 |
| Members of state legislatures..... | 4 |
| County commissioners..... | 3 |
| Judges..... | 2 |
| Bankers..... | 27 |
| Merchants..... | 22 |
| Business clerks..... | 460 |
| Lawyers..... | 34 |
| Physicians..... | 17 |

| Teachers..... | 82 |
| High-school principals..... | 4 |
| Superintendent of schools..... | 1 |
| Civil engineer..... | 1 |
| Clergymen..... | 21 |

As supplementary to its work the society maintains: The East Side Mission, whose work is to distribute flowers daily during the summer months among the sick and poor; free reading-rooms for young men; the Health Home at West Coney Island, comprizing cottages and dormitories where mothers with sick children are given an outing; the Sick Children's Mission, at 287 East Broadway, with a staff of fourteen physicians and four nurses, who visit the sick poor at their homes and supply free medical attendance, medicine, and food for sick children, of whom 1,500 are treated yearly; a summer home at Bath Beach, L. I., where over 4,000 tenement-house children are given a week's outing at the seaside each year; six lodging-houses, five for boys and one for girls, in which, during 1905, 242,780 meals and 136,788 lodgings supplied to 4,826 different boys and girls; twenty-one industrial schools with kindergartens, and twelve night-schools, in which 15,369 children were taught and partly fed and clothed. One of the industrial schools is located in each of the lodging-houses for boys. Special features of the girls' lodging-house, now called the Elizabeth Home for Girls, are its dress-making department, sewing-machine and type-writing schools, and laundry. The instruction in all branches is free. An adjunct to the society is a 125-acre farm located at Kensico, Westchester County, N. Y., for the primary and brief education of the large street boys in agriculture, preparatory to their being provided with places in the country.

At the Health Home in 1900 over 8,000 mothers and children were received and given the benefit of pure sea air, together with skilled medical care and nourishing food; 27,000 of these were there a week, and instances where a longer stay was advisable the time was prolonged until a permanent cure was effected. Parties of little ones were also taken there each week from the nurseries.

All the different branches of the society's work are dependent upon the contributions of the public.

The central office of the society is at the United Charities Building, Fourth Avenue and Twenty-second Street, C. L. Brace, secretary.

The trade with the principal countries besides bullion, is in Haikwan tael (the Haikwan tael equals 68 cents): Exports (1903): To Japan and Formosa, 30,000,000 taels; Great Britain, 10,000,000; Hongkong, 89,000,000 (of Hongkong's exports, £582,764 went to Great Britain); United States, 19,000,000; Russia, 12,000,000; other Eu-

ropean countries, 34,000,000. Imports: From Japan and Formosa, 80,000,000; Great Britain, 60,000,000; Hongkong, 225,000,000; (of Hongkong's imports, £2,719,614 came from Great Britain); United States, 45,000,000; India, 35,000,000;

Commerce

Russia, 15,000,000; other European countries, 56,000,000. The chief exports are: Silk, raw and manufactured, 74,000,000 Haikwan taels; tea, 26,000,000; raw cotton, 13,000,000; beans, 10,000,000. The chief imports are: Cotton goods, 128,000,000; opium, 43,000,000; oil and kerosene, 15,000,000; sugar, 15,000,000; metals, 15,000,000.

China is essentially agricultural. The land is all held by families on the payment of an annual tax. Holdings are generally small; methods of implements, primitive; irrigation, very common. Horticulture is a favorite pursuit, and there are fruit-trees in great variety. Opium is now grown all over the empire. Sugar and rice are grown in the south; wheat, barley, and other cereals in the north; tea in the west and south. Silk is equally important. Cotton mills are being developed, especially at Shanghai. There were, in 1900, fourteen cotton mills, with 460,000 spindles. Near Hankow are iron-works turning out 300 steel rails a day. All the eighteen provinces produce coal, and China is among the main coal countries of the world. Iron ores also abound.

Revenues and expenditures are estimated at about \$75,000,000 annually; the public debt at \$616,025,000. With the exception of a railroad loan this debt is based on customs.

The emperor is the sole high priest, and Confucianism the state religion, tho Buddhism and Taoism are considered also indigenous and adopted. There is no hierarchy maintained at public expense, nor any Confucian priesthood. With the exception of the universal ancestry worship and the worship of Heaven (at Peking), there is little outward Confucian ceremonial. Buddhism and Taoism have a gorgeous ritual. Many people profess and practise all three. The mass of the people are Buddhist. Mohammedans number 30,000,000; Roman Catholics, 1,000,000; Protestants, 150,000.

For education, railways, post-office system, etc., see section on Social Reform, below.

II.—Government

The present Emperor of China succeeded to the throne in 1875 under the title of Kuang-hsü. The supreme dictation of the empire is in the privy or Grand Council (*Chün Chi Ch'ü*); the administration is under the cabinet (*Nei-ko*) of four members, two of Manchu and two of Chinese origin, with two assistants from the Han-lin or Grand College, who see that nothing is done contrary to the civil and religious laws of the empire. Under this cabinet are eight boards. There are also, independent of the government and theoretically above the administration, forty or fifty censors, who can present any remonstrance to the emperor. A new foreign office was created in 1901, with Prince Ching as president. Each of the eighteen provinces (China proper) is ruled by a governor, responsible to the emperor. Grand Secretary of the Cabinet, Prince Ching.

III.—Social Reform

There is perhaps no country in the world where social reform is more inseparably connected with

political conditions than in China. The great uncertainty on the part of the Chinese people as to the sincerity and the continuity of purpose on the part of the government has made the progress of reforms of all kinds much slower and less steady than would otherwise have been the case. The suddenly manifested hostility of a single high official has sometimes exerted upon an advance movement the effect of an August frost upon a flower bed.

By an imperial decree of Sept. 13, 1901, the government ordered the establishment of modern universities, colleges, and schools in each provincial capital and in the subordinate cities. These were to be based upon a scheme drawn up by Dr. Watson M. Hayes, a Presbyterian missionary of Shantung, whom Yuan Shih K'ai, then governor of that province, had invited to the capital for that purpose. The plan

Educational was adopted as a model for the **Reform** empire. Unfortunately the beginning was made at the top, the provincial colleges being opened before there were any intermediate or primary schools to supply pupils. This strange inversion of the natural order—resembling a pyramid standing on its apex—rendered the execution of the project a matter of extreme difficulty, the students who wished to enter the colleges having little or no preparation, and there being no place at which it could be obtained. Most of the provincial capitals have now colleges of this sort, some of them with elaborate buildings partly furnished in foreign style, with a tower and a town clock; yet with a very elementary course of instruction. The Shansi University differs from all the rest in having for its use the sum of 50,000 taels (ounces) of silver each year for ten years, a sum which would have been used as a missionary indemnity but for the efforts of Dr. Timothy Richard, Secretary of the Christian Literature Society, who was invited by the Chinese Government to consult with the leading officials of Shansi. The Western Department of the new university was placed in his care in 1902, for a period of ten years, and under the care of the late Dr. Moir Duncan it has done excellent work. The province of Chili, to the government of which Yuan Shih K'ai was promoted from Shantung, under his vigorous lead has made exceptional progress, and a brief sketch of what is there undertaken will give an idea of what is aimed at for the empire, altho the work is elsewhere much less advanced than in that province.

It should be said that for these excellent results Yuan is largely indebted to the untiring efforts of Dr. Chas. D. Tenney, who began educational work in Tientsin long before the government took any interest in it.

According to a memorial of Yuan there are in his jurisdiction the Pei Yang University at Tientsin; a high college at Pao Ting Fu; the Pei Yang Medical College; an industrial high school; an agricultural high school, and 21 agricultural and industrial primary schools. There are 89 normal high schools, normal schools, and other training-schools; 27 middle schools, 182 advanced schools; and 4,162 primary schools; a Woman's Normal College, and 40 girls' schools. There are 18 schools for Yamun runners; a strangers' school, a tracing and mathematical school, and a telegraph college. The number of students shown in the records is 86,653, besides those in the half-day and night-schools. The total number of scholars, including military and police

students, amounts to 100,000. Each of the 124 districts of the province has about 20 primary schools, with about 30 boys each, who are taught upon a more rational plan than in the old schools. Each district has also one low- and one high-grade elementary school, with an average attendance of 50 boys, who not only study Chinese, but who are started in history, geography, arithmetic, and simple science. In each of the 16 prefectural cities there is a middle school where the study of English is begun, with more advanced courses of science and mathematics. Much attention is given to developing national and military sentiment. Physical training is an important part of the curriculum. In the lower schools there is simple drill; in the higher colleges the students wear uniform, are given manual exercises with the rifle, and are put through military evolutions. The text-books impress upon students the duty of developing the power of China, the danger of military weakness, and the importance of self-sacrifice for national interests, illustrating these teachings by pointing to the rapid development of Prussia and Japan. The instruction is all free, and in the higher schools the students are boarded and even clothed at public expense, thus opening the new education to the poorest families. This is the scheme, but at present much of the teaching is very inadequate, and there is a great lack of teachers. In every province are found Japanese teachers who can adapt themselves to the Chinese much better than can Occidentals, and who can be secured for much smaller salaries. When the general plan here outlined shall have been adopted all over China, as must eventually be the case, we shall have an entirely new empire. An important feature is the surprising development of schools for women and girls, which, absolutely unheard of a few years ago, are now very common, and rapidly increasing in number and importance. The girl students are becoming imbued with patriotic sentiments, and will be a feature of the greatest interest in the new China.

For more than two generations missionary influence has been exerted against the ancient Chinese custom of binding the feet of girls, but during the past five years this reform has made more progress than during the previous half century. Great societies have been organized by the Chinese themselves to promote the cause; essays and poems have been composed, and proclamations put out in its favor by many of the highest officials in China. An imperial edict was issued, which, while not absolutely forbidding foot-binding, strenuously exhorted against

Foot-binding and Opium

it. It is known that some persons holding high positions are memorializing the government to take more stringent measures than heretofore in the direction of this reform. The progress already made is certainly most encouraging. Memorials against the practise of keeping eunuchs in the imperial palace have been sent in, but the abolition of this ancient custom is exceptionally difficult. A serious effort is being made by the Chinese Government to put an end to the vice of opium-smoking, by forbidding its use by officials and in schools and colleges, by restricting its use also by confirmed smokers, and by limiting the time during which even they may remain exempt, and perhaps also by forbidding the cultivation of the poppy. The assigned reason for this reform is that the court is ardently deter-

mined to make China powerful. It is to be hoped that in the end China may succeed, as Japan has done, in strangling this gigantic evil, which has long been more fatal than war, famine, and pestilence combined. Such a result would be one of the most remarkable transformations in history.

The number of Chinese periodicals is rapidly increasing. Many of them are published at the ports, virtually under foreign protection, and a large percentage are either controlled or strongly influenced by Japanese. In some of the provincial capitals there are journals published at intervals of several days, which will gradually develop into dailies. A woman's journal has appeared in Peking, issued every day, which has been a great stimulus to the women of that city, intellectually and perhaps morally. The Chinese woman editor has interested herself in giving and in attending lectures on current events, sanitation, and the like. Many Chinese papers have paid very little attention to the news of the day, which would be unintelligible to most readers, but print local gossip, tales of the supernatural, vicious stories, and blackmail. As a whole, however, Chinese journalism is said to be improving, exhibiting very little hostility to Christianity as such, while the Bible and literature intended for instruction are treated with respect.

Periodicals

In connection with educational and other reforms, mention should be made of the new literature with which China is literally inundated, issued by an increasing number of firms, especially in Shanghai. A careful analysis of the character of some of these books, by a competent foreign scholar in Shanghai (Mr. John Darroch), is of general interest. There were, he found, 60 volumes on the science of education, and 20 volumes of text-books on such topics as geography, physics, etc. There were 90 histories, varying in price from five cents (silver) to \$2.50. Of these 7 are so-called universal histories, 11 of Europe, 12 of Japan, 7 of China, 5 of Russia, 4 of England, 2 each of France and the United States, 3 of Egypt, 4 of the nineteenth century, and 1 each of Rome, Italy, Greece, and Turkey. There were 40 books on geography, 60 on government, 40 on law, 30 on political economy, 70 on mathematics, 50 on literature, 30 novels, 50 on language, 70 on health, 60 on science, 70 on drawing, 120 on the art of war, 30 on agriculture, 20 on astronomy, 40 on mechanics, 30 books of travel, and 20 on mensuration: in all more than 1,100 works. As a rule they are excellently gotten up, very unlike the old style of Chinese books. They are plentifully besprinkled with English words, showing that the Chinese language was felt not to be sufficiently flexible.

New Literature

A Chinese scholar has invented what he calls a "Mandarin alphabet" of 50 more or less artificial characters, and 12 finals, by the aid of which it is claimed that within a few weeks the most untutored can learn to read fluently. This has been tried on a considerable scale both by Chinese and by foreigners, and appears to be a success. The use of the Mandarin alphabet is rapidly extending in China, as a result of a higher national vitality, increased communication by railways, and (it is said) by making its study compulsory. While the numerous dialects of China cannot be superseded, the wider currency of the Mandarin form—already current in some of its variations

in 14 out of the 18 provinces—is a distinct advance.

The Chinese postal system is not yet ten years old, but during the last half of that period it has been greatly improved and extended, until it now connects almost all the cities of the empire. During the year 1905 the number of offices was increased by 307, making a total of 1,626. By the end of 1906 it is expected that the number will have risen to 2,000, as on the average a new office is added every day. The number of articles handled increased in 1905 from 66,500,000 to 76,000,000, and the parcels from 771,000 to over 1,000,000, while the money-order transactions grew from 500,000 taels to 820,000. The effect of this postal reform is profound and far-reaching, socially, educationally, and politically.

Post and Telegraph

All China is now covered with a network of telegraph wires, which has largely increased the power of the central government over the remote and semi-independent viceroys, or governor-generals. A telephone system has been introduced into Peking, connecting the different boards and the palace. Other cities also have telephone service and electric lighting has become not uncommon.

In many of the chief cities there have been established industrial institutes, in which different arts and crafts are taught to workmen of the most unpromising character, some of them children, others beggars picked up from the street, a class for which there has hitherto been no ray of hope. These establishments are found in Peking and in the capitals of many of the larger provinces, in cities like Suchow, Hangchow, Chi Nan Fu, and Ch'eng Tu Fu. Similar enterprises for the helpless poor—men and women—have been opened in unoccupied granaries, temples, etc., under the charge of a kind of Bureau of Charities (itself an unheard-of thing), the machinery, teachers, etc., being frequently imported from Japan. The abundant patronage of these places shows that they have met a deep need. Another branch of the same general plan is the instruction of prisoners in common jails. This reform is now well rooted, and is a wonderful contrast to the previous indifference and neglect. Prisoners, well-dressed, well-fed, well-guarded, are made to weave rugs, run sewing-machines for leather work, make boots and shoes, stamp Chinese writing paper, do carpenter and iron work, and many other things. In an institution of this kind in Tientsin there is a lecture hall, where the prisoners are required to attend at fix times and listen to exhortation and instruction. Large sums have been invested in these enterprises, which will yield abundant return.

Industrial Reform

Industrial exhibits have been opened for the display of the results of these and other manual training-schools. By degrees this grows into a standing exhibition of whatever may be most noteworthy in the output of a place. Such a one has been open at Tientsin for more than two years, having separate days for men and for women, with an average of 2,000 visitors a day. As an immediate and striking result of these movements similar exhibitions have been ordered in every large city, with a view to holding first a national exposition, and after a few years an international one. No better method could be devised to bring the empire to industrial self-consciousness. Manufactures of many kinds are

beginning to appear here and there, generally under the patronage of the new Board of Commerce, which is invariably careful to require, under pain of forfeiture of the whole, that no stock shall be sold to a foreigner.

Cotton-mills have been established in Shanghai for many years, with tens of thousands of employees, but many of them have not been financially successful. Similar mills are now springing up elsewhere in cotton-producing districts. In many places improved wooden looms are being introduced from Japan. Experts from Hangchow are now teaching the natives of Shantung how to spin and weave the silk of that province, hitherto used only for the comparatively coarse product known as pongee, into the most beautiful fabrics, rivaling those of Central China. Cotton is frequently woven into various forms of toweling on Japanese patterns. Soap-works, candle factories, glass-works, knitting companies, and the like are found in different parts of the empire. But these enterprises often come to nothing for lack of capital, experience, and mutual confidence. In three different provinces it has been proposed to open potteries and kilns on western principles. A company has been organized to use steam trawlers of English make, with nets of English pattern. One official applied for American machinery for digging artesian wells; another asked an American consul for catalogs of machinery adapted to the manufacture of tape braid, and of plain and embroidered ribbons. Still a third purchased machines for making cigarettes, to keep the great profits of the trade in Chinese hands. From a factory in Shanghai there is a considerable sale of pianos to Chinese. Thousands of bicycles are annually bought by Chinese, and a year or two ago they were introduced into a remote city of Hunan by a student returned from Japan.

An imperial decree ordered the introduction into the larger cities of a uniformed and paid police force, and the practise of street cleaning. Something has been done in this direction even in the interior, while in centers like Peking and Tientsin the system is now well established. In many places, however, for lack of intelligent supervision, it has come to nothing, or has been used as a means of extortion. Great numbers of students have been sent to Japan to study police methods, but the time allowed for this is almost invariably too brief.

Agricultural colleges and schools have been set up in many provinces, the instructors being often Japanese, but with results of varying value. In some there is no experimental farm, and others, through superstitious belief in geomantic influences, are badly located. In all cases much depends upon the temper of the governor of the province, and much also upon the local magistrate, who is often indifferent or hostile. Considerable attention has been paid to

Agricultural Reform

arboriculture. A few years ago, during the governorship of Chou Fu in Shantung, it was estimated that 2,400,000 trees had been planted in the neighborhood of cities, waterways, and roads. The example of the Germans at Ts'ing Tao has been followed, and many hillsides heretofore barren are now covered with pines. Mulberry-trees have been imported from the Chekiang province to improve the feeding of silk-worms.

The Board of Commerce in Peking has been the means of the organization of Chambers of

Commerce, as in Canton, where seventy-two guilds have combined in order to push trade, by studying modern commercial methods. It intends to open a bank to issue notes, and to start a paper to expound its objects and aims. An exhibit of foreign manufactures is also planned, to serve as an object-lesson to native workers. The avowed intention is to drive foreign trade out of the empire.

By the latest treaty between Great Britain and China (signed in 1902) China voluntarily agreed to revise her mining regulations in such a way as to promote the interests of Chinese subjects, and yet offer no impediment to foreign capital. Expert foreigners who are interested in these matters have for some years complained that the government is acting in direct contravention of this treaty, and that it has drawn up regulations intended to keep foreign capital out of China altogether, in accordance with a growing resolution not to have the empire exploited by outsiders.

Mining

In some cases mines of considerable productiveness have been closed for lack of native engineers to work them.

In the last American treaty (1893) China agreed to reform her currency, and with this in view invited Professor Jencks of Cornell University to visit China, and to give his advice, which was done. One of China's foremost statesmen, Chang Chih Tung, in a memorial to the throne, recommended that Professor Jenck's judicious recommendations be *not* adopted. There is no unity in the monetary output of the empire, each province having its own coinage, frequently not current elsewhere. Each governor-general or governor has been industriously working one of the scores of different mints existing in China, issuing copper pieces ostensibly worth ten cash, but in reality representing an amount of metal only equivalent to from three to six of the ordinary cash. The immense apparent profits of this transaction were both illusory and transient. The people were very reluctant to accept the new coins, and only did so on the understanding

Coinage

that they were receivable for taxes. When this was later refused the new pieces were at a discount. At the time of maximum production it was estimated that the output for the empire was more than 16,400,000,000 pieces a year. Much of the ordinary cash has been withdrawn to be melted over, many of the mints are now closed, prices in general have risen, officials have been enriched, and the people plundered—all in the name of "Western monetary reform."

The navigation of the inland waters of China by steam vessels has within the past few years been greatly extended, with obvious advantages and equally patent evils. The inspection of boilers is infrequent and at times perfunctory, the dangers and accidents from overcrowding serious and constant, the injury done to the banks in time of high water by the wash of steamers so great as to lead to frequent riots, and, especially on the West River of the Canton province, the number of boatmen thrown out of employment is given as an excuse for the great increase of river piracy, involving the loss of more than one foreign life, and the murder of great numbers of Chinese. The Chinese Government has adopted the plan of opening inland "ports" at various places along the line of railways and in Manchuria, in order the better to resist the aggressions of any single

power by enlisting the interest of all the rest. Each new "port" is an additional inlet for new ideas, and while the result may not be an unmixed good, the change is an important step in advance.

The era of railway building on the part of the Chinese themselves seems to have come, or is soon to arrive. We may now reckon ten railways in China as in working order, but

Railways

the number increases so rapidly that statistics soon become obsolete. The following lines are in operation (the length in English miles is in some cases approximate only):

- (1) Peking to Tientsin (83½ m.); Tientsin to Tangku (27 m.); Tangku to Shanhai-Kuan (146½ m.); thence to Newchwang (268 m.); total length, 555 m.
- (2) Peking to Tungechow (14 m.).
- (3) Peking to Hankow (760 m.); branch-line from Sin Si Ho to Chu Ku Tien (9 m.).
- (4) Ts'ing-Tao to Chi Nan Fu Shantung (German), 240 m.
- (5) Shanghai to Wusung (10½ m.). An extension is now in operation to Suchow.
- (6) P'ingsiang to Siling (borders of Kiang-su-Hunan; 56½ m.).
- (7) Canton to Samshui.
- (8) Taokou to Ch'inghua Chen (Honan) "Peking Syndicate" railway bought by the Chinese Government (89½ m.).
- (9) Manchurian line. Port Arthur to Harbin (about 400 m.), controlled by Japanese to Kuan Ch'eng-tzu.
- (10) Hsinment'un to Mukden.

The status of the Manchurian railways is not yet definitely settled.

The following lines are in course of construction:

- (1) Canton to Hankow.
- (2) Peking to Kalgau (120 m.; completed to Neu K'on).
- (3) Cheng Ting fu to T'ai Yuan fu, Shansi (160 m.; about half completed. It is narrow gage).
- (4) Shanghai to Nanjing; extension of No. 5 above; to be about 180 m. long.
- (5) Swatow to Ch'ao Chou fu (Japanese). This short line is practically completed.
- (6) Ping Yang fu (Shansi) to Tse Chou fu.
- (7) K'ai Feng fu to Honan fu (140 m.). This is to be a branch of the Peking-Hankow line.
- (8) Yunnan to Tongking (French).

In addition to these, fifteen or twenty other lines have been projected, and permission to build secured. With the exception of a Portuguese-Chinese railway from Macao to Samshui, these seem likely to be built, if at all, by Chinese alone. Nearly all foreigners are agreed that this is next to impossible under present conditions, especially the lack of unity, engineers, and funds. The effect of the railway development of China is already very marked, but its social, economic, and political effects will be much greater every year.

For some years a commission, of which Wu Ting Fang is the leading member, has been engaged on a revision of the Chinese legal code. The barbarous punishment of slicing to death has been abolished, the use of torture forbidden, and heavy fines are to take the place of the bamboo. No general confidence is felt, however, that these latter

Legal Code

innovations will for a long time to come be generally adopted, the obvious motive being to make it appear that China is advancing after the manner of Japan as a preparation for demanding the abolition of extra-territoriality. A striking reversal of old custom is the permission for Chinese and Manchus to intermarry; and for Manchus to engage in trade, etc., as the Chinese do. The ancient discrimination between civil and military officials is now disappearing, as it is felt that to make China strong, the military and naval professions must be respected and respectable. This topic would of itself require an essay. The best Chinese troops, especially those under the

command of Yuan Shih K'ai are now well-armed, well-drilled, well-uniformed, and well-housed. In the autumn of 1905 a great military review with maneuvers was executed on the plains of Chili to which foreign military attachés and correspondents were invited, and were duly impressed by the evidences of a revolutionary change in Chinese military effectiveness. During the succeeding year similar exercises took place in northern Honan. It is the plan to unify the hitherto distinct provincial forces into one great Chinese army, and to raise the number of troops to at least half a million. At present the Chinese forces are by no means what they may be expected to become a few years hence when their training and their *esprit de corps* will doubtless render them formidable to any enemy.

The always strong national feeling of the Chinese is being supplemented by what appear to be the germs of patriotism. This is at present accompanied by an intense antiforeign wave, the effect in part of the victory of the Japanese over Russia. Imperial birthdays are now celebrated with processions of school-children,

Patriotism

sometimes address by scholars or officials. The number of Chinese students in Japan has increased so rapidly that in the autumn of 1906 they were estimated at 14,000. Many of them become dissatisfied with Confucianism and drift into Epicureanism. China's student class is one of her most serious problems.

The two imperial commissions, dispatched in 1905 by China to the West to study forms of government, furnish one of the most significant signs of progress yet seen in China. An unexplained attempt to destroy one of these parties by a dynamite bomb at the Peking railway station was a sinister prelude, and an ill-omened introduction into the East of Occidental methods. Upon their return the commissioners recommended that the proposed changes be adopted by China. Although no date has been fixed, there have been hilarious rejoicings in many of China's cities, with the obvious design of rendering a change of policy more difficult. As a preparation for this step, general, and even compulsory education is recommended by leading officials. It is interesting to observe the freedom with which the most far-reaching administrative changes are now proposed, both in memorials to the throne and by the press. Fifty-three students educated abroad have recently been examined in Peking, eleven of whom were rejected. Nine gained the doctor's decree (Chin Shih), five the master's (Ch'ü-jen) in the first grade, and eighteen in the second degree, while ten failed. The candidates were allowed to write an essay on the value of compulsory education in English as an alternative to an essay in Chinese on a passage from the classics. This is a patronage of the New Learning of a practical sort, and means much for the future. China's greatest need at the present time is a large number of men, not merely of ability, but of incorruptible integrity. Some such there are, but incomparably fewer than are needed. If, with all other social progress, China is able to develop such men in numbers at all commensurate with her needs, she will ere long take her place among the great nations of the earth.

ARTHUR H. SMITH.

A. H. Smith, *Village Life in China*, New York, 1901; idem., *Chinese Characteristics*, ib., 1902; idem., *China in Convulsions*, ib., 1901; A. R. Colquhoun, *China in Transformation*, 1898; Lord Bessborough, *The Break-Up of China*, London, 1899; R. J. D. Ball, *Things Chinese*, ib., 1904; A. J. Brown, *New Forces in Old China*, New York, 1904.

CHINESE IN THE UNITED STATES: There is hardly any other country in the world in which the question of immigration even approximately reaches the importance it has in social matters in the United States. Immigration may be divided in various ways; yet two great divisions will always remain, the *desirable* and the *undesirable*. To the latter belong people morally, mentally, or physically unfit for a country's citizenship. Such disqualifications may be inherited or acquired. They may even be based only on the fact that the people concerned do not appeal to the point of view of the country they desire to enter. To accurately determine the line where it will be justifiable to impose discriminating legislation against a whole nation is therefore a matter calling for grave consideration. Yet, for various reasons, the question of excluding the Chinese from the United States has long been a widely, and often hotly, debated proposition.

The Chinese, generally, have never evinced any great inclination to leave their native shores, probably because they feel alien in almost every land except their own. Up to the "fifties" of the nineteenth century very few Chinese came to the United States; but in 1854 the numbers arriving annually began to jump, and altho never assuming very large proportions, it became clear that discouragement rather than encouragement ought to be the watchword. Prior to 1854 the largest Chinese immigration recorded for one year was 42. In 1855 it was more than 13,000. During the following decades it fluctuated, reaching the maximum in 1882 with 39,579. The exact figures from 1869 to 1903 are as follows:

CHINESE IMMIGRATION INTO THE UNITED STATES, 1869-1903

| YEAR | MALES | FEMALES | TOTAL |
|----------|--------|---------|--------|
| 1869.... | 11,900 | 974 | 12,874 |
| 1870.... | 14,024 | 1,116 | 15,140 |
| 1871.... | 6,786 | 349 | 7,135 |
| 1872.... | 7,605 | 183 | 7,788 |
| 1873.... | 19,403 | 889 | 20,292 |
| 1874.... | 13,533 | 243 | 13,776 |
| 1875.... | 16,055 | 382 | 16,437 |
| 1876.... | 29,521 | 260 | 29,781 |
| 1877.... | 10,518 | 76 | 10,594 |
| 1878.... | 8,641 | 351 | 8,992 |
| 1879.... | 9,264 | 340 | 9,604 |
| 1880.... | 5,732 | 70 | 5,802 |
| 1881.... | 11,815 | 75 | 11,890 |
| 1882.... | 39,463 | 116 | 39,579 |
| 1883.... | 7,987 | 44 | 8,031 |
| 1884.... | 241 | 38 | 279 |
| 1885.... | 12 | 10 | 22 |
| 1886.... | 25 | 15 | 40 |
| 1887.... | 8 | 3 | 10 |
| 1888.... | 21 | 5 | 26 |
| 1889.... | 90 | 28 | 118 |
| 1890.... | 1,401 | 315 | 1,716 |
| 1891.... | 2,608 | 228 | 2,836 |

The sudden drop of the figures from thousands to tens was caused by a law passed in 1882, suspending Chinese coolie immigration for a period of ten years. This law, however, did not satisfy the Pacific coast states. The question of Chinese immigration has always been most acute in California, and it was this state which first demanded still stricter legislation, so that not only the Chinese should be prevented from entering, but that even those already arrived might be excluded. Such a law was finally passed in 1894. The following figures give a comprehensive survey of the disproportional quota of Chinese in California as compared with the country at large, and they show, furthermore, the fact that the city of San Francisco carries its full share of the burden:

NUMBER OF CHINESE IN UNITED STATES, 1850-1900

| YEAR | UNITED STATES | CALIFORNIA | SAN FRANCISCO |
|--------|---------------|------------|---------------|
| 1850.. | 758 | 660 | |
| 1860.. | 35,505 | 34,935 | |
| 1870.. | 63,042 | 48,826 | 11,729 |
| 1880.. | 104,468 | 73,548 | 21,213 |
| 1890.. | 106,688 | 71,066 | 24,613 |
| 1900.. | 81,534 | 40,262 | 10,762 |

These figures show conclusively that California's interest in the matter was paramount; and, indeed, most of the facts calling for restrictive legislation have been furnished by that state. The following paragraphs will set forth the various reasons that have been urged for and against Chinese immigration:

Against Immigration of Chinese

The "Report of the Industrial Commission" (xv., 747 sqq.) advances a great many seemingly valid reasons for excluding the Chinese. It says in condensed language:

The Asiatic competition has spread enormously in the Pacific coast states. The Chinese colony in San Francisco is a veritable beehive, the units of which, having solved the problem of cheap living, are more than a match for the American laborer. Coolie labor has in many instances displaced white labor on the Pacific coast, and factories and work-shops in San Francisco employ thousands of Chinese. They work in boot and shoe factories, in clothing shops, in broom-making, etc., etc. In 1901 there were 1,200 Chinese cigar-makers in San Francisco, and the scale of wages paid to these was from 33 to 50 per cent below that paid to white labor. The latter have almost been driven from the field, and San Francisco, instead of supporting 2,000-3,000 white cigar-makers, has now less than 200 union men who have remained to struggle against hopeless conditions.

In 1901 there were 2,579 Chinese employed in various industries in San Francisco, as will appear from the following table, which also shows the wages paid:

| INDUSTRY | NO. OF WORKMEN | HOURS | WAGES PER DAY |
|------------------------|----------------|-------|---------------|
| Boots and shoes..... | 251 | 11-12 | \$1 |
| Shirts..... | 195 | 11-12 | 1 |
| Men's clothing..... | 335 | 11-12 | 1 |
| Overalls..... | 430 | 11-12 | 1 |
| Ladies' underwear..... | 168 | 11-12 | 1 |
| Cigars..... | 1,200 | 10-14 | 1 |

Railway lines in California and other Pacific coast states employ a number of Chinese, especially in the construction branches of the service. The pay is \$1.75 for ten hours' work. In 1901 there were 3,934 Chinese employed in Californian mines at \$1-\$1.50 a day as against \$2-\$3.50 paid to white laborers. In addition there were 3,000-4,000 Chinese employed at placer mining for Chinese companies in California.

The agricultural industries of the Pacific coast states, according to the Industrial Commission, have felt still more acutely the baneful effects of cheap coolie competition. The report says: "The Chinese show great enterprise and thrift, and devote themselves to the industries in which they have become proprietors: truck-farming, etc. As a result they demand and receive fair wages, and enforcement of the exclusion act will gradually remove this rival from the field."

As to the relation of Chinese immigration to crime the following table furnishes interesting data:

RELATION OF ASIATIC IMMIGRATION TO CRIME

(Year Ending June 1, 1899)

| CITY | POP. | ARRESTS FOR DRUNKENNESS | FOR BURGLARY AND LARCENY | FOR VAGRANCY |
|--------------------|---------|-------------------------|--------------------------|--------------|
| San Francisco..... | 350,000 | 12,183 | 1,290 | 2,836 |
| Cleveland..... | 380,000 | 7,685 | 1,020 | 142 |
| Cincinnati..... | 296,000 | 2,124 | 853 | 504 |

The Industrial Commission, in commenting on this showing, says: "The appalling number of arrests for vagrancy in San Francisco can be accounted for upon no other theory than that the white toilers of the coast have gone down in hopeless defeat in the unequal struggle with their Asiatic competitors."

One of the strongest arguments against Chinese immigration is their so-called "tongs"—secret societies for committing crimes of various kinds: blackmail, gambling, prostitution. These "tongs" flourish especially in San Francisco, and it is said that out of 25,000 Chinese in that city more than 1,000 belong to the criminal class. They import women and sell them, impose fines, levy blackmail, and kill those who do not submit gracefully. They employ "hatchet men" whose duty it is to murder all those who invoke the displeasure of the "tong." Their power is absolute, because few have the courage to expose their nefarious practices. As a rule they do not molest white people, fearing an uprising against themselves.

Perhaps the most important reason urged both for and against Chinese immigration is that they furnish cheap labor. Those who are on the negative side of the question say that cheap labor is desirable, that it stimulates activities which would otherwise be latent, that it makes it possible to utilize natural resources that it would not pay to draw upon if labor were costlier. The affirmative side, however, aver that "cheapness" in labor is the same as "cheapness" in goods—it doesn't pay. Cheap labor affects the distribution, not the accumulation, of wealth. Cheap labor, by making it possible for a man to do with a small amount of capital what would otherwise require a great deal more, furnishes to industry what may be called the equivalent of usury in the money-lending business.

The opposite view of the matter may be representatively stated in the following quotation from an article in *The Outlook* of April 23, 1904:

No one has yet denied the thriftiness, industry, and loyalty to employer of the Chinese laborers and servants who have come to the United States. Nobody denies that on the whole they have been law-abiding dwellers in a strange land. Nobody denies that the horticultural beauty and agricultural prosperity of the State of California are largely due to the initial work of Chinese laborers who performed tasks with patience, skill, and good humor, that no other men could be found to perform. By our very laws they are forbidden to become citizens of the country. They cannot be naturalized. They are treated with aversion and with contumely. Why should

they not segregate and live by themselves? Why should they eagerly adopt American habits of life?

The same article also says that the dangers of Chinese immigration are very much overrated. To quote further:

The census of 1880, up to which time no special restriction existed, showed only 105,465 [inaccurate] in the United States. . . . If the vicious, the diseased, the incompetent, the paupers, and the contract laborers among the Chinese are excluded, as they are under our general immigration laws, it would probably be time enough to deal with the hordes of incoming Chinamen when those hordes appeared.

The Burlingame treaty of 1868 had provided for free emigration and immigration, but the modified treaty permitted the limitation or suspension by the United States Government of the coming or residence in the United States of Chinese laborers, but the absolute prohibition of such immigration was forbidden. After excited discussion Congress passed in 1882 a bill suspending for twenty years the coming into the United States of Chinese laborers. The bill was vetoed by President Arthur, but a modified act fixing the limit of suspension at ten years became a law. The Chinese who had already become residents of the country were not disturbed, and those who wished to make visits to China with the intention of returning hither were furnished with passports. The suspension of immigration related only to laborers, a term which has been construed to include skilled workmen.

Legislation

Nevertheless, this law was not considered sufficient by the Pacific coast, and in 1894 a law was passed, not only forbidding Chinese immigration, but excluding those now here except under certain conditions.

A convention between the United States and China, begun in 1880, was concluded at Washington on March 17, 1894; Walter Q. Gresham, U. S. Secretary of State, and Yang Yu, Chinese minister to the U. S., being the plenipotentiaries. The law adopted was ratified on Dec. 8, 1894, and contained the following provisions:

- (1) The coming of Chinese laborers to the United States is prohibited for ten years.
- (2) The return to the U. S. of Chinese laborers is permitted only if they have wives, children, property worth \$1,000, or debts of like amount.
- (3) Officials, teachers, students, merchants, travelers for curiosity, etc., are permitted to enter. . . .
- (4) Protection and rights to be granted Chinese residents in the U. S. as "most favored citizens." (U. S. Statutes, xxviii., p. 1213.)

On April 27, 1904, the law mentioned in the foregoing being nearly expired, Congress enacted that "all laws in force on the 29th day of April, 1902, regulating, suspending, or prohibiting the coming of Chinese persons or persons of Chinese descent into the United States . . . are hereby reenacted, extended, and continued without modification, limitation, or condition."

With regard to the question of the necessity of employing Chinese labor on the Panama Canal, a great deal has been said both for and against. The whole matter may be dismissed from here with the words of President Roosevelt, sent to Congress on Dec. 17, 1906, after his return from the canal zone. Says the President:

It certainly ought to be unnecessary to point out that the American workman in the United States has no concern whatever in the question as to whether the rough work on the isthmus which is performed by aliens in any event, is done by aliens from one country with a black skin or by aliens from another country with a yellow skin. Our business is to dig

the canal as efficiently and as quickly as possible; provided always that nothing is done that is inhumane to any laborer, and nothing that interferes with the wages of or lowers the standard of living of our own workmen. Having in view this principle, I have arranged to try several thousand Chinese laborers. This is desirable, both because we must try to find out what laborers are most efficient, and, furthermore, because we should not leave ourselves at the mercy of any one type of foreign labor.

To conclude, it may not be out of place to give quotations from two articles in *The Forum* of March, 1902 (pp. 53-67). Says Truxton Beale, in an article entitled "Why the Chinese should be Excluded":

To adapt the Chinaman to our institutions we should be obliged to begin by eradicating his religion, superstition, traditions, ideals, and customs—all of which have been so welded to his mind after four thousand years of inheritance as to have become a part of himself.

Robert Hutcheson takes the other side, endeavoring to show "Why the Chinese should be Admitted":

The Yellow Peril is a specter of the imagination, created of "such stuff as dreams are made of." Under the literal terms of the Treaty of 1868 millions [of Chinamen] might have come to our shores, but they did not. Attracted by the gold fields in California a few thousand came over, and nobody thought anything of it. In 1851 there were about 70,000 Chinese on the Pacific coast. Chinese emigration was always limited to a few districts in the province of Canton.

The objection that the Chinese work more cheaply than other foreigners or Americans in the same lines of industry is not sustained by the evidence. Like all other laborers they seek the highest wages going, and they soon learn what these are. . . . That they live more cheaply and save more money than our laborers is true, but this is a virtue that deserves imitation rather than condemnation.

FRANK F. H. CRAMER.

CHINESE LABOR IN SOUTH AFRICA: On Feb. 8, 1904, was carried in the Transvaal Legislative Council an ordinance for the introduction of indentured labor into that country "from outside Africa south of 12 degrees north of the equator." Among the provisions of this ordinance were sections to the following effect:

By Section 9 (b).—The Chinese laborer is to be bound to serve the master who imports him, or such master to whom the first shall lawfully "assign" his rights.

By Section 14.—The Chinese cannot trade, or hold any license whatever, or lease land, or have any economic rights.

By Sections 18, 19.—The laborer is to be bound to reside on his master's premises, and must not leave them without special permit, signed by a person authorized by his importer.

By Section 20 (2).—If found off the premises without such permit he may be arrested by any policeman without warrant.

Section 31 (10).—"Any person who shall harbor or conceal any laborer who has deserted from the service of his importer, or who has committed any breach of this ordinance, or who shall aid and abet any laborer to desert as aforesaid, shall be liable to a fine not exceeding £50, and in default of payment imprisonment not exceeding three months."

This ordinance, in order to become law, required the royal consent. The debate on it in the House of Commons lasted two days, and on a division the government won by 281-230. Sir H. Campbell-Bannerman gave notice of a vote of censure upon the government on this question, and the vote was lost (299-242).

The ordinance received the royal consent on March 11th, and the further convention with the Chinese Government, by which Great Britain is entitled to obtain Chinese laborers to work in any British possession, was signed on May 12th.

The first batch of Chinese were despatched from Hongkong on May 25th, 1904. Wages were to

be 1s. a day. In Nov., 1906, the total number of Chinese employed in the Rand mines was over 53,134; and arrangements were then in progress for the shipment of additional coolies from China.

During these months a sufficient number of facts have come to light to enable a general judgment to be passed upon the results of the experiment.

In the first place, from a purely financial point of view, the experiment has not come up to the predictions of its promoters. Indentured labor has many drawbacks even from the employer's point of view; and the cost of bringing out the Chinese and repatriating them at the end of the contract is a heavy item to be set against the profits of their labor. In his book, "Transvaal Problems," Mr. Lionel Phillips, the well-known Rand mine-owner and financier, makes the following candid statement:

The cost of feeding Kafirs and Chinese, taking an average of nine mines from which returns have been obtained, is respectively 3.57d. and 6.85d. per shift, and shows that the tastes of the latter involve an increased charge for their keep. Adding to this other expenses, like compound and hospital charges, and the cost of importing and repatriating them, even spread over the period of their contract time, we may take the monthly (a month is taken as twenty-six shifts) cost of a Chinaman, as far as can be ascertained at present, at, roughly, 12s. 9d. more than a Kafir, excluding wages.

It must not, however, be concluded from the fact that the mine-owners have given no overt sign of discontinuing the Chinese experiment that it is profitable to the shareholders. It was on political grounds that the mine-owners objected to white labor, and moreover they line their own pockets more rapidly by the fluctuations of the share market than they do by the profits of the mines. Even if the experiment be a financial failure they will be guided by other than the true financial interests of the mines in determining their course with regard to it.

In one respect, however, the coming of the Chinese has undoubtedly benefited the mine-owners. By creating a glut in the labor market, it has cheapened Kafir labor. Thus a correspondent of the *Financial Times* of Aug. 21, 1905, writes:

The employment of the Chinese on a large scale has, however, caused a vast economic upheaval affecting unskilled labor throughout the whole of South Africa. It has diminished the anxiety of the Labor Association to recruit Kafirs, and the native is no longer in a position to turn up his nose at the offers of work made to him by employers throughout the country. The rate of wages is declining; and in proportion to its fall, the Kafir's spells of work will become longer and the intervals of leisure correspondingly shorter.

Great indignation has been felt by all radicals and many Liberals and Conservatives over the introduction of Chinese labor into the Transvaal. Flogging and gross cruelty is shown to have been common. Many of the Chinese have deserted and been a menace to the community. The treatment of the question by the new Liberal administration has been perfidious.

At the same time, the whole question will have to be settled in the last resort by the forces on the spot. The principal event in the Transvaal has been the formation of the National Party, which, composed mainly of Englishmen, sets itself in definite opposition to the financial group who call themselves "Progressives." The new party, one of whose leaders is Mr. F. H. P. Creswell, has declared itself emphatically against the introduction of the Chinese, and for the repatriation of those at present in the country on

the expiration of their terms and at the expense of the mine-owners.

Pending the introduction of self-government no further importation is to take place after Nov. 30, 1906. At the elections in 1907 Mr. Cresswell was defeated, but the National Party (Hit Volk) won pledged to abolish Chinese labor.

CHRIST AND SOCIAL REFORM: The relation of Christianity to social reform and of the Church to social reform is considered elsewhere. In this article only the personal relation of Jesus Christ to the problems of social existence will be discussed. With His relation to the individual, and with theological conceptions of Christ, this encyclopedia is not concerned, save in so far as these conceptions bear directly upon social reform. But to a large number of minds this is very distinctly the case.

I. We may speedily state the opinion of those to whom Christ was but an ordinary human being, tho the noblest, the best, the most inspired, nay, even in this sense, the most divine of men. Christ is conceived by those

A Religious Reformer

who hold this view in two main ways: (a) as a great idealist and religious teacher, quickening the world by lofty maxims, altruistic ideals, spiritual insight, and, above all, by a pure, self-sacrificing life. He is as Sakya-Mouni, as Confucius, as Socrates, as St. Francis, as many another, tho greater than any other. His relation to social reform, according to this conception is, therefore, to raise ideals of brotherhood, of self-sacrifice, of the supremacy of character over circumstances, of the scorn of material comfort. W. M. Salter says in his "Ethical Religion," pp. 188, 189:

It cannot be claimed that we stand in any such relation to Socrates or the Hindu prince or Confucius as to Jesus. Socrates has not been without influence upon us, but it cannot be soberly called a tithe of that which Jesus has had. Would that men read the "Apology" oftener; they would find meat and drink in it, a tonic and an inspiration for their lives! But there is need for no such wish in relation to the Gospels. Jesus is an ideal of goodness, all too indistinct often, but hovering in the thought of well-nigh every one of us. It is true that there is much uncertainty relating not only to His life, but to His teaching; yet as there need be no doubt as to the main tenor and events of His life, so there need be none as to the commanding features of His teaching. They make too largely consistent a whole, and bespeak a mind of too much freshness and originality and power, to allow us to think of them as coming in an indefinite way from an age otherwise so traditional, so barren, and so prosaic.

The ethical features which Mr. Salter finds in Christ are: (1) His opposition to the traditional morality of His day; (2) His giving to the moral law a more distinct inward application, teaching that thoughts and words have a moral significance, like that of actions; (3) His removing of all barriers of love to our fellow-men; (4) His teaching that the "kingdom of God" is to come from above, and not in the natural course of things—i. e., "not from the onworking of man's natural self-regarding impulses." The limitations in Christ's ethical teachings, Mr. Salter finds, at least as far as the ethical requirements of our own day are concerned, to be (1) His failure to emphasize "the intellectual virtues," straightforwardness, etc.; (2) His lack of concern with the State. Says Mr. Salter: "Jesus was not concerned with the State, indicating neither ideal nor practical courses for it to follow." He was ever looking for a kingdom to come, which, says Mr. Salter, has proved one "of humanity's blighted hopes";

(3) Mr. Salter finds in Christ's teaching little guidance for industry; and (4) no clear presentation of an ideal to be the end of human existence.

But (b) there is another conception of Christ held by those who deny the deity of Christ, very different from and at almost every point opposed to the conception we have just noticed.

A Social Reformer

This is the conception that prevails largely among working men outside of the Church, and especially among materialistic Socialists. To such minds Christ was preeminently a social reformer. He is the first Socialist. They term Him the good "Sansculotte," to use Camille Desmoulin's phrase of the French Revolution. "The First Representative of the People" were the words written beneath the pictures of Christ that were posted in the halls of the French communists of 1848. "The Carpenter of Nazareth" is the name dearest to many working men. According to this conception, Christ was a Jewish labor leader, a religious trade-unionist, who taught of a kingdom of brotherly love, where inequalities and oppression were to vanish; where the poor, the weak, the unfortunate were to overthrow the kingdoms of wealth and of injustice. For opposing the rich and preaching communism He was crucified by the chief priests exactly as the pastors of the churches of wealth to-day oppose socialism and would hang all revolutionists. Christ, argues Austin Bierbower, in his "Socialism of Christ," sought to establish a kingdom in the interest of the "outs." He proposed to reverse existing conditions—to "lay the ax unto the root of the tree," "to put down the mighty from their seat," "to scatter the proud in the imagination of their hearts," "to send the rich empty away," "to fill the hungry with good things," "to exalt them of low degree." Christ's miracles, says Bierbower, "were all done in the interest of the poor." "The common people heard Him gladly." His command was to give up "houses and lands for the kingdom of God's sake." He said to the rich young man, "Sell all that thou hast, and distribute to the poor." The leading clergy Christ called hypocrites and whitened sepulchers. Christ's method, says Bierbower, was one of revolutionary force. He was an insurrectionist, who could be confused with Barabbas. He came "not to bring peace, but a sword." He prophesied a reign of terror. Jerusalem was to be destroyed. Not one stone was to be left upon another. Pilate accused Christ of stirring up the people. This insurrection was to establish a communism. In Christ's teaching all men were to be equal. "Call no man master." There was to be no more clean and unclean. Men were to live in simplicity, to "take no thought for the morrow"; not to have two coats. Many working men think that Christ was an Essene, or at least the founder of a communistic sect like the Essenes, of which the Orient was then full. According to Osborn Ward's "The Ancient Lowly," Palestine was in the time of Christ full of trade-unions or secret guilds of slaves and despised artisans, and to these organized laborers Jesus Christ appealed, entering into their life and carrying their principles of fraternity and equality through the world.

Working men are not surprised that Christ was crucified. "The cross and hemlock cup have ever been the reformer's reward." Such is the materialist reformer's conception of Jesus Christ.

II. We now come to the views of those who

hold that Christ was more than man—God manifest in the flesh. Here again we find two divergencies. According to the one view (a) Christ's message was only to the individual and at most to the Church, the body of the redeemed who have been made one with Him.

The holders of this view do not deny that Christ's teachings affect society, and are to be applied in the State; but they hold that the State and society are to be influenced only through the individual. "Make," they say, "perfect men and women, and then you will have a perfect society." Some do not even hold that society as a whole ever will be perfected

on this earth, at least not in this present dispensation. The kingdom of God, they reason, is to be composed of the redeemed, of the elect out of the world. The kingdoms of this earth are, they teach, not to be conformed to the law of God, but to be destroyed and replaced by the kingdom of heaven. It is "a mistake," said the Bishop of Peterborough, at the diocesan conference at Leicester, England, October, 1889, "to attempt to turn Christ's kingdom into one of this world." The *Regnum Hominis*, he argues, can never be the *Civitas Dei*; the State does not and cannot exist on Christian principles. Did not Christ Himself say, "My kingdom is not of this world"? Were not Christ and all His disciples continually speaking of and looking forward to the end of the world, its destruction, and the coming of the new heavens and the new earth? Christian Socialists, says this school of thought, forget the doctrine of the second Advent, the personal coming of Christ, when this earth shall be destroyed and only the redeemed be saved. However, not all who hold that Christ's message is only to the individual argue from it that Christ's life is not to be applied to present social organizations. They hold that the Christ life will and inevitably must transform, nay, even revolutionize, human society. They assert strongly that Christ is the savior of society; but they hold that the salvation of society is to come only through the new life in the individual, by creating better men and women to compose the State. Such thinkers deny that Christ was a Socialist in any sense implying that He has a message for the State apart from the individual. Says Dr. Lyman Abbott, in his "Evolution of Christianity": "It has been said that Jesus Christ was the first Socialist. This is certainly an

The First Individualist

incorrect, if not an absolutely erroneous statement. It would be more nearly correct to say that He was the first individualist. The Socialist assumes that the prolific cause of misery in the world is bad social organization. Christ assumed that the prolific cause of misery in the world was individual wrongdoing." Those who hold this view argue that Christ came to save the world by saving individuals. Individuals, indeed, may cooperate in all kinds of reform and charitable societies; they may and should enter into politics; but the redeeming power is ever in the individual heart, and the Church's prime message, like Christ's, is to the individual. A few, like Tolstoj, carry this view to such lengths that they may be called, as occasionally they call themselves, Christian anarchists. They would do away with organization. To obey the State is to take an oath of loyalty, and Christ said, "Swear not." Society can only be saved by personal sacrifice. Self-sacrifice is the one word. Re-

nounce life and you gain life. (For a full statement of this view of Christ, see Tolstoj.)

But lastly, we come (b) to the view of Christ held by Christian Socialists. (See also CHRISTIAN SOCIALISM.) We are here concerned simply with the view of Christ held by this school.

The Christian Socialist View

According to this conception, Christ is the King and Head of all humanity, and therefore with jurisdiction over all life, secular as well as spiritual, political and social quite as truly as individual. Christian Socialists do not deny, but assert the necessity of personal conversion and the new birth. Christ does not force any man to serve Him. A forced righteousness is not righteousness. Christ draws, but does not compel any man to follow Him. Hence all moral action from men in a sense commences with the individual, and in this sense Christian Socialists are individualists; but they deny that Christ came *only* to the individual; they deny either that Christ came only to save individuals out of a lost world, or even to save the world through the working alone of a new life in individual hearts. They do not admit that Christ taught that "individual wrongdoing is the prolific cause of misery in the world." They hold that man is born in society, and in a sinful society, which fact is the cause of deep evil. Throughout the Bible they find a teaching of racial sin. The child suffers for the father's sin, and the mother in the child's wrongdoing. They find a socialism in sin as well as a socialism in Christ. Men are not alone; men are molded by inheritance and by environment. Now, Christ, as the King of all the world, came to change this. He came to save rebellious individual men, but also to establish a new environment. He came to found a kingdom. He prayed for its coming. He taught that God's will should be done on earth even as in heaven. Those who argue that Christ's message is only to the individual, that He took no notice of the State and that He cared little for organization, forget, say Christian Socialists, Christ's whole relation to the Old Testament and the world. The Old Testament is two thirds of the Bible. Christ only came after a long preparation of the Jews in social righteousness. He came, he declared, to fulfil the Old Testament laws. He Himself fulfilled and bade His disciples to fulfil every minute detail of the ritual law. Christ indeed denounced and reproved the rulers of the Jewish Church, but it was not because they fulfilled the law, but because they did not fulfil the law, because they made it of no effect through their traditions. Jesus Christ was the great conformist. He was circumcised; He was baptized; He was made a Son of the Law; He kept Feast and Fast; He obeyed all the law; He bade His disciples obey even the very priests He denounced. As to the assertion that Christ did not recognize the State, men forget what the Hebrew Church was. It was a State almost as truly as a Church. It was a Church State. Christ paid little heed to the Roman heathen State, tho He obeyed even its laws; but He magnified the ideal of the old covenant, the Divine State, the heavenly kingdom. He was ever speaking of it. Of it are most of His parables. He came to fulfil its laws. It is true that Christ idealized, spiritualized the materialistic conception of the laws held by the Jews. He came to fulfil them through love, not through legalism. But he did not come to abrogate the laws. Law must fulfil

law, not destroy law. Spirituality is not to make men disregard matter. Never did any one ever honor the material body as did Christ.

**Not a
Lawbreaker**

Almost all His works were works of healing to the body. They were almost all secular Socialist works. He who thus magnified the body, law, organization, cannot be said—so Christian Socialists argue—to have come simply to save people out of a wicked world into heaven, or even to save a world on earth simply through the individual. If society, organization, the nation, count for nothing, why the thousands of years of the old covenant before Christ came? The law is the schoolmaster to lead to Christ, and Christ is the great Teacher to help us fulfil the law. Christian Socialists agree with the material Socialists that Christ was a social reformer—the social reformer; that He did come to establish a reign of equality, brotherhood, communism, here upon earth. They believe Christ's Church to be the world's first International; the call the Magnificat "the hymn of the universal revolution." Christian Socialists disagree with the materialist Socialists that He appealed to force or depended simply on organization. He came to bring a sword in the same sense only that the knowledge of the law brings forth sin. Christ has made a man's enemies those of his own household; He has turned the world upside down. He is the great revolutionist. But His appeal is not to force. He did not come to draw the sword any more than the law bids men to sin. He was led as a lamb to the slaughter. He conquers by self-sacrifice. His method is the cross. His kingdom is not of this world, but it is to include this world. "The kingdoms of this world are to become the kingdom of our Lord and of His Christ." Christ's whole teaching, according to some, may be summed up in the words: "Father, Child, Brother."

CHRISTIAN COMMONWEALTH, THE: Organized in 1896, in Muscogee County, Ga., by forty people, mostly from the Northern States. A college professor, a civil engineer, an editor, and the pastor of an institutional church were the leaders in the movement. They determined to open their doors freely to all who would come, confident that a hearty welcome to their brotherhood and to all the privileges of their association would soon put a new purpose and spirit of life even into the tramp and the loafer. They wanted no narrow or limited brotherhood. They bought an old plantation, at a price far beyond its value, on which they were able to make but a one-fourth payment. They had not sufficient means to lay in a three months' supply of food, and many months elapsed before they could hope to get returns from their planting. Yet they invited and received families from all parts of the country, most of whom came absolutely empty-handed and very few of whom added much to the financial strength of the colony. As the editor of *The Social Gospel*, the organ of the community, expressed it, "The colonists were

kept sensibly dependent on heaven-sent supplies."

The first year all engaged in manual labor—farming, gardening, grubbing, building, fencing, preparing fuel, logging, milling, carpentering, orchard and nursery work, etc.

The society was not incorporated until Nov. 14, 1899. Its constitution adopted under its charter reads, in part, as follows: "Article 2. Object: The Christian Commonwealth is a society whose purpose is to obey the teachings of Jesus Christ in all matters of life and labor and in the use of property. The society is incorporated to establish a community of people on a cooperative basis, with the purpose of demonstrating to the world the practicability and desirability of Christian cooperation as the best method of earning a livelihood, of developing nobility of character, and promoting all the ends of a true Christian civilization."

Writing in Sept., 1899, the editor of *The Social Gospel* says: "The Christian Commonwealth lives and grows and is increasing in spiritual power and material equipment. Loaded down with the poor and with almost nothing in hand, by most self-denying economy and the hard labor of its people, the Commonwealth has made slow but steady economic growth." Yet one year later the whole property was in the hands of a receiver and the colony disbanded. The creditors, however, were paid, we are informed, in full, which indicates that the colonists must have made something more than a living, and that lack of business management or want of harmony must have been a factor in the breaking up. The spirit of brotherhood did not share the fate of the colony so far as the prime movers were concerned. Two of the leaders published for a while *The Social Gospel*, at South Jamesport, N. Y., and others *Social Ideals* at Elgin, Ill., tho these publications did not endure.

CHRISTIAN COMMUNISM: This is communism on the basis of the Christian religion, and has had illustration in all ages. These are, however, best considered separately. For the communism of the primitive Church, see **CHURCH AND SOCIAL REFORM**. For the communism of the Church in medieval times, see **BROTHERHOODS, RELIGIOUS**. For more modern times, see **ANABAPTISTS, AMANA, CHRISTIAN COMMONWEALTH, HARMONISTS, HOPEDALE, ONEIDA COMMUNITY, SHAKERS, ZOAR**. It is scarcely too much to say that religious communism has seldom *financially* failed, but that all the various attempts at Christian communism have failed because of being committed to celibacy, or some narrow religious tenet. The number willing to embrace its tenets has fallen off or become *nil*. See also **COMMUNISM**.

CHRISTIAN SOCIALISM: A term used in a larger and in a narrower sense. In its larger or looser sense, it may be defined simply as the application of Christianity to social problems. Used in its narrower and more accurate sense, it is socialism, but socialism in the name and spirit and on the principles of Jesus Christ. In the larger sense almost any Christian may call himself a Christian Socialist and the term comes often to mean little more than a vague interest and too often to become only a catchword, in the endeavor of the Church to enlist the interest of persons engaged in working out social prob-

lems. Much Roman Catholic and, in the United States especially, considerable Protestant so-called Christian Socialism is of this vague type. It is not really socialism at all and is not seldom actually opposed to socialism. In England, however, and on the Continent and in the U. S., when used by societies of Christian Socialists, or members of those societies, the term does indicate usually a very large acceptance and not seldom a complete acceptance of at least the fundamental principles and often the whole program of ordinary socialism. This is more especially true of more recent Christian Socialist movements, and is the result in part of a more accurate use of words in the course of the evolution of social thought, and in part of an increasing radicalism on the part of not a few of the younger clergymen in all branches of the Christian Church. To understand, therefore, the use of the word by particular writers or schools of thought it is necessary to know their definition of the word, or at least their modes of thought and expression. The term was first employed by the little group of men who gathered around Maurice (whom they considered their master), Ludlow, and Kingsley in England in 1848. It was used by them to express their conviction that socialism was really but a historical development or manifestation of Christianity. If in practise they understood by socialism little more than the principle and practise of cooperation as opposed to economic competition, it must be remembered that socialism itself had not developed into that more precise economic thought which is understood by the word to-day. The first Christian Socialists were accurately and truly Socialists of their day and generation, only holding that socialism to be practical must be founded on the Fatherhood of God and Brotherhood in Jesus Christ. They spoke of socialism as "the nineteenth-century livery of Christianity," and Maurice wrote in a tract in 1850, when the term Christian Socialist was first decided upon, "that is the only title which will define our object and will commit us at once to the conflict we must engage in sooner or later with the unsocial Christians and the unchristian Socialists."

The year 1848 was a dark one for English working men. Bad harvests, heavy taxes, the potato famine had brought to a head all their sufferings and wrongs. Ireland was on the verge of rebellion. There were riots in more than one English town. On April 10th there was an immense mass-meeting at Kennington Common. London was thrown into intense excitement and fear. Two hundred thousand special constables were sworn in.

Meanwhile, two clergymen of the Church of England, F. D. Maurice and Charles Kingsley, with a young lawyer, J. M. Ludlow, had been growing more and more interested in social questions. Charles Kingsley now rushed down from his parish at Eversley, and meeting Ludlow at Maurice's house, it was decided to publish placards and spread them broadcast, sympathizing with the workmen, but urging restraint from violence, and the necessity of virtue and religion to make men fit for liberty. Charles Kingsley wrote all that night, and the next morning appeared on thousands of posters his address to the workmen of England, signed "A Working Parson." A pouring rain and the energy of O'Connor prevented any outbreak.

It was now decided by the above three to publish a penny weekly, entitled *Politics for the People*. In these, in addition to Maurice, Kingsley, and Ludlow, we find articles by Archdeacon Hare, Professor Conington, Sir Arthur Helps, Archbishop Whately, Dr. Guy, French, Stanley, Osborn, and others—a rare galaxy of brilliant minds. Kingsley wrote in it the well-known articles signed "Parson Lot" (see KINGSLEY). The first number appeared May 6, 1848. The paper, however, was discontinued after seventeen numbers for lack of support, altho it attained a circulation of 2,000.

The little knot of writers, however, now including Thomas

Hughes, held meetings all winter, meeting with many of the Chartist leaders, and starting night-schools. It was at one of these conferences that Kingsley made his celebrated speech beginning, "I am a Church of England parson and a Chartist," in which he acknowledged the grievous wrongs of the workmen, but dissuaded them from violence.

A Mr. Mayhew at this time contributed to the London papers a series of articles on the sweating system, which called out Charles Kingsley's burning and indignant tract on "Cheap Clothes and Nasty." But Maurice from first to last remained its directing spirit. Ragged schools were begun under their auspices, and "sanitary leagues" when the cholera began to rage. Colonization was projected. "Let us devise a Socialist home-colonization as soon as you please; provided only we give it a ground to stand upon, the sooner, the better," said Mr. Maurice, in a letter to Mr. Ludlow.

A cooperative institution, which was a practical embodiment of their ideas, was started, being an association of tailors in Castle Street, nearly opposite to the place where now stands the Cooperative Institution. This was in 1849. In 1850 a society for promoting working men's associations was formed, with Maurice for its president, and became the nucleus or center of the cooperative movement. The fundamental principle of this society was "the practical application of Christianity to the purposes of trade and industry."

In December, 1849, a dinner was held at Ludlow's and a plan for cooperative stores was discussed, and for the first time the term *Christian Socialism* was agreed upon. The name was favored by Maurice

"Christian Socialism" First Used

largely under the influence of Ludlow, who had been in Paris and seen there the *associations ouvrières*, and who had written to Maurice from there that "socialism must be Christianized or it would shake Christianity to its foundation, precisely because it appealed to the higher and not to the lower instincts of man." The Christian Socialists, now working under this name, started a periodical and also a cooperative store under the leadership of Walter Cooper, the ex-Chartist.

Their periodical, *The Christian Socialist*, was edited by Ludlow, but contributed to by all its members. The following, by Ludlow, clearly expresses its ideas: "A new idea has gone abroad into the world; that socialism, the latest born of the forces now at work in modern society, and Christianity, the eldest born of those forces, are in their nature not hostile, but akin to each other; or rather, that the one is but the development, the outgrowth, the manifestation of the other. That Christianity, on the other hand, in this nineteenth century of ours, becomes in its turn chilly and helpless when stripped of its social influences, or, in other words, when divorced from socialism. That if the Gospel speaks true, and 'ye cannot serve God and Mammon,' it is wholly incompatible with a political economy which claims self-interest to be the very pivot of social action; . . . but that it is compatible with those theories or systems which have for a common object to bind up into fellowship, and not to divide by selfishness and rivalry; to substitute fair prices and living wages for a false cheapness, and starvation, its child; and which have adopted for their watchwords *Association and Exchange* instead of *Competition and Profit*." *The Christian Socialist* was, nevertheless, less long-lived than *Politics for the People*. The movement, however, did not end. Kingsley published his "Alton Locke." It brought down on the Christian Socialists a shower of abuse. Says Professor Seligman of it:

"Tracts full of raving and disreputable rant; mouthpieces of class selfishness, popular prejudice and ignorant passion; ravings of blasphemy, rapine and nonsense; miserable delusions; mischievous provocations clothed in oily phrases of peace and charity; a clique of

Opposition

wayward-minded men, who, from a morbid craving for notoriety or a crazy straining after paradox, have taken up the unhallowed task of preaching the doctrines of Jacobinism and the Jacquerie"—this and much more of the like was said of them in all the reviews and journals. Advertisements were refused by the daily papers; booksellers did not dare to keep copies of their publications. *The Christian Socialist* was prohibited by the French Government from circulating in the realm. A committee of King's College was appointed to investigate Maurice's activity in these dangerous schemes, and he narrowly escaped losing at once his professorial position. Kingsley was invited to deliver a sermon in a London church, and at the close his opinions were openly branded as untrue and dangerous by the officiating rector.

Eventually Maurice was removed from his chair at King's College, and very affecting is the address of condolence presented to him by those workmen who had through him come to believe in the divine mission of Christianity in saving society. But opposition and obloquy, so far from discouraging the Christian Socialists, only acted as a spur to further exertion. "I am a revolutionist," says Kingsley in one of his letters. His "Bible Radicalism" meant to go to the root of the matter, and to recover the true and original basis of Christian fellowship. At the same time they all felt that if their work was to prosper they must put their hand to the plow and give a practical demonstration of their theory. Mr. E. Vansittart Neale provided the funds for the first attempts in cooperative production and the establishment

of the central cooperative agency. Many of the aristocracy and clergy wished to encourage the promoters. Orders came flowing in, and the success attained induced the promoters to open an "East-End Needle-women's Workshop," and an association of shoemakers. In course of time a number of productive associations were formed in London and the provinces, principally in the north. Out of this came an agitation for needed legislation and the "Magna Charta of Cooperation," the Industrial and Provident Partnerships Bill of 1852.

The early Christian Socialists, too, worked much for popular education. This led to the establishment of the Working Men's College, which was opened in 1854. Henceforth the Christian Socialism of England of this period is lost in the cooperative movement developing in the north of England. The London stores either failed or were swallowed by the larger movement. But the Christian Socialist thought lived.

Says Professor Sellman: "These Christian Socialists were reformers in the fullest sense of the word. The kingdom of

Christ was to them no empty formula; they were thoroughly imbued with the belief that this kingdom, created through revelation, actually existed, and was destined in time to subjugate all wickedness and misery. Society, according to them, is not to be made anew by arrangements, but is to be regenerated by finding the law and ground of its order and harmony, the only secret of its existence, in God."

Principles of the Early Christian Socialists

The poor man's book, the voice of God against tyrants and humbugs. "Justice from God to those whom men oppress, glory from God to those whom men despise," was to them the thought running through the Bible.

Men of such a stamp viewed with a sovereign disdain the social doctrines of the Manchester school. They wrote: "Of all narrow, conceited, hypocritical, anarchic, and atheistic schemes of the universe, the Cobden and Bright one is exactly the worst." Said Kingsley:

"I expect nothing from a public press which panders to popular Mammonism by scraps of politico-economic cant, and justifies the ignorant miser to himself by retailing Benthamite phrases which sound like scientific laws, while they are really nothing but the assertion of barren truisms. I expect nothing from the advocates of *laissez faire*—the pedants whose glory is in the shame of society, who arrogantly talk of economics as of a science so completely perfected, so universal and all-important that common humanity and morality, reason and religion must be pooh-poohed down, if they seem to interfere with its infallible conclusions, and yet revile, as absurd and utopian, the slightest attempt to apply those conclusions to any practical purpose."

"Competition," said Maurice, "is put forth as the law of the universe. That is a lie. The time is come to declare that it is a lie, by word and deed. I see no way but by associating for work instead of for strikes." Kingsley maintained that not self-interest, but self-sacrifice, was the only law upon which human society could be grounded with any hope of success. "That self-interest is a law of human nature, I know well. That it ought to be the root-law of human society, I deny, unless society is to sink down again into a Roman empire and a cage of wild beasts." The enthusiasm of the promoters was unbounded. Thomas Hughes thought they had found the solution of the labor problem and that "we had nothing to do but just to announce it and found an association or two, in order to convert all England and usher in the millennium at once, so plain did the whole thing seem." The majority of the promoters were equally sanguine.

The Christian Socialists were mistaken. Not thus were millenniums ushered in. Says William Clarke in the "Fabian Essays":

"The *Christian Socialist*, which was the organ of Maurice and Kingsley, betrayed great simplicity as to the real nature of the economic problem. It neglected Owen's principle of 'community in land,' and supposed that by working together and selling articles of good quality at a fair price poverty could be eliminated, while yet every worker in the community was paying his tribute of economic rent to the owners of the instruments of production."

After this wave of Christian Socialism in England, we have a long gap. Socialism of all kinds seemed dead in England.

But early in the eighties the Rev. Stewart D. Headlam founded the *Guild of St. Matthew*. A High Church organization, it has become the leader of a remarkable movement among the younger Catholic wing of the Church of England toward radical socialism. It believes the secular to be spiritual, and finds secular principles involved in the highest Church teachings. Mr. Headlam long edited the *Church Reformer*, the organ of the guild, and an outspoken mouthpiece of Christian Socialism. Its radical nature can be seen in its reference to the Queen's Jubilee celebration as that "blasphemous" adulation going on at Westminster Abbey; and by the ultra-socialistic literature advertised and commended in its columns.

Of more recent date and not so radical in its socialism, and yet doing a very wide and important work in the Church of England, is the Christian Social Union, founded in Oxford in 1889, under the lead of the Bishop of Durham and Canon

Scott Holland. (See CHRISTIAN SOCIAL UNION.) While it does not declare explicitly for Christian Socialism, its principles and teachings so largely tend this way that it is commonly spoken of in England as a Christian Socialist movement. It is significant, therefore, that the union embraces so many of the leading members of the Church of England, is the publisher of the able *Economic Review*, and includes men of such power and spirituality as Bishop Gore, Bishop Stubbs, and others, including its secretary, the Rev. John Carter. Quite recently an out-and-out *Christian Socialist Society* has been formed in connection with the Church of England. Outside of the Church of England, too, there is much Christian socialism. A society of Christian Socialists organized early in the eighties, not confined to the Church of England, and which from 1883 to 1891 published an organ, *The Christian Socialist*, did not endure, but its work was taken up by *The Christian Socialist League*, with the Rev. Dr. John Clifford, a leading Congregational clergyman, as president, and J. Bruce Wallace, Percy Alden, E. D. Girdlestone, John H. Belcher, Professor Shuttleworth and the Wesleyans, Revs. Hugh Price Hughes and Mark Guy Pearse are outspoken Christian Socialists; while the Rev. John Glasie, of the Church of Old Greyfriars, became a pioneer of socialism in Scotland.

This league, too, disappeared, but has given place to various movements and leagues for social service, and the London Free Church Social Union. (See FREE CHURCHES AND SOCIAL REFORM.)

Apart from all regular church organizations, yet standing for a very vital Christian socialism, are the labor churches (q. v.) begun in England by John Trevor (q. v.) in 1891, which represent a radical movement politically in connection with the Independent Labor Party, yet insisting on a religious character of the labor movement. They have now largely disappeared yet played their part.

GERMANY

Christian socialism in Germany dates in its present form from the period of the Lassalle agitation, yet had its precursors in the philosophy of Fichte and Hegel and the communistic preaching of Albrecht the Prophet and of Weitling (q. v.). We consider its Roman Catholic and Protestant developments separately.

The Roman Catholics come first. Early in the nineteenth century Franz Xavier von Baader (q. v.), moved by the sorrows of the working class, recommended a "theocracy," a monarchy guided by Divine politics, as opposed to a democracy of revolution, a State held together by Christian love, equally free from slavish despotism and lawless individualism.

A greater German Roman Catholic Christian Socialist was Wilhelm von Ketteler (q. v.), the late Bishop of Mayence. Von Ketteler was in very many ways like Kingsley. He said of himself: "I have lived with and among the people,

Catholic Christian Socialism

and know them in their sorrows and complaints. There are few of the tears and none of the sufferings among the people committed to my charge which have escaped my notice." He especially endeared himself to his people by his bravery and devotion during an epidemic of typhus fever in 1847. He was elected to represent his district in the German Confederation at Frankfurt. As early as 1848 he preached a course of sermons on the social subject in the cathedral at Mayence to audiences of many thousands. He largely endorsed the socialistic program of the day, invoking State protection against the encroachments of irresponsible capitalists; but he held that to endure, society must be founded on the rock of St. Peter. He pointed out the impotence of legislation to equalize property. Christianity alone, he taught, could put cooperative associations on a sound basis. "May God in His goodness," he cried, "bring all good Catholics to adopt this idea of cooperative associations of production upon the basis of Christianity." Yet little directly resulted. In 1864, however, Ketteler published a treatise, "The Labor Question and Christianity," and in 1868 organization was reached in the Christian Social Working Men's Associations. An organ of the movement was started, *Die Christliche Soziale Blätter*. In 1870 the Catholic Journeymen's Clubs, which had been started in 1847 by Father Kolping, a pious artisan, joined the Christian Socialist movement. These clubs numbered, in 1872, 70,000 persons, mainly in Bavaria and Westphalia. They were strictly under the control of the Church, and therefore were more or less opposed by the Social Democrats. Yet the movement grew. In 1878 it numbered 12,000 in Westphalia alone. It took many forms—benefit associations, savings and credit associations, associations for diffusing literature, working girls' associations, etc. At the meeting in 1871 Canon Moufang presented the points which became the program of the movement: (1) Legislative protection of the rights of labor; (2) pecuniary state subvention in aid of cooperative associations; (3) reduction of the burdens of taxation and military service; (4) restriction of the

Later English Christian Socialism

power of capital, and the removal of evils arising from usury and over-speculation.

Gradually, however, two wings developed, one tending to "self-help," and beneficent associations apart from the State, the other calling for State action and much of the Socialist program. The movement in one form or another has gone on, having to-day a large number of associations, mainly cooperative, and particularly among the peasants in Roman Catholic sections of the empire, but always distinctly under the control of the Church.

There are Catholic associations of masters and apprentices, of factory laborers, miners, and vintners; there are "Patriotic Bavarian" and Westphalian unions of peasant proprietors and a number of other societies of men and women in every direction, exercising a powerful influence under strict clerical supervision, the result of which is that in purely Catholic regions, for any efforts of social reform to be successful, it is essential in the first instance to secure the Catholic ecclesiastics as auxiliaries in any such undertaking.

This, too, has given the Roman Catholic Church in Germany large political power.

The Roman Catholic population of the empire is only 20,000,000 to 25,000,000 Protestants, and yet in the Reichstag, the Roman Catholic party, the so-called Center, has more delegates than any other party in the empire. It won in the last election 100 seats. Indeed the Protestant imperial government has usually had to depend for its majority on a coalition between the Roman Catholic Center with the Liberals or Conservatives. In that situation Rome is in power in the legislature and among the people. At a congress of German Catholics in Strasburg in Aug., 1905, Count Oppersdorf said, "Let every Catholic in Germany be a friend to every one in need." The Roman Catholic German Union for Works of Charity is a strong organization with 3,087 members and a very active life. There is also a strong Catholic propaganda and organization in Germany against the use of alcohol. Another organization is the Union of Catholic Women's Societies which publishes an attractive organ, *The Christian Woman*. Besides these and other societies, avowedly Catholic, German Catholics enter into every humane movement of every kind where they can exert influence. For example,

Present Strength

at the International Congress for the Protection of Labor held in Zurich, 1897, a very strong Catholic delegation was present, including many priests. The congress received the papal approbation and one of its three presidents was the Swiss Catholic leader Decurtins. So also with the International Congress for Labor Legislation held in Berlin, 1890, and in Brussels in 1897.

This German Catholic movement is deeply founded and ably led. It does not drift with the times. There are in Germany at least a dozen Roman Catholic theological magazines and these give much space to developing from the principles of Catholic theology their scientific application to social reforms.

Protestant Christian Socialism in Germany has been a wholly separate movement. As early as 1838 Victor Aimé Huber (q. v.) who may be called the founder of German Christian Socialism, at the request of Friedrich Wilhelm IV. of Prussia commenced in Berlin a paper, the *Jahrbuch*, advocating religious cooperation. He gave his life to this work and sowed much seed, but with little direct result.

About 1878, however, commenced the chief movement of Protestant Christian Socialism in Germany, begun by Pastor Todt and brilliantly championed by Stöcker, the court chaplain. From the first it allied itself to the paternal State socialism, which has become the policy of the Prussian monarchs.

Kaufmann, in his *Christian Socialism*, says, however, of this movement that its name Christian Socialism "is somewhat misleading, since those to whom it is applied, and who cheerfully accept the appellation, are so far from being Socialists, in the ordinary sense of the word, that the name 'Defenders of Society on Church and State Principles' would convey a more correct idea of their aims and purposes to English readers. Properly speaking, they are conservative would-be saviors of society, who see no other means of escape from the present social dilemma but in a firm alliance between crown and altar for the purpose of regenerating society."

Two fundamental principles were laid down in the program, one indicating the duties of the State, the other those of the Church:

(1) That thorough reforms have become necessary in order to inspire the enfranchised masses with confidence toward the government.

(2) That the solution of the social question is impossible without the cooperation of the moral and religious factors and the Church's recognition of the just demands of the fourth estate (the working men).

But Stöcker, the leader of the movement, gave it a strong political bias. Two associations were formed, a Central Union for Social Reform on a religious, constitutional, monarchical basis, and the Christian Social Working Men's Party. The Union for Social Reform was to be composed of well-to-do and educated men, such as ministers of the Church, professors, manufacturers, and landowners, who would join in seeking

for means of conciliating the anarchic classes through reforms inspired by the spirit of Christianity. The Christian Social Working Men's Party was to rally and aid working men.

The movement met great opposition. All the progressive papers protested against it as *mucker-socialism*, or sham socialism. The liberal press also opposed it. "We prefer," said one paper, "Socialists in blouse to Socialists in surplice."

The higher dignitaries of the Evangelical Church held aloof from the movement, or were hostile to it; but the common clergy were stirred. More than 700 ministers sent in their adhesion to the Central Union for Social Reform. Dr. Stöcker displayed great energy. He attended public meetings at Berlin, where he confronted the most fanatical opposition of the Socialist Democrats, and sometimes, by sheer force of eloquence, he won cheers from the hostile crowd. He was attacked with extraordinary violence by Herr Most, who organized what he called a *Massenaustritt aus der Kirche*, or formal renunciation of the Church.

The Central Union for Social Reform also obtained the adhesion of several well-known economists, such as Prof. Adolf Wagner, of Berlin University; Dr. Schaeffle, former Minister of Finance in Austria, and author of "Socialismus und Capitalismus"; Herr Adolf Samter, banker at Königsberg; and Professor von Scheel.

Pastor Todt was the chief author of the movement. In his "Radical German Socialism and Christian Society," he condemns the economics of liberalism as unchristian, and seeks to show that the ideals of liberty, equality, and fraternity are scriptural, as are also the Socialist demands for the abolition of private property and of the wage system, the laborer to have the full produce of his labor, and labor to be associated. Herr Todt places the following epigraph at the head of his work: "Whoever would understand the social question and contribute to its solution must have on his right hand the works on political economy, and on his left the literature of scientific socialism, and must keep the New Testament open before him."

The movement, however, was hurt by its politics. Depending in part on imperial support, this finally failed it. Dr. Stöcker, with unquestioned motives, but with doubtful wisdom, early became a leader in the anti-Semitic movement, and by so doing attached to himself a certain political following not always of a desirable character, and, at the same time, prejudiced against him many who had been attracted by his Christian Socialism. The movement, therefore, so far as it was Christian Socialist, broke away from his lead, and for the most part became a movement for all kinds of church and social philanthropic societies and efforts. It has in this line developed a large and useful activity, but so connected with the "Inner Mission" (q. v.) that we consider it best under that head. Only a few of the younger men adhered to any large extent to the radical Christian Socialism of England and America.

Dr. Göhre (q. v.) developed a radical wing, largely helped by the revelations in his book, "Three Months in a Factory," but he has gone over to straight socialism. Dr. Naumann, formerly of Frankfurt and now of Berlin, with his paper *Die Hilfe* has stood for a more evangelical socialism. There exist in Germany a large number of so called Christian Trade Unions, both Catholic and Protestant, but they are best considered under Trade Unions. See also Germany.

FRANCE

France may be said, in a very real sense, to be the birthplace of Christian Socialism. As long ago as 1790 Claude Fauchet (q. v.), once a court preacher, and then a leader in the Revolution, advocated a radical Christian communism, and founded a Christian communist paper—the first Socialist paper of the world, *Bouche de Fer* ("The Iron World"). He founded Christian Socialist clubs, and exerted no little influence. The *bon mot* of Camille Desmoulins, calling Christ *le bon sansculotte*, is well known. Saint Simon (q. v.) himself has been sometimes called the first Christian Socialist. His first idea was to induce the Pope to found a new Christian social order, and when he failed in this, he undertook himself to found what he called a New Christianity. Several of the Saint Simonians, notably Buchez (q. v.), believed that they could, and endeavored strenuously to establish a new social Christianity. Far more truly may Lamennais (q. v.) be considered a leading French Christian Socialist. His journal, *L'Avenir*, begun in 1830 with its motto, "God and liberty, the Pope and the people," and after his break with the papacy, his *Les Paroles d'un Croquant* ("The Words of a Believer," 1839), are among the noblest and most

burning Christian Socialist utterances ever made. Cabot, the brilliant author of the utopian *Icaria*, must also be mentioned here, with his book, "Le Vrai Christianisme suivant Jesus Christ" (1846), striving to show that Christianity is communism. Yet in spite of these and other brilliant utterances there has been no organized Christian Socialist movement in France until recent times.

Says Kaufmann, in his "Christian Socialism," p. 169: "De Maistre, Lamennais, Lacordaire, on the one hand, Bonald, Le Play, and le Comte de Mun, on the other, represent in the order we have placed them, not in chronological sequence, the ascending and descending scale from and to the ultramontane standpoint of Christian Socialism."

The great movement of Le Play (q. v.) can, in itself, however, scarcely be called a Christian Socialist movement, altho it has led to some extent to movement sometimes using this name. Le Play himself, altho a devout Roman Catholic, aimed to make his movement purely educational. The founder of the real Roman Catholic Socialist movement in France is the Comte de Mun (q. v.). He, with the Comte de la Tour-du-Pin Chambly, founded, soon after the Franco-Prussian War, the *Centre des Cercles Catholiques d'Ouvriers*, an association organized for the purpose of bringing together working men on a Church basis, and standing on the social principles of the encyclical and syllabus of 1864. Its

professed object was "the counter-revolution, made in the name of the syllabus, and the great work of reestablishing a Christian order in the world of labor." The followers of this school hold the Protestant Reformation to be the parent of all France's moral and social ills. They see in the Reformation a revolution against God, the worship of the sovereignty of the man in place of the sovereignty of God. They class Luther, Calvin, Voltaire, Rousseau, Danton, Robespierre, side by side. Against the Reformation, with its asserted ecclesiastical, political, social, and moral results, they declare war. In place of Protestantism and economic individualism they would establish cooperative association with State aid, under the patronage of the Church of Rome. With the Social Democrats they have nothing to do. When the Pope, however, condemned socialism under that name, too indorsing many of its principles, they denied there could be a Christian socialism. The movement is more ecclesiastical and political than really Christian Socialist. It is an effort to hold the working classes for Rome. The direction of the unions is placed in the hands of local committees in close connection with a central committee in Paris. It is an attempt, moreover, to bring together the higher and lower classes of society by means of Christian sympathy, and so to effect social union.

In 1887 there were 400 *cercles* and 130 cooperative associations.

Their leader, the Comte de Mun, an active politician and fluent speaker, too sometimes defeated, has frequently been elected to the Chamber of Deputies.

This movement, however, is not the only Roman Catholic social movement in France. In 1890 Bishop Fréppel founded the *La Société Catholique d'Economie politique*, representing the Le Play movement, but in direct conjunction with the Church.

French Roman Catholic political Christian Socialism, however, has not been a success. Compromised by their persecutions of Dreyfus, accused of plotting against the French Republic, the French voter has voted against these Ultramontans. Therefore the movement is now taking a more practical turn.

Marc Sangnier, a brilliant young student at the Collège Stanislas in Paris, developed a burning interest in social reform, and finally, in the year 1899, an institution known as the *Sillon*, in many senses the Young Men's Christian Association of Catholic France, and, like this, with many branches or clubs of an undenominational character.

These clubs are open to all. Their organization varies. In towns they may take the form of literary and musical societies, daily classes for shorthand, English, or drawing, debating clubs, and the like. In the country they meet less frequently, and generally occupy themselves with lectures on agricultural or industrial topics. In every case the *Instituts* endeavor to meet the social wants of the district. Altho they are not exclusively Catholic, every occasion is taken to bring before those who attend them the truths of Catholicism and its social sympathies. Besides these *Instituts Populaires* the *Sillon* has founded a number of cooperative societies in various parts of France, and an *Office Social*.

An equally important association for social purposes in the French Church, tho perhaps more theoretical than practical, is the *Action Populaire* which undertakes to exhibit the condition of certain sections of the laboring classes, to teach the people that they must organize themselves, and to show them how to do so.

These two associations show which way the Catholic Church in France is moving. They are not political; they oppose socialism, but are social efforts to hold the people for the Church.

Protestant Christian Socialism in France is still more recent.

In 1887 Pastor L. Gouth of Aubenas (Ardèche) took the initiative in the establishment of a Protestant Association for the Practical Study of Social Questions. And on Oct. 18 and 19, 1888, the association held its first general assembly at Nîmes (Gard). The aim of the association, as the result of its studies, was to labor to repair the evils from which we suffer, by pointing out to Christians their social duties, by suggesting to them the initiative in works of brotherhood and relief, and by acting upon public opinion and the established powers to bring about necessary reforms.

Many general assemblies were held—at Nîmes, Lyons, Montbéliard (Doubs), Marseilles, Havre, and Paris, and much thought aroused. Professor Gide, Pastor Fallot, and Charles Secrétan were active in it. The association early developed 600 members. Several of the members have established in their churches, or rather in their communes, institutions answering to its aims, a bureau of information and employment, a *maison de travail*, a mutual aid society; elsewhere a society for the aid of young apprentices of both sexes, lodging-houses, and the like institutions. The *Review of Practical Christianity* became the official organ of the association.

BELGIUM

Belgium has distinguished herself in the literature of Christian Socialism. Colins, born in Belgium, should be mentioned here, tho he wrote mainly in Paris, and developed a philosophy in most respects anything but Christian, since he believed, strange to say, in immortality, but not in God. As an ardent land nationalizer, however, and with a religious spirit, altho a bizarre theology, he sowed seeds which have sprung up in Belgian Christian Socialism. Huet (q. v.) was an out-and-out Christian Socialist. His "Le Regne Social du Christianisme," published about 1850, is one of the earliest and best statements of Christian Socialism in any language. Professor de la Laveleye was his pupil, and says of this book that it has not received the attention it deserves, being too full of Christianity for most Socialists and too full of socialism for most Christians. A Roman Catholic of the school of Pascal and Bossuet, he protested to the last against ultramontanism, and for a liberal Catholicism and a spiritual secularity. Professor de Laveleye, his most distinguished scholar, belongs to the same school. Professor of political economy at Liège, he became as well known for his Christian Socialism as for his economic and sociological writings. A Catholic, of the extreme liberal type, his position on Christian Socialism may be summed up in the passage from the introduction to his "Contemporary Socialism," where he says: "Every Christian who understands and earnestly accepts the teachings of his Master is at heart a Socialist; and every Socialist, whatever may be his hatred against all religion, bears within himself an unconscious Christianity." Prof. C. Perin, of the Roman Catholic University of Louvain, belongs to the ultramontane school. His treatise on "Wealth in Christian Society" was published in 1861. Later he published a work on the "Laws of Christian Society" which was prefaced by a pontifical breve, dated 1875. In 1879 he published a work on "Christian Socialism," to which was added an address he delivered at the opening of the Congress of the Directors of the Roman Catholic Workmen's Associations, at Chartres, Aug. 9, 1878. Perin founds social order on divine authority, but rests largely to the moral rather than the dogmatic influence of the Church. Industry, he believes, should be organized, both paternally and fraternally, under employers, and yet with a Christian fraternal spirit. (For further details, see COLINS; HUET; LAVELEYE; PERIN.) With all these and other Christian Socialist writers in Belgium, one is not surprised to find much fruit. Indeed, in no other country of the world has a whole national church been so penetrated with Christian Socialism, as the Roman Catholic Church. Hence, many think, its deep hold on the people.

As early as 1854, a Jesuit, R. P. Van Caloen, organized in a Brussels basement a few working men into an association of St. Francis Xavier. Its object was to evangelize working men by working men, but it early developed social activities, including economic branches, cooperative societies, institutions for saving, trade-unions of various trades. To-day it has 354 societies, some 70,000 adult and 10,000 juvenile members, besides thousands of women, connected with it only to pray for its success.

In 1867 was founded the Belgian Catholic Federation (for working men). In 1869 it published an organ, *The Christian Economist*, and later a popular journal, *The Worker*. In 1882 the first named was changed to the *Catholic Economist*. In 1888 was organized the Belgian Federation of Catholic Working Men's Societies, which in 1891 became *The Democratic League* (under the guide of the Church), and has held twenty-nine congresses in various parts of the kingdom. Its aim is declared by its constitution to be the moral and material improvement of the working classes and the pacification of labor and of capital. Societies may be affiliated with it composed either of employers or employees, but all must accept its aim, and recognize the indispensability of religion to the social order. The league has 300 societies with about 90,000 members. It is this league that largely gives Catholicism its political power in Belgium.

Catholic Movement

These societies are largely under the lead of the parish priests. The movement agitates for legal reforms, such as laws limiting child labor, woman's work, providing for working men's insurance, a Sunday rest, etc. It has established working men's hotels, schools, orphanages, savings-banks, mutual purchasing societies. Particularly has the movement organized cooperative agricultural societies, as one of its writers says, "for the salvation of agriculture, the first of all industries."

The movement has been an educated and instructed movement. It was Roman Catholic Louvain that first inaugurated a course in social studies in Belgium in 1885. By 1891 this had grown into a school of political and social sciences. To-day this school has thirteen professors, with some forty students. It has a course of two years and a half, grants diplomas, has already published twenty-five volumes and nineteen doctrinal theses. This is for the leaders of the movement who make social studies their specialty, but at every theological seminary in Belgium departments exist for the social and political instruction of the priests.

A Jesuit writer, A. Vermeersch, has published (1904) the most complete work on Belgian social legislation and activities.

OTHER EUROPEAN COUNTRIES

In other European countries Christian Socialism has had less development. In the Netherlands both Protestants and Roman Catholics have gone largely into politics and have created Church parties which separately or by combination have till recently largely ruled the country, but they have been in the main ultra-conservative. Recently, however, the growth of radicalism has compelled action on social lines.

A Catholic Social Union (Katholische Sociale Actie), covering the whole country, has been formed, its central office in Leyden. This society will take the initiative in social action, and will be a bureau of information.

The Calvinists are following suit in a society in connection with the "Patermonium," a working man's society.

In Scandinavia one recalls the late Bishop of Zealand with his book, "Socialism and Christianity as a Fragment of Christian Ethics." There has, however, been little or no organization on Christian Socialist lines, except the efforts of a few pastors and others for temperance and other particular reforms.

In Austria, Christian Socialism was first advocated by a Protestant, Rudolph Meyer, but was taken up by Roman Catholics, Prince von Leichtenstein, Counts Blome and Knofstein, and above all Baron von Vogelsang, and has grown into a large movement. It has, however, been principally a political movement to increase the political power of the Church, by organizing working men as in Germany into societies under the guide of the Church. It has also had much to do with anti-Semitism.

In Switzerland there have been various local Protestant Christian Social societies and a few leaders of economic thought, but the movement has developed little more than some charitable efforts on the part of the respectable upper middle class. Swiss Roman Catholic Christian socialism has been more radical, and some of the priests have been very active co-operators in the labor movement.

In Italy there has been nothing that can be called Roman Catholic Christian Socialism, except for a few utterances like Ruffini's "Christian Catholicism and Culture," and Professor Nitti's notable "Catholic Socialism." Some of the evangelical pastors write and preach on Christian Socialist lines.

THE UNITED STATES

Christian Socialism in America made a more recent appearance. This is due undoubtedly mainly to economic conditions, in part to the American idea of the divorce of Church and State, which has meant too often the divorce of secular and religious life. There have long been those, however, in America who have individually looked this way. Many of the participants in the Brook Farm and the early Fourier experiments acted on motives largely those of Christian Socialism. As early as 1849 Henry James, Sr., in a lecture delivered in Boston, argued the identity of Christianity and socialism. In 1872 a Christian Labor Union was organized in Boston under the lead of George E. McNeill, Edward H. Rogers, Hon. T. Wharton Collins (of New Orleans), the Rev. Jesse H. Jones, Henry T. Delano, and others. The Rev. Jesse H. Jones from 1874-75 published a paper in Boston called the *Equity*, really a paper of

Christian Socialism. The writings of Dr. R. Heber Newton, of Drs. Lyman Abbott and Washington Gladden, of Prof. R. T. Ely, are well known. Yet there were no Christian Socialists, so called, in America till organization was effected in Boston, April 15, 1889, largely under the lead of the Rev. W. D. P. Bliss. It was called the Society of Christian Socialists, and adopted the following principles:

To exalt the principle that all rights and powers are gifts of God, not for the receiver's use only, but for the benefit of all; to magnify the oneness of the human family, and to lift mankind to the highest plane of privilege, we band ourselves together under the name of Christian Socialists.

I. We hold that God is the source and guide of all human progress, and we believe that all social, political, and industrial relations should be based on the fatherhood of God and the brotherhood of man, in the spirit and according to the teachings of Jesus Christ.

II. We hold that the present commercial and industrial system is not thus based, but rests rather on economic individualism, the results of which are:

(1) That the natural resources of the earth and the mechanical inventions of man are made to accrue disproportionately to the advantage of the few instead of the many. (2) That production is without general plan, and commercial and industrial crises are thereby precipitated. (3) That the control of business is rapidly concentrating in the hands of a dangerous plutocracy, and the destinies of the masses of wage-earners are becoming increasingly dependent on the will and resources of a narrowing number of wage-payers. (4) That thus large occasion is given for the moral evils of mammonism, recklessness, overcrowding, intemperance, prostitution, crime.

III. We hold that united Christianity must protest against a system so based and productive of such results, and must demand a reconstructed social order, which, adopting some method of production and distribution that starts from organized society as a body and seeks to benefit society equitably in every one of its members, shall be based on the Christian principle that "We are members one of another."

IV. While recognizing the present dangerous tendency of business toward combinations and trusts, we yet believe that the economic circumstances which call them into being will necessarily result in the development of such a social order, which, with the equally necessary development of individual character, will be at once true socialism and true Christianity.

V. Our objects, therefore, as Christian Socialists, are:

(1) To show that the aim of socialism is embraced in the aim of Christianity. (2) To awaken members of Christian churches to the fact that the teachings of Jesus Christ lead directly to some specific form or forms of socialism; that, therefore, the Church has a definite duty upon this matter, and must, in simple obedience to Christ, apply itself to the realization of the social principles of Christianity.

VI. We invite all who can subscribe to this declaration to active cooperation with us, and we urge the formation of similar fellowships in other places throughout the land.

This society included members of all churches. Its president was a Baptist, the Rev. O. P. Gifford, and among its officers Rev. P. W. Sprague (Episcopalian) and Mrs. Mary A. Livermore (Universalist). Branch societies were also started in many cities. The society also established, in 1889, a monthly organ, *The Dawn*, for some years published in Boston by Mr. Bliss. The society, however, no longer exists. Mr. Bliss established an Episcopal mission, the Church of the Carpenter, in Boston. This movement as an organized movement has disappeared, but the seed has been widely sown. *The Dawn* in 1893 published a list of some 700 clergymen more or less actually engaged in Christian social reform. To-day there are many more.

In the Episcopal Church the *Christian Social Union*, established in 1891, under the lead of such men as Bishop Huntington, Dr. Holland, of St. Louis, Prof. R. T. Ely, Mr. Bliss and others, attained considerable following, and still exists, tho the organization as an organization has not grown. The more radical and locally more active *Church Association for the Advancement of the Interests of Labor* ("C. A. I. L."), organized in New York in 1887, has had more permanent success. The undenominational *Brotherhood of the Kingdom*, established in 1893, by Dr. Leighton Williams and others largely of the Baptist churches, has done, and still does, a quiet but good work. In his Christian Socialist days, Dr.

George Herron, by his brilliant books and burning words, stirred up much thought and some organization, particularly in his own denomination, Congregational; but this, so far as organization goes, was largely undone by Dr. Herron's later break with organized Christianity. Dr. Josiah Strong, tho never calling himself a Christian Socialist, has done very much for Christian social thought through the country. The same may be said of Dr. Gladden and several other prominent religious leaders. In 1906 a national Christian Socialist League, definitely committed to socialism, was organized in Louisville, Ky. But for all these different societies and forces, see articles under the respective names. The following is perhaps a correct representation of the principles and actual methods usually advocated by avowed and radical Christian Socialists:

Christian Socialism is the application to society of the way of Christ. Christ has a social way, and only in this way are there healing and wholeness for the nations. Christian Socialists do not deny the necessity of individual Christianity. Christian Socialism is no salvation by the wholesale, by machinery, by power of environment; it is no new gospel. It is, rather, the carrying out of the old full gospel, which is to all people. It holds that Christian Socialism follows from and is involved in personal obedience to Christ. It is Christian. Its starting-point is the Incarnation.

But this being so, it quickly adds, that while Christian Socialism follows from personal obedience to Christ, it is not enough to-day to say that all that is needed is for the individual to follow Christ. This, while true, begs the question. We need to be told what it means to follow Christ. Those sentimental Christians who say that all that is necessary is for individuals to obey Christ are in danger of saying, "Lord, Lord," without showing what the Lord would have us do. Christian Socialism tries to voice the social law that it has learned from Christ.

First, it declares that all men are the children of God. It follows that men are not merely individuals; they are born united. The world is one. Society makes the individual, more than the individual makes society. Society begins in God. The first social necessity is to recognize this. We are to develop the social unity we derive from God. Second, the law for the social life is revealed in part in the Old Testament. The Mosaic revelation founded a theocracy on earth.

God was the Universal Father; every man of the theocracy a brother. Property in land was not absolute; the land was conceived as belonging to God. No individual could own it in fee simple. He could only use it. In its use he was inalienably protected. It came to him through the family as an inalienable inheritance. If, through poverty or misfortune, he temporarily parted with it, it returned to him in the year of jubilee. No landless, homeless class could, therefore, be permanently developed among the Hebrews. (See JUDAISM.)

The law went farther. It cared especially for the poor, the orphan, the children, the fatherless, the widow. Usury (or interest: all scholars agree that the two words originally meant the same thing) was forbidden between members of the theocracy. The law provided for every one's independence. It not only provided land for the worker, but defended him in the ownership of clothes, tools, etc. (capital), which could not permanently be taken from him. If taken as a pledge, they must be returned before night. No permanent mortgage indebtedness was, therefore, possible on either land or capital; that is, the law was truly socialistic in providing in the name of organized society for both land and capital for every family. And this was not, be it remembered, a law of mere individual righteousness. In order to reap its benefits, the family had to belong to the theocracy. The Jew could take interest from a foreigner; the foreigner could be enslaved, even killed. The law was essentially national and institutional.

Third, this law is to be fulfilled in Jesus Christ. The Hebrew law did not work; no law can work; man must work the law; hence the Christ, conversion, the sacraments, the means of grace. Jesus Christ came to enable us to fulfil the law. What the law could not do, in that it was weak through the flesh, that Jesus Christ came to fulfil. Individualism forgets law; institutionalism forgets grace. A true Christian Socialism fulfils the social law through grace. The Old Testament gives the world its social track; Jesus Christ gives the locomotive power. To preach as Tolstoy and most Protestants do, the latter without social organization, is to try and run a locomotive without a track. Protestantism has run the world into a quagmire. Jesus Christ is the locomotive power drawing the world along the social track.

Fourth, a social law must be fulfilled socially. Protestantism has here made a grievous mistake. But to make a mistake here is to misconceive the whole Incarnation. In Christ, God became man on earth. He took all humanity into Himself. Christ was not only a man, but man; man in all that is in man or possible to man; man in art, in science, in letters, in politics, in society, in commerce, in industry. In the Incarnation God entered into all life. God's laws are practical. What is impractical is not divine. Individualism has been found impractical. Men have tried to carry out the Golden Rule on individual lines, and they have failed. We do not say they have wholly failed. No earnest effort, even tho mistaken, wholly fails. But, generally speaking, they have failed. Large numbers of business men say to-day that the Golden Rule cannot be applied to business. They are right on the present system of business, because the system is wrong. You "cannot serve God and Mammon." Pathetic, noble but impractical are the desperate efforts of Christian men and women to do good and be Christ-like in modern business. It is a hopeless task. God's way demands a social basis.

Fifth, Christian Socialism would fulfil the social law by striving to build up a socialism based on Christ.

It would aid the eight-hour movement. It would reduce the hours of labor in factory and in shop, that men may have longer hours of labor in the home, the library, and the church. Christian Socialism would favor direct legislation, through the initiative, the referendum, and proportional representation, purging our politics of corruption, breaking down the machine, and teaching the people self-government. It would emancipate woman as well as man. It does not believe in a democracy of half the people. It would develop a true municipalism, as is being done in Birmingham, Glasgow, London, Berlin, and other cities. Glasgow, by spending \$7,000,000 in tearing down and rebuilding the worst tenements, and by municipally clearing courts and passages; by providing municipal baths, wash-houses, etc., has reduced her death-rate from 54 to 29 per 1,000. This Christian Socialism considers practical Christianity. It would have the city employ the unemployed, in ways not to compete with present labor. Says Turgot, whom Matthew

Measures Favored

Arnold calls "the wisest statesman France ever had": "God when he made man with hands and rendered labor an indispensable resource, made the right of work the property of every individual; and this property is the first, the most sacred, and the most imprescriptible of all kinds of property." It would have cities obtain the funds for doing this by conducting gas works, surface railroads, etc., for a profit for the city, instead of having them owned by rich capitalists favored by city franchises.

Christian Socialists would have the nations own and manage railroads, the telegraph, expressage, etc. In every way it would replace competition by fraternal combination, and it would press toward reform in all these ways. It is not one reform. It is many reforms on one principle. Perhaps most important of all is land reform. Christian Socialism would revert to the Bible principle, that God is the owner of all the earth, and men only entitled to its use. It would, therefore, favor the reclaiming of the land for the use of all the people, by taxing land values on a graduated scale, and increasingly every few years, till finally the whole value of the natural resources of the earth be taken for the people, and not for the favored few. Christian Socialism would not go out of the world to save the world. It would be in it, tho not of it. Gradually it would influence cities and states and nations.

CHRISTIAN SOCIAL UNION, THE (AMERICAN): Organization founded in New York, April 3, 1891, on the basis of the English Christian Social Union. Its first president was the Rt. Rev. F. D. Huntington, Bishop of Central New York; its first secretary, Prof. R. T. Ely; and its traveling secretary and lecturer, the Rev. W. D. P. Bliss. For its principles, see **CHRISTIAN SOCIAL UNION (ENGLISH)**. It has found considerable response among clergymen and others, and has issued numerous tracts. Its president is Dr. Clinton R. Woodruff; its secretary, the Rev. A. J. Arkin, 3113 Richmond Street, Philadelphia, Pa.

CHRISTIAN SOCIAL UNION, THE (ENGLISH): An organization of the Church of England, founded in 1889 for the study and advocacy of Christian social principles.

The first regularly constituted branch was organized at Oxford, Nov. 16, 1889. The London branch began in 1890. The Oxford branch has been mainly engaged in the systematic study of economic facts; the London branch has been more active in holding public meetings, organizing courses of sermons, and issuing addresses on definite political, social, and industrial problems.

The principles of the union declare it to consist of Churchmen who have the following objects at heart:

(1) To claim for the Christian law the ultimate authority to rule social practice.

(2) To study in common how to apply the moral truths and principles of Christianity to the social and economic difficulties of the present time.

(3) To present Christ in practical life as the living Master and King, the enemy of wrong and selfishness, the power of righteousness and love.

Members are expected to pray for the well-being of the union at Holy Communion, more particularly on or about the following days: The Feast of the Epiphany, the Feast of the Ascension; the Feast of St. Michael and all Angels.

The president of the union is the Bishop of Worcester, who has succeeded the late Bishop of Durham, Dr. Westcott, who was the first president. The largest branches are at Oxford and in London; there are also branches at Cambridge, Leicester, Leeds, Liverpool, Birmingham, Manchester, and some thirty other centers. Canon Scott Holland, Professor Sanday, Professor Stanton, the Archbishop of Canterbury, the Bishop of Liverpool, the Bishop of Durham, the Bishop of Rochester, the Bishop of London, and the Bishop of Chester are prominent members. The Rev. John Carter, of Pusey House, is the honorary secretary. Canon Scott Holland is chairman of the executive committee of the London branch, and the Rev. Percy Dearmer (102 Adelaide Road, London, N. W.), is secretary. The union has upward of 5,000 members in sixty branches, and is very influential in Church of England thought and activities. It has affiliated societies in Australia, New Zealand, and the United States. It has two organs: *The Economic Review*, published at Oxford; and *The Commonwealth*, published in London (3 Paternoster Buildings, E. C.).

The spirit of the union may be seen in the following quotations from a tract, "The Ground of Our Appeal," by Canon Scott Holland:

(1) We start from the conviction which has been for so long stamped on every heart that feels or brain that thinks that the time is come to vote urgency for the social question. We believe that political problems are rapidly giving place to the industrial problem, which is proving itself more and more to be the question of the hour. . . .

(2) We are of those who are convinced that the ultimate

solution of this social question is bound to be discovered in the person and life of Christ. He is "the Man"; and He must be the solution of all human problems. That is our primal creed.

It is true that this relationship of His to the social life of men is less obvious and direct than His relationship to their sorrows or their sins as the Redeemer. For the victory which gained Him this living lordship over all that man is was won by Him not in the social, or economic, or political, but in the spiritual sphere. He redeemed men's souls from sin. That was His primary task; but its significance is bound to tell on every level of existence down to which the influence of the victorious spirit reaches. The whole of human nature is to be brought within the sway of the "New Man." And human nature is corporate; "man is a social animal." The natural bonds which hold together men into societies and races must, of necessity, receive the new inflowing force which comes to them out of the supremacy of Him, who gathers all men unto Himself.

(3) But this application of the redemptive force of Christ to actual society can be no very simple matter. The problems raised by human society are manifold, intricate, and immense; and however firm our conviction may be that Christ is Himself their one and only solution, yet the solution of a difficult problem must, of necessity, be itself difficult; and if the perplexities have been themselves a matter of long and gradual growth, then their undoing, also, will be slow and gradual.

These are the questions; and they can only be answered by those who have got long past the merely sentimental assertion that Christ is all in all, and have set themselves to the solid task of discovering what that solemn truth really and precisely means, and have worked it down into the concrete facts, and have surveyed and estimated the full need of the circumstances, and striven to make clear to themselves what is the first step, and what the second, and the third, if that great royalty of Christ is, in very deed, ever to be made good here on earth, amid men as they are, and after a history such as they have hitherto had.

We cannot all of us undertake such a study as this involves; we have not the leisure or the brains. But that is just why we should all take some direct measures for keeping in touch with those who have the faculties and the opportunities that we lack. Some servants of the Church there must be who will give themselves seriously to the training that such a task involves. . . . They will arrive at the discussion possessed by two deep convictions: First, that the present situation is intolerable; and, secondly, that its solution must be found in the unflinching assertion of moral as supreme over mechanical laws. . . . It is to collect together such men as this, it is to foster and to enlarge such a spirit, that the Christian Social Union exists.

CHRISTIAN SOCIALIST FELLOWSHIP, THE: Organized in Louisville, Ky., June 18, 1906. Objects: To permeate churches, denominations, and other religious institutions with the social message of Jesus; to show that socialism is the necessary economic expression of the Christian life; to end the class struggle by establishing industrial democracy, and to hasten the reign of justice and brotherhood upon earth." Membership is open to all who agree to the objects of the fellowship. Organ, *The Christian Socialist*. Secretary, E. J. Ward, 5406 Drexel Avenue, Chicago, Ill.

CHRISTIAN SOCIALISTS, THE SOCIETY OF: A society organized in Boston, U. S. A., in 1889, but tho not disbanded, not now in active existence. (See **CHRISTIAN SOCIALISM**.)

CHRISTIANITY AND SOCIAL REFORM: This article is concerned neither with the teachings of Christ, nor with the activities of the Church, but solely with the effect of Christianity on social problems, and with the principles of a Christian sociology. The subject is considered under two heads: (1) History, and (2) Christian Sociology.

I.—History

The first effect of Christianity upon society was to introduce a new spirit of brotherhood, of equality, and of humanity to the suffering and the lowly (see **CHRISTIAN COMMUNISM**). Outside of Judea, at least, it seems probable that up to the third century Christianity spread largely among the vast slave and despised population of the empire, perhaps mainly among the trade *sodalities* or *colleges* or brotherhoods with which Mr. C. Osborn Ward shows the empire to have been honeycombed (see **GILDS**). Spreading mainly among these, the enslaved

rather than the masters, it is evident that Christianity could not at once overthrow slavery; but it did what it could to elevate the position of the slave. It bade him submit, in the spirit of Christian love, to his master, and yet it treated him as an equal and a brother. It inculcated a spirit and *praxis* of brotherly love. "How those Christians love one another!" is the suggestive exclamation concerning life in the primitive Church. For a beautiful though imaginative picture of the life of the early Church, see Koun's "Arius the Libyan."

Coming to more authoritative and established facts, we can see the evidence of the social effect of Christianity by comparing legislation before and after its influence began.

Rome, like all early civilizations, gave almost unlimited power to the father. He could and often did chastise or even slay an adult son. He could take his property, assign him a wife, divorce him when married, transfer him to another family by adoption. See *Val. Max.*, v. 8; *Liv.*, vii. 7; *Plut.* (*P. Gr. et Rom.*). Over the daughter he had still further power. Under the Christian emperors, whatever their personal character, this was abridged.

The Family

Constantine punished a parricide, and Justinian went much further. The father could now only inherit from a son to a less degree than the son's minor children. Under Justinian the son had full control over all his acquisitions. He could not be killed, exposed, bought, sold, or imprisoned, save by decree of the courts. Under old Rome, inheritance was not by blood, but by power. Relationship was limited to descendants by males, though a daughter inherited equally with a son. But neither an "emancipated" son nor a married daughter who had "left the family" inherited. They were *cognates*, not *agnates*. Under the Christian emperors this distinction disappears. Under the old Roman law the woman was almost wholly under the tutelage of her male relations. A court of her relatives could try her. Her husband had power of life and death over her, and power over her property. To the three ancient forms of Roman marriage, the *confarreatio*, or religious, the *coemptio*, or civil, and the *usus*, or without ceremony, there was gradually added "free marriage" in the interest of the woman, which was recognized by law, but did not make the wife of the husband's "family," leaving her her own property, her own gods, and her old family relation.

Under the Christian emperors this was changed. "Tutelage of women must be done away with," says Justinian in his "Institutes." The absolute power of the husband ceased. If unjustly divorced, she received full paternal power (*C. Theod.*, v. 4, 5).

Under Rome, divorce had become frequent to the utmost. Juvenal declares that "no crime or deed of lust was wanting to the age" (*"Sat."*, vii., 223). Modesty was held to be a presumption of ugliness (*Plut. Val. P. Aem.*).

Marriage

In the year 19 A.D. the Roman senate had to pass a law that no woman of a certain rank could make her person venal. (*Tac. Ann.*, 2, 83). In 330-331 A.D., however, a wife might be divorced from her husband only when he was a murderer, a magician, or a violator of tombs. The husband could be divorced when the wife was an adulteress or given to evil practices. If the wife's innocence was proved, she had right again to all the property of her husband, and even the *dos* of the second wife. A married man was prohibited (340 A.D.) from having a concubine, and finally adultery was punished by death. Justinian's code, however, extended the causes of divorce. Jerome confesses that "some were the laws of the Caesars, and some of Christ." A stoical jurist, Paul, writes in the third century: "Women in every kind of affairs and obligations, whether in behalf of men or women, are prohibited from having any concern" (*Paul Sent.*, ii., xii.). Justinian says that nothing in human affairs is so much to be venerated as marriage. "We enact then that all persons, so far as they can, shall preserve chastity, which alone is able to present the souls of men with confidence before God" (*Nov.*, iii., 1, 14).

In ancient Rome and Greece, unnatural vices became the rule even among the learned (confer Lucian, Apuleius, Arator, Athenæus, Plato's *Symposium*). The plain words of St. Paul are well known. The Theodosian code, which codified the legislation of Constantine, ordered the most intense punishments to be inflicted on those guilty of such crimes. He says: "Taught by the Holy Scriptures, we know what a just punishment God inflicted on the inhabitants of Sodom" (*Cod. Theod.*, ix., tit. 7).

Slavery was probably never worse than just before the advent of Christianity. Stoicism mildly denounced, but did not alleviate it. Cato approved of selling a sick slave (*De re militari*, II.). Six hundred slaves were put to death because one had slain their master, and Cassius defended the act, which the law required (*Tac. Ann.*, xii, lib. 42).

Slavery

Similar inhumanities are well known. Slaves were fed to fish and put to death for amusement. Under Christianity the Lord's day became a day appropriate to emancipation (*Cod. Theod.*, i., 2). The setting free of slaves became common. In 312 A.D. the poisoning or branding of a slave was declared by law to be homicide. In 314 liberty was a right which could not be taken away. By 316 emancipation in the church before witnesses was emancipation before the law. Later a few words from a priest could emanci-

pate. Under Justinian those who served in the army or entered a monastery, with the consent of their masters, became free. Slavery was suppressed by penalty. If, at the death of the master, the heir was directed to free one slave, all became free. The marriage of the master with the bondswoman freed and legitimized all the children, and even without marriage, if the woman held the position of a wife, she became free with her children. The violation of a slave woman was made an equal offense with crime committed upon a free woman, and punishable by death. The movable property of slaves became their own, and with it they often purchased their liberty. The code declared its purpose "to have the republic frequented by freemen rather than liberated slaves." These were but the principal enactments. Under Leo (717) all slaves on imperial domains were allowed to do with their property as they chose. If property reverted to the State (867), the slaves became free. In the ninth century St. Theodore of Studium (Constantinople) commanded "Thou shalt possess no slave, neither for domestic service nor for the labor of the fields, for man is made in the image of God" (Wallon's "Hist. de l'Esclavage," v. iii., p. 484). Slavery had disappeared in Europe when the Reformation came.

The gladiatorial games of Rome are well known. The Stoics objected to them, but it did no good. Caesar had 350 pairs of gladiators at once in the arena. Trajan surpassed all in forcing 10,000 prisoners and gladiators to contend for life in a carnage lasting 123 days. Constantine, in the very year before he accepted Christianity, exposed a vast number of prisoners to wild beasts in the amphitheater. The early Christians protested against all this. In 325 A.D. Constantine passed the law, "Bloody spectacles in our present state of civil tranquility and domestic peace do not please us, wherefore we order that all gladiators be prohibited from carrying on their profession" (*Cod. Theod.*, lxxv. tit. 12, l. 1). Their final abolition by the leaping into the arena of the monk Telemachus (404) is well known.

Under old Rome public spectacles were licentious as well as bloody. Nude women were made to bathe before the spectators. The actresses were prostitutes and the plays obscene. The Christians denounced these, as they did the gladiatorial shows. By 343 no Christian woman, bond or free, could be forced to serve as a prostitute on the stage. Exhibitions were forbidden on Sundays and saints' days. By 439 a law of Theodosius forbade the profession of the *lena*, or procurer. Under Justinian no woman could be retained by force on the stage. Under Theodosius it was forbidden to sell or train women for social entertainments. A slave mutilated became free. Often when examined a slave would answer, "I am not a slave; I am a Christian; Christ has freed me."

Under ancient Rome, the exposure and frightful mutilation of children, and especially of female children, were frequent.

Humanity

Even Seneca approved of exposing weak infants. Exposed children were often taken to be prostitutes. The Christian fathers were full of denunciation of the custom. Constantine (315) forbade the practice, and had his revenue and treasure used to rescue any who were exposed. The Council of Nice ordered the foundation of hospitals in the principal towns. Houses of mercy for children were founded by Justinian. A marble vessel was provided for exposed children at the door of each church, and nurses were employed for them.

Under Constantine began the first prison reform, and with the Christians, the first active condemnation of war and the adoption of arbitration. Many of the Christians refused to fight or to go to law. Tertullian called Christians "priests of peace." The first hospital is said to have been built in Rome at the end of the first century. Pulcheria, sister of Theodosius the Younger, built and endowed several at Constantinople.

THE MIDDLE AGES

It is often claimed that the elevation of woman under the Christian emperors could not have been due to Christianity, because the same elevation was found in unchristian Germanic tribes. But the same elevation was not found. The woman occupied a higher position than under ancient Rome, but not so high as under Christian Rome, and when Christianity conquered these tribes her position was very much bettered. It is true, according to Tacitus, that woman among these tribes was the companion of her husband, and often the honored prophetess; a high ideal was maintained of female purity; and the debauchery of Rome was unknown; nevertheless the wife was under the absolute authority of her husband, and could be bought, beaten, or killed. The wife was usually bought, being rated at so many pieces of silver. The offender was required by law simply to pay the husband for the adultery of his wife, and to furnish a new wife (*Leg. Ethel.*, 32).

Christianity immediately strove to increase the sanctity of marriage. The law of Ethelred is striking: "And we direct very earnestly that every Christian man carefully avoid unlawful concubinage and rightly observe Christian law; and let it never be that a Christian man marry within the fourth degree, nor have more wives than one as long as she may live, whoever will rightly observe God's law and secure his soul from the burnings of hell" (*Leg. Ethel.*, v. II., vi., II.). The Pepin and Charlemagne capitularies

are equally strong on the indissolubility of the marriage tie, save for the cause of fornication. The Church strove likewise to root out the old venal character of marriage. The Council of Treves (1227) forbade the relations of the bride from taking money under any pretense for giving the woman in marriage. The ring is now well-nigh the only relic of the ancient wed or pledge that the man would fulfil his part of the money contract. France was the first to abolish tutelage.

A greater effect of Christianity on the Germanic tribes was in the mitigation and finally the suppression of personal feuds. In barbaric society individual injury was revenged on the person of the enemy, and the injured, being a member of a family or association, was protected by the association, and his wrongs regarded as wrongs done to the family. Hence arose feuds (*foida*). In the Teutonic tribes an elaborate system of fines, or amends, was arranged. Christianity agitated the subject. King Alfred, in the introduction of his laws, speaks of the ordaining of *bot*, or money fines, to repress feuds by the legislative assemblies of England as a special effort of the Christian faith. All Sundays and religious days became sacred from feuds. In the seventh and eighth centuries a confessor at shrove-tide would refuse absolution to a man at feud who would not make peace. From a Russian code of 988 A.D., we learn that "King Vladimir lived in the fear of God, and murders waxed greatly. Then spake the bishops to Vladimir: 'Murders wax greatly. Why dost thou not punish?' He answered: 'I feared injustice.' But they replied: 'Thou hast been set by God for the punishment of the wicked and for grace to the good. It becometh thee to punish the murderers, but only after much searching out.' Then Vladimir rejected *wergild* (fine), and punished the murderers."

From feuds arose private wars. A nobleman once declared war against the city of Frankfort because a lady residing there had promised a dance with his cousin, and had danced with another. The city was obliged to satisfy his wounded honor. The Margrave of Brandenburg boasted that he had burned 170 villages. A Church council held near Soissons in 909 A.D., declared "that the monasteries were burned or destroyed, the fields reduced to solitude, so that we can truly say that the sword has pierced to the very soul." Wherever feudalism went there was private war. Consequently the clergy preached "the Peace of God."

"The Peace of God"

In France, in the tenth and eleventh centuries, there seems to have been a sort of peace "revival," almost "a crusade of peace." Whoever broke the "Peace of God" lost his property, and was driven from among men. The peace lasted from Thursday evening to Monday morning, and included Christian feasts and other festivals. Many religious fraternities to reconcile enemies were formed in the Middle Ages. A meeting of clergy at Charons (980 A.D.) anathematized all who should plunder the poor and the clergy. The Council of Poitiers 1004 A.D., worked for the same end. By the Council of Limoges (1031) all disputes were to be brought before the bishop and his chapter. The popes made public proclamations of peace. Almost all the councils reaffirmed this peace. In the thirteenth century Brotherhoods of the *Agnus Dei* worked for peace. In the same century Friar John of Vicenza traversed large portions of Italy, preaching the "Peace of God." In the fourteenth century a great religious movement for peace stirred the minds of different nations. Pilgrims with white bands around their necks (*I Bianchi*) marched through various lands preaching the duty of a Christian peace. In Germany the Church and the free cities combined, and in the twelfth and thirteenth centuries largely introduced courts of arbitration under the bishop in place of feuds.

The capitularies of Charlemagne are replete with evidence showing the effect of Christianity in the way of social reform. One of them reads: "Let peace and good intelligence rule among bishops, abbots, counts, judges, and men of all conditions, for without peace, nothing pleases the Lord." "If ye love one another, all will know ye are Christ's disciples." "Widows and orphans and minors are to be protected as under the peculiar care of God." "The true charity, which loveth God and our neighbor," is to be cultivated. The people are exhorted to peace, because "they have one Father in heaven," and because the best book has taught them that "blessed are the peacemakers." The powerful are cautioned against the oppression of the poor, and all are exhorted to be imitators of Him who would save the souls of men. All Christians are most solemnly warned to give their utmost diligence lest they be forever separated from the kingdom of God by their strifes and contentions and falsehood and wicked vices. The laity were ordered to learn the Apostles' Creed. The stranger and far-come were especially protected "under the injunctions in the Bible, and because such may be journeying in the service of their common Master."

Similarly indicative of the influence of Christianity are old English laws. King Alfred (about 870 A.D.) introduces his code with the ten commandments and other laws taken from the Bible. Of his laws, the king says: "These are the dooms that the Almighty God Himself spake to Moses and bade him to hold, and when the Lord's only begotten Son—that is, Christ the

Healer—on middle earth came. He said that He came not these dooms to break nor to gainsay, but with all good to do

and with all mildheartedness and lowly-mindedness to teach them" (Hughes's translation). "That ye will that other men do not to you, do ye not that to other men. From this one doom, a man may think that he should doom every one rightly; he need keep no other doom-book." The Saxon and early Norman laws are strict as to Sunday work. If a bondsman work on Sunday by his lord's order, the lord must pay a fine of 30s.; if without this order, he must be flogged. If a freeman work without his lord's order, he must forfeit his freedom or pay 60s. A priest pays double. In King Ethelred's dooms the Christian impulse is very strong (978 A.D.). "This, then, first, that we all love and worship one God and zealously hold one Christianity; . . . that every man be regarded as entitled to right, and that peace and friendship be carefully observed within the land before God and before the world." King Canute's laws (1017 A.D.) are similar: "Let every Christian man do as is needful for him; let him keep his Christianity," etc.

Christianity in the Middle Ages did much for education. The Council of Vaison (590 A.D.) says: "It hath seemed good to us that priests with parishes should receive into their houses, according to a sound custom in Italy, young readers to whom they give spiritual nourishment, teaching them to study, to attach themselves to holy books, and to know the law of God." The Synod of Orleans (799) says: "Let the priests in villages and towns hold schools, in order that all the children entrusted to them can receive the first notion of letters. Let them take no money for their lessons" (*Theod.*, cap. 20). In 859 another council declared: "Let one raise everywhere public schools, that the Church of God may everywhere gather the double fruit of religion" (*Conc. Ling.*, cap. 10). The Council of Trent commands that the children of the poor have at least one master to teach poor scholars grammar gratuitously" (*Conc. Trid.*, *occ.*). Charlemagne had already said: "Let one open schools to teach children to read; let, in every monastery, in every bishopric, some one teach psalms, writing, arithmetic, grammar, and employ correct copies of holy books; for often men seeking to pray to God, pray badly on account of the unfaithfulness of copyists" (*Cap. Ecc.*, 61-66).

All these exhortations, and there were many more, had the effect of multiplying schools. The contribution of the monasteries to education is well known. An immense quantity of manuscripts was copied. Thomas à Kempis said of this copying: "Do not trouble yourself at the fatigue of your work, for God, who is the source of every good and just labor, will give the reward, according to your efforts, in eternity. When you shall be no more, those who will read the books copied by you with elegance will pray for you; and as he who gives a glass of cold water does not lose his reward, so he who gives forth the living water of wisdom will receive more surely his recompense in heaven." All classes studied in these monastic schools, so that rich and poor were brought together on the field of learning. Nor were the popes altogether wanting to the intellectual movement.

Equally was the Church effective in behalf of liberty. Medieval serfdom sprang from the chaos of the times. Freed slaves, finding that they could not protect themselves, preferred to join some master as land slaves. The small farmer found himself better guarded from robbers by becoming the serf of some powerful nobleman. Wealthy patrons at Rome rewarded their faithful clients by bestowing on them parcels of land in the provinces, where they were attached as *coloni* to the soil. Again, the government settled bodies of prisoners or immigrants on large districts of public land, and made them serfs to the soil. These *coloni* were considered as free born, but attached to the estate. They could not marry, nor teach their children without the consent of their lord, nor they could become priests. They had a little cottage, a little land, pasture, and fuel, and, according to Rogers, rent free. (See *SERFS*.) The estate could not be sold without them, nor they sold from the estate. They paid no taxes.

The laws of Constantine forbade the separation of near relatives among slaves of the soil. Slavery, however, still existed. Up to the twelfth century there was an absolute power of the master over the life of the slave. For these and for the serfs the Church did much; thirty-seven Church councils are reported to have passed acts favorable to slaves. In 305 A.D. any master ill treating his slave was condemned; in 517 the murderer of a slave was excommunicated; in 549 the right of asylum in a Christian church was offered to the runaway, and slaves freed by the Church were protected; in 585 the ornaments and property of the Church were permitted to be sold for ransoming slaves; in 566 Christians were forbidden to reduce freemen to slavery; in 922 no Christian was permitted to enslave a fellow Christian; in 656 any slave compelled to work on Sundays became free by the fact, or if he were held over the font for baptism. The decree of the Council of Chalons (650 A.D.), with forty-four bishops in session, ordered that no Christian slaves should be sold outside the kingdom of Clovis, with the words: "The highest piety and religion demand that Christians should be removed entirely from the bonds of servitude." One form of manumission was, "For fear of Almighty God and for the cure of my soul I liberate thee, and may the angel of our Lord Jesus Christ deem me worthy of a place among His saints." Another form was, "I, in the name of God, thinking of the love of God, or eternal retribution, . . . do free this slave from the bonds of servi-

English Laws

tude." In the eleventh century the Emperor Conrad speaks of the sale of human beings as a thing nefarious and detestable to God and man (*Paris*, xi., 38). In the fourteenth century the Count of Valois, brother of Philip the Beautiful, freed the serfs of his *comté* with the words: "As the human creature who has been formed in the image

Slavery

of our Lord ought to be free by natural right. . . . let these men and women be free. . . . In 1256 the city of Bologna freed all its serfs, paying an indemnity to their masters, closing the decree with these remarkable words: "The city of Bologna, which has always combated for liberty, remembering the past, and its eyes fixt on the future, in honor of our Savior Jesus Christ, hath ransomed all the serfs on its territory, and decreeth that it would not suffer there a man not free" (*Isidori di Bologna, Girarhacci*, quoted by Laurent Sugenheim and von Raumer, vol. iii., p. 168). In Germany, the "Sachsenspiegel," or Mirror, the code of the thirteenth century, is full of the traces of the influence of Christianity against slavery. The Lord is said to have "put rich and poor equally under His love." Slavery is declared to have its origin "from unjust captivity," and, quoting the Bible, the law affirms that man belongs to God alone, and "whoever holds him as slave, sins against the power of the Almighty."

One of the first Christian kings of Norway, Knut the Holy, at the end of the eleventh century publicly proclaimed that slavery should be abolished. By 1212 it had almost ceased, and by the fourteenth century there are no traces of it. In Sweden, King Magnus Erikson, 1335, made a similar proclamation. In England, as upon the Continent, slavery arose from many causes—birth, captivity, punishment, poverty. Thousands of Britons, in the first century after the Norman conquest, sold themselves into thralldom. Children were sold by their parents. Bristol was the great slave market, and there might be seen long trains of British youths and maidens—the latter often received for the sake of selling their offspring—all to be sold either to Ireland or to foreign countries. One authority says that from Ethelwolf to William I., for 230 years, a great part of the English peasantry became reduced to slavery. By the Domesday Book (1086-71 A.D.), the number of male slaves in Sussex was 9,200, which would make the whole number about 50,000, while the freemen were only about 38,000. In the whole of England there seems to have been 25,000 slaves, 89,000 serfs, and 110,000 villeins. There is proof that slaves were branded and yoked as cattle.

Christianity strove against this evil. Bishop Wulfstan, of Worcester, about 1086, came yearly to Bristol and spent several months preaching against the slave trade. Edward the Confessor, 974 A.D., said of Christian brotherhood: "We have all one heavenly Father and one spiritual mother, which is called Ecclesia—that is, God's church—and therefore are we brothers." St. Aidan, of Northumbria, ransomed slaves. Bishop Wilfred, having received an estate with 250 Christian slaves,

Slavery in England

emancipated them. Laws were enacted in behalf of the slaves, but always on a Christian basis. Some of these we have seen. A female slave led into sin by her master, by that act became free. The Seven Years' Jubilee, taken from the Jewish system, did much to destroy slavery in England. Under William I. the law forbade the slave trade. A council in London (1102), called by Anselm, forbade absolutely the nefarious business of selling human beings like brute beasts. The chivalry of the Middle Ages owes much to Christianity. The initiation of the knights was essentially religious, his ideals were largely so. His first oath was often to fortify and defend the Christian religion to the uttermost of my power." Similarly the crusades and much of the life of the first period of the military orders like the Knights Templars were largely influenced and formed by Christianity, and were undoubtedly for good. The effect of the monastic life upon equality is noticed under the article COMMUNISM. Christianity and the Church did far more for civil liberty than is usually recognized. It should not be forgotten that Stephen Langton, Archbishop of Canterbury, was the main instrumentality in forcing from King John the priceless Magna Charta. For the part played by John Ball and Wycliffe, "poor priests," see JOHN BALL. The social influences of Savonarola in Italy, who can estimate? The democracy of the Church certainly influenced the political movement.

THE PERIOD OF THE REFORMATION

The first social effect of the Protestant Reformation, with its emphasis upon the right of private judgment, salvation by personal faith, the worth of the individual soul, was the outbreak of a struggle for social freedom. In this struggle Germany took the lead. (See PRASANTS' REVOLT.) Many associations among the peasants were formed. One is spoken of on the Upper Rhine, which had a banner with a picture of Christ crucified, before whom knelt a serf with the legend, "Nothing but God's justice." The Swabian peasants, in the insurrection of 1525, said: "It hath been the custom till now to hold us for serfs, which is a pity, seeing that Christ hath bought us and redeemed us with His blood;" and, "It is found in the Holy Writ that we are free, and we . . . desire to be free. . . . We would have God as our Lord, and know our brother in our neighbor." The fourth article claims on religious grounds the use of wild game and wood from the

forests. In conclusion, say the peasants, "If any of these articles are opposed to Holy Writ, and this can be proven to us, we will give them up. The peace of Christ be with us all." The peasants on the Neckar claimed under the emperor an absolute equality for all men. "All worldly lords are to be reformed, so that the poor cannot be burdened by them beyond the rules of Christian freedom; the same law is to be for the highest and lowest." "All cities and parishes are to be reformed in divine and natural rights, after the principles of Christian freedom." (See also ANABAPTISTS; CHRISTIAN COMMUNISM, etc.) Such was the first social result of the Reformation. But it did not endure. The leaders of Protestantism soon became too much engaged in the discussion of doctrines to lay great stress upon social rights. Protestantism became "otherworldliness." It is not to be denied that the preaching of the right of private judgment and the value of the individual had far-reaching social and political influence. John Fiske says of Calvin: "The spiritual father of Coligny, of William the Silent, and of Cromwell, must occupy a foremost rank among the champions of modern democracy." Liberty owes indeed a great debt to Protestantism, however much Protestants hung and burned and tortured those who did not believe with them according to the spirit of the times. Plymouth Rock is a truer outcome of Protestantism than the persecution of the Salem witches. In the words of Cromwell, "They that trusted God for the liberty of conscience could venture life for the liberty of country." Protestantism against Romanism meant to Protestants, very largely, liberty against absolutism. Nevertheless, Protestantism soon turned against the common people. Luther was against the German peasants. Others than Milton found that "new presbyter was but old priest writ large." Protestantism had stood for political liberty, but not for social reform. What Christianity did for social reform up to the Reformation was accomplished largely through the Church. Since then it has been mainly through individuals, in spite of the Church. The Reformation produced in the Church of Rome, it is true, somewhat of a counter reformation, yet the effect upon her, as upon the Protestant mind, was mainly doctrinal, and the Church, both Protestant and Roman, largely forgot to apply its Christianity. The opening of the new world, and especially of the gold mines of the New World produced a revival of greed and of mammon worship, and led to the horrors of a modern slave traffic, that has endured 400 years. The first considerable cargo of slaves seems to have been bought in 1444, under Prince Henry of Portugal, by a Portuguese captain from the coast of Guinea. Charles V. granted in 1517 a monopoly to Governor de Brea to import 4,000 negroes during eight years into the Spanish colonies, but in 1542 the monopoly covered 23,000 slaves. In 1700 a Spanish treaty with a Portuguese company of Guinea stipulated to furnish 10,000 *lows* of negroes. The treaty of Utrecht (1713) gave Great Britain a monopoly in the slave trade for thirty years, from 1713-43, and during this period the British Government agreed to import 144,000 negroes of both sexes into Spanish America at 33½ pisters per head. The British slave trade began under Queen Elizabeth. Certain statutes of William declared that "the trade was highly beneficial and advantageous to the kingdom," and to the plantations and colonies thereunto belonging. Between 1752 and 1762, it is estimated that 71,115 slaves were imported into Jamaica alone. During two centuries the Spanish Government concluded more than ten treaties "in the name of the most Holy Trinity," which authorized the sale of more than 500,000 human beings. The first ship which sailed from England in 1562, under Sir John Hawkins, to buy slaves in Africa and sell them in the West Indies, bore the name of *Jesus*. In 1807 Lord Eldon said in Parliament: "It [the slave trade] has been sanctioned by Parliament, wherein sat jurists of the most wise, theologians the most enlightened, statesmen the most eminent." Bancroft estimates that for one century previous to 1776, 250,000 negroes were torn from Africa by Great Britain, 31,000, of whom 250,000 perished in the Atlantic from the horrors of the "middle passage," where they were chained between decks so low that they could not stand up, the living often chained to the dead. Helps estimates that from 1519-1807, between five and six millions of negroes were carried as slaves from Africa to America by various European powers. The American colonies protested against it. Oglethorpe, the great founder of Georgia, declaring that they prohibited it in that colony "because it is against the Gospel, as well as against the fundamental law of England." Within two years, however, the inhabitants petitioned for slaves. Protestantism and Romanism have thus the terrible stain to bear of the approval of slavery. Yet it should not be forgotten that it was mainly Christian thought that finally broke up the slave traffic and slavery itself. The Society of Friends or Quakers, both in England and America, was the first modern body of Christians to denounce and oppose slavery. As early as 1675 the devoted missionary, John Eliot, in Massachusetts, spoke against slavery, and in 1701 a petition against slavery was presented to the representatives of Boston.

Among the Friends who opposed it in the eighteenth century should be mentioned Beneset and John Woolman. The

The Antislavery Movement

great divines Wesley and Whitefield preached against it. Dr. Hopkins, a Congregational clergyman of Rhode Island, distinguished himself by his efforts against it, till in 1774 Rhode Island gave up the traffic, and in 1784 abolished slavery. The Society of Friends was, however, the only religious body which as a whole forbade the holding of slaves. The early abolition societies all took religious ground. "Nearly all," says Wilson, the historian of the slave power (vol. i., p. 230), "who engaged in the formation of antislavery societies were members of Christian churches." In Great Britain the opposition to slavery came equally from Christian men, notably Baxter, Bishop Warburton, Paley, Wesley, Bishop Porteus, Whitefield, and others. The first petition to Parliament against the slave trade (in 1776) was based on the religious ground "that the slave trade is contrary to the laws of God and the rights of man." The slave trade was abolished in the British Empire, 1806-7. The United States had included their judgment on the slave trade in the Constitution, but adjourned the final abolition till 1807. In England antislavery sentiment rose till in 1833 England abolished slavery, paying £20,000,000 to the planters as indemnity. In the United States early Church conferences denounced slavery. The Presbyterian Synod in 1787 "recommended to all their people to use the most prudent measures, consistent with the interests and state of civil society in the countries where they live, to procure eventually the final abolition of slavery in America." In 1818 it pronounced slavery "utterly inconsistent with the law of God . . . and totally irreconcilable with the spirit and principles of Christ." Congregationalists and Unitarians went even further. The Methodist Episcopal Church in 1780 plainly condemned the system of human bondage. In 1800 the annual conference was directed to prepare an address favoring gradual emancipation. But the words were finally removed, and this was added, "Let all our preachers, from time to time, as occasion serves, admonish and exhort all slaves to render due respect and obedience to the commands and interests of their respective masters."

But the conflict was as irrepressible in the Methodist Church as it afterward proved to be in the nation. At the General Conference of 1844, which was held in the city of New York, the contention took an extremely angry form. It centered upon the personal relations of one of the bishops of the Church (Andrew), who had come into the possession of slaves by a marriage which was contracted after he entered the episcopate. It was his wish and intention to resign, but he was overruled by the Southern delegates. They finally called a

The Irrepressible Conflict

convention of delegates from the Southern churches, which met at Louisville, Ky., in 1845. This body took formal action, separating itself from the Northern churches. Many discerning minds regarded this action as prophetic of the same results in the organic life of the nation.

But it was true nevertheless that from 1830 to 1850 the churches as a whole were subservient to the slave power. Dr. Albert Barnes said, "There is no power out of the Church that could sustain slavery an hour if it were not sustained in it." Judge Birney called "the American churches the bulwarks of American slavery." Yet there were individual churches and not a few clergymen that battled for abolition. The clergyman Lovejoy was killed for advocating abolition. Garrison and Phillips were strong in Christian sentiment. At one meeting in Illinois more than thirty clergymen attended and opposed the introduction of slavery into that state. During the struggle in 1853, which prevented Illinois from becoming a slave state, the clergymen were almost as one man against slavery. But whatever the position of the churches, it is not too much to say that Christianity put down slavery.

For the other social effects of modern Christianity, see CHURCH AND SOCIAL REFORM; but Christianity, if not the Church, has had at least its part to play in the gradual emancipation of woman, in the condemnation of war, the favoring of arbitration, in the care of the wounded in war, the condemnation of dueling, in prison reform, in the creation of hospitals and charities of every kind, and in temperance reform.

II.—Christian Sociology

The first note of Christianity in relation to society is that it is world-wide and international. It knows "neither Greek nor Jew, circumcision nor uncircumcision, barbarian, Scythian, bond nor free, but Christ all and in all." It taught Peter to call no man common or unclean, "that God is no respecter of persons, but that in every nation he that feareth Him and worketh righteousness is accepted with Him" (Acts x. 34). It led Paul,

once a Pharisee of the Pharisees, to write to the Ephesians, "Now, therefore, ye are no more strangers and foreigners, but fellow-citizens with the saints, and of the household of God" (Eph. ii. 19). It taught the Christian Church the unity of the faith—"One Lord, one faith, one baptism, one God and Father of all, who is above all and through all, and in you all" (Eph. iv. 5, 6). One Lord Jesus Christ, "of whom the whole family in heaven and earth is named" (Eph. iii. 15). Hence Christians of every age, however they have explained it, have believed in "the holy Catholic Church," "the communion (literally the communism, *κοινωνία*) of the saints," the unity of believers, the kingdom of God. Thus Christianity, at least till the Protestant Reformation, in Catholic countries, and even under Protestant denominationalism, in a deeper-lying unity, has ever stood for the unity of man in Christ. Says Bishop Barry:

"The Catholic [not Roman] Church is a universal society, which knows no distinction of age and physical circumstance, no distinction of peoples, nations, and languages. It is no castle in the air, no mere promise of a future heaven. It is a living reality now, obviously the one, ever-growing international society; already realizing by its Bible read and its Christian worship offered in some 200 languages, the sign of Pentecost, and always advancing toward its future heritage of the world of humanity. This great unity . . . underlies all special, local, temporary characteristics; its communion is a communion of saints; its one universal tie is the indwelling of the Spirit of God; . . . its means and pledges of unity are the sacraments of communion with Him" ("Lectures on Christianity and Socialism," p. 13). Canon Fremantle's "Bampton Lectures" (1883) bring out still more plainly the unity of the Church "as a moral and social power, present, universal, capable of transforming the whole life of mankind, and destined to accomplish this purpose." The Church he calls "the social state in which the spirit of Christ reigns, embracing the general life and society of men, and identifying itself with these as much as possible, as having for its object to imbue all human relations with the spirit of Christ's self-renouncing love, and thus to change the world into a kingdom of God."

This makes the field of Christianity the world, and identifies with the coming of God's kingdom any advance in unity and in love. Says Canon Fremantle: "All goodness is essentially one, and therefore essentially Christian."

Its Field all Life

The coming of love in all human relations is thus the coming of God's kingdom. Canon Fremantle therefore calls the Jewish Church a training in national righteousness. The early Christian Church he considers the beginnings of the universal society. The imperial and medieval Church a united Christendom attempted. The medieval theory of Christendom he thus states: "Christendom forms one great whole, in which there are two chief functionaries, the Pope and the Emperor, each in a different way its head. Each power is instituted by God. The one is to rule over man bodily, the other over his spiritual interests. Both spring from the old Roman Empire, which, having become Christian, was at once empire and Church. The two powers must support each other, both mutually necessary. The emperor sanctions the pope's election, the pope crowns the emperor; the emperor protects the pope and the clergy and the spiritual courts, and these in return support the authority of the emperor over his subjects. This theory," says Canon Fremantle, "tho it did not wholly correspond to the facts, had much in it, considered as an ideal, which was sound." It explains much of the crusades, is the key to Dante's "De Monarchia," gives rise to both a Frederick Barbarossa and a Hildebrand. It gave to the world an Alred the Great, a St. Louis, a Savonarola. The Reformation was largely a reaction toward individualism, but still it was full of efforts toward a Christianized society; and in England especially toward a Christian nationalism. Digitized by Google
Christianity to-day is drawing together the lines of Chris-

tendom. Canon Fremantle sees its unity and universality in (1) public worship, not as a separate cult, but as seeking to raise the tone of the general life; (2) the family, the social unit; (3) knowledge, the education of all; (4) art, which must be national and popular, to gladden, not individuals, but mankind; (5) society, which must acknowledge its stewardship; (6) trade, which must learn cooperation; (7) the nation, the constitutional and organic form of the Christian spirit; (8) the universal Church or universal State, to be attained through arbitration, international law, international congresses, and federation. Into all these channels the spirit of Christianity is more and more being poured. This is Christianity leading to international socialism.

But, more definitely, what does Christianity teach as to social reform?

First, that humanity is to come into a unity of brotherly love, *not* by building up some new scheme of universal brotherhood, but by the recognition that mankind is to-day a unit in the common Fatherhood of God, and may through Christ enter into united life. It denies that society can be "made anew by arrangements"; it believes that it is to be regenerated "by finding the law and ground of its order and harmony the only secret of its existence in God" (Maurice). This is the first social message of Christianity—"Return to God."

Carlyle saw the need when he wrote, "The beginning and the end of what is the matter with us in these days is that we have forgotten God." Mazzini saw it when he wrote to the working men of the world, "The source of your duties is in God," and contended that agitation conducted in the name of the rights of man had brought in up to the present day simply an increase of selfishness and individual competition. When we accept God, we have the basis and possibility of union. "There can be no brotherhood without a common father," wrote Maurice. "From that time began Jesus Christ to preach and to say, Repent, for the kingdom of heaven is at hand." To return to God is the first step in Christian sociology.

Second, Christianity declares that to do this Christ is *the Way*. "I am the Way, the Truth, and the Life; no man cometh unto the Father, but by me." This is the second sociologic position of Christianity, that Christ is the elder brother, the Way, the leader into brotherhood. This, as we

have already seen, Christ came to be—the fulfiller of the law. He is the King made manifest, the King in man, the King on earth, the head of the body. The way to realize human brotherhood and unity is not alone to discuss Christ's divinity, but to accept His mastership, to become His follower, to join His kingdom. This is to be a Christian. Men realize this in personal salvation; but it is equally to be realized in social salvation. For Christians, He is "the Man," and He must be the solution of all human problems. That is the primal creed. Not only is He, as the "Man of Sorrows," the Brother and Comforter of all who are weary and heavy-laden; not only are the poor His peculiar charge and treasure, but more than that: He is Himself, in His risen and ascended royalty, the sum of all human endeavor, the interpretation of all human history, the goal of all human growth, the bond of all human brotherhood.

Third, it is a *spiritual way*. "Ye must be born again" is true of society as well as of individuals: the third point in Christian sociology. A nation's life must be from the spiritual to the material, from the inner to the outer, till all be spiritual. Not by law material but by law spiritual

does God's kingdom come. This does not mean that we are only to build up God's kingdom by spiritualizing individuals alone. It was not Christ's method (see article CHRIST AND SOCIAL REFORM). We must spiritualize all life—the body, the city, the State, the nation. This is the distinctive function of the Church. The national Church should be the *soul* of the nation, into which and through which God's *Spirit* may come to the nation.

Fourth, if Christian sociology consists in society's obeying, through spiritual life, the social law of Christ, we must know that law. It is simple.

"Then one of them, which was a lawyer, asked Him a question, tempting Him, and saying,

"Master, which is the great commandment in the law?"

"Jesus said unto him, Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind.

"This is the first and great commandment.

"And the second is like unto it, Thou shalt love thy neighbor as thyself.

"On these two commandments hang all the law and the prophets" (Matt. xxii. 34-40).

Says Professor Ely: "This is a most remarkable, and at the same time a most daring summary of the whole duty of man. A human teacher would never have ventured to reduce all God's commandments to two simple statements; nor would such a teacher have presumed to exalt man's obligation to love and serve his fellows to an equal plane with his obligations to love his Creator. All false systems of religion exalt the love of God above the love due our fellow men, and tell us that we may serve God by injuring our fellows. How many millions of human beings have thought that they did God service by human sacrifice!

"The second commandment, which is like the first, means that in every act and thought and purpose, in our laws and in their administration, in all public as well as private affairs, we—if indeed we profess to be Christians—should seek to confer true benefits upon our fellow men. It means that the man who professes to love God and who attempts to deceive others in regard to the real value of railway stock, or, for that matter, any other property, that he may coax their money into his pockets, is a hypocrite and a liar. It means that the man who oppresses the hireling in his wages is no Christian, but a pagan, whatever may be his declarations to the contrary notwithstanding. What does God say of such an one? He says: 'I will be a swift witness against those that oppress the hireling in his wages.' What does His second commandment mean for those rich men who keep back the hire of their laborers? It means that they 'must' weep and howl 'for the miseries that shall come upon them.' And what does this message mean for monopolists who use their superior advantages of wealth or intellect or bodily strength or other resources, to crowd out and grind down their fellows according to the methods of modern commercial competition? The prophet Isaiah shall tell us: 'Woe unto them that join house to house, that lay field to field, till there be no place, that they may be placed alone in the midst of the earth.'

"It is needless to enlarge upon this. It must be seen that the arrangements of this world are not in accord with the commandment given to love our neighbors as ourselves."

Fifth, the interpretation of this is the *Cross*. The Cross cannot be removed from Christian sociology. There can be no obeying Christ without sacrifice. *Via crucis, via lucis*. "If any man will come after me, let him deny himself and take up his cross and follow me." This is the fifth point in Christian sociology. It is the only way to fulfil love. Love is the *leaving* of self, the *living* in others. Love and life and sacrifice are one. It is thus indeed that we most truly gain. But if we love and deny ourselves *for the sake of gain*, we do not love. "Whosoever shall seek to save his life shall lose it." Christian sociology is finding one's true individuality in losing it in the life of all. Therefore, luxurious

A Spiritual Way

The Social Law

The Brotherhood of Man

Christ the Way

The Cross

bishops and priests and ministers cannot teach Christian sociology, for their lives give the lie to their words. We must become poor, if we would make the many rich.

Sixth, we come to more detailed questions. They can only be answered by those who have long passed the merely sentimental assertion that Christ is all in all, and have set themselves to the solid task of discovering what that solemn truth really and precisely means, and have worked it down into the concrete facts, and have surveyed and estimated the full need of the circumstances and striven to make clear to themselves what is the first step, and what the second, and the third, if that great royalty of Christ is, in very deed, ever to be made good here on earth, amid men as they are, and after a history such as they have hitherto had.

(a) Christianity must demand in some form the opening of all the earth, including all natural advantages, to all God's children equally. How may be a question of political and economic method (see LAND), but in some form it must be accomplished. Equity, brotherhood, and the declaration of Christ demand it. That private property in land was forbidden, and every Jew entitled to the use of land by the Jewish theocracy, is indisputable; that Christ came to fulfil the law and the prophets can no more be denied. That we must follow their method is not certain, but that in some way Christianity must bring to the world what Judaism required of the Jew can be denied by no Christian.

(b) Christianity demands that love and not competition be the law of trade. The golden rule must be made the rule for gold. "Competition," said Maurice, "is put forth as the law of the universe. This is a lie. The time is come to declare it is a lie by word and deed." This means that in some form Christianity implies SOCIALISM. Said Laveleye: "Every Christian who understands and earnestly accepts the teachings of his Master is at heart a Socialist; and any Christian who opposes what is commonly known as Christian Socialism misunderstands Christ, or Socialism, or both." The inference is not, of course, that Christianity must be committed to State Socialism, but society to be Christian must in all ways conform to the law of cooperation.

(c) Christianity demands that every man able to work should work. Not otherwise can he follow the Carpenter of Nazareth. "If any man would not work, neither should he eat" is the injunction of well-nigh the oldest Christian epistle.

(d) It follows from this and from the whole spirit of Christianity that we are not to live upon the work of others by usury. (For the detail of this argument, see USURY.)

(e) Christianity demands the enthronement of the family, in the abiding unity in love of one man and one woman. "And I say unto you, whosoever shall put away his wife, except it be for fornication, and shall marry another, committeth adultery; and whoso marrieth her which is put away, doth commit adultery." These words of Christ, with all they imply, are fundamental to Christian sociology (see FAMILY).

(f) Lastly, Christian sociology demands that the Christian go into the details of all political, social, and industrial life of every kind, and bring them into subjection to Christ. Only so shall we be His disciples. "Not every one that saith unto

me, Lord, Lord, shall enter into the kingdom, but he that doeth the will of my Father, which is in heaven."

Christ's spoken ordinances do not go into all these details. Christianity is not a system of ordinances. But it is a life, and into these details the Christian life must go. (For different views, see CHRIST AND SOCIAL REFORM.)

CHURCH ARMY: This is a mission of the Church of England, originated in the year 1882, for the benefit of the working classes. It is governed by a committee within the Church, some of the bishops being members thereof. The membership approaches almost a thousand, consisting of workers of both sexes. It extends throughout the kingdom, having also branches in the United States and in other English-speaking lands. The mission is divided into two departments, one of which, the evangelical, chooses suitable persons and trains them, free of expense to themselves, to become teachers and speakers in Christian doctrine and mission nurses. The other department, the social branch, seeks to help the down-fallen, the outcast, the homeless, by labor and by every other means possible. The Army possesses nearly 120 houses for the lodging of the working people in London, as well as in the provinces. There are test farms at Essex, Hempstead, Newdigate, and Surrey. They also assist in the matter of emigration. There are also homes for boys and for girls; for first offenders and for persons addicted to intoxication. There is also an Aid Society for convicts. The Society for the Houseless Poor, which was established in 1819, is now under the charge of the Army. Over 400,000 men, women, and boys were cared for by the mission in the year 1905, some 60 per cent having turned out well. *Chief Secretary*, Prebendary, Carlile. Address: 55 Bryanston Street, London, W., England.

CHURCH ASSOCIATION FOR THE ADVANCEMENT OF THE INTERESTS OF LABOR, THE: This society, commonly known as "C. A. I. L.," was founded in 1887, in New York City, by communicants of the Protestant Episcopal Church. The Rt. Rev. F. D. Huntington, Bishop of central New York, was elected president. It was felt that the Church should take active measures to show her sympathy with the laboring classes in their struggle for justice, and C. A. I. L. grew out of a desire to carry this sympathy into effect. Its principles are as follows:

The Church Association for the Advancement of the Interests of Labor, believing that the clergy and laity of the Church should become personally interested in the social questions now being agitated, should inform themselves of the nature of the issues presented, and should be prepared to act as the necessities of the day may demand, sets forth the following principles and methods of work for its members:

- (1) It is of the essence of the teachings of Jesus Christ that God is the Father of all men, and that all men are brothers.
- (2) God is the sole possessor of the earth and its fulness; man is but the steward of God's bounties.
- (3) Labor being the exercise of body, mind, and spirit in the broadening and elevating of human life, it is the duty of every man to labor diligently.

(4) Labor, as thus defined, should be the standard of social worth.

(5) When the divinely intended opportunity to labor is given to all men, one great cause of the present widespread suffering and destitution will be removed.

More than sixty bishops of the Church are honorary vice-presidents. Communicants of the Church are eligible for membership, and others willing to work with the society may become associate members. The society has an official *Organ, Hammer and Pen*, the only Church labor paper in the United States. The association has standing committees on promotion of peace, organized labor, investigation of strikes, sweatshops, and tenement houses, looking to the reform of abuses. In connection with the ACTORS' CHURCH ALLIANCE it also takes an active interest in looking after the relations between the Church and the Stage. The association was one of the pioneer societies to introduce arbitration of industrial disputes in the United States; and it has been particularly active against the evils of the sweat-shop system, notably in New York City. President, Rt. Rev. Henry C. Potter, D.D.; secretary and organizer, Miss Harriette A. Keyser, Church Mission House, 281 Fourth Avenue, New York City.

CHURCH AND SOCIAL REFORM: The influence of Christianity on social reform has been discussed in its alphabetical place. It seems necessary, however, to consider the relations of the Church to social reform in an article by itself; first, because very many make a sharp distinction between Christianity and the Church, and, secondly, because all are agreed upon the immense power wielded by the Church, be it for evil or for good, in the advancement or retardation of social reform. The subject is considered under the following heads: (1) The apostolic Church; (2) The primitive Church after Apostolic days; (3) the medieval Church; (4) from the Reformation to the present time; (5) the modern Church; (6) what the Church could do.

I.—The Apostolic Church

The Church is here considered as commencing with the apostles and their followers in the upper chamber at Jerusalem. (For the beginnings of the Church in the Hebrew theocracy, and the relations of that theocracy to social reform, see JUDAISM; for the teachings of Christ in regard to society, see CHRIST AND SOCIAL REFORM.) That the Church, as organized in Jerusalem, had vital relation to social life needs no reiteration. (See COMMUNISM.) The indisputable record is that the members had "all things in common," and that to each was given "according as any man had need." It may, however, be necessary to point out that this was not an accident or mere passing incident in the history of the apostolic Church, born of the enthusiasm of its first love, but rather the necessary and logical result of the very character and nature of the Church. The first Christians of Jerusalem were drawn from

among the Jews or from among the proselytes to the Jewish faith, the "strangers within the gates." They were therefore familiar with the social teachings and requirements of the Jewish law and the Jewish scriptures. Any one who knows what these were—their care for the afflicted, the oppressed, the father-

less and the widow, their minute directions as to the organization of social life, their provisions for securing land *in perpetuo* to every individual for use, while in ownership it was held as belonging to God, their prohibition of usury and oppression in every form, and, *above all*, the recognition of all this as binding because it was *the law of God*, to be taught, upheld, and enforced by the institutes and officers of the national religion—any one, we say, who at all realizes this cannot wonder that the first act of the first Christian Church was to apply its pentecostal love to the conduct and the ordering of property and of the social life. Jesus Christ had enforced this spirit. He had taught both by word and deed that He had come as a King, with authority over all life, social as well as spiritual. He had fed the hungry, healed the sick, raised the dead. He had entered Jerusalem as a King. He had in every word taught of the kingdom of heaven as the great summation of His life and as near at hand, on earth as truly as in heaven. (See CHRIST AND SOCIAL REFORM.)

Yet it must be also noted that this so-called communism of the Church of Jerusalem was not one of law and of requirement. Love was the fulfilling of the law. The incident of Ananias and Sapphira (Acts v. 1-11) shows that there was no requirement to renounce private property in land or houses. Until the disciples had given property to the Church, their property remained their own. It was only out of their love that "as many as were possessors of lands or houses sold them and brought the prices of the things that were sold and laid them down at the apostles' feet, and distribution was made unto every man, according as he had need."

Nor are we to think of it as peculiar to the Church at Jerusalem. While it is true that we do not know so much of the communism of any other Church, and while but little has come down to us in any way of the life of other Christian churches of the first century, the indications nevertheless are strongly against the communism of the Jerusalem Church being exceptional. All that we know points to its *not* being exceptional. In the Book of the Acts and in the Epistles there are abundant references to the life of love as carried on in these other churches. We have Dorcas, or Tabitha, at Joppa (Acts ix. 36) "full of good works." Paul writes to the Corinthians (2 Cor. ix. 7) about giving to the poor. He praises the Christians of Macedonia (2 Cor. viii. 2) for giving almost beyond their power. He orders the churches both at Galatia and Corinth (1 Cor. xvi. 2) to lay by a store for charity "on the first day of the week," as each person was prospered. St. James declares that "pure religion and undefiled before our God and Father is this: to visit the fatherless and widows in affliction, and to keep himself unspotted from the world." We read of the churches at Troas (Acts xx. 6) and at Corinth holding *agapæ* or love-feasts, where they came together to break bread. Jude 12 indicates that this was a common custom in all the churches. 1 Tim. v. 10 indicates the duty of the widow (or deaconess) to wash the saints' feet, entertain strangers, bring up children, relieve the afflicted. Hospitality is continually urged. The slave is to be treated as "a brother beloved" (Philemon 16). If it be said that the fact that St. Paul took up a collection for the poor saints at Jerusalem is indicative of a peculiar condition in that Church, and

that their communism and giving up of private property had brought them into special poverty, it may be said, on the other hand, that the Church at Jerusalem was under notorious and excessive persecution, as during the first century the churches throughout the rest of the Roman Empire were not. It appears (cf. Heinrici, "The Christian Church of Corinth" and the "Religious Communities of the Greeks" in the *Zeitschrift für wissenschaftliche Theologie*, 1876, iv.; Uhlhorn's "Christian Charity in the Ancient Church," and the whole of C. Osborn Ward's "The Ancient Lowly"), that as soon as the Church emerges into recognized form, its legal position in the Roman Empire was as a *collegium*, very much resembling the *collegia tenuiorum*, or sodalities of the poor, organized to collect contributions for the poor or for special ends, such as burial, etc. For a full account of these, see GILDS; but we must here note the similarity between these and the early churches in their social life.

Tertullian uses the same words, *steps* and *arca*, for the contribution and contribution chest of the Church as were technically employed in the *collegia* for their collections. These *collegia* had their presiding officers, or *magistri*, their meeting places, more or less humble, according to their wealth. They had regular meeting times and dues for various purposes, mainly of benefit, but sometimes for carousals. They had banquets or meals together. Some of them had considerable wealth, lands, houses, etc., being donated to them by wealthy members or patrons. On appointed days there were *sportula*, or distributions of bread, wine, or money among the members. Members were called brothers and sisters, and their presiding officers fathers and mothers (for there were women among them as truly as men). It is evident how close these were in resemblance to the social organization of the Church at Jerusalem, with its contributions, its officers, its gifts of houses and land, its common meals, its organized distribution "in the daily ministrations" to the widows and those in need. Now if these *collegia*, so exactly in this respect like the Church in Jerusalem, existed through all the empire, as seems proven, and that legally all the churches were regarded as *collegia*, and used the very technical terms of the *collegia*, does it not indicate almost beyond a doubt that the picture given in the acts of the Church at Jerusalem is a picture of every Church in the apostolic days? The Church, even in apostolic days, was by no means immaculate; it was being saved, not wholly sanctified; but its very essence and its inmost spirit was a life of brotherhood and of practical love upon this earth.

II.—The Primitive Church after Apostolic Days

We come here into fuller light, and may treat the subject in detail, dividing it into parts, considering, first, the spirit of equality and of brotherhood that prevailed in the primitive Church.

The Roman Empire was full of poverty and distress. Slavery was universal. Uhlhorn estimates that at Rome under Augustus there were 380,000 proletarians needing support to 90,000 senators, knights, soldiers, and traders not needing support, and this does not include the slaves, who constituted the mass of the population. (See CRISES.) At Athens at one time, according to some historians, there were 400,000 slaves to 31,000 citizens; according to others 200,000 to 100,000. In Italy, according to Blair, there were under Claudius nearly 30,000,000 slaves to 7,000,000 freemen; and tho these figures may be too high, the slave population was, according to all, in an immense majority. This, of course, meant widespread suffering beneath a corrupt aristocracy of enormous wealth.

The working class lived, and little more. Mommsen reckons the Roman bushel of wheat at 1 denarius, and this was the usual day's wage. Meat was proportionally dear. Diocletian fixed the price of beef and mutton at about thirty cents the kilogram, and a fowl at the same price. A modest dwelling in the upper stories of one of the large lodging-houses at Rome came to about \$80 a year. On the other hand, the wealth of the few was enormous. The augur, Cnæus Lentulus, and Narcissus, Nero's freedman, were said to own \$22,000,000. *Latifundia* were growing. Cæcilius, a freedman of Augustus, left in his will, Pliny tells us, 4,116 slaves. It is true that this does not indicate either such wealth on the part of the rich, or such poverty on the part of the laborer as we have to-day; but the worst of the slave condition under the Roman Empire was the lack of civil or moral standing: the slave could be sold,

killed, violated, thrown to the fish at pleasure with impunity. Such was the society in which the Christian Church took root. In CHRISTIANITY AND SOCIAL REFORM we have traced the influence of Christianity upon the laws and organized society, and have shown how it gradually overthrew slavery. Here we are simply concerned with what the Church did directly as a church. The Church spread at first, it is evident, mainly among the slaves and the oppressed. Hence it was powerless directly to affect the legislation of proud emperors and senators, but it did welcome the slave to its fold as an equal and it did practise brotherhood among men. It taught that, being descended from one Father, all men were equal. "We are all born alike, both emperors and beggars," said an early Christian writer (*Breviarium in Psalt.*, in opp. Hieron., vol. ii., p. 233). "Thou sayest that thy father is consul and thy mother holy and good," says Chrysostom; "What does it matter to me? Show me thy own life, for it is only by that I can be able to judge of thy nobility" (*Or. in terra motum et Lasarum*, § 6, vol. i., p. 782). Man is "the great work of God" (Ambrose, *Sermo* 10, in Pa. cxviii.). "The world is a vast republic, a great family of God's children," writes Tertullian (*Apol.* xxxviii.). The whole of Christianity the early Church found in charity rather than in hope or faith (*Zeno Veron*, Book I., tract 2, p. 111). Chrysostom put it above fasts or solitary penances. Love, gentleness, almsgiving, are greater, according to him, than celibacy (*Hom.* i., in Matt., § 7). "Love on earth must be without thought of earthly profit or heavenly recompense" (*Orig., Contra Cels.*, i., 67, vol. i., p. 382). Gregory Nazianzen says: "Rich and poor, strong and weak, servant and freeman, have one only Head, from whom everything comes, Christ Jesus. What the members of the body are for each other, each among us is for his brothers, and all for each" (*Greg. Naz., Or.* 10, vol. i., p. 243). Of this unity the *agape*, or love-feasts, were symbols. Here they brought the poor and the needy" (*Consist. Apost.*, II., 28, p. 243). The Church Augustine calls "a spiritual republic in the midst of a pagan society" (*De opere Monach.* chap. xv., vol. vi., p. 363).

At first the Christian Church did not favor monasticism. Their communism was not like that of the Essenes. "Christians," says one, "are not distinguished from other nations either by language, dress, or habits. They do not shut themselves up in particular towns, but live where they were born, in the midst of Greeks or barbarians. They are different from pagans in conduct, and their life is altogether distinct" (*Ep. ad Diogn.*, chap. iii., p. 237). They honored the magistrates and

prayed for them, and for the emperor, who was their earthly head, as Jesus Christ was head in the kingdom of God (*Polyc. Ep.*, chap. xii., p. 101; Just., M., i., c.; Athenag., *Leg.*, chap. xxxvii., p. 313). The Christians obeyed all laws save those which compromised their faith, such as giving divine honors to the emperors, bowing before idols, swearing by their genii. Here they were inflexible. The aged Polycarp, summoned by the proconsul to swear by the genius of Cæsar, refused to do so, but was willing to obey in all else. Ambrose reckons it among the duties of an ecclesiastic to take an interest in the oppressed and suffering. "Your office will shine gloriously," he writes, "if the oppression of widows and orphans attempted by the powerful should be hindered by the servants of the Church; if you show that the commandment of the Lord is more to you than the favor

of the rich" (*De Offic.*, II., 22). Athanasius excommunicated the viceroy of Lydia, notorious for his cruelty and excesses, and Basil declared that the Church agreed with him (*Bas. Ep.*, 16). Synesius of Ptolemais excluded from the Church the Prefect Andronicus for the same reason (*Synesius Ep.*, 57, 58, 72). When the inhabitants of Antioch were trembling before the wrath of the emperor, because they had overthrown his statues, Bishop Flavian went to Constantinople to intercede, while Chrysostom preached his famous "statue sermons," and when prosecutions began, a monk, seizing the brides of the horses drawing the carriage in which the judges were riding, cried: "Tell the emperor you are not only an emperor, but a man, and those you reign over are your fellowmen. Human nature was made in the image of God; do not then so mercilessly and cruelly destroy the image of God." The story of Ambrose himself expelling Theodosius the Great from both Church and sacrament till he did public penance, for having allowed his soldiers a massacre at Thessalonica, is well known. The Church became the sanctuary of the oppressed. When a debtor, sued for 17 solidi (about \$150), fled to the Church, Augustine paid the debt. He who violated the right of sanctuary was excommunicated.

Next to the spirit of the equality and brotherhood and protection to the oppressed, we notice what the primitive Church did for the family and for woman. Under Rome woman was either the slave, the toy, or the property of man. The Church recognized her equality.

"I do not know anything more unjust," said Augustine of the Roman laws which kept women in an inferior position (*De Civit. Dei.*, iii., chap. xxi., vol. vii., p. 63); and all the Fathers

Spirit of Brotherhood

Relation to the State

Spirit of Equality

teach the equality of man and woman (Clem. Alex., *Pedag.*, I., 4, vol. i., p. 103; Greg. Naz., *Or.*, 31, vol. i., p. 502; Greg. Nys., *Or.*, 1, in *Verba Fac. Hom.*, vol. i., p. 151). Marriage was regarded in its spiritual aspect as for eternity an association of souls rather than of bodies (Athenag., *Leg.*, chap. xxxiii., p. 311). It was a type of the union of Christ with His Church (Chrysost., *Hom.*, 12 in col., § 5, vol. xi., p. 419). Some of the

The Church and Woman

Fathers, such as Ambrose and Augustine, began to exalt celibacy and virginity above marriage, but in the beginning it was not so; and was never so with all the Fathers. With Chrysostom a true man and wife joined in sacred union show a holier life than the inhabitants of many a monastery (*Hom.*, I., in *Rom.* xvi. 3, vol. iii., p. 175). In marriage, the woman, according to the Fathers, was wedded to the husband as the Church to its Head. Chrysostom says: "Woman can neither carry arms nor vote in the assemblies nor manage the commune, but she can weave thread, give better advice than her husband about domestic matters, rule and keep order in her household, superintend the servants, and bring up the children. Each sex has its special vocation. God has not given all to one. He has wisely divided it" (Chrysost., *Quales Ducerenda sint Uxores*, vol. iii., p. 127). "Nothing," he says further, "can better mold man than a pious and wise woman" (Chrysost., I. c.; *Sermo*, 4, in *Gen.*, § 1, vol. iv., p. 659). Mixed marriages between pagans and Christians were frowned upon. Second marriages were discouraged. Tertullian said that "he who marries again commits a decent kind of adultery" (Athenag., *Leg.*, 33, p. 312). Montanists absolutely forbade second marriages, but after the time of Augustine it was a heresy to condemn second marriages. Adultery was the only admitted cause of divorce, and then separation was usually recommended. Purity was required of both sexes equally. "The laws of the Cæsars are different from the laws of Christ," says Jerome. "With us, on the contrary, what is not permitted for women is also forbidden for men" (*Ep.* 77, Ann. 399, vol. i., p. 459). Nevertheless, condemning strictly their vice, the Church welcomed the Magdalenes, and many of them became noble martyrs. Pelagia, a celebrated courtesan of Antioch, was converted and married to a convent, where she spent the rest of her life in humble piety. Afra died for her Savior in Augsburg, together with three servants who, having followed her in vice, followed also in conversion. Similarly high was the position of the Church in regard to children. At a time when abortion and exposure were frequent, the Fathers declared that to cause a child to perish by abortion is to destroy the work of God. God is the father of all life, however incomplete it be. Those guilty of it were excluded from the Church for ten years (*Const. Apost.*, vii., 3, p. 366). Exposure was still more condemned. The Church welcomed the children. "If old sinners," says Cyprian, "are received in the Christian community, with how much greater reason shall the new-born child be received, who has not yet committed sin?" (*Ep.* 59, p. 99). This was true even of natural children. They were still under God's paternal care, and to be welcomed by the Church (Methodius, *Conviv. x. Virginum*, *Or.* 2, in *Combelis*). According to Chrysostom, what has upset the whole world is that man has not cared more for his own children (*Hom. de Viduis*, vol. iii., p. 317). Chrysostom and Jerome especially urge upon mothers to rightly influence the children. Thus we have in the early Church Monica, the mother of Augustine; Nonna, the mother of Gregory of Nazianzus; Anthusa, the mother of Chrysostom. The first schools that may be called primary were kept in the fourth century by Christian priests (Palladius, *Vita Chrys.*; in *Opp.*, vol. xiii., p. 77). Basil during his rule made their keeping an special duty (*Regula Fusius*, *Tract.*, *interrog.*, 15 et 23, vol. ii., p. 355).

The next thing to be considered is the relation of the primitive Church to the *laboring classes*. These, according to all classic antiquity, were despised. Artizans, according to

Aristotle, were not worthy of the name of citizens (*O.*, chap. ii., 1). Almost all manual and most mental work was done by slaves. By Christians work was honored. They neither felt themselves to be miserable nor disgraced because they had to work with their hands (*Ep. ad Zenam et Serenum*, chap. xvii., in *Opp. Just. Mart.*, p. 416). They remembered Christ the carpenter and Paul the tent-maker. The "Apostolic Constitutions" forbid a man to mix with the idle crowd, and advise him to engage in useful work, having his soul turned toward God (Book I., chap. iv.). The necessity of teaching youthful arts to children was dwelt upon (*Constit. Apost.*, Book IV., chap. xi., p. 301). They

taught that if a man did not work, "neither should he eat."

The relation of the Church to *slavery* has been much discust. The primitive Church, while not immediately seeking to overthrow slavery, undermined it. Before the Reformation slavery had *wholly* disappeared from Christian lands, and *long before* that it had *almost* disappeared. The Church, started among the poor, and, despised by the powerful, had not the power to abolish the institution in any legal way. But while the Church long allowed slavery, it did much to alleviate it, and welcomed the slave as an equal; only in later years did the Church ever practise slavery.

"No one is a slave by nature," say Clement of Alexandria and Basil (Clem. Alex., *Pedag.*, III., chap. xii., vol. i., p. 207; Basil, *De Spîr.*, s. I., chap. xxi., vol. iii., p. 42). Chrysostom says that God, who created the two first beings free and equal, never created slaves to serve them (*Hom. 22 in Eph.*, § 2, vol. xi., p. 167). Some of the Fathers held that slavery was punishment, but they held so of all work, and yet that work was honorable. "I call noble and lord," says Chrysostom, "the slave who is covered with chains, if it accords with his life; I call him low and ignoble who in the midst of dignities retains an enslaved soul" (*Or. in Terra Moïsem et Las.*, § 7, vol. i., p. 782). In the Church slavery was only an accidental external condition which did not affect the moral worth. Again and again the Church taught that Christianity was *service*. Christians called themselves, like St. Paul, servants or bond-servants (*boûlâs*) of Christ. Ignatius wrote of the slaves: "Let them continue to serve without murmuring, and God will give them a better than earthly liberty" (*Ad Polyc.*, chap. iv., p. 41). Slaves were recommended to bear servitude in this passing world of exile, where none is free, and beyond which the Christian expects deliverance and glory (August., *De Agone Christiano*, chap. vii., vol. vi., p. 181). In 451, the Council of Chalcedon forbade the convents to receive slaves without the consent of their masters, "in order that the name of God be not dishonored" (Canon IV.). Many slaves bore noble testimony to their master Christ, such as Potamiana, Eutyches, Victorinus, Maro, Nereus, Vitalis, and others. But while bidding the slave be patient, the Church spoke plainly to the master. Said Chrysostom: "Do not imagine that an injury to a slave will be regarded as indifferent, because it is only to a slave. The laws of the world see a difference between the two races; but the laws of the commonwealth of God ignore it" (Chrysost., *Hom. 22, in Eph.*, § 2, vol. xi., p. 167).

We observe the difference between the recognition of slavery by the primitive Church and its recognition too frequently by the Church in modern times. The primitive Church recognized it as a *human* institution, to which they were to submit. The modern Church too often tried to prove slavery a *divine* institution. Masters were told by the primitive Church to love their slaves as sons and as equals (*Constit. Apost.*, Book IV., chap. xii., p. 302). The Church refused to receive the gifts of the master who ill treated his slaves (*Constit. Apost.*, Book IV., chap. vi., p. 197). In the early Church there were households where master and servants formed one family.

When Thecla was cited to appear before the tribunal fifty of her slaves, urged by gratitude, appeared in her favor (*Acta ss.*, January, vol. i., p. 601). Paula, a descendant of Paulus, Æmilius, Leo, and Fabiola are spoken of as the servants rather than the mistresses of their women. But the Fathers went farther than to counsel gentleness. They urged masters to free their slaves. Gregory Nazianzen and Chrysostom are prominent in such exhortations, and many masters did the same. The earliest instance that has come down to us is that of Hermes, Prefect of Rome under Trajan, who embraced Christianity with his wife, children, and 1,250 slaves, whom he freed on the day of their baptism, Easter Day, with ample assistance to enable them to gain a livelihood. He himself afterward suffered martyrdom with Bishop Alexander, who had been the means of his conversion. Another prefect of Rome, Chromatius, under Diocletian, freed his 1,400 slaves, saying that those who had God for their father ought not to be the servants of man. Melania, with the consent of her husband, Pinus, freed 8,000 slaves; Ovinius, a French martyr, 5,000.

The Church especially did her utmost to end the horrors of the *gladiatorial* combats and the

The Church and Working Classes

The next thing to be considered is the relation of the primitive Church to the *laboring classes*. These, according to all classic antiquity, were despised. Artizans, according to

degradation of the *theatrical* exhibitions. The Church refused baptism to gladiators unless they gave up their profession. Lactantius said: "Instead of buying and feeding wild beasts, ransom prisoners and feed the poor; instead of bringing together men to kill each other, go and bury the innocent dead" (*Div. Instit.*, Book VI., chap. xii., vol. i., p. 470). From the theaters, at this time grossly immoral, Christians were warned to absent themselves. Those who, in spite of warnings, still attended, were declared unworthy of Christian communion.

Christians were urged to find their exhibitions in nature. "What theater," says one writer, "constructed by the hand of man can equal these wonders of creation" (*Tract. de Spect.*, in *Opp. Cyr.*, p. 312). Actors who became Christians and had no other means of earning a livelihood, such as Eucherius, were provided for by the Church through the efforts of Cyprian.

We come now to consider the relation of the primitive Church to the *poor*, and its property relations in general. This may be said to be a more or less faithful carrying out of the voluntary communal life of Jerusalem. There seems to be no evidence that there was anywhere established by the primitive Church a mechanical communism. Voluntary communism seems to have been the ideal to which they always tended, tho sometimes very vaguely and remotely. The emphasis was on love. "It is not the census," said Ambrose, "but the qualities of the soul, that show the rich man" (*Ep.*, chap. lxiii., § 89, vol. ii., p. 1044). Barnabas, in warmly commending charity, argues that "we ought not to consider anything as belonging to ourselves alone, but to share everything with our neighbor; for if there is communion in spiritual and everlasting things, with how much greater right ought it to exist in these material things" (chap. xix., p. 52). Ambrose of Milan wrote, "Nature created everything for common use. If, then, there are men who are excluded from the enjoyment of the products of the earth, it is contrary to nature. The unequal division of this wealth is the result of egotism and violence. Nature is the mother of common right, usurpation is the mother of private right" (*De Off. Ministr.*, Book I., chap. xxviii., § 132, vol. ii., p. 35).

The early Church opposed riches as hindering salvation, but Augustine, Ambrose, Jerome, and others teach that riches are not to be condemned in themselves. "Neither is every poor man a saint, . . . nor is every rich man condemned," wrote one (Asterius, *De Divite et Lavaro*, p. 13). "The hand of the Christian," said the same writer, Asterius, "ought only to be held out to give alms, never to seize what does not belong to him" (*Hom. de Economo, Inquisit.*, p. 23). The giving of charity the primitive Church exalted. "It is better to do the works of charity than to ornament churches, or to enrich them with precious vases" (Hieron., *Ep.* 130, vol. i., p. 991). The priests were to lead in this, especially the bishops. The "Apostolic Constitutions" lay down their duties in these words: "To orphans take the place of a father; to widows give the protection that they would have from their husbands; help young people who desire to marry with your counsels; find work for the artisans; have pity on the infirm; receive strangers beneath your roof; give food and drink to those who are hungry and thirst; and clothes to the naked; visit the sick and help the prisoners" (Book IV., 2, p. 295). Charity was to *cost* sacrifice. We read of the early Christians fasting that they might give to the poor (*Const. Apost.*, V. xx., p. 331). Deaconesses were appointed to aid poor women. Under Bishop Cornelius, toward the close of the third century, the Church of Rome supported more than 1,500 poor people. The Church of Antioch, in the time of Chrysostom, maintained more than 3,000. The Church of Rome, under Bishop Sotir, in the second half of the second century, and 100 years later, under Bishop Stephen, sent money collected in distant provinces, sometimes to help famished populations, sometimes to lighten the burdens of the persecuted. Prelates sold the vases and ornaments of their churches to aid the poor. This

was done by Cyril, by Acacius, Bishop of Amida, who sold 430 vases and sent back to freedom 7,000 imprisoned Persians, and by Deogratias, of Carthage. Augustine and Ambrose did it to ransom captives. Paulinus, of Nola and Hilary of Arles sold their large estates for the poor. Martin of Tours sacrificed his sacerdotal robes. The Bishop of Eacupere, of Toulouse, went hungry and used only basket and glass for the bread

and wine of the Eucharist, in order to help the poor. When the martyr Lawrence was asked by the pagan governor for the treasures of the Church, he showed him the poor. Peter, the tax-gatherer, in the time of Justinian, on being converted expiated his harshness by selling himself to a slave merchant for the benefit of the poor. Clement of Rome writes to the Church in Corinth: "We have among us many who have given themselves to servitude in order that others might be free." It is told of Bishop Eleusis of Cyzicus, that he took the pagan temples and made them into hospitals for the old and widowed. The first orphan houses are of this period, and were cared for by priests. Special collections were made for prisoners. The poor denied themselves a day's food to give to these. The funds of the Church were used to ransom brothers sentenced to public works or the arena. The Church was the asylum. Even Alaric, on taking Rome, is reported to have spared those who took refuge in the churches. The innocent went to the bishops for redress. In the midst of universal anarchy, the bishops raised their voices in behalf of outraged humanity. It was one of their special duties to save defenseless men from the hands of powerful oppressors, and to intercede with the emperors and magistrates in their behalf; to undertake long journeys and brave all wrath, provided the cause of those in whom they were interested was just. Most frequently we find bishops giving assistance to country people, who suffered from the rapacity of the fiscal agents, the avarice of the usurers, the oppression of great proprietors. For the sick, the primitive Church did much, even for the lepers. Basil advises that lepers be not deserted, but be loved the more for the miseries of their desolation. During the plague of Carthage, about 250 A.D., and during that of Alexandria, the Christians showed great bravery and love. The earliest hospitals are due to the Church, the first being established in the beginning of the fourth century. From the latter half of this century they multiplied greatly. The most important of these was founded by Basil in Caesarea. It rose, says Gregory Nazianzen, like a new town, providing lodgings for travelers, rooms for invalids, workshops for the poor, provision for lepers. It bore the name of Basilias. Chrysostom founded several hospitals. By the time of Theodosius most of the large towns had hospitals. The hermit Thalassius founded one for the blind.

The early Church was especially remarkable for its sacrifices in behalf of its *enemies*. Tertullian could truly say that "if all men loved their friends, the Christians alone knew how to love their enemies" (*Ad Scap.*, i., p. 69). The Fathers, too, with their profound respect for human life, unanimously condemned capital punishment. The Council of Elvira (A.D. 305) excludes the magistrates whose duties as decemvirs caused them to judge cases involving capital punishment from joining in worship during the year. The emphasis the early Church put upon *hospitality* is well known, as is also its universal opposition to war.

It is well to notice the organization of the Church for practical charities. At first there was little or none.

"We give to all and communicate to every one who is in need," says Justin (*Apolog.*, I., 14). The shepherd of Hermas says: "Give simply to all, without asking doubtfully to whom thou givest, but give to all" (*Pastor Herm.*, Mand., II.). Clement of Alexandria warns against trying to judge who is deserving and who undeserving (*Quis divus saluus.*, chap. xiii.).

Concerning the giving up of property, Hermas says to Christians: "You are dwelling here in a foreign city. Would any one dwelling in a foreign city, provide himself with fields and expensive accommodations?" (*Simile*, I.) The Church was in the world, but not of it. "We are no Brahmins nor Indian gymnosophists: no wild men of the woods and separatists from life. We are mindful of the gratitude which we owe to the Lord our God, and do not despise the enjoyment of His works," wrote Tertullian (*Apolog.*, II.). But the Fathers everywhere counseled simplicity of life. "On the road to heaven," says Clement, "the best provision is frugality, moderation is the shoe, and beneficence the staff" (*Pedagog.*, III., 7). Clement pities the insatiable who collect their dainties from all parts of the world, with whom "the basting ladies and the kitchen form the central point of existence" (*Pedagog.*, I., 1). In an old catalog of the apostles,

Ransoming Captives

Charities

Peter, Andrew, and the sons of Zebedee are fishermen; Philip an ass driver; Bartholomew, a vegetable gardener; James, the son of Alphaeus, a mason. Later, when the Church became corrupt, men like Chrysostom vehemently attacked the luxury of the day. Said Chrysostom of the luxuriously dressed woman: "Of how many poor, O woman, dost thou bear upon thine arms the spoils!" Yet, even when the Church was at her simplest, there were some organizations for charity. Deacons, deaconesses, and widows, who were considered officers in the Church, had special charge of the charities, but always under the direct guidance of the bishops. Alms were collected and distributed largely at the *agapæ*, which were first suppers in common for all Church members, later suppers for the poor, and finally occasions of drunkenness and excesses. Montanism tried to react from these excesses and any compromise with the world by strict discipline and by limiting church-membership to the select few, but this was to make the Church separatist and sectarian and sacrifice her power as a Church for the world. It taught the Church to distinguish between the "religious" and the "secular," sending the "religious" into monasticism and asceticism, and the "secular" into worldliness.

As a result of this alliance with the State, the Church, still more developing her worldliness, gradually came to palliate, allow, and endorse, and even own slaves (so that even so pure a spirit as Gregory the Great makes no apology for having a fugitive slave brought back "by any means" from Otranto, tho he was also torn from wife and children, to serve as a baker in Rome). Thus the Church gradually became full of all such worldliness as called forth the burning protests of Chrysostom. On the other hand, we have the development of MONASTICISM, for the social results of which see the article on that subject. Still through all the earlier centuries the Church was not only the friend but the leader of social reform. If she did not abolish slavery or advocate all the social reforms that are suggested to-day, it was because they were not proposed. She was at least on the side of the most radical reform there was, or, rather, the mother and the life of all reform. On the whole, well could Tertullian point to the life and love of the Church, which to the jealous hatred of its enemies was a reproach. "See how they love one another," mocked these enemies: "as if they were ready to die, the one for the other." "Yes," says Tertullian, "we love one another; we are brothers, for we have a common Father, and the same Spirit has led us from darkness to light. We are also your brothers, because, altho you are our persecutors, you are men like us. We support one another; we have everything in common except our wives; each one freely brings his offering to relieve the poor, the sick, orphans, widows, travelers, and prisoners. We are not incapable of the business of life, for do we not live with you, sharing your habits and necessities? We do not retire into forests; we do not flee from life; we use everything with thanksgiving; we sail with you; we mix with you in the forum, in camp, in commerce; we refrain only from your spectacles, sacrifices, disorders, and crimes" (*Apologeticus*, about 198 A.D.).

III.—The Medieval Church

In this section we shall not enter so much into details, because these are given in other articles: that in the CANON LAW, which belongs almost exclusively to the medieval Church, and the general article on CHRISTIANITY AND SOCIAL REFORM, Christian influence, in the Middle Ages at least, being admittedly almost identical with Church influence. Yet a few general characterizations may here be made, and one or two points elucidated.

We notice, first, that the medieval Church was

the great leveler; the clerical order was the one profession in which it was possible for a man of the humblest birth to attain to the highest position. This was less by virtue of enactment than in consequence of the facts (a) that the Church remained free from the distinctions of classes that grew up in the civil state, and (b) that churchmen, as the rule of celibacy became universal in Latin Christendom, could be raised to any rank without founding a family of nobles. Many a peasant heard of the learned Grosstête, son of a serf, the most distinguished scholar of thirteenth-century Oxford, the Oxford which existed long before a college was founded—the friend of the reforming friars, the enemy of the Roman court, the advocate of England for the English; and was eager, out of his scanty means, to buy the license that his son might go to the schools and take orders. The possibility of rising was, it is true, not confined to churchmen; but that which was the exception among the laity was common among the clergy. Nor was it till centuries later that it became the accepted doctrine that an ordained person was *ipso facto* a free man; and if in the fifth century it could be conceived that a man might be a clergyman and yet a slave, this idea early gave way before another, which presumed that if a slave were ordained with the knowledge of his lord, and without any objection raised by him, he was a free man, tho not formally manumitted. For the effect of the medieval Church upon slavery, see CHRISTIANITY AND SOCIAL REFORM. It must not be forgotten that before the time of the Reformation slavery, and, in some countries like England, even serfdom, had disappeared from Christendom. The medieval Church had put it down.

We notice next as characteristic of the medieval Church its monasteries, nunneries, and Church brotherhoods of various kinds, not only as centers of Christian equality, but as asylums for the oppressed and as centers of brotherhood life and work. Says Thorold Rogers upon this point:

"The relief of destitution was the fundamental religious duty of medieval Christianity. I might have said of Christianity itself. In ancient politics it might be the duty of the State to relieve distress; it was always its prudence, if it cared for security. To get abundant supplies of food for the poorer citizens in one way or the other was the constant anxiety of democratic Athens and of imperial Rome. But from the very first Christianity transferred this duty from the State to the individual, and to the voluntary corporation. The early Church undoubtedly preached patience, but it much more emphatically inculcated the duty of almsgiving. The contribution of the tithe was enforced in order that a third part, at least, of the proceeds should go to the relief of the deserving poor. In the fifteenth century nothing moves the righteous wrath of Gascoigne more than the teaching of Pecock to the effect that ecclesiastical revenues enjoyed by churchmen can be disposed of according to the discretion of the recipient as freely as the proceeds of private property. After heresy, simony, and sorcery, the heaviest charge which could be leveled against a churchman was that of avarice, and a covetous priest who hoarded his revenues was lucky if the charge of avarice was not coupled with those graver vices to which I have referred. We may be certain, too, that the duty which was so generally imposed on them by public opinion—the force of which is not yet extinct—was inculcated by them on others. In times of plenty, too, food was often given with wages. A wealthy monastery or college would find a place at its servants' table for the artisans which it employed without much grudging, and the poor at the gate would not be sent away empty-handed. Where mendicancy was no disgrace, almsgiving was like to be considered the most necessary and the most ordinary of the virtues.

It has been often said and often denied that the monasteries supplied the want which the poor law, two generations after the dissolution of these bodies, enforced. That the monasteries were renowned for their almsgiving is certain. The duty of aiding the needy was universal. Themselves the creatures of charity, they could not deny to others that on which they subsisted. But some orders were under special

duties. The Hospitalers were bound to relieve casual destitution. Hence when Waynflete procured the surrender of the house of the Oxford Hospitalers, he bound his college to the duties which the surrendered house had performed, duties which, it is almost superfluous to say, were speedily evaded. So again the preaching and begging friars were the nurses of the sick, especially those who labored under infectious diseases. There were houses where doles of bread and beer were given to all wayfarers, houses where the sick were tended, clothed, and fed, particularly the lepers. There were nurseries, where the nuns were nurses and midwives; and even now the ruins of these houses contain living record of the ancient practices of their inmates in the rare medicinal herbs which are still found within their precincts. In the universal destruction of these establishments, the hardest instruments of Henry's purposes interceded for the retention of some among the most meritorious, useful, and unblemished of them. It is possible that these institutions created the mendicancy which they relieved, but it cannot be doubted that they assisted much which needed their help ('Work and Wages,' p. 416).

What an enormous part in the polity of the Middle Ages was played by these monasteries is well known. The estates of the monasteries are said over and over again to have comprised a third of the knights' fees in England. Most of these religious houses were founded before the close of the thirteenth century, many of them in the early ages of the Saxon polity. Only a few were founded in later times. Besides these monastic estates, the bishops and the chapters held large possessions.

Many of the English towns grew up round monasteries. The piety of the converted Saxons led them to spend lavishly in the foundation of these institutions, and the principal part of the documents which have been preserved from a period antecedent to the Conquest refer to these early monasteries. Thus the town of Oxford grew up under the shadow of the great monasteries of St. Frideswide and Osney. Such was the origin of Abingdon, of Reading, of St. Albans, of Coventry, of Durham.

That these centers of religious life were centers also of humble brotherly work is well known. Says Palgrave's "Dictionary of Political Economy":

"The lands held by a religious house, at least those in its immediate vicinity, were, as a rule, cultivated by the brotherhood itself, and the personal interest thus devoted to the work produced better results than the enforced labor of bondmen. The evidence of the Domesday survey goes to show that the Church lands were in a higher state of cultivation than other property. The monks also employed themselves in clearing forests, draining marshes, and making roads and bridges (cf. Lingard, i., 267 seq.; Cunningham, 'Growth of English Industry and Commerce in the Early and Middle Ages,' pp. 64, seq., 1890); and the Cistercian order, through the activity which it displayed in sheep farming, promoted in a singular degree the production of the staple commodity of England. Through the immense extent of their property, variously estimated in the thirteenth and fourteenth centuries from a quarter to a half of the total landed property of England (Wycliffe, *de Ecl.*, xv., p. 338; cf. Pearson, 'History of England,' ii., 497, 1867), the churches and religious houses came to take an important share in the industrial development of the country; and it is acknowledged that the clergy were mild landlords (see Stubbs, 'Constitutional History,' iii., 562). The attacks of the Lollards upon the landed property of the Church were inspired rather by *a priori* objections to the system itself than by any actual abuses to which it led; and the consideration which Bishop Pecock, writing in the middle of the fifteenth century, alleged on the opposite side are probably in the main just. 'The truth is,' he says, 'that the tenementis and alle the possessions with her purtenancia, which the clergie (religiose or not religiose) holden and haue, is better menteyned and susteyned and repared and kept fro falling into noust and into wildirnes, than if the same tenementis and possessions with her purtenancia were in the bondis of grete lordis, or of knyghtis, or of squyeres. . . . The tenauntis, occupying the tenementis and possessions with purtenancia vnder the clergie, ben esilier tretid, lasse dresid, and not greued by extorcioun, as thei schoulden be, if thei holden the same tenementis and possessions of temporal lordis or of knyghtis and squyeres.' Among other points in favor of those who held of the Church, Pecock notices that their tenure was less liable to be disturbed than that of those who held under lay lords ('Repressor of Overmuch Blaming of the Clergy,' vol. ii., p. 370 seq., ed. Babington, 1866). It has been noticed by critics least friendly to the medieval Church that it was such causes—the known advantage to the tenant—that did much to reconcile public opinion to the enormous estates held by the Church (Pearson, 'History of England,' vol. ii., p. 502; Rogers, vol. i., p. 160). That at the close of the Middle Ages the state of things was somewhat altered, and the abuses which had arisen with respect to the management of Church property called forth well-founded complaints (cf. 'Dialogue between a Gentil-

man and a Husbandman,' 1530, ed. Arber, 1871, p. 134 seq.; 'Ballads from Manuscripts,' ed. Furnivall, 1869, vol. i.), need not be denied."

But it was not only manual work that was performed by the monks and clergy. Says Rogers:

"The clergy, in the widest sense of the term, contained nearly the whole of what we should call the professional classes. The architects, the physicians, the lawyers, the scribes, the teachers, of the Middle Ages, were almost always clergymen, and when employed in these callings were rewarded for their services with benefices. We know but few of the men who designed the great cathedrals, churches, and castles of the Middle Ages—those buildings which are the wonder of our age for their vastness, their exquisite proportions, and their equally exquisite detail. But when we do know, as it were by accident, who the builder was, he is almost always a clergyman. It seems as tho skill in architecture and intimate acquaintance with all which was necessary not only for the design of the structure, but for good workmanship and endurance, were so common an accomplishment, that no one was at the pains to proclaim his own reputation or to record the reputation of another. It is known that we owe the design of Rochester Castle and the Tower to one ecclesiastic. It is recorded that William of Wykeham was Edward III.'s architect at Windsor, as well as his own at Winchester and Oxford, and of various handsome churches which were built during his long episcopate. It is probable that Waynflete designed the beautiful buildings at Magdalen College; and it is alleged that Wolsey, in his youth, planned the matchless tower, which has charmed every spectator for nearly four centuries. But no one knows who designed and carried out a thousand of those poems in stone which were the glory of the Middle Ages, and have been made the subjects of servile and stupid imitations in our own.

"The monks were the men of letters in the Middle Ages, the historians, the jurists, the philosophers, the physicians, the students of nature. It is owing to their labors that we know anything of our annals, of the events by which the political history of England is interpreted. They were often frivolous, frequently credulous, but they collected the facts to the best of their ability. It is true that the material which they put into shape is far less in quantity than those voluminous archives which are preserved in our national collection. But these, tho of great collateral value, would have but little constructive importance in the absence of the chronicles which the monks compiled. This is abundantly illustrated by the history of the fifteenth century and part of the sixteenth. . . .

"I am convinced that schools were attached to every monastery, and that the extraordinary number of foundation schools established just after the Reformation of 1534 was not a new zeal for a new learning, but the fresh and very inadequate supply of that which had been so suddenly and disastrously extinguished. ('Work and Wages,' p. 162.)

"And it must be remembered that they were not monks of the lower ranks who did manual and literary work, but ecclesiastics of the highest rank. We find such men as Hilary of Arles, one of the leading prelates in the French Church, working in the field. Becket, the Archbishop of Canterbury, when he visited a monastery in harvest did not hesitate to labor in the fields. St. Dunstan is reported to have been an excellent blacksmith."

For what the medieval Church did to put down feuds, to bring in "the peace of God," etc., see CHRISTIANITY AND SOCIAL REFORM. We notice here the influence of the Church upon the State. The political influence of the medieval Church was enormously great. Undoubtedly much of it was due to ambition for temporal power, especially with the Roman see and wherever her spirit went; but equally undoubtedly, apart from all question of ambition, the medieval Church often used her enormous power, and especially did many of her leading prelates use their commanding influence, to protect the rights of the common people against the aggression both of the barons and of the king. We can cite only a few examples, but they are strewn on every page of medieval history. In England, Stephen Langton, Archbishop of Canterbury, was the leader and the prime mover in wresting from King Richard the Magna Charta, which has now become the birthright of every Englishman and American. In France, the life of Bernard of Clairvaux is filled with records of masterly and effectual resistance against the

wrongs and violence of the barons. In Italy, the political influence of Savonarola, the Dominican monk, can hardly be overestimated, and these are shining illustrations of what was done in a humbler way and on a lesser scale by thousands of brave medieval churchmen. The influence of Wycliffe's poor priests, and above all of John BALL, must not be forgotten. Says Thorold Rogers:

The poor priests alone could traverse the country by right, and, without suspicion, advise their followers. They were precisely the persons who could organize resistance among the serfs, could win and keep their confidence, and could be trusted with their subscriptions, their plans, and their communications.

The Poor Priests

Wycliffe's poor priests had honeycombed the minds of the upland folk with what may be called religious socialism. By Wycliffe's labors the Bible men had been introduced to the new world of the Old Testament, to the history of the human race, to the primeval garden and the young world, where the first parents of all mankind lived by simple toil, and were the ancestors of the proud noble and knight, as well as of the down-trodden serf and despised burgher. They read of the brave times when there was no king in Israel, when every man did that which was right in his own eyes, and sat under his own vine and his own fig-tree, none daring to make him afraid. They read how God, through His prophet, had warned Israel of the evils which would come to them when a king should rule over them, and how speedily this was verified in the conduct of the young Rehoboam, with his depraved and foolish counselors, of how woe had been predicted to the people over whom a child should rule. The God of Israel had bade His people be husbandmen, and not mounted knights and men-at-arms. But, most of all, the preacher would dwell on his own prototype, on the man of God, the wise prophet who denounced kings and princes and high priests, and, by God's commission, made them like a potter's vessel in the day of His wrath, or on those bold judges who were zealous even to slaying. For with this book, so old, yet so new, the peasant preacher—we are told that many learned to read when they were old that they might tell the Bible story—could stir up the souls of these clowns with the true narrative of another people, and would be sure that his way to their hearts and their confidence would be, as it always has been with the leaders of a religious revival, by entirely sympathizing with their wrongs, their sufferings, and their hopes. And when they told them that the lords had determined to drag them back to their old serfdom, the preacher could discourse to them of the natural equality of man, of the fact that all, kings, lords, and priests, live by the fruits of the earth and the labor of the husbandman, and that it would be better for them to die with arms in their hands than to be thrust back, without an effort on their part, into the shameful slavery from which they had been delivered. And as their eyes kindled, and they grasped their staves, he could tell them to keep their ears open for the news of their deliverance, that on the password being given, they were at once to hie to the appointed place, where a great work could be done for God's people by His appointed servant ("Work and Wages," p. 254). It is true that the correctness of this view has been questioned, but that it is largely true is perhaps fixt. Green says that in the preaching of John Ball, "the mad priest of Kent," England "first listened to the knell of feudalism and the declaration of the rights of man." For an account of somewhat similar movements on the Continent, see BRETHREN OF THE COMMON LIFE; COMMUNISM; MIDDLE AGES, etc. But already in noticing these movements that were reformatory of the Church, as well as of society, we are in the dark days when Rome, led by her earthly ambition and desire for temporal power, had forgotten the life of the spirit; and, first, the papacy itself had grown utterly and scandalously corrupt, and was completely dominated by worldly policy, and then gradually the poison spread from the head to feet and members, till the whole medieval Church, save for reforming movements like those led by Wycliffe, Huss, and Savonarola, became dead in trespasses and sins—the higher clergy profligate mammon servers, the lower clergy profligate servers of the senses; the monasteries (tho not always even then) too commonly centers of vice, the nunneries homes of license for the monks. But on this we need not dwell, tho it must be remembered in obtaining a true picture of the effect of the medieval Church upon social reform; yet there is little danger in Protestant lands of its being forgotten. We are more apt to forget that the poison of corruption came from the worldliness of Rome, and that for long centuries, even after Rome was herself corrupt, the Catholic Church (in England especially, never wholly subject to Rome) was the great purifying, liberating, civilizing, Christianizing factor of medieval life. For the close relation between many of the medieval trade guilds and the Church, see GILDS. Almost all guilds had their patron saint and their church, where they went for solemn worship, and whose clergy took an active interest in their life, religion and business being continually interblended in medieval life.

IV.—From the Reformation to the Present Time

With the Reformation, or at least soon after, when the principles of the Reformation had become well established in reformed countries, we have a great change in the history of the Church and social reform. That Protestantism, by reaching the *individual*, has along certain lines done much for social reform, no thoughtful man can deny. But the Protestant Churches as a whole accomplished but little. Rome, too, since the Reformation has, until recently, done even less. The Reformation, in its appeal to personal faith, to the right of private judgment, to the letter of the Scriptures, had largely the effect, both on Roman and Protestant churches, of exalting belief, creeds, dogma, and discussion above life. It divided Protestantism into so many sects, each discussing and battling to sustain its own peculiar belief and separate church machinery, as to cause the reform of the social life to be until recently almost forgotten. This, too, has been intensified by two other elements in Protestant faith. First, its exaltation of what it calls "the spiritual life," largely meaning by this a life that finds its chief interest in the life hereafter, leading to what has been well called "*otherworldliness*"; and secondly, the tendency to *individualism*. This combination of tendencies in Protestant thought has at times almost wholly divorced Church life from the life of this world; and it is therefore no wonder that in the history of the Church and social reform we have after the Reformation nearly a blank. There are, however, exceptions to be noted. First, the early Protestants—for example, the Anabaptists of Germany—referring directly to the New Testament, learned there of its communism, and not a

few attempts were made to reproduce it. It has led to a long series of Protestant attempts at communism (see COMMUNISM), some of them very successful—for example, the SHAKERS. But, in the first place, these attempts were made by sects, and therefore were so limited by narrow and peculiar doctrinal requirements as to very materially reduce their influence; while secondly, they were based on the belief that Christians must go out from the world and be *separate*, rather than on the Catholic doctrine that the whole world is God's, and the duty of Christians is to remain *in* the world, tho not of it, and to bring it wholly into subjection to its King. The second exception to the divorce between the Protestant churches and the social life was in the attempt of many of the first Protestant leaders, such as Calvin, Cromwell, and the Pilgrim Fathers in America, to set up a theocracy on earth, with their particular church organization as the interpreter of the Divine will. These efforts have passed into history, and are now as much marked by their complete failure and their renunciation by all Protestant sects as they were once marked by intense faith in their efficacy. The attempts belong to the first years of Protestantism, when its principles were held in the glow of enthusiasm, fanned by persecution and martyrdom. Protestantism, as soon as it reached its logical outcome, conceived this world for the most part to be "a dreary wilderness," from which the individual is saved by the efficacy of his personal faith in the atoning blood of Christ; Christianity to be the salvation of the individual soul, and the Church to

Social Uprisings of the Reformation

The Puritan Theocracy

be but the coming together of the individuals who are being saved. While later Protestant thought in Unitarianism and even in orthodox circles has given up much of this soteriology, still the divorce of the Church from practical social matters has until recently remained. The individualism of Protestantism is admitted by friend and declared by foe. As applied to economics, it has its good and its bad effect. Undoubtedly it has produced a period through which both the world and the Church had to pass. Economics and religious individualism are largely identical. Says Palgrave's "Dictionary of Political Economy":

Guizot, Seebohm, K. Marx, and É. de Laveleye declare alike that the "history of capital and the supremacy of private interest," i.e., commerce in its modern aspect, commenced contemporaneously with the period of the Reformation, accompanied, as that movement was, by many discoveries and inventions, and the recovered sense of personal freedom and responsibility. In "Protestantism and Catholicism in their Bearing upon the Liberty and Prosperity of Nations," by Émile de Laveleye (1875), the progress of economic enterprise is attributed to the superior education and enlightenment fostered by Protestantism. De Tocqueville ascribes to the

Protestant- ism Individ- ualistic

Puritan discipline of the first settlers the same result in the commercial expansion of the United States. From Luther to Protestant divines of the present day the moral force of the dignity of labor and the duty of cheerful exertion in the subduing the earth by economic effort have been held up to admiration, and have given an impulse to the economic life of Protestant countries. The "Wealth of Nations," which appeared in 1775-76, marks a revolution of thought as truly as in the world of industry. "The machine is somewhat in the nature of Protestantism," says Dean Uhlhorn in his brochure on "Katholicismus und Protestantismus gegenüber der sozialen Frage" (1887). Private property is encouraged by Protestantism. Luther, in his Sermon on Usury (1579), speaks of three grades "of dealing well and worthily with temporal goods." The highest is to allow ourselves to be despoiled of it without offering opposition; the lowest is to take neither profit nor interest, tho he sees objections to this ideal being realized. While Erasmus complained of the "rage of ownership," Protestantism endeavored to make a compromise, maintaining the ideal in theory and encouraging what Fr. A. Lange calls a "moderate egoism" or "ethical materialism," in practice (see "Geschichte des Materialismus," i., 254, 294. Cf. J. E. Thorold Rogers on "The Economic Interpretation of History," 1888, p. 83). Liberation of industry follows logically from that of liberty of thought, developing the five points of industrial independence—freedom of labor, free trade in land, free movement of capital, freedom of industrial enterprise, and a free market regulated by demand and supply; it further implies the removal of all governmental and trade restrictions—in a word, *laissez-faire*. Individualism in religion and industry go together.

It is not therefore strange that slavery, supplant in Europe by the medieval Church, reappeared in the slave trade after the Reformation, practised by both Protestant and Roman peoples. It is not strange that all the evils which are laid at the door of individualism and competition should be largely condoned, sometimes defended, and at least allowed and not seldom practised by individualistic and competing churches. Individual Protestants like Wilberforce and Howard and Chalmers and Shaftesbury and Garrison (for at least in Garrison's early reform days he was a believer in the Church), and Gough and a long list of noble Protestants may have done much for social reform, and no one can challenge the effect upon the daily moral life of Protestantism among the Scotch Covenanters, the English and American Puritans, or the more ordinary life of many a parish in Scotland or town in New England (such as Northampton, Mass., under Edwards, when nearly the entire population were in church every Sabbath, and 600 out of a population of 1,100 were members of the Church); yet the point is only too well sustained that the Protestant churches as organizations have had little to do with social reforms.

V.—The Modern Church

With the modern Church we reach a new era. The Church of to-day can by no means be fairly accused of doing nothing for humanity. Those who accuse it, as many do in unsparing terms, of being separated from the masses and not battling for social reform, mean that it does not battle for certain ideas of reform. For charity and in cer-

tain lines of reform the Church, in all its history, never accomplished more than to-day. If charity (in the modern sense) be the fulfilling of the law,

Activity of the Church

no one acquainted with the facts can condemn the Church. And this should not be forgotten even by those who do not believe that such charity is the fulfilling of the law.

Those who would put justice before charity must themselves be just enough to give the Church credit for what she is doing. The real state of the case seems to be not that the Church is inactive, for she is immensely active, but that she is not active along the lines most needed in the opinion of most progressive thinkers. We shall therefore point out here the lines upon which the modern Church is active, and in the next section point out the position she might take.

We cannot here enter into details concerning separate churches and church organizations. For these, see BAPTIST, CHURCH OF ENGLAND, CONGREGATIONALIST, METHODIST, PRESBYTERIAN, PROTESTANT EPISCOPAL, ROMAN CATHOLIC, UNITARIAN, and UNIVERSALIST CHURCHES in their relation to social reform. We consider here only those activities which hold more or less true of all churches.

The first of these is the marked activity of the churches in sustaining our great charitable institutions. Especially in our larger cities, like New York, our great hospitals, for example, are almost solely due to the churches. Many of our best educational institutions, too, are the direct offspring of our churches. (See CHARITY ORGANIZATION SOCIETIES; HOSPITALS; EDUCATION, etc.) The immense activity of the Church in these respects can hardly be realized, save by a detailed study, and if one adds to this the enormous benefactions given, the sums contributed, and the charities and institutions founded by individual members of the Church, and largely as the result of the constant, quiet teaching and inculcation of Christian pupils, the influence of the Church for the social uplift of humanity can scarcely be exaggerated.

Secondly, in spite of severe criticism from those who believe that our churches, or at least church-members, are guilty in supporting political parties wedded to the saloon interest, it cannot be denied that in other ways at least our churches are exerting a vast influence for temperance (see TEMPERANCE; PROHIBITION; WOMEN'S CHRISTIAN TEMPERANCE UNION; CHURCH TEMPERANCE SOCIETY, etc.).

Thirdly, the churches are exerting a growing social influence through the development of numerous so-called "institutional churches," where charities and classes and clubs and benefit societies of the most various kinds are developed and maintained, and largely on the lines of social reform. These will be noticed in more detail in the articles on the several churches. We here refer only to such churches and institutions as the East Side House of St. Bartholomew's Church, New York City; the work at St. George's, in the same city; at Berkeley Temple, Boston; the People's Palace, Jersey City; the Temple College, connected with Grace Church, Philadelphia; the Church of the Paulist Fathers, in New York City; in London, the Oxford House, Mansfield House, Newman House, and numberless others in all the important cities and towns of Europe and America. For Germany and France, see article CHRISTIAN SOCIALISM.

Fourthly, many general movements for social reform, like the social work of the Salvation Army, the immensely important educational work of the Chautauqua movement, of the University Extension, the battle for Social Purity, the Social Settlement Idea—these and a hundred others are, first, the indirect result of Church teaching and, secondly, very largely supported by Church people, and not seldom directly in connection with the Church.

Fifthly, the main influence of the modern Church on social reform we have yet to notice in its deep, vital influence through the development of individual character. That the whole present influence of the Church upon character is good many may doubt; that the total effect of its influence is good a few radicals may question; but that the Church helps to develop purity, kindness, filial and marital love, general honesty, patriotism, temperance, the sacredness of life, the supremacy of duty, and that these are immensely important social forces, no man can deny. It is frequently said that the main work of the Church is not to teach social reform, but to prepare and move individuals to develop social reform. Into this private fundamental work, however, we cannot largely enter; yet must it never be forgotten by those who would ask what the Church is doing.

Often those who condemn the Church know her only as she was twenty or more years ago, and know not that a wholly new life and spirit have entered into her to-day. And yet no fair reviewer of the question can deny that along certain lines the Church is far from being or doing what she should. Almost all social thinkers are now agreed that the social evils of the day arise in large part from social wrongs, in monopolies of land, of money, of machinery, of railroads, and of capital of other kinds. They are also all agreed that whatever be their especial economic views, in some way society has a large part to play in righting these wrongs, and that such reforms are therefore at present needed as much as the personal charities and activities of the Church. Now it is in this large field that the

Failure of the Church

Church does so little. Many earnest churchmen claim that this is a field which the Church should not enter. But this is exactly the difficulty urged by social reformers. They claim that the Church has no adequate conception of what she could and should do. If Jesus Christ be the King of all life (see CHRISTIANITY AND SOCIAL REFORM), surely the Church, as working for Him, should demand that all life obey Christ, and surely the political, social, and industrial spheres are a part of human life. It is more than hinted that while the churches do much for charity (often, however, in their wealth giving of that which costs them little), they fear to take up these fundamental social questions because they have become identified with and dependent upon wealthy donors interested in sustaining these private and class monopolies. City clergymen, with their (often) large salaries and luxurious homes, are especially scorned, hated, and denounced by working men, who claim that these men are not true followers of the Nazarene Carpenter. "We denounce and leave the Church," say these labor leaders, "not because it is Christian, but precisely because it is *not* Christian." In these lines it is easy to see how, in spite of their growing activities, the churches are still denounced as false to their pretended creed and duty. Nevertheless even on this line there is a great change. The article on CHRISTIAN SOCIALISM and the respective articles on the various Christian Churches contain evidence of this. Clergymen of all denominations are coming to see that Christ really meant His kingdom to come on earth, and all kingdoms of this earth, including the kingdoms of politics, trade, industry, etc., to become a portion of His kingdom. It is significant that a new policy is proposed for foreign and home missions, whereby the Church should organize its converts into Christian, industrial, and social communities, as indeed Moravian missionaries have long done. Certainly a new life is in the Church, altho when one realizes the social need and the power that is in the Christ the Church professes to serve, the little done seems lost in the undone vast. (See also CHURCH AND THE WORKING MEN.)

VI.—What the Church Could Do

In an address upon "The Needs of the City," before the Evangelical Alliance, convened in Boston, Dec. 4, 1889, Professor Ely, in words still true, spoke of the need in the Church:

(1) A profound revival of religion, not in any narrow or technical sense, but in the broadest, largest, fullest sense, a

great religious awakening which shall shake things going down into the depths of men's lives and modifying their character. The city needs religion, and without religion the salvation of the city is impossible.

A Proposed Program

(2) The first need restated from a different point of view, a renaissance of nationalism or municipalism. Said Professor Ely: "Societies have failed and will fail. They cannot, acting simply as societies, do the work. Their resources are inadequate, the territory they can cover is too small, and their power is insufficient. The Evangelical Alliance simply as such can never do the work. The Evangelical Alliance, like other societies, must put itself behind municipal government and recognize the reform and elevation of municipal government as one of the chief features of its work. It must strive to establish among us true cities of God. There is plenty of room for the individual and for individual activity. Not all the work can be done by government, altho without government very little can be accomplished. But in addition to strictly private work, there is room for any amount of individual work in stimulating official work and in cooperation with official work."

"We must recognize this, and the sooner we recognize it the better. . . . The most successful work, says Barnett, after his long striving, is done by the Education Act, the Poor Law, and other socialistic legislation. That that is the most successful work is also illustrated by the life and career of the seventh Earl of Shaftesbury, who carried through Parliament legislation which has benefited millions of Englishmen. If simply by touching a person you could confer a distinct benefit on the person touched, it would take you twenty years to benefit as many people as have been benefited by legislation chiefly due to this great philanthropist."

The Church could work for:

- (3) Education of all kinds.
- (4) Good amusements, gymnasiums, parks, etc.
- (5) Public baths, washhouses, etc.
- (6) Improvement of artisans' dwellings.
- (7) Organized medical relief.
- (8) Temperance.

National churches might do still more. It was proposed at the World's Congress on the Church and the Labor Movement that among the first things for the Church to do was in conventions and conferences, and finally national councils, to create true ideals of social and industrial life, teaching men of our day what conscience demands in the daily life, even as the canon law of the Middle Ages expressed then the sense of the Church on such questions of the daily life as taking of interest, etc. The Church, to do this, needs not to lay down laws, but it should lift up practical ideals.

Again, the Church in pulpit, church paper, conference, and convention, should protest against great social wrongs and oppressive monopolies and tyrannies, and agitate for such far-reaching reforms as the lessening of the hours of labor, the progressive taxation of great incomes, the nationalization of land and of monopolized capital, the employment of the unemployed. Says a leading Christian Socialist in England, Rev. S. D. Headlam: "Lastly, I come to what is the main plank in the platform of the Christian Socialist, the chief political reform at which he aims, being bound by his creed to go to the very heart of the matter; to be content with no tinkering. It is summed up in the resolution which was moved by the English Land Restoration League in Trafalgar Square; after which the authorities, being conservative authorities, wisely settled that no more should be said there for the present. It ran as follows: 'That the main cause of poverty, both in the agricultural districts and in the great centers of population, is the fact that the land, which ought to be the common property of all, is now monopolized by a few; and that therefore those who want to cut away at the root of poverty must work to restore to the people the whole of the value which they give to the land, to get for the people complete control over the land, and to that end see to it that those who use land pay

for the use of it to its rightful owners, the people." Perhaps, first, above all else the Church should see to it that her own life is rightly fashioned; that she organize her needy converts in home and foreign fields into true self-supporting Christian communities; that she see to it that her own churches be built and her church papers and prayer-books be printed by united labor working during just hours at righteous wages. A Church that did this, led by clergy, living from the Christ life in humility and self-sacrifice and lifting up her voice for the oppressed against every oppressor, would be indeed a Church following her Master in social reform.

CHURCH AND THE REFORM WORKERS,

THE: The writer in 1905 conducted an investigation into the church affiliation of the men and women engaged in social reform work in the United States. Returns were received from over 1,000 persons. Four hundred and one were workers in associated charities, 339 in settlements, 272 were connected with various national social reform organizations. All portions of the country were represented. Four hundred and seventeen were men, 495 were women, the excess of women being in the associated charities and settlements.

Out of 878 social reform workers reporting upon the point, 753 were returned as communicants in some church. Even if the 134 who did not report on this point be all counted as non-communicants, it still makes 753 out of 1,012, or 74 per cent.

The method was by sending blanks to the secretaries of associated charities, to the head workers in settlements, and the presidents or secretaries of national reform organizations. Blanks were sent to all whose addresses could be secured. Each person to whom a blank was sent was requested to fill it out for individuals known personally to him or her as social reform workers. They were asked not to report the names of the individuals, so as to avoid seeming to pry into personalities. It was thought, too, that in this way more returns could be obtained. As a guaranty, however, of good faith, each one sending in a report was asked to sign his or her name to the statement that the returns did represent the facts as to workers in social reform personally known to the sender of the facts. To obviate reduplication, each was asked to report for individuals so intimately connected with the society or organization in question as not to be likely to be reported by any one else. One thousand and twelve such returns were made.

The Church membership of workers in the associated charities rises to 92 per cent; with the settlements it is 88 per cent; among other reform organizations it falls to 71 per cent.

What does this finding mean? It may be said at once that it does not mean that there is therefore no basis for criticism of the Church. Blanks were not sent to any institutional church, nor to any distinctively church organizations. It was taken for granted that workers in such societies would be affiliated with the Church. If anything, the presence of such a large proportion of church people in societies distinctly extra-ecclesia would indicate that the Church herself was not doing such work, at least not sufficiently

to furnish an adequate outlet for earnestness and effort.

Complaint is raised in many quarters of the decreasing number of candidates for the sacred ministry; may it not be that in the large number of church men and women found in these social efforts there is one cause for this scarcity?

It is also clearly evidenced by the returns that religion and Christianity and the creed are not dying. It is a time of change, but the changes are modal and not of faith. Still, to-day, the majority of the men and women who are striving to make the world better—at least in the U. S.—are members of the Christian Church and believers in the Christian faith. Rather do we see to-day Christianity blossoming into a new life and the creed putting forth new credentials in the eyes of a practical world.

This becomes even more manifest as we note the denominational preferences of the social reform workers. The churches that do social reform work are, naturally, the churches social reformers choose.

If we take the proportion of communicants in each religious communion to the total number of communicants in the United States, and compare this with the number of communicants the same communions furnish to social reform, we shall find that the Roman Catholic Church should produce 33 per cent of the reform communicants, and does produce 5 per cent; the Methodist Church (of all kinds) should produce 20 per cent, and does produce 14 per cent; the Baptist Church should produce 17 per cent, and does produce 6 per cent; the Presbyterian Church (North and South) should produce 5 per cent, and does produce 16 per cent; the Congregational Church should produce 2 per cent, and does produce 16 per cent; the Protestant Episcopal Church should produce also 2 per cent, and does produce 21 per cent; Unitarians and Universalists together should produce 0.4 per cent, and do produce 6 per cent. Other churches should produce some 18 per cent, and do produce 10 per cent. Other returns were as to church attendance. The average social reform worker, according to these returns, attends church 3.7 times per month, tho 37 nominal church members and 120 non-church members do not attend church at all.

Another set of returns shows the dominant early religious influences of the reform workers. Of the 980 reporting on this point, only 22 report no dominant early religious influence; 108 report the influence simply as Protestant, without naming any denomination; 872 report a denominational early influence. Comparing this with their present religious affiliations, we get some indication of the denominational changes that are taking place among this class of workers. The Baptist and Presbyterian churches have neither gained nor lost. The Roman Catholic Church, the Methodist, Unitarian, and Universalist, and the "scattered" churches seem to have lost. The Roman Catholic Church, with originally 7 per cent, has now 5 per cent of those reporting the points; the Methodist Church, with originally 15 per cent, has now 14 per cent. The Unitarian and Universalist churches, with originally 7 per cent, have now 6 per cent; while the "scattered" churches, with originally 16 per cent, have now 10 per cent. The Protestant Episcopal Church and the Congregational Church have gained. The latter originally had 15 per

cent, and now has 16 per cent; the Protestant Episcopal Church, having originally also 15 per cent, now has 21 per cent of those reporting.

So go the denominational changes, indicating, with what has gone before, that to-day it is not, on the whole, the churches most characterized by revivalistic methods, not the churches working on old personal lines, be these Roman Catholic or liberal, that are reaching the earnest social workers. Personal religion means to-day the devotion of the person to the common effort.

W. D. P. BLISS.

CHURCH AND THE WORKINGMAN, THE:

Labor troubles come as the result of an advancing civilization. Social unrest is sometimes an indication of social progress. There are no labor troubles in "Darkest Africa." Curiously enough, Christianity will have a good deal to do with introducing them.

The ancient philosophers declared that "a purchased laborer is better than a hired one," "a workshop is incompatible with nobility." And in accordance with these principles they erected great prison-like structures in which they hid away the laborer, compelling half the world to live in slavery. Then came Jesus Christ. Standards changed. Jesus discovered the individual. He showed the world how highly God values a human soul. Men have caught His spirit, with the result that in every Christian land the standing of the laborer has been elevated.

It was in Christianity that the labor movement had its rise. Its success is due to the fact that Christianity blazed the way. It was because Christianity and the labor movement had so much in common, that, as C. Osborne Ward points out in "Ancient Lowly," it was among the members of the labor guilds of the apostolic days that the Gospel had its freest course. In those days practically every workingman belonged to the guild composed of the men and women of his craft. It is not unlikely that some of the apostles themselves were identified with these organizations. This may have been especially true of Paul, who still worked at his trade as a tent-maker, usually seeking out those who were of the same craft, when visiting a strange city. As he was dependent upon his trade for a living, and as he constantly traveled from place to place, it seems reasonable to suppose that Paul identified himself with an organization which would give him greater opportunities for gaining his support. If, in connection with this benefit, there might come an opportunity for doing a larger service among a great class of toilers, it may be that Paul again "became all things to all men, that by all means he might win some," following out the principle of his approach to men. This we know without dispute—it was among the guilds of the larger cities which Paul visited that he established the churches whose names are given in the inspired record. And these very guilds of working people became centers for the proclamation of the Gospel.

Since those days, the relation of the workingman toward the Church has undergone a great change. Labor organizations and mass-meetings of working men have, from time to time, passed resolutions denouncing the Church and the ministry because of their apparent

indifference to the interests of working people. Vast numbers of working men have undoubtedly been alienated from the Church, and it has often been true that the Church was to blame for this alienation. If it is insisted that it is the fault of the workingman that he does not go to church, it should be remembered that the Church was established for faulty people. Therefore the greater the fault of the workingman, the greater becomes the responsibility of the Church in this connection.

The Church is slowly awaking to the fact that the labor movement is the most significant movement of modern times. It should be understood that when one speaks of the labor movement one does not refer exclusively to the labor-union. There are forces organized and unorganized which are comprized in this term. It includes the 25,000,000 Socialists of the world, nearly 7,000,000 of whom have cast their ballots for Socialist candidates; it includes the 8,000,000 trade-unionists from every land, 3,000,000 of whom are in the United States and Canada; it embraces the uprising among the Russian peasantry, 20,000 of whom (in 1906) suffered martyrs' deaths because of their belief in the ideal which somebody has given them; it includes the movement among the British working men, who practically control the English Parliament; it includes the movements among the masses in Germany, in Italy, in France, in Belgium, in Australia—to say nothing about the social unrest that exists in the U. S. In view of all this, it does not require a very wise man to say that this is the era of the common man, and when the hour strikes that shall proclaim the victory of the common people, this is the question which will confront us as a church: Will they be inspired by a high religious ideal given them by the Church, or will they go on to better and nobler things, indifferent to the Church, because of the consciousness that they have won all in spite of the Church? For win they will; no human power can prevent it, and no divine power will.

This, then, is the great labor movement that confronts the Church to-day. There is so much religion in this movement that some day it will be a question as to whether the Church will capture the labor movement or whether the labor movement will capture the Church. We hear a great deal about the Church saving the masses, but some day the masses are going to help save the Church.

Three very interesting facts give the Church a decided advantage in the matter of capturing the labor movement.

First. Workingmen almost universally honor Jesus Christ as their friend and leader, and most of them believe in His divinity.

Second. The great mass of working people are naturally religious, altho that religion may not always be expressed in the most orthodox manner.

Third. The labor question is fundamentally a moral and a religious problem. It will never be settled on any other basis. In the end there will be not one answer to the social question, but many; but they will all agree in this: all of them will be religious.

If the Church is to permanently attract working men, the workingman must find in the approach of the Church an absolute sincerity. It must make the people the end of its endeavors. They must find in the Church a greater democ-

racy. It behooves the Church to study the new movement among the masses and to direct it with unselfishness and with a devotion to the right, which shall win the millions who are incarnated in the "common people." The Church must preach a clearer social message. Working men are not particularly concerned about social theories, but sometimes their social conditions are so real and so vital a part of their lives, that it is almost impossible to reach them through an evangelistic campaign. Furthermore, the workingman must find in the Church more of the prophetic spirit.

Practically every church has expressed its interest in this problem, but some of the leading denominations have spoken with no uncertain sound. At the session of the Federation of Churches held in New York City in 1905, representatives of practically every Protestant denomination in the U. S., who spoke for nearly 20,000,000 church members, unanimously adopted the following resolution:

Whereas, In the divine order of things there can be no discord between labor and the accumulated results of labor known as capital:

Resolved, That private capital in every instance ought to be administered as a sacred trust for the common weal—this not merely in the distribution of surplus wealth, but also in all the active productive uses of capital, the law of God requiring not only beneficence instead of corrupting extravagance, but also instead of greedy production productive activities conducted on lines most considerate of the ultimate well-being of the whole community and the immediate welfare of the immediate workers.

Among other resolutions adopted by the Congregational Church at its national meeting with reference to labor, was the following:

Recognising that the need and the right to work are fundamental in human society and that much remains to be done to establish just relationships in the industrial order, we urge our churches to take a deeper interest in the labor question, and to get a more intelligent understanding of the aims of organized labor.

The National Council of the Congregational Church also has a representative Industrial Committee which is to study such questions as child labor, organized labor, immigration, industrial organizations, and socialism. State associations also have similar committees under whose auspices frequent conferences have been held in various parts of the U. S.

The Protestant Episcopal Church, at its national conference, had this to say:

In the face of a prejudice and a hostility for which there are serious reasons, we are convinced that the organization of labor is essential to the well-being of the working people. Its purpose is to maintain such a standard of wages, hours, and conditions as shall afford every man an opportunity to grow in mind and in heart. Without organization the standard cannot be maintained in the midst of our present commercial conditions.

This denomination also has a Labor Committee composed of prominent clergymen and laymen. For many years there has been in this church an organization known as the Church Association for Improving the Condition of Labor, commonly known as the C. A. I. L. While not in organic relationship with the Church, it has among its officers many of its bishops, and the work of the organization has received the hearty indorsement of the General Convention. Among the committees are those on Tenement-House Reform, Labor Organization, Sweating System, and the Church and Stage. The official organ of the association is *Hammer and Pen*, published in New York City.

The Presbyterian Church has established a Department of Church and Labor, which is in official relationship with that church. Its General Assembly of 1905 adopted this resolution:

Appreciating the increasing importance of the industrial problem and realizing that the labor question is fundamentally a moral and a religious question, and that it will never be settled upon any other basis, we recommend that the Presbyterian Home Mission committees appoint subcommittees for the purpose of making a systematic study of the entire problem in their respective localities. These committees shall cooperate with the Department of Church and Labor, thus establishing, in connection with the organized Presbyterianism of every city in America, a board of experts, who may be able to inform the churches with respect to the aims of organized labor, and to inform the working men concerning the mission of the Church.

The department serves as a clearing-house for the study of up-to-date methods of city mission work. It is attempting to reduce to a science work among working men. In this matter it has the cooperation of committees in practically every city of importance in the U. S. An article dealing with some phase of the labor question from the Christian view-point is regularly sent to the 300 labor papers in the U. S. and Canada, through which the department speaks weekly to 10,000,000 working people. Noonday shop meeting campaigns are conducted under its auspices in the industrial centers, the ministers of the city doing the preaching. Each year on Labor Sunday—the Sunday before Labor Day—every minister in the church is requested to preach on some phase of the labor question. So that both the Church and labor may see each other with clearer vision, the plan of the exchange of fraternal delegates between local ministers' associations and central labor-unions has been advocated by this department. Several of the leading denominations have entered most heartily into this work. The fraternal delegate goes unpledged to secrecy. He does not have the privilege of voting, but he has the right of the floor on all occasions. In some instances the labor-unions have created the office of chaplain for the ministers, and the regular meetings are opened with prayer.

Fraternal Delegates Working together, the Ministers' Association and the Central Labor Union may bring about many municipal reforms. Indeed, united, there

are few things in this direction which they may not accomplish in the cause of good citizenship, independent of partizan politics. Especially in those matters which involve moral issues—such as the saloon, gambling, the social evil, Sunday work, child labor, sanitary conditions in tenement-houses and factories, and everything else that influences the moral life of the community—may these organizations cooperate. If the opportunities for service which the ministerial fraternal delegate to the Central Labor Union has presented to him are rightly appreciated and properly employed, there are few positions that offer greater possibilities in bringing men of all classes the message which will bring about a truer spirit of Christian brotherhood. In operation in about 100 cities, the plan is spreading from city to city, until it is hoped that it will become effective in the 600 cities of our country that support central labor unions and ministers' associations. As a practical result of this plan, there is a more cordial relationship between working men and the Church; first, because the minister has a broader conception of what the labor movement stands for; and, sec-

ond, because the labor leader has come to know something of the mission of the Church. The plan has the hearty indorsement of the American Federation of Labor. At its Pittsburg meeting, held in 1905, the following resolution was unanimously adopted:

Resolved, That the American Federation of Labor recommends that all affiliated state and central bodies exchange fraternal delegates with the various state and city ministerial associations, wherever practicable, thus insuring a better understanding on the part of the Church and clergy of the aims and objects of the labor-union movement of America.

To further indicate its attitude toward the Church, another resolution was adopted which very strongly commended the Church for its renewed interest in the study of the problems which concern the toilers.

Altogether the outlook with relation to the Church and labor is most encouraging. The question of the workingman and the Church is no longer a problem. It is an opportunity. It is simply another challenge to the Church.

CHARLES STELZLE.

There is, however, another side, not contrary to the foregoing, but to be taken in connection with it.

In 1906 Dr. Josiah Strong wrote in *Social Progress*, of which he is editor:

The most striking fact revealed by the study of these eight denominational year-books is the large and increasing number of barren churches; that is, those which do not report a single addition on confession of faith. The number of barren Congregational churches last year was 2,390, against 2,306 the year before, and 1,632 in 1895. The number of barren Presbyterian churches was 2,270, against 2,024 the previous year, and 1,699 in 1895. The minutes of the Methodist Episcopal conferences do not give statistics for separate churches, but for charges, and there are often several churches in one charge. The number of Methodist charges which reported no additions on confession last year was 2,276, against 2,046 the year before, and 1,134 ten years earlier. Both the absolute number and the percentage of barren churches is increasing, having risen in the Congregational denomination from 30.5 per cent in 1895 to 41.0 per cent in 1905.

The increase of barren churches in recent years is the more significant in view of the evangelistic efforts of the last year or two.

From 1800 to 1850 there was a flowing tide of individualistic religion, which swept over an increasing proportion of the population; but from the middle of the century on, the tide ran more slowly, and by 1900 it was practically stationary. We must not, therefore, be surprised to learn that the tide has now turned, and the statistics of the past year show that it has already begun to ebb. The estimated annual increase of our population is 2.18 per cent, while the increase of the entire church membership of the United States during 1905 was only 1.69 per cent—the lowest rate on record.

That this falling off in church life is particularly true among the working classes is seen in many facts, among others in what Dr. Strong reports in his *New Era*:

He says that in Brooklyn (the city of churches) the rector of an important Episcopal church said: "On the list of my church members there is not a single workman." A Reformed Church clergyman: "That is also my case." A minister of a large Congregational church said: "We have one artisan on our list." A leading Presbyterian clergyman added: "Of working men, strictly so called, I have not a single one in my congregation." The total number of the members of these churches was about 2,200, and of these professed believers gathered into church fellowship only one was a workman.

Says a pamphlet (American):

Much has been said about "reaching the masses" . . . but I am compelled to say the Church does not want to reach the masses. The Church wants the classes. . . . The poor are passed by because they are poor, and the rich and well-to-do are sought because they are rich and well-to-do.

Says Richard Heath in "The Captive City of God" (London, 1905):

It is not Mariolatry or Bibliolatry we have to fear—what has desolated the Church and is desolating the Church is the worship of Property.

It was stated, in 1891, at the Congregation International Council, that almost all of the hundred richest men in the U. S. were members or adherents of Protestant churches, and out of the 200 men who possess \$20,000,000, or more, 95 per cent were members of Evangelical churches. In the Protestant Episcopal Church, the dioceses of New York, Long Island, Massachusetts, western Massachusetts, Pennsylvania, Pittsburg, out of a possible twenty-five lay delegates to the General Convention choose at present thirteen millionaires. The fact that the Church is the church of the wealthy, keeps it from being the church of the people.

This last winter at a Young Men's Christian Association theater service on Sunday afternoon in Brooklyn, the city of churches, an audience of 500 men was asked to show by raising the hand how many had been to church that morning. Twenty-five responded, of which twenty-three were Roman Catholics.

In Great Britain it is perhaps worse. Says Charles Booth (quoted in Haw's "Christianity and the Working Classes"):

The general conclusion is that the great masses of the people remain apart from all forms of religious communion.

Mr. Percy Alden, M.P. (long warden of Mansfield Settlement), is quoted as saying:

Great Britain

An intimate acquaintance with many thousands of working men has taught me that, even where there is no hostility whatever to religion, there is a sort of subconscious and unrecognized feeling of antagonism to the Church as an institution or corporate body and to the parson as a paid teacher of religion.

Says the Rev. Arthur Jephson, vicar of St. John's, Walworth:

Why should working people go to church? What have they got to learn there? The Church is largely to blame for the alienation of the working classes. The Church is almost always the friend of the landlord and employer. The Church has allied itself with land and capital, and generally with the master against his workmen. Its clergymen have dined with the rich and preached at the poor, instead of doing the exact opposite.

An editorial in the *Labor Leader* says:

In these later days the Church has fallen into almost obscurity as a power in the moral and civic life of the nation. Its form remains, its habiliments are still gorgeous, but it walks behind not in front of the State, and its gestures and speech are almost unheeded in the great march of the nation."

A Fabian writer shows by an analysis of the votes in the House of Lords that the bishops and archbishops of England have voted "No" on almost every progressive and advance bill.

For the following statistics (as well as for some of our quotations as to the position on the continent) we are indebted to Richard Heath's "The Captive City of God" (London, 1905).

The religious census taken by the *Daily News* in London, 1902-3, compared with the census taken in 1851 by Sir Horace Man, shows that the population has doubled, but that the total church attendance has fallen from 37.38 per cent in 1851 to 22.44 per cent in 1902. The attendance on the Anglican churches fell from 17.73 per cent to 7.44 per cent. The census also shows that few things are less hopeful as far as the working classes are concerned than the modern mission in

London. In the boroughs of Shoreditch, Bethnal Green, Poplar, Stepney, Hackney, Finsbury, Bermondsey, and Southwark, with a population of 1,352,903 persons, the attendance on Sunday services of the Free Church Missions, including those of the Evangelical Mission churches, the City Mission, and the Salvation Army, was (without deducting those who attended twice) somewhat more than 40,000, or about 3.3 per cent of the population, and of these, 22,000, or more than 53 per cent, were children. For Scotland the elaborate statistics published in 1893, by Dr. Robert Howie, show that while the population of Scotland increased 39.3 per cent in forty years, the attendance at its Presbyterian churches had decreased 22.4 per cent.

Scotland

In Germany conditions are the same. Dr. Stöcker, of Berlin, is quoted by Richard Heath as saying:

Nowhere has so great a part of the population broken with the Church. Protestantism is sick, sick unto death. Individual expressions of Christian life are on the increase, but the organized Church is steadily losing influence and respect. . . . In the north and northeast the friends of Christianity are among the aristocracy and among the peasants, while the middle classes, the educated industrial commercial people, as well as the artisans and little tradesmen, are, with few exceptions, opposed to the Church; the working men of the towns, belonging, as they often do, to the Social Democratic Party, being necessarily hostile.

Germany

Pastor Erich Forster, of Frankfurt-on-Main, editor of *Chronik der Christlichen Welt*, says:

It is undeniable that the alienation from the Evangelical Church and its worship goes on increasing. In Mecklenburg, Pomerania, and the north of Brandenburg, that is, in the most purely Protestant part of Germany, the Church is dead. Worst of all is the condition in the great cities.

Says Paul Göhre in his "Three Months in a German Workshop":

Among the working classes only one quality of religion remains, and that is respect and reverence for Jesus Christ. . . . There is no escaping the conclusion that the materialistic influence of social democracy has nowhere so fundamentally destroyed the received ideas and impressions of the workman as in the sphere of religion. The old forms and images in which the beliefs of Christendom have hitherto been handed down are, for the bulk of our wage-earners under the capitalistic system of production, forever broken. And with the form, the spirit, which alone is the essence and the work of the form, is for many also gone. A world without God is growing up under our eyes; a world whose horizon is continually growing wider, and whose icy chill and desolation is creeping over many souls who still waver and struggle and despair who in their inmost depths reject the barren teachings of a materialistic philosophy.

Forsoaken by their Church, without help, without enlightenment, without support or guidance, surrounded by an atmosphere of socialistic thought from which there is no escape, they are all dying a lingering and often a torturing spiritual death.

OTHER COUNTRIES

Of France, Pastor Elie Gournell says:

Why are people alienated from the Church? Because its action is neither just enough nor promotive of solidarity. In the sixteenth century we were the vanguard of science, moral action, and faith; to-day we lag behind in the rear-guard.

In Switzerland, Prof. Gaston Frommel says:

The churches are not true churches, only audiences.

Of Holland, Dr. A. Kuyper is represented by Richard Heath (from whose book several of our quotations are taken) as saying in substance:

Orthodoxy in Holland is faced by a destructive criticism subversive of the very sources of Christian faith, by a remodeling of moral ideas, and above all by a social movement, which means nothing less than a total overthrow of the social edifice.

Of the Roman Catholic Church we have few reliable statistics, but of its weakening hold upon the masses in Europe there can be no question.

Witness the startling political reverses for the Church in France, Italy, Spain, and Austria. Its very efforts at a so-called Christian Socialism (see **ROMAN CATHOLIC CHURCH**; also **CHRISTIAN SOCIALISM**) are but efforts to stay the work of the Social Democratic Party, which has taken millions of men from the Church. In Germany the Roman Catholic vote (1907) was 1,375,000. The Social Democratic vote 3,000,000. If in the U. S. the Church of Rome seems sometimes to be gaining, it is only due to the immense Roman Catholic immigration. But the increase of the Church of Rome is less than the Roman Catholic immigration, so that here, too, the Church of Rome is steadily losing ground.

EDITOR.

CHURCH OF ENGLAND: The relation of the Church of England to social reform is best seen under **CHRISTIAN SOCIAL UNION**; **GUILD OF ST. MATTHEW**; **CHRISTIAN SOCIALISM** (section England); **CHURCH SOCIALIST SOCIETY**, also **CHURCH ARMY** and **CHURCH OF ENGLAND TEMPERANCE SOCIETY**. For statements of the failure of the Church of England to reach the masses, see **CHURCH AND WORKINGMEN** (§ 2). To what extent, however, radical thought has entered the Church of England, especially in London, may be seen in the fact that at a meeting of the London Conference in 1906, a resolution indorsing the general principles of socialism was carried by a vote of 58 to 13.

CHURCH OF ENGLAND TEMPERANCE SOCIETY: Organized 1862, and reformed on the basis of the dual pledge 1873. One of its sections, including the junior department, is composed of those who take a total abstinence pledge. The other section includes non-abstainers, who take a pledge of moderation and cooperate with the abstainers in work for temperance. There is also a woman's union connected with the society. Address: 4, The Sanctuary, Westminster, London, S. W., England.

CHURCH SOCIALIST LEAGUE, THE: English organization, founded June 13, 1906. Principles: (1) The Church has a mission to the whole of human life, social and individual, material and spiritual; (2) the Church can best fulfil its social mission by acting in its corporate capacity; (3) to this end the members of the league accept the principles of socialism. Object: To secure the corporate action of the Church on these principles. Methods: (1) To cultivate by the regular use of prayer and sacraments the life of brotherhood; (2) members undertake to help each other in fulfilling the object of the league by speaking and lecturing and in other ways; (3) members shall cooperate as far as possible to secure the consideration of social questions at their various rural dean and diocesan conferences, and the election of Socialists on these and other representative bodies; (4) members shall work for the disestablishment of the patron, and the substitution of the Church in each parish in conjunction with the Church in the diocese in the patron's place; (5) to secure the due representation of the wage-earning classes upon all the official representative bodies of the Church.

A leaflet of the league says:

The league requires its members to be convinced Socialists, in the historical and economic meaning of the word. It is thus a society within the Church, composed exclusively of Socialists.

It accepts the principles that the Church has a mission to the whole of human life, social and individual, material and spiritual; that the Church can best fulfil this mission by acting in its corporate capacity. . . . Whilst the Church has some claim to be the Church of the people, it is notorious that the wage-earners of this country have little or no place in the councils of the Church. The constitution of any diocesan conference or of the Houses of Laymen is the revelation of the Church's preference for rank, position, and wealth. This is as wrong as it is disastrous to the life and influence of the Church. The league will aim at securing the more adequate representation of the wage-earners on these various Church bodies.

Honorary Secretary, Rev. J. H. Hastings,
Halton, Lancaster, England.

CHURCH TEMPERANCE SOCIETY (THE): An American society founded in 1881 on the following basis: "Recognizing *temperance* as the law of the Gospel, and *total abstinence* as a rule of conduct essential in some cases and highly desirable in many others, and fully according to every man the right to decide, in the exercise of his Christian liberty, whether or not he will adopt said rule, this society lays down as the basis on which it rests and from which its work shall be conducted, a *union and corporation on equal terms* for the promotion of Temperance, between those who use temperately, and those who abstain entirely, from intoxicating drinks as beverages."

Objects: (1) The promotion of temperance; (2) the reformation of the intemperate; (3) the removal of the causes of intemperance.

Lines of Action: (1) Prevention, embodied in the semimilitary orders of Young Crusaders of from eight to sixteen years of age; Knights of Temperance from sixteen to twenty-one years; and Veteran Knights over twenty-one years of age. (2) Counteraction, through the establishment of saloons without liquor. The society has established the *Squirrel Inn* at 131 Bowery, New York, with free reading-room, a library of 1,000 volumes, monthly lectures, and coffee at one cent per cup. It has six lunch wagons, open day and night, from which 355,712 ten-cent meals were sold in 1906. During the summer months the society maintains free ice-water fountains at a cost of about \$2,000. It has also a firemen's van, which attends all large fires in the city, supplying the firemen with sandwiches and coffee. (3) Restrictive legislation. Twenty-five years ago the saloon license in New York City was \$120, and the trade was controlled by the board of twelve aldermen, of whom nine were interested in the liquor business. The high license is now \$1,200, and the number of saloons has been reduced to 6,930. (4) Rescue. The society's offices are always open for the consideration of personal cases of intemperance; and for counseling those who have fallen its victims and needing a home where they will be medically treated and cared for.

The governing board consists of forty members. Chairman, Rt. Rev. Bishop Courtney, D.D.; treasurer, Mr. Irving Grinnell; general secretary, Mr. Robert Graham. Office, 281 Fourth Avenue, New York City.

CIGAR-MAKERS' INTERNATIONAL UNION, THE: An American union with highly developed methods of governmental administration and an elaborate system of sick, death, and out-of-work benefits. Moreover, its structure and functions, which exemplify those of the English unions, modified to suit American conditions, have frequently served as models for newer national or-

ganizations. The piano and organ workers, for example, have borrowed almost bodily a constitution from the cigar-makers. In 1902 the plumbers adopted their financial system; and various characteristic features have been copied by other American unions.

The cigar-makers were not among the first trades in this country to form local societies. Until recent years it required very little capital for a journeyman cigar-maker to open a shop of his own. The members of the craft, therefore, occupied an independent position, and were able to command good wages without forming unions. A few attempts to organize the trade were, however, made at a comparatively early date. Thus, in 1835, at the time of the agitation among the mechanics of Philadelphia to inaugurate a ten-hour working day, a committee of cigar-makers in that city held a meeting, and adopted resolutions to the effect that the cigar-makers of the city "organize in order to regulate the prices of work, so as to earn a sufficiency on the principle of ten hours." The females engaged in cigar-making were also urged to strike with the journeymen of the trade, and "thereby make it a mutual interest with both parties to sustain each other in their rights." A local society of the trade is said to have been formed at Cincinnati, Ohio, in 1843. On May 5, 1851, a cigar-makers' union was organized in Baltimore, Md., then one of the leading centers of the cigar trade. Between 1852 and 1853 about sixty cigar-makers employed in the shop of a manufacturer named Mark Sharkey, in New York City, organized a union. But the English and German members of the society did not harmonize. Suspicion and ill-feeling were engendered, and in about six months the union ceased to exist. Another attempt was made, in 1859, to form a local in New York City. But like its predecessor it went to pieces in a few months on account of internal dissensions.

The Internal Revenue Law, adopted at the time of the Civil War, and particularly the law of 1868, which required every journeyman who desired to manufacture cigars or who worked in his own home to furnish bonds to the amount of \$600 on real estate, hastened greatly the unionization of the trade. Most journeymen were unable to pay this bond. They thus permanently became wage-earners, and formed unions to bargain more effectively with their employers. The introduction of the mold, about 1870, the team system of manufacture, and other labor-saving devices have successively lowered the skill required of the cigar-maker, and have made increasingly necessary the organization of the trade.

A national federation of all local unions was formed in 1864, for the purpose of preventing competition for work between journeymen cigar-makers in different cities, and to regulate nationally the conditions of apprenticeship. Almost immediately, also, provision was made for the support by the national union of locals on strike. A few years later, with the admission of certain Canadian societies, the name Cigar-makers' International Union was adopted. The international organization has maintained a continuous existence until the present day. During the depression of 1873-77 many of the subordinate unions went to pieces; and from 5,800 in 1869 the membership sunk to about 1,000 in 1877. After the depression, however, the union reorganized on a much sounder basis; and most of the features

which characterize the society to-day were adopted at that time. Moreover, the membership has since then maintained a steady growth, and has reached about 45,000 at the present time. Of recent years the cigar-makers have been engaged in a severe contest with the tobacco trust, which has consistently opposed the union from the beginning, and has undoubtedly weakened the power of the locals in many places.

The Cigar-makers' International Union was one of the first American organizations to adopt the various beneficiary features of the English unions. In 1867 an abortive attempt was made to introduce the system of advancing loans to members who wished to travel in search of work. The administration of the loan system was, however, so dishonest that, in 1873, this feature was replaced by the so-called "endowment plan" or death benefit; but under the stress of industrial depression the endowment plan was abandoned. In 1879 the loan system was permanently reestablished, and in 1880 the sick and death benefits were introduced, the Cigar-makers' International Union being the first American organization to pay a sick benefit. This union is also one of the few American confederations that have adopted the out-of-work benefit, which was inaugurated in 1890.

The cost per member for the out-of-work benefit has varied according to the state of the trade, having reached its highest point during the four years of industrial depression from 1894-97. The cost per member for the sick and death benefits has steadily increased. This has been partly due to the fact that the amount of benefit paid in each case has gradually been made larger; partly it is the result of the higher sick and death rate, due, in turn, to the steady increase in the average age of the members—a condition found in all organizations with a slowly growing or stationary membership.

The members who pay fifteen cents as dues receive strike benefits and not more than \$50 death benefit. The twenty-cent retiring card holders receive sick and death benefits.

On the side of government and administration, the cigar-makers have, almost from the beginning, employed the system of popular initiative and referendum, and, since 1896, have not held a general representative convention. Amendments to the constitution are proposed by the local unions, and adopted or rejected by a majority vote of the members. The officers of the union have also been elected by popular vote since 1893. The cigar-makers have adopted the English financial system of nationalization and equalization of funds. All funds are made the property of the International Union. They are kept, however, not at central headquarters, but in the treasury of each local union. The local societies are allowed a certain percentage of the total amount in the treasury. The remainder must be expended for activities guaranteed by the International Union. When the amount in any local treasury becomes exhausted, the president of the International Union equalizes the funds, so that there shall be in every local treasury a certain amount for each member.

The union label, the well-known device now used to mark goods made by union labor, had its origin among the cigar-makers. It was utilized by the San Francisco local in its fight against Chinese coolie labor. A little later, a similar label was employed by the local at St. Louis. A

label for all subordinate societies was adopted by the International Union in 1880. The fact that working men prefer cigars which bear the union label, is an important source of the union's strength in bargaining with employers.

CINCINNATI: While heralded abroad as "the worst governed city," it is the distinction of Cincinnati to have quite early in its career taken two steps that placed it far in advance of any other city in the world, and which to-day give it a unique position in the family of American municipalities. Behind many others in the extent of its municipal activities, and not even now the theater or the forum for the discussion of municipal ownership and operation, it has in a manner all its own gone perhaps to bolder extremes in this direction than any other American city.

Cincinnati is the only city in America that owns a steam railroad, a road that runs over territory in three states from Cincinnati in Ohio to Chattanooga in Tennessee. Cincinnati is also the only

Public Ownership

American city that owns and operates a university, altho other cities have colleges and seminaries. Cincinnati, too, was the first American city to establish on a country site a municipal hospital exclusively for consumptives, and it owns and operates this hospital to-day. However, having taken these vast steps, the city would seem to have spent its energy and met its desires in this direction, for its municipal activities, compared with those of other cities, seem to be exhausted as far as innovations are concerned. The fact that Cincinnati built a steam railroad and established a municipal university and a hospital, and yet has since practically halted in the extension of its municipal activities, presents perhaps as strange a contrast of temperaments in a people as history affords. Cincinnati is conservative in the accepted sense and as a normal condition; yet the fact remains that when aroused it has shown a daring and radical spirit not to be found elsewhere. On one notable occasion, when lashed into fury by what they considered repeated miscarriages of justice and a general condition of public debauchery, the people became a "many-headed mob," which placed the torch to its temple of the blind goddess; and in the morning its court-house was a smoldering ruin.

The story of the Cincinnati Southern Railroad is filled with interest, and not without flashes of romance. Cincinnati, the home of Mrs. Stowe when she wrote "Uncle Tom's Cabin," had long been a hotbed of abolition sentiment; and at the conclusion of the Civil War the feeling of the South was bitter against the city. Louisville, Ky., had the Louisville and Nashville Railroad to the south, and was diligent in nursing the trade to that section. It was seen that if Cincinnati was to maintain its commercial and manufacturing position it must regain and develop its Southern relations. As early as 1865 James Dalton, a Cincinnati man, had introduced legislation in the General Assembly for a railroad to

the south, but the people were not then ripe for the venture. However, the matter was taken up by E. A. Ferguson, a Cincinnati lawyer, and in May, 1869, the legislation was passed. This law provided that whenever the city council should declare the necessity for a railroad, and the people on a referendum should approve, the Superior Court should appoint five trustees, and a bond issue of \$10,000,000, secured by mortgage and a tax for interest and sinking-fund, should be authorized. This was all done, and the debate as to what should be the southern terminus of the road was eventually decided in favor of Chattanooga. A charter from Tennessee was obtained without much trouble in 1870, but there was considerable delay and difficulty in getting a charter from Kentucky. This too, however, was secured in 1870, and then an act was passed by Congress to allow of a bridge across the Ohio River. New loans of \$6,000,000 and \$2,000,000 respectively were authorized as the work progressed and the cost found to increase. These several acts were accompanied by the most strenuous debates, and frequently the people were worked up to a great state of excitement. As usual there were charges and countercharges regarding the intelligence and purity of actions and objects of persons. The scheme for a city to build a railroad, and that, too, through three sovereign states, was so novel and unheard-of that naturally it met with the opposition of "constitutional" lawyers, and lawsuits were abundant. But Ferguson and his associates persisted, and in 1880 the road was completed, an event celebrated with a great banquet, bonfires, and ringing of bells. The road was leased, and in 1896 an effort to sell it was defeated on a referendum to the people, altho the most powerful interests were for its sale. In 1901 the people decided on a renewal of the lease, the terms being an annual rental of about \$1,116,000, for sixty years. There are also other provisions of a rather technical nature in the lease. If the experience of Cincinnati with the Southern Railroad has not been an unbroken chain of benefits—if there have been disappointments—yet the fact is now undisputed that the worth and wisdom of the venture have been more than demonstrated. It furnishes an object-lesson of what has to be endured as well as of what is to be enjoyed, of the forces that have to be opposed and of the friends to be gained.

As with the Southern Railroad, there are none now who would sell the Cincinnati University, a great institution housed in a series of magnificent buildings, and in which are 1,500 students in the various schools and departments. It has a revenue of about \$115,000 from taxation, and about \$32,000 from endowments, rents, and fees.

So well satisfied is the city with its hospital for consumptives, that not only is there no whisper of getting rid of it, but plans are now being carried out for its enlargement and improvement. This hospital was started in July, 1897.

These three things accomplished, Cincinnati did little in the way of marked advancement, altho millions have been well spent on the streets, and a new water-works is now practically completed. It was not until about four years ago that the people manifested any marked desire for a larger municipal activity. They could not forever fail to catch the contagion for betterments, and the "new spirit" first manifested itself for improvements in the schools.

Public Schools

As a consequence, the public schools have undergone and are undergoing a transformation in their physical equipment, along with academic improvements that make them the peer of any in the country. The fight was long and bitter. Every influence that could be utilized to prevent this improvement was summoned. The industrious and saving Germans were especially beguiled for a while by "scare talk" about a high tax-rate, and those who pointed to other cities were accused of "knocking the town" and of lacking local patriotism. But the fight was won, and having been won the people wonder that it should ever have been necessary to make it.

The result of the school battle, for such it truly was, has encouraged the people to demand some more evidence of what is sneeringly called "altruism" in the municipal government itself. This demand has in Cincinnati, perhaps more largely than in other cities, taken its most effective form by the alertness of numerous "Improvement Associations," "Welfare Societies," "Taxpayers' Associations," and such bodies as the Business Men's Club and the Associated Organizations, and the central organizations of the Labor Unions. Robert Peel fought the repeal of the Corn Laws for years; but it was Peel, the minister, that had them repealed. So too, in Cincinnati, many of the steps in advance have been made by the politicians who were inert when the people were quiet, but who, under the lash of no uncertain public demand, went forward. There are those who, while unwilling to admit that the so-called reform movement that placed the present city administration in power under the emblem of the Democratic Party did a wise thing, yet say that it was perhaps just as well that the people asserted their power and showed what they could do if they had a mind. If it should be the fate of the political-reform movement to fail totally in gaining the confidence of the people, it appears certain that there will be no lessening of the people's vigilance. What form this will take is of course a matter of conjecture, but the signs now seem to point to the initiative and referendum, with its correlated principles of the imperative mandate and the power of recall. Agitation for direct legislation has recently taken an organized and intelligent course, and its friends feel confident that it will in a few years be written into the law of the state.

Cincinnati organizations that are influential in municipal affairs are:

City Club, United Bank Building.
Vine Street Congregational Church, Vine Street, near Eighth Street.

Associated Organizations, 1250 Harrison Avenue.

Business Men's Club, Vine and Fourth Streets.

University Settlement, Liberty and Plum Streets.

Citizens' Municipal Party, 9 Blymyer Building.

Associated Charities, 304 Broadway.

Commons Club, 621 Walnut Street.

Central Labor Council, 1313 Vine Street.

Chamber of Commerce, Vine and Fourth Streets.

Taxpayers' Association, 2518 Moormann Avenue.

Socialist Party, 304 West Ninth Street.

Hamilton County Referendum League, 34 East Sixth Street.

ALFRED H. HENDERSON.

CITIES: In this article are considered the development of cities, their administration, and matters pertaining to civic reforms. For other civic topics, see OVERCROWDING; CORRUPTION; EDUCATION; EXPENDITURES; LIGHTING; HOUSING; LUXURY; MAYOR; MUNICIPALISM; POLICE; PROSTITUTION; SLUMS; STREET-RAILWAYS; SWEATSHOPS; TENEMENTS; WATER-WORKS.

A city may be defined in general as a large or important town; more accurately, it is an incorporated municipality, usually governed by a mayor, aldermen, and common council. The number of inhabitants required to constitute a city in the United States is usually 10,000, but in some western states it is as low as 3,000. In Great Britain a city is usually a corporate town which is or has been the seat of a bishop.

I.—The History of the City

The origin of cities loses itself in the unknown past. Discoverers, as at Troy, have often found the ruins of one city buried many feet below the ruins of another, these in turn many feet below the present soil. It is doubtful, however, if these early cities from the standpoint of social science had any true civic life. They seem to have been gigantic conglomerations of walled-in populations, ruled by some despot or family of lords or priests, who sometimes, indeed, gave to the city a rude splendor and developed monumental art, yet without allowing the citizens any corporate life of their own. The inhabitants were the slaves of some king or the devotees of some god. It is in Greece that we come to the first actual city in the sense of the corporate unity of citizens. Greek social

The Classic City

polity turned upon the conception of the city begun undoubtedly as a colony from some patriarchal clan, but early developing organized democratic life. (See ATHENS.) Many of the cities, however, were long oligarchies, and often, even after democratic life had been gained, some family or families would gain the power and establish an oligarchy. Sometimes an individual would gain the power and establish a tyranny, which was, however, personal, rarely inherited. The city was usually supreme, and not a part of any State. It dominated the country around, made treaties, waged war, etc. It was sacred in the eyes of the citizen, his church as well as his home. The city entered into, ruled, and conducted all kinds of activities. It built temples, markets, theaters, gymnasia. It conducted worship, games, instruction. It sent out colonies and ruled commerce. It worked mines, fields, and factories. It supported its free citizens rather than was supported by them. (See ATHENS.) Citizenship was limited, but the assemblage of the citizens was supreme. Often, however, officers were nominally elected who were virtually irresponsible. Next to the citizens came a class of "aliens," subject natives or foreigners, having special rights on payment of special taxes. At the bottom of the whole structure were the slaves. Even a democracy of free men was simply a democracy of slave-owners. Thus at Athens there were at one time at least 140,000 slaves, 10,000 resident aliens, and 31,000 male citizens. (See SLAVERY.) Two gigantic evils resulted: First, danger of servile revolts, which not infrequently broke out with terrible results (see GILDS), and were put down only by relentless cruelty; secondly, class antagonisms were roused between other classes of citizens. (See ROME.) Civil war became the order of the day. The State was either paralyzed by internal conflict or demoralized by corruption. Slavery ate out the life of ancient cities. In the Roman civilization the city gradually lost its sovereignty and became a part of the empire, furnishing the transition to the medieval city.

In the early Middle Ages the city lost power before the military chieftain and the robber castle. Feudalism magnified the country over the city. Where feudalism was weak, as in

South France or in Italy, or where natural conditions were favorable, as along the Adriatic coast, the Rhine, and the northern coast of Europe, free cities were developed soonest. In the north the struggle of the cities for independence

Middle Ages

was fiercer, and their development slower, but stronger. They grew by work, by art, by commerce, not by war. All through the eleventh and twelfth centuries they developed rapidly. The Italian republics, the cities of the Hanseatic League, the Flemish and English cities, tho often dominated by a fierce and quarrelsome nobility, tended, on the whole, to develop the rule of the trader rather than that of the noble or chieftain. They became first the creator and then the creature of the gilds. Gradually, as the national life developed itself, the city became but a part of the nation, ready to gain commercial rights and privileges and representation in Parliament, for contributions to the royal treasury. Where the royal power was greatest the cities lost their power first, as in France and England and Spain; later, in Germany and Italy. Free thought, however, developed in the cities, and the Reformation and the Renaissance were largely matters of the city. The medieval city was a democracy more truly than the classic city, but not at all so pervasive. It ruled commerce and trade; it sharply watched the market and attempted to fix prices and to decide industrial disputes, but it did not conduct activities, as did the Greek city. The medieval city was ruled by the individual citizens more than it ruled them. Yet the city played a much larger part in industrial and social life than ordinarily to-day. Mr. Albert Shaw ("Municipal

Government in Great Britain," p. 21) gives the following sketch of a medieval town:

"The rise of town life, which dignified mercantile pursuits and handicrafts, had opposed the system of leagued and equal freemen, of burgesses of incorporated citizenship, to the feudal military system of lordship and vassalage. And this was a great preparatory step toward modern institutions and conditions. We know that there was a certain dignity and form about municipal life that appears well in the retrospect. We have surviving, here and there, a fine old medieval town hall, or gild hall, with its banqueting chamber and its council room. There was much stateliness in the office of mayor; and the old maces of mayoral authority survive to this day. Then there was impressiveness in the liveries that the freemen of the gilds donned on formal occasions. As for municipal conveniences, those were times when life was simple, and 'modern improvements' not so much as dreamed about. The streets were narrow, with the houses built close upon them. The paving was of the rudest character. There was simple surface drainage, and no garbage removal or cleansing system. Water was supplied from a few town fountains or public wells. Street-lighting had not been invented, and early hours were prescribed. Most towns had a skirting of common lands, where the cows were pastured, and where, in many cases, fuel was procured. The houses were, in large part, built of wood; and in spite of vigilant 'watch and ward' and compulsory hearth precautions, destructive fires were not infrequent. The death-rate, of course, was high. There was infection in the wells, and no means of checking the spread and fatality of the frequent 'plagues' that swept the towns. But the science of public sanitation being undiscovered, these things were accepted piously as inscrutable visitations of God."

II.—The Modern City

The modern city is somewhat of a return to the Roman city. It is the creature of the State. The industrial and political revolutions of the last century shattered the ancient rights and privileges of the medieval boroughs and gilds. The city was left with little sovereign power. Nevertheless the growth of the factory system, and, above all, the development of railroads and centers of commerce, have crowded people more and more into cities. Cities have grown in size, but not in corporate power. Hence they have become unwieldy, shapeless, confused, with often little true civic life. The modern divorce, too, between Church and State has at least temporarily hurt the city in a portion of its life. It has given the city responsibilities which it has not always been willing to accept. The poor and needy have been left to seek from confused private charities what formerly they received from the Church as part of the organized city life. The tendency of the well-to-do to leave the city and live in the suburbs; the crowding of the poor in quarters where rent is low, and the grouping of the wealthy in sections where rent is high; the development of parks and other improvements in the latter quarters and their absence among the poor—all these factors have added to the difficulty. The problems of modern city life have thus grown out of the sudden development of cities, without a corresponding development of organic municipal life.

The modern city in England, France, and the United States, markedly, and to a less extent in Germany, is the creature of the State. It can only do what it is chartered to do by the State. It has in some cases almost lost self-government. It fixes its own rates, but often has its taxes collected for it by national officials; it is in many cases responsible for its own peace and order, but has no control over an armed force, and has to ask for help if it requires it. On the other hand, it exercises many local functions which in the Middle Ages were left to the Church or to compulsory or voluntary private effort.

Poor relief, education, sanitation, police, the supplying of light and water, are usually in the

hands of the city, while the conduct of justice, of national defense, of postal communication, and commercial regulation are in the hands of the State.

IN THE UNITED STATES

Considering first American cities, we find a general similarity coupled with considerable variety in the details of their charters and constitutions. They are all the creations of the State. The first city in the United States to receive a charter was New York (1686), and the next Philadelphia (1701). In New England the township system prevailed, and Boston

Early States

was not incorporated till 1820. Each city received a special charter; and, following English models, the charter was given to the mayor, council, and officials, rather than to the citizens. The council was the governing body. Powers were very limited, being confined to few spheres of activity. The city was the instrument of the State; and in colonial days the mayor was appointed by the governor, even down to 1822, in which year mayors were elected in Boston and St. Louis, other cities gradually following suit. Even police powers were limited by inadequate taxation to finance the city. The result was that little attention was paid to city government or its administration. The supply of water and other public necessities was in private hands.

Nevertheless, cities grew rapidly. The ownership of city franchises became of immense value. They were to be obtained from state legislatures or city councils. The state legislatures were composed of city and country representatives.

Corruption

A representative of some rural district, who perhaps had little business interests at home, could in the legislature cast a vote worth millions of dollars to some corporation. The almost inevitable result was the purchase of votes by the corporations, and their active participation in rural politics to secure representatives favorable to their interests. It has frequently happened that the chairman and the majority of the cities' committees in state legislatures have been rural delegates. Then again, city councils, tho nominally with limited powers and occupying positions not held in esteem (since originally city governments were little thought of), have really been in a position to sell or give away franchises, or to enact provisions of enormous commercial value. This was another incentive to corruption. Both in state legislatures and city councils honest members could make little money, whereas dishonest members could rapidly accumulate a fortune. It was therefore a paying proposition for corrupt rings and dishonest cliques to organize the city politically, and elect their creatures to office. Hence Tammany and the rings which have disgraced every American city. By the same rule, it did not pay honest men to be elected, since, if elected, they had no certain tenure of office, and usually found themselves in a hopeless minority, which could only be a helpless witness to corrupt methods. As a result, generally speaking, the worst citizens have been members of and active in city government; while the best citizens, until recently, have kept out of city politics. By the same system corrupt corporations and dishonest directors who would buy franchises and legislative enactments were favored, while honest corpora-

tions and directors were made almost an impossibility. The perfectly natural and all but inevitable result of this has been a corruption of city government unequalled in any other civilized country. Said Mr. James Bryce ("American Commonwealth," vol. i., p. 608):

"There is no denying that the government of cities is the one conspicuous failure of the United States. The deficiencies of the national Government tell but little for evil on the welfare of the people. The faults of the state governments are insignificant compared with the extravagance, corruption, and mismanagement which mark the administrations of most of the great cities. For these evils are not confined to one or two cities. The commonest mistake of Europeans who talk about America is to assume that the political vices of New York are found everywhere. The next most common is to suppose that they are found nowhere else. In New York they have revealed themselves on the largest scale. They are 'gross as a mountain, open, palpable.' But there is not a city with a population exceeding 200,000 where the poison germs have not sprung into a vigorous life; and in some of the smaller ones, down to 70,000, it needs no microscope to note the results of their growth."

Said Mr. Andrew D. White (*The Forum*, December, 1890):

Without the slightest exaggeration we may assert that, with very few exceptions, the city governments of the United States are the worst in Christendom—the most expensive, the most inefficient, and the most corrupt. The city halls of these larger towns are the acknowledged centers of the vilest corruption. They are absolutely demoralizing, not merely to those who live under their sway, but to the country at large. Such cities, like the decaying spots on ripe fruit, tend to corrupt the whole body politic. As a rule, the men who sit in the councils of our larger cities dispensing comfort or discomfort, justice or injustice, beauty or deformity, health or disease, to this and to future generations, are men who in no other country would think of aspiring to such positions. Some of them, indeed, would think themselves lucky in keeping outside the prisons. . . . Few have gained their positions by fitness or by public service; many have gained them by scoundrelism; some by crime. . . . It has been my lot also to have much to do with two interior American cities of less size—one of about 100,000 inhabitants, the other of about 12,000. In the former of these I saw a franchise, for which \$1,000,000 could easily have been obtained, given away by the common council. I saw a body of the most honored men in the state go before that council to plead for ordinary justice and decency. I saw the chief judge of the highest court of the state, one of his associate judges, a circuit judge of the United States, an honored member of Congress, two bishops, the president and professors of a university, and a great body of respected citizens urge this common council not to allow a railway corporation to block up the entrance to the ward in which the petitioners lived, and to occupy the main streets of the city. They asked that, if it were allowed to do so, it might be required, in the interest of human life, either to raise its tracks above the streets or to protect the citizens by watchmen and gateways, and to pay a fair sum for the privilege of cutting through the heart of a populous city. All was utterly in vain. I saw that common council, by an almost unanimous vote, pass a bill giving away to this great corporation all this franchise for nothing, so far as the public knew, and without even a requirement to protect the crossings of the most important streets; and I soon afterward stood by the mutilated body of one of the noblest of women, beheaded at one of these unprotected street crossings while on an errand of mercy. So, too, in the smaller of these two interior cities, while the sewerage and the streets were in such bad condition as to demand the immediate attention of the common council, I saw the consideration of these interests neglected for months, and the main attention of the council given to a struggle over the appointment of a cemetery-keeper at a salary of \$10 a week."

This, however, by no means exhausts all the causes of municipal corruption. Another cause of misgovernment is the uncertainty of responsibility, especially in its executive branches. Various departments, which should work in closest harmony, owe their appointment to as many different authorities; and often not only do not co-operate, but actually pursue cross purposes. Said Mr. Francis Bellamy:

"At one time Philadelphia was found to be possessed by four boards with power to tear up the streets at will, but none

whose duty it was to see that they were properly re-laid. Or here is an example of a composite officialdom which may happen any day: a 'citizens' ticket' mayor, a Republican street commissioner, both elected by the people; other appointments filled by men acceptable to a Democratic board of aldermen; a police commission named by the governor, together with the state legislature interfering on occasion. With such a mixture it is not easy to fix responsibility for maladministration. Non-partisan commissions of four members, two from each party, is another favorite and specious arrangement by which the people are prevented from calling either party to account. This non-partisan contrivance is also an open door for the most unblushing division of spoils in the department between the 'workers' of both parties. . . . The people of Boston, for instance, do not know [the charter has been now changed.—Ed.] where to lay the blame for many municipal disorders. Mayor and street commissioner, school board, and the two chambers are elected by the people. Treasurer, auditor, superintendent of the streets, and 104 other officials are appointed by the mayor and aldermen together. There are forty distinct executive departments which depend on mayor and aldermen. The police department is controlled by the governor and his council. The state also appoints a fire marshal to investigate fires, while the city-appointed firemen put them out. The various departments are headed by commissions of three or five men, and by another ingenious contrivance these men are appointed by the mayor singly, only one each year; so that the mayor can never control any commission of three until his second year, nor any commission of five until his third year, if he lasts so long. But these are not all the obstacles the people meet in finding out who is accountable. If seven of the twelve aldermen are not in sympathy with the mayor, they can, by dictations or bargains, put such a restriction on his appointments that he finds himself without control of the executive departments of which he is the nominal head. It is, indeed, as an English journal said, 'the craftiest combination of schemes to defeat the will of democracy ever devised in the world.'"

The efforts at reform began with an increased trust of the people. Popular election of mayors was begun in Boston and St. Louis in 1822, and in Detroit and New York in 1834. The council too was modeled after the state legislature and frequently made bicameral, the mayor having a veto power. But these changes produced little result, because they did not in the slightest degree touch the fundamental evils.

The next idea was, because of the corruption of city councils, to minimize their powers, and to create boards appointed by the governor, the legislature, or the mayor—rarely chosen by election. This system probably began with the New York charter of 1849. By 1860 almost all important municipal functions in the chief cities were in the power of such boards,

Various Theories

which had little accountability to the people or to the council. They were sometimes self-perpetuating, and their members could be removed only for cause. The result was disorganization and a very divided responsibility. About 1880 the theory came into vogue that to ensure responsibility increased powers should be given to the mayor. He should have large powers of appointment and removal, so that he could be held responsible. This idea was incorporated in the charter of Brooklyn in 1882, and rapidly embodied in the charters of many other cities (New York in 1895). This change was accompanied by the creation of many single commissionerships in place of boards. But the system has not produced large results, and has by no means been copied in all cities. To-day there can hardly be said to be any American municipal system. City charters created by different legislatures vary in every possible way. The tendency has developed to enact laws, not for specific cities, but for grades of cities according to size. But this has had little effect on the larger cities. In California, Missouri, Washington, Minnesota, and Colorado cities have been given the right to frame their own charters; but this right is prac-

tically nominal, since the state constitutions largely determine what powers can be adopted.

The American city has only authority in powers enumerated by the Constitution or by legislative enactment. Nor has it any taxing power beyond what the legislature gives it.

In most city charters this financial limitation has also been largely increased by provisions strictly fixing the city's debt limit. These limitations were placed in the effort to restrain the vast and useless expenditures of corrupt and inefficient councils; but they now work to prevent activities for improvements absolutely needed, even when these improvements may in the long run be made very remunerative to the city. It is this provision of most American city charters which often blocks the development of municipal ownership and operation that prevails in Europe. The city having no power to develop such activities, it is left for private corporations to do so; and this naturally tends to stimulate the latter in endeavors to control and debauch legislatures, councils, and city and state politics. Parties need the support of corporations, and their machines therefore become dependent upon these. With little proper civic life, city politics become ensnared with national politics. The effort to prevent this has led to the holding of city elections on separate days from state elections. About 1880 it began to be held that if city politics could be divorced from national politics, great good would result. This was largely emphasized by the New York Commission of 1876, appointed to investigate municipal government. Since then it has been accomplished to a considerable extent, but has been productive of little good. The state still has virtually all the legislative and governmental powers, while the city has only administrative powers; and monster corporations still control legislatures and councils. Preying upon and using ignorant and corrupt masses of voters, these corporations, through rings and cliques, rule our cities.

The New York City charter of 1897 marked the beginning of a tendency to increase the power and responsibility of the city council; and the revised charter of 1901 actually removed many of the checks placed upon the council's actions.

Reforms

Mr. Dorman B. Eaton argued that a council could be non-partisan, a mayor never. Other reforms have been agitated. Quite recently Iowa, California, Nebraska, and South Dakota have granted to local legislative authorities the right to refer questions to the people of the localities. (See DIRECT LEGISLATION.) In order to take the nominating power from the machine leaders, Minnesota (1900-1902) adopted a system of direct nominations, and other states are following suit. The latest idea is the so-called Galveston idea. See GALVESTON.

Above all a spirit of reform has entered into civic life. Men of character and position (such as Mr. Seth Low, Mr. Roosevelt, and others), have entered into city politics, and have taken office. National conferences for good city government became important in 1894. A NATIONAL MUNICIPAL LEAGUE was founded, and also a LEAGUE OF AMERICAN MUNICIPALITIES. Local citizens' unions and municipal leagues have been formed in all the principal cities. (See under the head of the several cities.) Reformers have appeared, who are willing to unearth and expose corruption at any cost. The results have not as yet justified

the hopes of these reformers. Undoubtedly something has been accomplished; but too often the uprisings of indignant citizens have been but temporary, and at the next election the reformers have been defeated by the experienced work of corrupt machines. Many are coming to believe that there can be no permanent reform until the system has been changed whereby gigantic corporations owning or desiring franchises of enormous value are given such inducements to corrupt legislatures and councils. Public-ownership parties are therefore being formed in many cities; and in Chicago and New York these parties have already polled formidable votes. (See CHICAGO; NEW YORK; PUBLIC OWNERSHIP.)

GREAT BRITAIN

The city in Great Britain, because of the early development of a central government, as compared, for example, with Germany and Italy, never attained in medieval times the same independence as some of the German and Italian cities; but, on the other hand, it has never been so completely subordinated to the State as many continental cities, because the administrative system of the English Government has never been largely centralized. The administration of justice and the preservation of peace were administered by the city, tho regarded as functions of the state government. The cities, however, had little or no political life of their own, and were constantly used, first by the crown, then by the nobility and gentry, and later by national political parties to control Parliament. The cities, or boroughs as they were usually called, were incorporated through a grant of the crown to each locality of an especial charter. These charters were given, not to the people living in the district, but only to the municipal officers, or perhaps including a very narrow border of freemen. The corporation usually consisted of mayor, aldermen, and councilors. The charters were distinctly oligarchic, and the sphere of action was very limited. Not the council, but special parliamentary trusts or commissions conducted such functions as the paving, lighting, and even the watching of streets. The administrative degradation of the city was complete.

Modern municipal reform in Great Britain begins with the Scotch Municipal Government Act of 1833, and in England with the Municipal Reform Bill of 1835. These bills were

Beginnings of Reform

consequent upon the great Reform Bill of 1832 reconstructing the parliamentary boroughs. They admitted to burgess rights all property owners and all occupiers of rented property valued at £10 per annum. These remained substantially in force till the Act of 1882 consolidated all acts bearing on the subject into one municipal code. By the Local Government Act of 1888, cities having over 50,000 inhabitants became distinct counties for administrative purposes. Under these bills and some special bills enlarging their functions England's towns exist to-day. It has been said that the whole substance of British municipal government is condensed in the following clause:

"The municipal corporation of a borough shall be capable of acting by the council of the borough, and the council shall exercise all powers vested in the corporation by this act or otherwise. All

that the burgesses have to do is to elect the councilors, and they do the rest."

No attempt is made by law to secure amenability of the council to the popular will, except through public opinion. The position of the councilor is made one of power and of honor, and the result has been that the council is usually composed of the best citizens, instead, as is too often the case in America, of the worst. The council divides itself into committees, and each of these has control of some civic department. The people control the council, the council the committees, the committees the departments. Members of the council serve without pay; and are therefore not prompted to seek election by motives of pecuniary gain. For this reason, if for no other, they are usually men of position and of character. For councilors on the various committees and for heads of departments it secures the best citizens, thus obtaining an honest and efficient administration. Also the officers of the departments are appointed by the council, and with no legal requirements as to length of time of office or of qualifications. Thus the councils can choose the best, and good men can be retained. Hence continuity of effective administration. The entire administrative force is out of politics, national and local. The most important office is that of clerk of the corporation, often a life position.

Any burgess is eligible to the council. In addition, property and rate-paying qualifications admit to eligibility suburban who live beyond, but within 15 miles from, the limits, yet have their business interests in the town. The councilors are elected for three years, and one third of them retire annually. The aldermen (or those councilors who rank next to the mayor, and who are also police judges), and mayor are an integral part of the council, the law stating specifically that "the council shall consist of the mayor, aldermen, and councilors." Aldermen are elected by the council, and hold their office six years. They are one third as many as the councilors. Half the aldermen retire every three years. The mayor is elected by the council from among the aldermen or councilors or persons qualified to be such.

The English franchise is very complicated and very different in different portions of the United Kingdom. The franchise is often different for parliamentary, town-council, school-board, and parochial-board elections. It turns on the household rather than the individual. Mr. Shaw says ("Municipal Government in Great Britain"):

"The English municipal electorate excludes in practise nearly all the unmarried men, all floating laborers and lodging-house sleepers, and nearly all the serving class. Furthermore, in judging of the political effects of the extension of the franchise to the humblest householders, it must be borne in mind that the exploitation of the votes of the ignorant, vicious, and indifferent in English cities by demagogues or party agents is so extremely difficult that it does not count for anything at all in election results. The extraordinarily severe laws against bribery, direct and indirect, apply to municipal elections, and it is next to impossible to get a British voter to the polls who does not contemplate the contest with some glimmering of interest and intelligence. In Scotch towns the slums do not vote, because they evade the rate collector and are not registered. In English towns, altho registered by canvassers, they do not care about voting, and are a neglected field so far as political missionary work goes. The organized working men vote, of course; and they seem to vote with more intelligent and distinct purpose than any other class in the community. Of the women rate-payers nothing is to be said except that their voting is variable, sometimes being high in proportion to their numbers, and sometimes low, depending upon their interest in particular candidates or special issues. Their disposition to espouse party causes seems very marked, but it is not to be relied upon as unthinking or as oblivious of the qualities of candidates. Obviously, the franchise needs simplification, altho for municipal purposes it is difficult to see what desirable end would be gained by changing the principle from that of a household franchise to a personal one."

Such is a general view of British civic administration. The recent growth of the cities has, however, developed new needs, and new problems; but these, on account of their importance, are

best treated under special heads. (See LOCAL GOVERNMENT; MUNICIPALISM; MUNICIPAL TRADING; SCHOOL QUESTION IN GREAT BRITAIN.)

GERMANY

Municipal structure in Germany varies somewhat in different states and in different cities, yet has everywhere certain similar characteristics. In Prussia it is based on the Stein and Hardenburg reforms of the early part of the century. The Prussian franchise, both in the municipalities and in the kingdom, is based upon a division of the population according to the taxes paid. The wealthiest class, which pays one third of the taxes, has one third of the

Organization

suffrage. The middle class, which pays a second third of the taxes, has another third of the power; while the remaining third is left to the whole remainder of the population. In the constitution of the empire, however, and in many German cities, outside of Prussia, the franchise is based on manhood suffrage as demanded by the revolutionists of 1848. In all cases, however, the city council (*Gemeindewahl*) has the municipal power. Its members are usually elected for six years, one third going out of office every two years. The executive power is exercised by the burgomaster or mayor and a body of department chiefs, called magistrates. These are elected by the council, and have practically a life tenure. They are selected for expert knowledge and ability. A city will sometimes advertise for an experienced mayor. The magistrates are either highly salaried men or men of position who serve without salary. They form a council called the *Magistratsrat*. With this constitution in all German cities, the council, through the burgomaster and magistrates, conducts the city government as a father would a household. The city can do anything that it is not forbidden to do—the reverse of the American theory. It is supposed to do all that is necessary to the best interests of the community. The cities as a rule furnish their own water supply, gas, and electric lighting. They strictly rule the running of the horse-cars, etc. They build and maintain baths, lavatories, abattoirs, markets, savings-banks, pawn-shops, etc. They care minutely and effectively for sewerage, street-paving, cleaning, and lighting. German cities provide systematically, too, for the relief of the poor. The cities are subdivided into districts, with a visitor for each. Workpeople must be insured by the municipalities or the state; compulsory education is provided at low rates; manual training and gymnastic drill is a part of the education. German cities are thus households, carefully watched, regulated, kept clean and healthful. Taxation is generally not high, no small portion of the municipal revenue coming from municipal activities or franchises, carefully sold at rates very favorable to the city corporation. (See also BERLIN.)

The following from Dr. Wilms Erster, Mayor of Posen, gives a favorable idea of German civic administration:

In Germany to-day everything is planned by the municipalities with a view to general harmony. Factory, business, and housing districts are conformed to special needs. The height of the houses in proportion to the width of the street, and the utilization of building sites are restricted to admit light and air. Ordinances govern the height of rooms, the number of windows per room, substantial construction, etc. The pavement of the streets is suited to the character of the

surrounding neighborhood. Careful attention is given to the future erection of public buildings, play-grounds, and recreation centers. Artistic effect is always sought. Municipal building here takes the initiative and influences private enterprise. When property is bought for building purposes, the plans showing the front of the building to be erected must be submitted to the authorities for approval. The disfigurement of street fronts by bill-boards is regulated.

Sewage pipes receive street drainage as well as house sewage. Some cities separate the drainage from the sewage system. Pipes conduct the sewage outside of the city limits and utilize or dispose of it in various ways. Berlin and Breslau carry it through fields, where it is used for fertilizing and manuring. In other cities the pipes empty into rivers after their contents have been clarified. This process is costly and difficult, forcing the towns to acquire large areas to fertilize them with this waste.

The larger cities have, almost without exception, hygienic institutes where all questions relating to the public health of the city are studied. The interest of the authorities in the promotion of public health has led to a considerable decrease in mortality during the last decade. In the seventies the death rate was 35 to 40 per 1,000; to-day the average has decreased to 20 per 1,000. In cases of contagious diseases prompt notice to the Board of Health is compulsory. All premises are disinfected by the Board of Health, and the poorer classes are not charged for fumigation. In some cities, as for instance, Posen, disinfection is free for all classes.

The inspection of foods, such as milk, butter, and meat, is in charge of the Board of Health.

Public swimming and shower baths are provided. Consumptives are cared for in homes for consumptives, and persons suffering with incipient consumption are sent to forest colonies. Those unable to pay for treatment are placed in these institutions at the expense of the city or State. Asylums are provided for the feeble-minded. Any one who, on account of illness or incapacity, cannot support himself, receives relief from the Poor Department, in case the sickness, old-age, invalidity and accident insurance does not provide for his maintenance or the support received is insufficient.

The departments of education of the various communities and cities provide public, elementary, and high schools. Special schools and institutes give courses in the building-trade and machine-shop training. Cities engaged in special industries, such as textile, ceramic, woodwork, etc., have special schools. There are further arts and craft schools for women. When the public-school education of the child is completed, the continuation school must be attended, etc. In the upper grades the girls are taught cooking.

For the laboring classes, people's restaurants and coffee-houses are opened, which, at the same time, serve as substitutes for the saloons.

For instruction and information in legal matters, many cities maintain bureaus and consulting stations.

Even the very smallest city runs its own slaughter-house. Every slaughter-house has a special department for the microscopic examination of pork.

Nearly all cities own their own water-works. Gas-plants are in most cases owned by the city. These add largely to the city's income. The water-supply is not regarded by the city as a business enterprise, inasmuch as a higher rate would interfere with its free consumption. The cost to German cities for maintaining water-works is greater than in American cities; therefore the rates charged are somewhat higher, and the average consumption consequently less. Electric-lighting plants are only partly municipalized. The tendency in this respect is, however, in favor of municipalization. Cities are urged to erect plants where as yet no electric-lighting plants exist; even to erect such plants in competition with private enterprises. Competitive plants may be successfully started where private plants are operated, by withdrawing from the corporation the privilege of using the streets for conducting electricity, either above or below ground.

Street railways are only partially municipalized. In many cities these are operated by private corporations. These corporations then receive franchises from the cities to lay tracks, and in return for this privilege they, in the first place, maintain part of the street in proper condition, and, secondly, pay the city annually either a certain stipulated sum or a fixed percentage of the earnings. Many cities reserve the right to determine the fares to be charged. Almost every city has its own municipal theater, and most of the large cities have their own concert halls, conductor, and orchestra. Everywhere, in large cities and small towns, the authorities have expert economists working out the social, industrial, and economic problems confronting the cities in every phase of human progress.

FRANCE

The French municipality is intimately connected with the old communes or townships, which in the early history of France won a high degree of local autonomy, and played no small part in the national history. (See FRANCE AND SOCIAL REFORM.) These ancient communes,

however, had gradually lost all autonomy, and become but administrative parts of the absolutism of the Louis. The Revolution instantly liberated them, but under Napoleon, as First Consul (1800), they again became but units of his highly centralized system—a system, however, with some attempt at justice and freedom. Changing with the changes of France, the communes at present, under the third republic, have considerable local power, yet are by no means free from the control of the central government. The Act of 1884, which is virtually the act under which they exist to-day, increases the local powers of the communes materially, yet leaving very much to be desired by the radicals and Socialists, who in France, more than in most countries, center their ideals around the autonomy of the old communes. According to the present system, some of these communes are municipalities, some of them rural townships. According to the present law, they are governed by a mayor, with his executive assistants, and a council. The council elects the mayor, and the council is elected by manhood suffrage in the communes. The councilors hold office for four years, and all retire together. The council holds four regular sessions a year, lasting from fifteen days to six weeks, tho the mayor may call extra sessions. The council appoints consultative committees, but the mayor has all executive power with his assistants. He has the appointing power, subject to the approval of the prefect of the department, the representative of the central government. The council has large authority in the levying of taxes, voting of public works, etc., but usually subject to the approval of the department authorities.

Paris has in many ways less local autonomy than any other city in France. In the Revolution she gained her old communal freedom, and has at every revolution, but it was taken away by

the various imperial governments, and has only been partially granted by the republic. Paris is still largely governed by the prefect of the department of the Seine, and his colleague, the prefect of the police. The city is divided into twenty arrondissements, and in each there is a central building called the *mairie*, the bureau of an officer called the *maire*. There is, however, a municipal council with considerable power, and the tendency is to develop municipal self-control.

Statistics

One of the prominent facts in the nineteenth century was the drift of population in all countries into the cities. The following tables are compiled, except for their latest figures, from Weber's "Growth of Cities in the Nineteenth Century":

GROWTH OF CITIES (Population in Thousands)

| CITY | 1800 | 1850 | 1890 | 1900 |
|-------------------------------|------|-------|-------|-------|
| London..... | 958 | 2,362 | 4,211 | 4,536 |
| New York..... | 62 | 660 | 2,740 | 4,014 |
| Paris..... | 546 | 1,053 | 2,448 | 2,714 |
| Berlin..... | 173 | 378 | 1,578 | 2,033 |

SOME COMPARATIVE STATISTICS¹

| CITY | Population | Area acres | Density per acre. | Death- rate | Annual expenditure | Per capita cost | Debt |
|---------------------|------------|----------------|-------------------------|----------------|-----------------------|-----------------------|---------------|
| London..... | 4,654,437 | 75,575 | 61 | 16.6 | \$82,000,000 | 17.62 | \$378,278,250 |
| New York..... | 4,014,000 | 197,760 | 20 | 18.2 | 156,000,000 | 38.94 | 459,000,000 |
| Paris..... | 2,714,000 | 19,259 | 142 | 17.2 | 65,000,000 | 24.09 | 400,000,000 |
| Berlin..... | 2,033,000 | 15,676 | 130 | 16.9 | 45,000,000 | 22.1 | 87,000,000 |
| Vienna..... | 1,674,000 | 43,980 | 38 | 18.3 | 32,932,614 | 19.07 | |
| Chicago..... | 2,050,000 | 121,920 | 17 | 16.2 | 64,104,166 | 31.27 | 20,200,000 |
| Philadelphia..... | 1,500,596 | 82,880 | 18 | 21.2 | 46,874,326 | 31.25 | 61,137,000 |
| St. Petersburg..... | 1,487,000 | 71,679 | 20 | 23.7 | 9,250,000 | 6.22 | |
| | | (with suburbs) | | | | | |
| Hamburg..... | 872,000 | 94,693 | 9 | 17.9 | 25,280,000 | 29.0 | |
| Manchester..... | 631,185 | 19,893 | 31 | 21.3 | | | |
| Glasgow..... | 798,778 | 12,796 | 63 | 21.2 | | | |
| Liverpool..... | 710,337 | 17,792 | 40 | 22.6 | | | 11,126,950 |

¹ The items are not all for the same year, tho all for recent years and the financial items, like Annual Expenditure and Debt, are not all estimated on the same basis, yet do in a general way present a real comparison.

The foregoing table of comparative statistics has, however, very little value, unless rightly interpreted, and may very easily completely mislead. The relative population and acreage of cities mislead unless one knows to what extent populous suburbs are included in the city area. New York vastly increased her population in 1898 by including Brooklyn and other boroughs, and becoming "Greater New York." Density per acre may be still more misleading, because of variations in different sections of a city. New York appears in this table with a low density per acre, but this is only because large areas as yet

little occupied are included in the city limits. As a matter of fact certain sections of Manhattan Island, where is found a large portion of New York's population, has a greater density than any city in the world. Death-rates may also mislead, tho to a less extent. An average general death-rate may conceal a very high death-rate among the poorer classes, balanced by an unusually low death-rate among the more prosperous classes. Similarly with comparative financial statements. Annual expenditures and municipal debts have very different real values, depending upon what they represent. A city making large expenditures

and carrying a large debt may be in a very much better financial condition than a city with a small expenditure and debt, because the former represents revenue-bringing investments, while the latter do not. Some city governments are expensive

at any price; others cheap at any ordinary cost. This distinction generally speaking is against American cities as compared with European, because American cities have few revenue-bringing properties, while European cities often have many.

POPULATION IN CITIES OF 100,000 OR OVER

CITIZENS' INDUSTRIAL ASSOCIATION OF AMERICA, THE: An outgrowth of the feeling that labor-unionism has taken on certain features which operate most injuriously to the general interest and which need correction. The fact that in all labor disputes, however brought about, the public must foot the bills and suffers from consequent derangement of business, loss of employment by the working classes, etc., suggested the idea that an organization which should comprise all classes of society was necessary to meet these conditions. Employers and strikers alike have been prone to disregard the interests of any one, except themselves, in case of a controversy.

The Citizens' Industrial Association is not opposed to labor-unions. It recognizes the value of organizations of working men, not only to themselves but to the general welfare. But many of

the practices of modern unionism are directly opposed to that welfare, are extremely harsh in their operation upon working men who do not belong to the unions, and establish unjust conditions, as by a limitation of output, whereby working men who are members of the union are restricted to the amount of work they may do in a day, by restricting apprenticeship until it has become practically impossible for more than one out of eight of American-born boys to learn a trade, and by denying forcibly, and by violence very frequently, and sometimes by murder or manslaughter, the right of working men not members of the union to accept employment when and where they please and on such terms as suit them and thus to earn their living by the labor of their hands. The resulting assumption of the labor-unions that they must be permitted to control the labor market and dominate all transactions between employed, employers, and the public is regarded as un-American and the practical establishment of a trust which is more mischievous in its operations and more threatening to the best interests of the common people than any other in existence. It is unfortunate that the management of labor-union forces has fallen into the hands of a class of men not of the highest intelli-

gence and patriotism, who in seeking the advancement of their personal interest, as such leaders have misled their followers (the majority of whom are really at heart good and patriotic citizens) to the support of methods which cannot be justified.

For these reasons the effort was entered upon some four years ago to unite the people who are not members of the union and to set their strength over against that of the labor organizations in order to secure the correction of the evils referred to. This it was felt was not only required on behalf of the members of the unions themselves, but emphatically necessary for the protection of the people. And to that end the cooperation of not only employers and working men but also of professional men, of merchants, of farmers, of clerks, and the vast multitude who are not affiliated with labor organizations has been sought.

The census of 1900 gave 29,000,000 as the number of working men, wage-earners, etc., in this country. It is reasonable to assume that by this time the number has reached 32,000,000 at least. The leaders of what may be termed the Labor Trust do not claim that the membership of the unions amounts to more than 2,000,000, and yet they assume to speak for the other 30,000,000, assume to dictate as to the employment of the other 30,000,000, and assert the right to control relations between labor and employers. The result is, so far as the latter point is concerned, that by the unwise increase of wages brought about by force and duress, and not by natural operations of normal conditions, the cost of living to all has been enormously increased with no resulting benefit to the members of the Labor Trust (whose living expenses have been also forced up with the increase of wages, that is, the increase of the cost of production), while the burden has fallen with tremendous weight upon many millions who find no increase in their own incomes to correspond with the greater cost of living thus brought about.

There are between 400 and 500 local associations throughout the country, in at least forty-three states and all of the territories, which are in affiliation with this National Association. These local associations run from a hundred or more up to several thousand in membership each. The St. Louis local association, for instance, has a membership of over 8,000 and is rapidly increasing. By its influence it has succeeded in giving industrial peace to St. Louis where three or four years ago the most violent demonstrations were characteristic of labor strikes, where the commerce and business of the city was held up at the mercy of the leaders of the strikers to the infinite loss of the community in general.

The work of the extension of the influence of the association is going steadily forward in all parts of the United States, is being emulated in Canada, and has been

Activities

imitated in Great Britain by the recent organization of a British Citizens' Industrial Association, modeled upon the principles of the American institution. This system of meeting organization with organization is the first practical effort that has been made at reducing the undesirable conditions established by the Labor Trust. In politics the unions have been accorded an undue weight because of the fact of their organization as a compact body operating as a trained and disciplined influence, while the great mass of the voters had no organization outside of political parties.

The officers of the association are Mr. C. W. Post, who was elected last December for the third time to the position of president, Messrs. James W. Van Cleave (president of the National Association of Manufacturers), first vice-president; F. C. Nunemacher, second vice-president; A. C. Marshall, third vice-president; James A. Emery, Esq., secretary; and Major A. C. Rosencranz, treasurer, with an executive committee of ten members comprising leading business men representing the large cities and manufacturing centers of the country. The association has its headquarters in the St. James Building, Twenty-sixth Street and Broadway, New York, and publishes, as its national organ, a monthly magazine known as *The Square Deal*, which is used chiefly as an educational instrumentality and which carries at its head the following platform of principles:

- No closed shop.
- No restriction as to the use of tools, machinery, or material except such as are unsafe.
- No limitation of output.
- No restriction as to the number of apprentices and helpers, when of proper age.
- No boycott.
- No sympathetic strike.
- No sacrifice of independent workmen to the labor-union.
- No compulsory use of the union label.
- "I find every one of these principles to be in defense of private and public liberty."—Charles W. Eliot, President Harvard University.

That power through organization be placed in the hands of the people to effectually control the acts of all organizations when such acts relate to the public welfare, thus to perpetuate the individual liberty of every citizen and prevent interference with the continuous operation of industries.

WILSON VANCE.

CIVIL SERVICE REFORM: The Civil Service of the United States includes all public employments which are not military or naval. It may be divided into two parts—the political and the non-political. The political part comprises the positions which are essential to carrying out the policy of the administration which has been approved by the people at the polls; and the non-political part embraces the positions which are subordinate and ministerial. This last part is strictly a business agency with no representative political character or significance, and civil service reformers aim to purify politics by the removal from political contests of all inducement of office-seeking in these business agencies, and to make the tenure of office in them independent of party changes by putting them under the protection of law. They urge the adoption by legislation or executive action of rules for the regulation and improvement of the public service and for aiding appointing officers in choosing candidates for appointment upon a merit instead of a party basis. While it is obvious that a public office belongs to the people, that its duties are fixed by law and its salary paid by the people, yet owing to the infirmity of human nature the power of patronage tends to be exercised for personal and partizan gain. The reform rests upon the theory that a public office is a public trust and that a president, governor, or mayor in making appointments must not, therefore, himself profit directly or indirectly, in his own person or through the advancement of any other individual or party organization, in administering his trust, and he must himself conduct this administration and not hand it over or farm it out to others. The use of patronage by an appointing officer to strengthen himself in his faction or his faction in his party or his party at the polls is, upon this theory, an

abuse of trust and a form of bribery. The reform, therefore, does not merely propose the establishment of a system of mechanical examinations to test fitness for appointment, but aims at the eradication of the doctrine that offices are party spoils for the victors. A reform in this regard is deemed by its advocates to be vital if the government is not to break down under its work. Under the spoils system the government cannot deal worthily with the problems presented by the growth of industrial combinations, the tariff, the currency, and the regulation of public utilities. Business has attained a high economic organization with which law and administration have not kept pace. Governments are outgrowing their shell and are called upon to do more things and do them better than formerly. The number of public employees is increasing more rapidly than population, due to the assumption of functions that have heretofore been neglected or left to private enterprise. The task of solving these new problems and of administering government efficiently and economically needs the aid of men of as good abilities as the great captains of industries, men trained in administration and fit to be the dispensers and instruments of the power of society, who will administer their trust in the interest of the whole people and not pervert it to the interest of a faction or for corrupt ends.

The reform of the civil service is chief among the great administrative reforms for which the nineteenth century is distinguished. No other reform has made such rapid progress or reached such a stage of general acceptance. It has been found the necessary basis and means of effecting other civic reforms. The history of European countries during the century exhibits social transformations arising from the improvements which have been effected in their administrative machinery, and our country advances as fast as civic spirit and conscience gain the strength and find ways to overcome the forces which would debase and dishonor it. Party leaders in all countries have used the power of patronage in aid of their own power or that of their party, and their followers appointed to office have regarded their allegiance and efforts as due to them rather than to the government. At the beginning of the eighteenth century the party system reigned in the civil service of Great Britain and state employments were treated as the assets of the party in power and available for party purposes. This feudal administration of the government demoralized the public service and public spirit and is said by Trevelyan to have been one of the efficient causes of the American Revolution. The founders of our government, in breaking away from the mother country, sought to escape the evils of the patronage system; and the purity of the early administrations was such that during the first forty years after the establishment of the Constitution the appointing power was exercised in the spirit of Washington, who declared that nothing would procure an appointment but evidence of ability, integrity, and fitness. The intent of the Constitution, that office should be held during good behavior, was during this period given thorough and practical effect. The spoils system had its beginning in the laws of 1820 and 1823, causing a departure from the traditional policy. It rapidly became the practise to regard these four-year tenure offices as agencies not so much for the transaction of the public business as for the advancement of political ends. The

public service, from being used for political purposes, came also to be used for corrupt purposes, frauds and defalcations were common, and the public duties, where not entirely disregarded, were negligently and inefficiently performed. The saturnalia of spoils and corruption culminated in the assassination of President Garfield.

The tide of corrupt practises in Great Britain began to turn with the growth of a better sentiment during the reign of George IV., and a merit system of selecting candidates for office began in a small way in 1834. In 1855 a uniform system of competitive examinations was established, effecting a sweeping reform, which has proved permanent and salutary. In our own country in 1853, the same year with the passage of the India Act, and in 1885, laws were passed providing for an examination before an appointment in any of the executive departments. These pass examinations proved inadequate, as they had also in Great Britain, and while useful to a degree, they failed to remedy the evils at which they were aimed. In 1864 Senator Sumner put the reform sentiment of our country into a bill which he introduced in the Senate. A somewhat similar measure was introduced in the House of Representatives in 1867 by Mr. Thomas A. Jenckes of Rhode Island, followed by a comprehensive report presented by him from a joint committee of the two houses of Congress. These bills failed, probably because public sentiment had not been sufficiently awakened, and because their provisions were regarded as too radical and sweeping.

In his annual message of 1870 President Grant recommended legislation, and a commission was established in 1871 of which Mr. George William Curtis was chairman. He was shortly succeeded by Mr. Dorman B. Eaton. An appropriation was made by Congress during two years for carrying the law into effect. Competitive examinations were enforced

under rules applying to promotions as well as to original admissions. In the same year President Grant, in a message to Congress, urged that an appropriation of \$25,000 be made to continue the system. Congress refused to make the needed appropriation, partly because of the inherent defects of this meager law and the partizan hostility to it. President Grant was obliged to arrest the work of the commission in 1875, and the efforts for reform in a large measure failed, tho the good effects of the examinations were beyond question. In 1877, and again in 1879, President Hayes requested Congress to make the necessary appropriation for the resumption of the work, and he established rules under which competitive examinations were enforced at the New York custom-house and post-office.

Public opinion, which had been diverted from the growing evils in the civil service by the Civil War and the problems arising out of it, was now turned to the imperative need of reform. The voice of the people was unmistakable, and on Dec. 15, 1880, Mr. Pendleton, a Democratic senator from Ohio, presented in the Senate a bill which was in substance and in nearly all of its provisions the same which had been originally presented in the House by Mr. Jenckes. In the debates upon this bill its advocates declared that it would "vastly improve the whole civil service of the country," which they characterized as being at that time "inefficient, expensive, and extravagant, and in many instances corrupt." The bill

became a law on Jan. 16, 1883. It aims to eliminate patronage and political and personal favoritism in appointments, thus taking out of political contests all inducement to office-seeking, and preserving the independence of the legislative and executive departments. It provides

**Legislation
in 1883**

for the appointment of three commissioners, not more than two of whom shall be adherents of the same political party, and makes it the duty of the commission to aid the president as he may request, in preparing suitable rules for carrying the act into effect. The act requires that the rules shall provide, among other things, for open competitive examinations for testing the fitness of applicants, the making of appointments from among those passing with the highest grades, an apportionment of appointments in the departments at Washington among the states and territories, a period of probation before absolute appointment, and the prohibition of the use of official authority to coerce the political action of any person or body. The act also provides for investigations touching the enforcement of the rules and forbids, under penalty of fine or imprisonment or both, the solicitation by any person in the service of the U. S. of contributions to be used for political purposes from persons in such service, or the collection of such contributions by any person in a government building.

The first parts of the service classified embraced the departments at Washington and the custom-houses and post-offices having as many as fifty employees, applying in all to less than 14,000 positions. A committee of Congress, composed of eight Democrats and five Republicans, in June, 1884, made a unanimous report in which it declared itself

**Con-
gressional
Committee
of 1884**

"entirely satisfied with the thorough, conscientious, and non-partizan work of the commission," and added that the continuance of its work would in a large degree aid in eradicating the prevalent evils in the civil service. In the second year the new system was subjected to the severest test of its vitality. A party which had been out of power for twenty-four years refused to treat the New York custom-house and post-office as party spoils. Notwithstanding the change of power and the fact that the new party had been out of control of the offices for a quarter of a century, the new system was enforced, and the number of places subject to it nearly doubled. In 1886 direct assaults to annul the law failed in both houses of Congress. In the same year President Cleveland commended the cause to the liberal care and jealous protection of Congress. He said that the scheme for reform in the methods of administering the government was no longer an experiment, and that wherever the reform had gained a foothold it had steadily advanced in the esteem of those charged with public administrative duties, while the people who desired good government had constantly been confirmed in their high esteem of its value and efficiency. Several large extensions of the classified service were made by President Cleveland in 1888, as also by President Harrison in 1891. In 1896, during President Cleveland's second term, the number of classified positions was increased by executive order from about 43,000 to about 87,000. Under President McKinley the merit system was applied to additional customs ports, Hawaii, Porto Rico, and the Philippines, and under President Roose-

velt to the rural delivery, census bureau, field employees of the War Department, the Spanish War, forestry and Isthmian canal employees, and to laborers. The rules were revised and strengthened under President Roosevelt and a marked improvement effected in their observance; the number of excepted positions has been reduced, notably higher positions in the customs service and deputy collectors of internal revenue, and a merit system applied to the consular service.

There are about 325,000 positions in the executive civil service, of which 184,178 are classified subject either to competitive examination under the civil service rules or to a merit system governing appointments at navy yards. In the latter class are about 18,000 workmen. The total expenditure for salaries in the executive civil service is about \$200,000,000. Laborers and persons nominated for confirmation by the Senate are exempted from the requirements of classification. Within these limits certain classes of positions are excepted from examination. Examinations are held in every state and territory at least twice a year. They range in scope from technical, professional, or scientific subjects to those based wholly upon the age, physical condition, experience, and character as a workman of the applicant. During the year ended June 30, 1906, 117,277 persons were examined and 39,050 were appointed. In 1900 the Philippine Commission passed a civil service act and in the same year the federal civil service act was extended to Hawaii and Porto Rico. The Philippine act is based upon the federal act and goes much further in giving powers to the commission. There are no excepted positions in the Philippines and natives are preferred in appointment.

The competitive system has proved infinitely better than the patronage system. It has produced great economy and efficiency, and the public service has been improved in honesty and general character. Unnecessary positions created for parasites have been abolished. Improved methods of business have been rendered possible by the stability given to the service. Superfluous work is no longer devised to create places for favorites. Employees, released from political and personal obligations, are required to do more and better work. Thus a very great economy has been effected and vastly more is being done in aid of the public welfare, in promotion of the ends for which government is constituted. A marked result is found in the elevation of the tone of official life. The holding of office within the merit system, instead of being a makeshift or a refuge, is regarded as a worthy career that may be attained by self-respecting methods. In time office-holding may be regarded as one of the most important and desirable of professions when freed from the subserviency, discreditable partizan work, and solicitation by which office is gained and held in parts of the service outside the merit system and when promotion is possible to higher administrative positions.

The merit system has not been carried as far in this country as in Great Britain and in several European countries. Postmasters, collectors of customs and internal revenue, and other heads of offices and bureaus are appointed by the president subject to the confirmation of the Senate and are therefore not required to be classified. These offices continue to be political agencies and their occupants being active working politicians are

greatly aided by the power of their offices in affecting the political prospects of leaders in their districts. Thus the Senate becomes actually, if not formally, a nominating body and holds to the powers thus acquired by individual senators. The ultimate and complete success of the merit system depends upon the prohibition of a party test in appointments to these purely administrative business offices.

The abuses which have been largely corrected in the federal service continue to exist in some of the state governments and especially in the governments of many of the large cities. Fitness for office has been subordinated to a party test, political assessments levied, employees coerced in their political action, and municipal contracts and jobs distributed as political favors. These abuses have been partly corrected by the adoption of the merit system for minor non-elective offices in several state and city governments. The success attending the reform in the federal service has led to its adoption in the program for the reform of state and municipal governments. The federal civil service law and a state law in New York were approved in 1883, a law in Massachusetts in the year following, and laws in Illinois and Wisconsin in 1905. In Massachusetts civil service rules prevail everywhere. In New York a second law in 1884 extended the system, and since 1894 it has been entrenched in the state constitution and applied to villages, all the cities, and, in 1906, to four counties. In Wisconsin, in addition to other state employees, the rules apply to legislative employees. The first municipal civil service rules in the U. S. were established in Brooklyn in September, 1884; the second in New York City in November, and the third in Buffalo in December of the same year; and the cities of Massachusetts followed in 1885. There have been setbacks, but in those cities the system is now successfully enforced. In Buffalo, for instance, more than four fifths of the municipal offices in all departments are under rules which are well administered. There are now seven cities outside of New York and Massachusetts which have a complete merit system: Chicago (1895), Milwaukee (1895), Seattle (1896), Los Angeles (1903), Portland, Ore. (1903), Denver (1904), and Philadelphia (1905). In addition to this list there are some states, cities, and towns where a partial merit system has been established, or where a system has been established and then abandoned. In 1885 Illinois passed an admirable act, not applying to the state service, but permissive for towns and cities, under which Chicago and Evanston adopted rules in 1885, and Cook County, Rockford, Aurora, and Elgin in 1903. The state charitable institutions of Indiana have been made non-partizan by voluntary action of the boards. San Francisco secured a measure of reform by a charter passed in 1900, but it is now held unconstitutional as to certain county offices. In most of the large cities and in many small ones examinations are held for the police and fire departments and for teachers. In 1903 Ohio passed a municipal code, the provisions of which appear to be meager and inadequate and cover only the health, police, and fire departments. Under this law Cleveland, Cincinnati, and Toledo have rules in those departments. In New Jersey in 1905 a law was passed providing for rules in the police and fire departments of cities of the first

class. The revised charter of New Orleans has a semblance of the merit system, and there have been creditable but only partially successful or wholly unsuccessful attempts to establish rules in Atlanta, Memphis, Minneapolis, Galveston, Tacoma, Jacksonville, and Duluth, and in Michigan, Kansas, Maryland, and Texas. The application of the merit system to state and municipal governments has proved successful wherever it has been given a fair trial, and numerous and important improvements have been introduced in the more recent legislation permitting the remedial action to be more drastic, reaching to the heart of abuses and effectually stopping them.

Secretary, U. S. Civil Service Commission.

CIVIL SERVICE RETIREMENT ASSOCIATION: The United States Civil Service Retirement Association was organized in Washington, D. C., in the spring of 1900. The association has collected and tabulated numerous data bearing upon the subject of superannuation, in the service of this and foreign governments, and in the service of private enterprises; has endeavored to stimulate thought upon this subject, by means of investigations into the real conditions and giving the same publicity, public meetings, which have been addressed by men high in official life, and by correcting, wherever necessary, false impressions that have gained credence as to the labors, lives, compensation, cost of living, etc., of the civil service employees of the government; and it has also been in constant touch with actuaries, in an endeavor to formulate a plan under which superannuated employees may be retired with pay, such compensation to be derived from a fund constituted by assessment upon the salaries of those in the civil service.

The committee's labors resulted in the presentation of a draft of a bill to the President of the United States in May, 1906. The main features of this bill provided for an assessment of 5 per cent upon the salaries of civil service employees and the retirement of said employees, upon reaching the age of seventy, on a retired pay equal to one eightieth of the employee's average salary for the ten years preceding retirement, for each year of service. The bill also provides for retirement on account of disability, without respect to age, at any time after the employee has had ten years of service, on the same basis.

The present membership is about 18,000. Jacob W. Starr, of Camden, N. J., is president, and David D. Caldwell, of Peoria, Ill., secretary. Address: P. O. box 37, Washington, D. C.

JACOB W. STARR.

CLARK, EDGAR ERASTUS: Member of the Interstate Commerce Commission; born at Lima, N. Y., 1856. He attended school until sixteen years of age; commenced work on railroad in

1873; became a member of the Order of Conductors in 1885, and was chief of his local division for several terms. In 1888 he was a delegate to the international convention, and in 1889 was elected second vice-president of the Order of Railway Conductors. The following year he was elected chief executive, and held the office continuously till appointed by President Roosevelt in 1902 a member of the Anthracite Coal Strike Commission, giving most active and valuable service in that important and difficult cause. Clark is a member of the National Child Labor Committee, the National Civic Federation, the American Institute of Social Service, and the Academy of Political and Social Science. Mr. Clark believes in the organization of labor on protective lines, but approves of the strike only as a last resort. He is a strong advocate of arbitration in industrial disputes. He has written "Articles and Papers on Labor and Sociological Subjects." Address: Washington, D. C.

CLARK, JOHN BATES: Professor of political economy; born at Providence, R. I., 1847; educated at the public high-school, Brown University, Amherst College (Ph.D., LL.D.), Heidelberg University and University of Zürich. He traveled as a student and tourist in France, England, Germany, Italy, and Switzerland, returning to America in 1875. He has held the chair of political economy and history at Carleton College, Northfield, Minn.; that of history and political science at Smith College (1881-92); and that of political economy at Amherst (1892-95); and is now (1907) professor of political economy at Columbia University. He has been lecturer on economic theory at Johns Hopkins University, and president of the American Economic Association. He is perhaps best known for his writings upon Wealth (see Capital). His main writings are: "Philosophy of Wealth"; "Capital and Its Earnings"; "The Distribution of Wealth"; "Essentials of Economic Theory"; "Control of Trusts"; and "The Problem of Monopoly," in addition to numerous articles in economic reviews and journals. Address: 616 West 113th Street, New York.

CLARKE, LADY JANET: President of the Australian Women's National League, Victoria. She is interested in all questions affecting the welfare of women, is prominent in philanthropic movements, and rendered active assistance to the Melbourne University Fund (1904-5). In 1890, mainly through her munificence, Trinity College Hostel was supplied with a permanent building erected within the college precincts, and called The Lady Janet Clarke Building. Address: Cliveden, East Melbourne, Victoria.

CLARKSON, THOMAS: English philanthropist and abolitionist; born in 1760. He commenced his life-work in 1825, while at Cambridge, by writing a prize essay against the principle of slavery. He secured the cooperation of WILBERFORCE, who undertook the parliamentary campaign. Clarkson became one of the leading members in the antislavery society formed in 1823. His benevolence led him to take part in many other philanthropic endeavors, most notably in providing homes for sailors in the English seaport towns. Among his works may be mentioned: "Essay on the Impolicy of the African Slave-trade"; "History of the Abolition of the

African Slave-trade"; "The Cries of Africa to the Inhabitants of Europe"; and also the "Grievances of our Mercantile Seamen a National and Crying Evil." He died in 1846.

CLEVELAND, OHIO: Has been well characterized as a city finding itself. A city of broad areas, with plenty of room to grow, it is only within the last few years that it has come face to face with metropolitan problems.

Cleveland, of New England origin, with New England ideals, was founded in 1796 by General Moses Cleaveland, acting for the Connecticut Land Company. The Western Reserve, of which Cleveland is the metropolis, was sold to this company by the State of Connecticut, and the proceeds were applied to the fund which is still used in the support of the common schools of that state. In 1840 the population had reached 10,000; in 1860 it was less than 50,000. At this time the New England traditions asserted themselves. Cleveland was one of the strongholds in the anti-slavery movement and was an important station on the underground railroad. In 1880 the population was barely 160,000; now it is approximately half a million.

Prior to 1891 the government was chaotic. It consisted of the council and mayor, whose powers were modified by numerous boards or commissions, created in various ways. Irresponsibility was largely the result. The so-called federal

plan, introduced in 1891, was an attempt to adjust the English parliamentary forms to city affairs. This charter was worked out by a committee of the chamber of commerce. The mayor, with the chief executive officials of five departments, appointed by him, became the repository of all the administrative authority. These officials had a unique privilege, that of a seat and a voice in the council. The mayor exercised the veto, subject to an overruling by a two thirds vote of the council. The chief opposition to the plan was the possibility it gave for a powerful machine, but in this case the mayor, who might become the boss, was at least a responsible boss, instead of an outside and irresponsible one, as is usually the case. This plan, successful on the whole, was overturned in 1902, and the city was given a mixed product, which was a partial return to the old system of the divided responsibility.

The city has come to be essentially independent in local elections, and the principle, city before party, is becoming increasingly prevalent. The merit of individual candidates is being more and more considered, as is shown by the frequent election of Democrat officials in a Republican city. The Municipal Association is undoubtedly to a large extent responsible for this independent spirit. This association examines the individual merits of candidates irrespective of party, and its recommendations are coming each year to have a greater force.

Early in its history the city was prominent in its charities and philanthropy. Its orphan asylums, relief associations, and missions were numerous, but it is only within the last few years that any definite coordination and cooperation has been in existence. This has been brought about largely through the efforts of the Associated Charities and the chamber of commerce. The Associated Charities is a clearing-house for all charitable efforts, particularly in the form of re-

lief, and through this means duplication of effort is rapidly being eliminated. The Associated Charities has a department of relief in which intelligent investigation is the vital principle and where the principle that charity is "love with discrimination" is the key-note. Included in this department is special effort for the tubercular. The organization conducts, also, an employment department, a lodging-house, a wood yard, a penny savings-bank, a system of friendly visiting, and numerous other activities.

All of the Jewish charitable institutions in the city are affiliated through a federation which collects and disburses all funds for the support of these organizations. The Catholics conduct numerous orphan asylums and other organizations upon a high grade of efficiency. The Visiting Nurse Association provides nurses for any who are unable to pay for this service, and this undoubtedly is one of the best of its kind in the country. There are several settlements doing efficient work. One of these, the Hiram House, is following the plan, as far as possible, of having its residents live in small houses of the grade of those in the neighborhood, thus getting closer to the life of the people in the district. Numerous orphan asylums, fresh-air camps, the Young Men's and Young Women's Christian Associations, the Anti-tuberculosis League, the Cleveland Day Nursery and Free Kindergarten Association are important factors in social welfare. The Juvenile Court, working in close cooperation with other organizations, is resulting in a constant decrease in juvenile delinquency in crime.

An opportunity for social service study is given through the Social Service Club, the Council of Sociology, and various women's organizations. The colleges of the city and the high schools are also paying especial attention to the subject.

The city government is now developing a "farm colony." This consists of 1,900 acres, ten miles from the city, laid out as a beautiful estate by a landscape gardener. In one section is an open-air tuberculosis hospital, in another is the city infirmary, where the poor and helpless are housed in separate cottages. In an entirely separated section is the workhouse, while the city hospital and other buildings are being planned for. This farm also contains the city cemetery. A large proportion of the work in preparing the land and in building is being done by the workhouse prisoners. These prisoners build their own houses and support themselves, and during their leisure hours they are permitted to work on individual lot-holdings, and produce that which will be placed to their credit as a protection against relapse, or for the maintenance of their families. In connection with the workhouse the brotherhood is conducted. This was founded upon the initiative of released workhouse prisoners, and its aim is the friendly assistance of newly released men until they are able in turn to help others. The city has also founded the Cleveland Boys' Farm, an institution of several hundred acres where boys who are homeless and neglected or delinquent through the influence of their surroundings may find the influences of a home. The boys are housed in families with a matron at the head of each family who is very properly designated "Ma," and who fully lives up to the responsibility thus placed upon her.

The chamber of commerce may well be considered the center of the civic life of Cleveland. In connection with many commercial interests,

it carries on a department which embraces every form of civic activity. The chamber is responsible for the plan by which the city hall, the county court-house, the federal building, public library, the union depot, and other public and semi-public buildings will be grouped about a common center.

Civic Improvements

The plan opens on the lake front and in this center will be a broad mall, 600 feet wide and adorned with statuary, fountains, lagoons, and sunken gardens. The architecture for the buildings will be uniform, and of the most classic style. The chamber of commerce includes a committee on benevolent associations, which supervises the charitable institutions of the city. The committee gives a card of indorsement to such organizations as conform to the required standard. It is difficult for any organization to gain support without this indorsement, and the committee is able to develop in this field a standard of highest efficiency. The housing committee has made an extended investigation of tenement conditions in the city, has been influential in procuring legislation tending to prevent future abuses, and is now engaged in preparing legislation for remedying existing conditions. At the inauguration of the industrial committee, six years ago, there were twenty-five employers in the chamber membership engaged in definite welfare work. There are now approximately 200. The municipal committee has brought about the creation of a city department of forestry, under which the trees in the city streets and parks are cared for, and new trees planted. The public bath-house committee brought about the erection of two public baths, and plans for others are now being considered.

The sanitary committee was effective in controlling the smallpox epidemic which threatened the city a few years ago. This committee prepared a sanitary code which was adopted by the Board of Health, and which, among other provisions, created a department of meat and milk inspection, which through the cooperation of the committee has become most efficient. This code also provides for medical inspection in public schools, the reporting of communicable diseases, the abatement of nuisances, and similar matters in the enforcement of which the committee is now actively engaged. An efficient system of street cleaning by means of flushing is the result of this committee's work. A committee of the chamber is at present working upon the subject of smoke prevention. Water-supply, sewage disposal, and many other matters are constantly under the active consideration of this commercial body. The chamber has also been influential in preventing various franchise abuses, and has taken a hand in national matters, such as consular service reform and peace promotion.

The city government has shown itself most willing to cooperate in the accomplishment of many civic movements. It owns its own garbage reduction plant, does its ash collection, and supplies the city water. The mayor, some three years ago, endeavored to establish a municipal lighting plant, but the opposition from various sources compelled him to discontinue the project. The city recently annexed a suburb which owns such a plant and this is now being enlarged to supply part of the city with electric current. The city is developing a system of broad boulevards, which will completely encircle it, and large spacious

parks form a part of the system. These parks were formerly adorned with "keep-off-the-grass" signs and were used largely for pleasure drives. The signs have now been torn down and the parks are used extensively for baseball, golf, tennis, outdoor meetings, band concerts, and playgrounds. The city has established several playgrounds in crowded neighborhoods, and a dozen skating-rinks are in operation. The city also conducts several public bathing-beaches.

Mayor Johnson is a strong advocate of public ownership of public utilities, both local, state, and national.

He has worked to bring about the ownership of street-railway lines, but through the failure of necessary legislation and the opposition of the existing railway company and other forces he has not yet accomplished this. He has, however, succeeded in introducing a competing line at a three-cent fare, and in reducing the fare of the other company to three cents and a half.

The public-school system of the city was founded in 1836, and in 1847 one of the first public high schools of the country was started. The Board of Education maintains the highest educational standard, both in its educational systems and in the construction and maintenance of its buildings.

The labor element of the city is essentially radical, the central labor body being largely committed to socialism. Union leaders claim 60 per cent of the laborers in the organized trades. Several severe strikes have been conducted, resulting in few victories for either side. The efforts of the unions have, however, undoubtedly resulted in shorter hours, higher wages, and better conditions of labor. The meetings of the various unions are open to the presentation of general movements of social reforms, and usually these unions have been willing and active in cooperation.

Some important organizations are:

Cleveland Chamber of Commerce, Chamber of Commerce Building.
Municipal Association, 734 Garfield Building.
Sociological Council, Chamber of Commerce Building.
Goodrich House (Settlement), St. Clair and Sixth Street.
United Trades Labor Council, 717 Superior Ave.
Cleveland Citizen (Socialist and Labor, M. S. editor), 193 Champlain Street.
Anti-Saloon League, 516 The Arcade.
Woman's Christian Temperance Union, 513 The Arcade.
Young Women's Christian Association, 1245 Euclid Ave.

CLIFFORD, JOHN: English clergyman and Christian Socialist; born at Sawley, Derbyshire, 1836. At the age of eleven he worked in a factory near Nottingham, and at fourteen he was received into the Baptist Church, soon becoming a student of the General Baptist College. In 1862 he took charge of the Praed Street Baptist Church, in London, of which he is still pastor, altho the growth of the congregation has compelled the removal to the present chapel in Westbourne Park. In connection with his work Dr. Clifford pursued studies and took degrees and honors at London University. He has added an educational institute to his own church, where 1,500 names stand enrolled in various classes. Dr. Clifford is known to-day for his active interest in social reform. He was one of the founders of the Christian Socialist League; president, Metropolitan Free Church's Council (1896-97); and president, National Council of Free Evangelical Churches (1898-99). He is the author of many

religious works and numerous tracts and articles on Christian Social topics. Address: 25 Sunder-land Terrace, Westbourne Park, London, W., England.

CLUBS, MEN AND BOYS' (see **WOMEN'S CLUBS; WORKING GIRLS' CLUBS**): Clubs have played a large part in social development and reform. They existed in classic times and are mentioned by Aristotle and others. The first modern club to win fame seems to have been the club established at the end of the sixteenth century in the Mermaid Tavern at London, to which Shakespeare and other literary men and wits of the day belonged. Since that day clubs of various sorts have flourished in London as in no city of the world. White's, still one of the leading London social clubs, was founded in 1697. There are said to be nearly 300 clubs in London,

London

social, literary, political, sporting, or the like, with a membership of some 300,000. The largest political club is the Constitutional (Conservative) with 7,000 members. The Junior Constitutional has 5,000, and the United Empire the same number. The Conservative (1840) has 1,300. The National Liberal Club has 6,000 members, but more important Liberal clubs are the Carlton (1832) and the Reform (1837) with from 1,500 to 2,000 members. The most expensive London club is the Naval and Military. The oldest service club is the United Service (1815). The leading literary clubs are the United University, the Oxford, and Cambridge. Science has the Athæneum with 1,200 members. There are thirty ladies' clubs, the Pioneers, the Sesame (political), and Empress being prominent. The Ladies' Army and Navy, with its great smoking-room, has 3,600 members. The initiation fees for the larger clubs are from £10 to £50.

Working men's clubs in England, and especially in London, have had a large development. Many have large buildings or rooms. Some of these, usually called "proprietary" clubs, are strictly secret, and with a doubtful reputation. Others are philanthropic, more or less supported and superintended by church and other organizations. Prominent among such are the University Club and the United Brothers. These are usually teetotal and mainly educational and social.

Many clubs are political, Liberal, Radical, Conservative, Socialistic. In most of the clubs

Working
Men's Clubs

an unorganized socialism rather than old-fashioned radicalism is the dominant note. All these clubs have a bar, and breweries often help in fitting them up. They also have concerts, lectures, entertainments, dancing, and dramatics. Billiards and whist are played. It is declared by their enemies that they are drinking-dens, and take the men from their homes; but Mr. Booth declares the former accusation to be without foundation, and that most of the members, if not at the clubs, would be on the street. They give an opportunity for political education such as American workmen are almost without. The American workman is organized for political purposes usually only in the heated campaigns with partizan spirit. The English and European working men's clubs discuss politics all the year round, and to an extent in a broad spirit because the clubs are not merely political. It was to these clubs that the lecturers

of the Fabian Society (*q. v.*) went, and largely changed their political spirit from one of cheap negative radicalism to one of constructive evolutionary socialism.

In all the clubs the fee is usually 6d. per month; the average membership is from 300 to 400; the hours are from 6.30 P.M. to 12.30 A.M., and on Sunday from 11 A.M. to 1 P.M. and from 6.30 P.M. to 11.30 P.M. The management is by a committee, and the sale of drinks makes them largely self-supporting. Gambling and excessive drinking in the open clubs are rare.

Clubs on the Continent have played a minor part. Some republican clubs in Paris, especially during the Revolution, gained notoriety, but most European clubs are more or less artificial copies of English prototypes. In the

United States clubs began late in the eighteenth century. The Hoboken Turtle Club, still existent, was formed in 1797. The (New York) Union Club was formed in 1836. The Union League Club (1863), Reform Club (1883), and especially the City Club (1892) have often led in civic reform movements. Various literary, social, university, and church clubs have wide influence, many of these having luxurious club-houses and appointments. In other American cities clubs are found in similar number in proportion to the size of the city.

In distinctive reform movements, the club is equally important. According to *Social Progress* (1905) there were in connection with Settlements in the U. S. 185 men's clubs, 220 women's clubs, 496 boys' clubs, and 466 girls' clubs. According to an investigation made by Dr. H. D. Sheldon in 1898, there were in 1898 862 clubs in the U. S. formed by boys between the ages of ten and seventeen. Of these 85 per cent stood for physical activity. Most of the clubs in the Settlements and institutional churches, however, have been started by adults for educational and character purposes. Their object has been to get boys off the street and from bad surroundings, and interest them in activities of their own. The general principle adopted is to leave the

Boys' Clubs conduct of the clubs so far as possible to the boys themselves, with, however, a guidance from some older person, and so far as possible influencing the boys by the power of personality. This is more especially true of the younger and more recently formed clubs. Larger clubs were formally formed and in New York and other cities often occupy large buildings or rooms. A modern development is the federation of clubs.

CLYNES, J. R.: English labor member of Parliament; born 1869, Oldham; served his time in a cotton factory. Showing ability for organization, he was selected, in 1891, by the Gas-workers' and General Laborers' Union as organizer for the Lancashire district; became chairman of the Federation of Trades Councils, and for ten years secretary of the Oldham and District Trades Council. He was recently appointed justice of the peace for the Oldham bench. Elected to Parliament 1906 for Manchester. N. E., under the auspices of the Labor Representa-

tion Committee. Address: 176 Union Street, Oldham.

COAL INDUSTRY (for Coal Miners, see **MINERS' UNIONS**): The question of coal production is one of the most important of economic questions, and in the coal industry have arisen some of the greatest industrial conflicts in the United States. (See **COAL STRIKE**.) The coal industry, which began in the U. S. in 1814, to-day employs 600,000 men and boys. Its yearly value is about \$520,000,000 at the mine and over \$2,000,000,000 when it reaches the consumer. For conditions so far as the miners are concerned, see **MINERS**. In regard to other conditions in the coal industry we quote largely from the address delivered by Mr. Henry D. Lloyd before the Interstate Anti-Trust Conference at Chicago, June 5, 1893. It still remains one of the best brief statements of evils in the coal trade ever made. The evils since that day have continued substantially unchanged. We add enough facts to bring the subject to date.

Within the last thirty years 95 per cent of the anthracite coal of America, practically the entire supply, it is reported to Congress, this year, has passed from the ownership of private citizens, many thousands in number, into the possession of the railroads controlling the highways of the coal-fields. These railroads have been undergoing a similar process of consolidation, and are now the property of eight great corporations. This surrender of their property by the individual coal-mine owners is a continuing process in operation at this moment, for the complete extinction of the "individual" and the independents in this field. It is destined, according to the report of Congress, to end in the entire absorption of the entire anthracite coal-fields and collieries by the common carriers.

Monopolies "The railroad companies engaged in mining and transporting coal are practically in a combination to control the output and fix the price. They have a practical monopoly of the production, the transportation, and the sale of anthracite coal."

Congress found in 1888 that the coal companies in the anthracite regions keep thousands of surplus laborers on hand to underbid each other for employment and for submission to all exactions; hold them purposely ignorant when the mines are to be worked and when closed, so that they cannot seek employment elsewhere; bind them as tenants by compulsion in the companies' houses, so that rent shall run against them, whether wages run on or not, and under leases by which they can be turned out with their wives and children on the mountain-side in midwinter if they strike; compel them to fill cars of larger capacity than agreed upon; make them buy their powder and other working outfit of the companies at an enormous advance on the cost; compel them to buy coal of the company at the company's price, and in many cases to buy a fixed quantity—more than they need; compel them to employ the doctor named by the company, and to pay him whether sick or well; "pluck" them at the company's stores, so that when pay-day comes around the company owes the men nothing, there being authentic cases where "sober, hard-working miners toiled for years or even a lifetime without having been able to draw a single dollar, or but a few dollars in actual cash; in debt until the day they died"; refuse to fix the wages in advance, but pay them upon some hocus-pocus sliding scale, varying with the selling price in New York, which the railroad slides to suit itself, and most extraordinary of all, refuse to let the miners know the prices on which their living slides; a fraud, says the report of Congress, "on its face."

The companies dock the miners' output arbitrarily for slate and other impurities, and so can take from their men from five to fifty tons more in every hundred than they can pay for.

In order to keep the miners disciplined and the coal market undersupplied, the railroads restrict work, so that the miners often have to live for a month on what they can earn in six or eight days, and these restrictions are enforced upon their miners by holding cars from them to fill, as upon competitors by withholding cars to go to market. Labor organizations are forbidden, and the men intentionally provoked to strike to affect the market.

The laboring population of the coal regions, finally, is kept down by special policemen enrolled under special laws, and often in violation of law, by the railroads and coal and iron companies practically when and in what numbers they choose, and practically without responsibility to any one but their employers, armed as the corporations see fit with army revolvers, or Winchester rifles, or both, made detectives by

statute, and not required to wear their shields, provoking the people to riot and then shooting them legally. "By the percentage of wages," says the report of Congress, "by false measurements, by rents, stores, and other methods the workman is virtually a chattel of the operator."

Moved mainly by the disappearance of a free market in oil and coal, the people of Pennsylvania arose in 1873 and adopted a new constitution. To put an end to the consolidation of all the anthracite coal lands into the hands of the railroads, this constitution forbade common carriers to mine or manufacture articles for transportation over their lines, or to buy land except for carrying purposes. These provisions of the constitution have been disobeyed "defiantly." "The railroads have defiantly gone on acquiring title to hundreds of thousands of acres of coal, as well as of neighboring agricultural lands," says the congressional committee of 1888. "They have been aggressively pursuing the joint business of carrying and mining coal." So far from quitting it, "they have increased their mining operations by extracting bituminous as well as anthracite."

Defiance of Law

Instead of enacting "appropriate legislation," as commanded by the new constitution to effectuate its prohibitions, the legislature has passed laws to nullify the constitution by preventing forever any escheat to the state of the immense area of lands unlawfully held by the railroads. Every effort breaking down to meet the evil by state action, failure was finally confessed by the passage, in 1878, by the Pennsylvania Legislature, of a joint resolution asking Congress to legislate "for equity in the rates of freight," and to this day the will of the people of Pennsylvania, as declared in their sovereign utterance, has found among these corporations none so poor as to do it reverence.

The following statement is condensed from Leroy-Beaulieu's "The United States in the Twentieth Century":

The coal-fields of the United States cover an area of more than 275,000 sq. m. The Appalachian ranges along the Alleghenies from Pennsylvania to Alabama, across Ohio, Maryland, the two Virginias, Kentucky, and Tennessee, and contains 73,000 sq. m.; the East Inland field (Indiana, Illinois, and western Kentucky) contains 60,000 sq. m.; the North Inland field (Michigan) contains 11,000 sq. m.; the West Inland field, which stretches from Iowa to Texas, contains more than 89,500 sq. m.; the Rocky Mountain field, running from the Canadian frontier almost to the Mexican border, contains 45,000 sq. m. The small Pacific field has less than 1,000 sq. m. The richest by far, in point both of quantity and quality, appear to be the East Inland and the Appalachian. It is estimated that fully 55 per cent of the whole area is workable. Mention must also be made of the small but extremely valuable anthracite field which covers

Coal-Fields

500 sq. m. in eastern Pennsylvania, which has an average annual output of 50,000,000 tons. Finally, there are some deposits of brown coal which constitute a reserve supply.

In 1902 two thirds of the bituminous coal output of the U. S. was extracted from the mines of the Appalachian field, from which were taken more than 156,000,000 of the total 234,000,000 tons mined that year. As the anthracite field is contiguous to this particular field it is evident that this region furnished in all about 200,000,000 tons, or more than 70 per cent of the total American output. The most productive sections are the extreme northern and southern parts of the field, the more productive of these being the northern section in which the output was 89,000,000 tons for Pennsylvania, 21,500,000 for Ohio, 24,500,000 for West Virginia, and

5,000,000 for Maryland. In 1880 the aggregate output of these four states was but 28,000,000 tons; in 1902 close upon 150,000,000 tons. In the southern section 9,500,000 tons are extracted in Alabama, Virginia, Kentucky, and Tennessee have an annual output, respectively, of 3,000,000, 6,000,000, and 4,000,000 tons. Naturally, fuel is cheap in all these states. The average price, at the mine, varies (for 1902) from \$1.05 per ton in Kentucky to \$1.76 in Indian Territory.

One is surprised at the cheapness of coal. The wages paid are so high that it seems incomprehensible that it can be mined and sold at a profit for from only \$1 to \$1.20 per ton and even in certain years for 80 cents per ton. But the high cost of labor is offset by the employment of machinery. The coal-mines of America are well equipped in this respect, and the miners, after having at first opposed the introduction of machinery, have welcomed it, so soon as they perceived that not only were the risks of mining lessened thereby, but that since 1900 the U. S. has exported more coal than it has imported. In long tons the exports in 1902 were: coal, 6,126,946; coke, 392,491. The imports were: coal, 2,551,381; coke, 107,437.

Estimating a ton of coke as equivalent to 1½ tons of coal, the exports in 1900 exceeded 8,500,000 tons; 5,222,000 tons were shipped to Canada, 223,000 to Central and South America, 664,000 to Japan, 760,000 to Mexico, and 635,000 to Europe. Of the imports 1,484,000 tons came from Canada, mainly from British Columbia.

Coal Trade

If eastern Canada obtains its coal supply from the Eastern States, western Canada in turn supplies fuel to the Pacific slope, which, moreover, imported 25,200 tons of coal from Australia during 1900.

There are reasons, too, for believing that the cost of carriage will fall and American coal may be sold on the Mediterranean at or below \$4 per ton. In consequence of the deepening and the relative exhaustion of the English mines the price of English coal has a general tendency to rise; whereas in America, with the possible exception of the anthracite field, the development of the coal-beds has but begun. It is quite reasonable to predict that the time will come when, pending the exploitation of the coal-fields of China, all the world, with the exception of northern and northwestern Europe, which will almost certainly remain customers of Great Britain, will look to the U. S. for its coal supply.

WORLD PRODUCTION OF COAL (IN METRIC TONS OF 2,205 POUNDS)

³ Quantities represent amounts shipped to market; values are based on those of entire product.

GREAT BRITAIN

The Royal Commission on Coal Supplies of the United Kingdom, appointed in Dec., 1901, reported in 1905. As summarized in Hasell's *Annual*, the commissioners estimated, after making necessary deductions, the available quantity of coal in the proved coal-fields of the United Kingdom to be 100,914,668,167 tons. The 1871 commission's estimate was 90,207,285,398 tons. The statistics show that, between 1870 and 1903, 5,694,928,507 tons of coal have been raised, the present estimates of available coal are nevertheless 10,707,382,769 tons in excess of those of the 1871 commission. This excess is accounted for partly by the difference in the areas regarded as productive by the two commissions, and partly by discoveries due to recent borings, sinkings, and workings, and more accurate knowledge of the coal-seams. In addition, the commission estimated that there were 5,239,433,980 tons of coal in the proved coal-fields lying at greater depth than 4,000 ft. below the surface. From the concealed and unproved coal-fields the Geological Committee appointed by the commission estimated there might be expected 39,483,000,000 tons at depths less than 4,000 ft. and over 1,000,000,000 tons beyond high-water mark in the Cumberland coal-field, and in St. Bride's and Carmarthen bays. The commissioners held that it was highly improbable, owing to physical considerations, that the average increase in the output for the last thirty years (viz., 2½ per cent per annum) would continue. They said: "In view of this opinion and of the exhaustion of the shallower collieries, we look forward to a time, not far distant, when the rate of increase of output will be slower, to be followed by a period of stationary output, and then a gradual decline."

COAL STRIKE OF 1902: One of the greatest and most far-reaching strikes in the history of the United States. Some 147,000 men were involved. Of the business loss Mr. Carroll D. Wright has said ("Battles of Labor," p. 146):

According to the Chief of the Bureau of Anthracite Coal Statistics, the shipments of coal decreased 22,333,333 tons, 40 per cent of the shipments of the previous year. Making an estimate on coal mined for local trade and consumption, the total decrease in 1902 must have been nearly 25,000,000 long tons. This meant a decrease in the receipts of the coal-mining companies of over \$46,000,000, while the mine employees lost in wages a total of upward of \$25,000,000, and \$1,800,000 was spent by the mine-workers of the country in the relief of the miners of the anthracite regions. The decrease in freights paid to the railroad companies on the larger sizes, had it all been sent to New York harbor, would be about \$19,000,000, and on the smaller sizes the total decrease in freight receipts would be about \$28,000,000.

The occasion of the strike was the demand of the United Mine Workers of America for an increase in wages and a decrease in time, and the payment for coal by weight wherever practicable. But the cause lay deeper and may be found in the desire for recognition of the miners' union by the operators, and leading up to it many long-continued grievances. (See **COAL INDUSTRY**.)

In 1899 the United Mine Workers of America, who had already organized the bituminous coal miners and had won annual trade agreements, undertook to organize the anthracite miners. Finding some success, they struck, in 1900, for higher wages. Political conditions led Senator Hanna to induce the operators to yield and they posted a notice of a ten-per-cent rise in wages without recognizing the union. In 1901 Mr. John Mitchell, president of the union, tried to induce the operators to confer with his organization as to a wage scale. They refused, but gave notice that they would continue the existing advance. Again, in 1902, the union invited the operators to a conference, but they declined. In March the miners' convention met and demanded an increase in wages and an eight-hour day. They resolved to work only three days a week after April 1st, until the dispute was settled. The Civic Federation, through Senator Hanna, its chairman, tried to intervene, but unsuccessfully. May 8th, Mr. Mitchell, for the union, proposed to the operators to leave the matter to an arbitration committee to be chosen by the

Civic Federation or by Bishop Potter and Archbishop Ireland. The operators refused and declined to deal any further with Mr. Mitchell.

On May 14th the United Mine Workers met in convention at Hazleton, and the next day the strike, which had already broken out, was officially declared. The demands of the strikers were:

1. An increase of 20 per cent in the pay of miners working by the ton—about 40 per cent of the whole number.

2. An eight-hour day for per diem employees, being equivalent to a reduction of about 20 per cent in working-time without change of wages.

3. Payment by weight to be based on a ton of 2,240 pounds.

The men were entrenched behind a law requiring every miner in the anthracite field to have a certificate of competence, granted after examination, and based on at least two years' experience as a laborer. As there were only about 40,000 holders of such certificates, and practically all of them belonged to the union, it was impossible to operate the mines as long as they held out, and the contest settled down into one of endurance. One hundred and forty-five thousand men were idle. An attempt was made to call out the bituminous miners in a sympathetic strike, but they unanimously voted to stand by their agreement with their employers and not strike. Two million five hundred thousand dollars, however, was contributed to the miners by unions and friends over the country.

September brought a general scarcity of coal, verging upon famine. By October the country was facing a calamity. The price of anthracite went up to \$20 and even \$30 per ton, and only small lots could be obtained at those rates. Political pressure was brought to bear upon the operators, but they defiantly refused to yield an inch. President Roosevelt had already, in June, directed Labor Commissioner Carroll D. Wright to investigate the causes of the dispute, and he now invited President Mitchell and the representatives of the operators to meet him in conference on Oct. 3d. Mr. Mitchell offered on the part of the miners to accept arbitration by a commission selected by the president. The operators rejected this proposition, and their whole attitude appeared so offensive as to make them the objects of intense popular indignation. They insisted that the whole matter was one of protection, and said that if troops enough were furnished they could operate the mines. A considerable force of militia was already on duty, but on Oct. 6th Governor Stone called out the entire National Guard of Pennsylvania, numbering 10,000 men. It soon became evident that miners could not be obtained under any conditions. Accordingly, Mr. J. Pierpont Morgan conferred with President Baer of the Reading, and went to Washington. He offered on behalf of the operators to accept the arbitration of a commission to be appointed by the President and to consist of:

1. An army or navy engineer officer.
2. An expert mining engineer, not connected in any way with coal-mining properties.
3. One of the judges of the United States Court of the Eastern District of Pennsylvania.
4. A man of prominence, eminent as a sociologist.
5. A man who by active participation in mining and selling coal was familiar with the physical and commercial features of the business.

The findings of this commission were to be binding for at least three years.

The union objected, unless the president was left free to appoint whom he would, and they have a representative.

This was accepted and a convention of the United Mine Workers at Wilkesbarre on Oct. 20th declared the strike off. As members of the commission the president appointed U. S. Court Judge George Gray, Carroll D. Wright, Thomas H. Watkins, General John M. Wilson, E. W. Parker, E. E. Clark, and Rt. Rev. John L. Spalding.

The commission after extensive hearings made an award almost wholly in favor of the men. All contract workers were to receive an advance of 10 per cent. Hours were reduced to eight wherever possible. Wages were to be advanced beyond this as coal prices rose. A board of conciliation was created to settle disputes and which perforce recognizes the union. Mr. Mitchell declares the miners will gain by the strike from \$7,000,000 to \$8,000,000 annually, but that the board of conciliation is the most important result. The strike was thus a test case between labor and capital, and it was proved that even capital must submit finally to organized public pressure.

COBDEN CLUB, THE: A society founded in 1866, with the object of encouraging the growth and diffusion of those economic and political principles with which Cobden's name is associated. The motto of the club is "Free Trade, Peace, Goodwill among Nations." Its principal work consists in the advocacy of free trade, and its funds are mainly devoted to the printing and circulation of books, pamphlets, and leaflets, in support of free-trade principles.

The club is always ready to place its information at the disposal of parliamentary candidates who are supporters of free-trade principles. With the further object of encouraging the scientific study of economic questions, the club spends considerable money in giving prizes for literary work on political economy at the universities and elsewhere. The club also occasionally organizes dinners, to which notable free-traders and other distinguished men are invited. The management of the club is vested in a committee which reports annually to the general body of members. The chairman of this committee is Lord Welby. Other committee members are: Sir J. T. Brunner, M.P.; the Right Honorable Herbert J. Gladstone, M.P.; Captain Sinclair, M.P.; T. Fisher Unwin; Henry Vivian, M.P.; and Sir Spencer Walpole, K.C.B.; General Secretary, J. A. M. Macdonald, M.P.; organizing secretary, F. Maddison, M.P., Caxton House, Westminster, London, S. W.

COBDEN, RICHARD: English free-trader; born near Midhurst, Sussex, 1804. At an early age he entered a London warehouse and after a time became traveler for the firm. In 1832 he started a cotton-printing business of his own at Manchester and Salford.

There are three great political agitations with which Cobden's name will be always connected—the repeal of protective duties, the movement against war and military expenditure, and the one in favor of commercial treaties.

The general spirit of his whole policy is well expressed in the motto quoted by himself (in "England, Ireland, and America") from George Wash-

ington: "The great rule of conduct in regard to foreign nations is, in extending our *commercial* relations, to have, with them, as little *political* connection as possible."

He believed that a nation's first care was for its own household, and that political and military entanglements interfered with the performance of a nation's duty in this respect. He preached the policy of non-intervention, opposing with Bright the war with Russia and China. He maintained that the prosperity of the nation demanded, not military glory and conquest, but a larger population and a wider trade. Cobden and the "Manchester school" of politicians erred in mistaking the welfare of merchants and manufacturers for the welfare of the whole nation; their standpoint was that of the employer of labor, not that of the people. They were the advocates of direct taxation. Cobden has been denounced as a mere pleader for a "let-alone" policy in matters of trade; but it must be remembered that in his day British trade was hampered by absurd governmental restrictions from which it is free to-day. A policy which was best then may be unwise at the present time. Cobden did much for the cause of free education. It was largely owing to his efforts that the Manchester Athenæum was established.

We need not here enter into the details of his busy political career, and shall only mention one more conspicuous service which he rendered, not only to his own country, but to the United States as well. Devoted as he was to the arts of peace, the outbreak of the American Civil War was to him an event most deeply to be deplored. From first to last his sympathies were with the North, because the South was contending for slavery. He was extremely anxious that Great Britain should adopt a just and worthy attitude toward the struggle; and when, therefore, vessels which sailed from English ports committed depredations upon American commerce, he sternly and forcibly brought the question before the House of Commons. Altho attacked for a time on every side because of his manly stand for honor and fair play he persisted in a series of speeches to maintain his position. His death was the occasion of many tributes of honor and esteem, all classes uniting in confessing him to be a statesman who was unwavering in his fidelity to conscience and to what he believed to be the best interests of his country. He died in London, 1865.

COEDUCATION (for the statistics of coeducation in the United States, see article EDUCATION): The following is abridged from an article that appeared in *Munsey's Magazine* for March, 1906:

The essential argument for coeducation in the university is the argument for the university itself. Special subjects can be taught in detached and specialized schools. The university makes better manhood. Its function, in Emerson's words, is to "bring every ray of genius to its hospitable halls, by their combined influence to set the heart of the youth in flame."

For these reasons, it is better for any body of students that they be taught in company with other kinds of students. Culture studies and technical studies gain from mutual association. The man who pursues each gains from contact with other types of mind.

This argument is especially cogent in institutions in which the individuality of the student is

recognized and respected. In such schools each man, by his relation to action and realities, becomes a teacher of women in these regards, as, in other ways, each cultivated woman is a teacher of men.

In woman's education, as planned for women alone, the tendency is toward the study of beauty and order. Literature and language take precedence over science. Expression is valued more highly than action. In carrying this to an extreme, the necessary relation of thought to action becomes obscured. The scholarship developed is not effective, because it is not related to success. The educated woman is likely to master technique rather than art; method, rather than substance. She may know a good deal, but she is not effective in action. Often her views of life must undergo painful changes before she can find her place in the world.

In schools for men alone, the reverse condition often obtains. The sense of reality obscures the elements of beauty and fitness.

Arguments For

It is of great advantage to both men and women to meet on a plane of equality in education. Women are brought into contact with men who can do things—men in whom the sense of reality is strong, and who have definite views of life. This influence affects them for good. It turns them away from sentimentalism. It gives tone to their religious thoughts and impulses. Above all, it tends to encourage action as governed by ideals, as opposed to that resting on caprice. It gives them better standards of what is possible and impossible when the responsibility for action is thrown upon them.

In like manner, the association with wise, sane, and healthy women has its value for young men. It raises their ideal of womanhood, and the highest manhood must be associated with the possession of an ideal.

It is not true that the character of college work has been in any way lowered by coeducation. The reverse is decidedly the case. It is true that untimely zeal of one sort or another has filled the West with a host of so-called colleges. It is true that most of these are weak, and are doing poor work in poor ways. It is true that most of them are coeducational. It is also true that the great majority of their students are not of college grade at all. But none of these defects is derived from coeducation; nor are any of these conditions made worse by it.

Very lately it has been urged against coeducation that its social demands cause too much strain both on young men and young women. College men and college women being mutually attractive, the result is that there are too many receptions, dances, and other functions in which they enjoy each other's company. But this is easily regulated. At the most, the average young woman in college spends in social matters less than one tenth the time she would spend at home.

With the young man, the whole matter represents the difference between high-class and low-class associates and associations. When college men stand in normal relation with college women, meeting them in society as well as in the classroom, there is distinctly less of drunkenness, rowdiness, and vice than obtains under other conditions. And no harm comes to the young woman through the good influence she exerts. To meet freely the best young men she will ever

know, the wisest, cleanest, and strongest, can surely do no harm to a young woman. The best young men and the best young women, all things considered, are in our colleges. This always has been and always will be the case.

It is true that coeducation is often attempted under very adverse conditions. Conditions are adverse when the little girls of preparatory schools and schools of music are mingled with college students and allowed to have the same freedom. This is wrong, whatever the kind of discipline offered, lax or strict; the two classes need a different sort of treatment.

Another condition very common and very undesirable is that in which young women live at home and traverse a city twice each day on railway- or street-cars to meet their recitations in some college. The greatest instrument of culture in a college is the college atmosphere, the personal influence exerted by its professors and students. This atmosphere develops feebly in the rush of a great city. The *spur-studenten*, or railway students, as the Germans call them—the students who live far from the university—get very little of it.

In the English universities the question of where the student should live has been made all-important, almost excluding consideration of methods of study, or even of the relative value or significance of the subject-matter of education. In America we have too much neglected this. We have housed our students in barracks, or, even worse, not housed them at all. We have exposed them, men and women alike, to the vulgarity of the small village or the wear and tear of a great city.

We cannot deny that there has arisen in the last few years a reaction against coeducation in our colleges. In so far as this is honest, it is a reaction not against coeducation, but against the lack of provision for wholesome living. It is a protest against turning girls loose unaided and unguarded in college towns, in which adequate safeguards exist neither for them nor for young men.

There are about three classes of college boys who seem to object to the presence of college women, and these may be classed as the boorish, the dilettante, and the dissolute. If these are to remain such, the sooner they are out of college the better for others, and often the better for themselves.

I have rarely found opposition to coeducation on the part of really serious students.

Sometimes, too, the college athlete objects to the presence of women in college. In athletic matters the young women give very little assistance. They cannot play on the teams, they cannot yell, and they are rarely generous with their money in helping those who can.

Of like grade is the feeling that men count for more than women, because they are more likely to be heard from in after life. Therefore their education is of more importance, and the presence of women impedes it.

A certain adverse influence comes from the fact that the oldest and wealthiest of our institutions are for men or for women alone. These send out a body of alumni who know nothing of coeducation, and who judge it with the positiveness of ignorance. Most men filled with the time-honored traditions of Harvard and Yale, of which the most permeating is that of Harvard's or Yale's infalli-

bility, are against coeducation on general principles. Similar influences in favor of the separate education of women go out from the sister institutions of the East.

The only serious new argument against coeducation is that derived from the fear of the adoption by universities of woman's standards of art and science rather than those of man, the fear that amateurism would take the place of specialization in our higher education. Women take up higher education because they enjoy it; men because their careers depend upon it. Only men, broadly speaking, are capable of objective studies.

It is quite true, as President Hall has lately shown, that the work of the woman student in college, in almost all fields except the creative, is better than that of men of the same age. Girls are more docile than boys; they take better care of their time; they see from a nearer view-point; they are cleaner, not only in their work, but in their acts; they write better examination papers; they are saved from vice not alone by environment, but by instinct. In general, they excel in the conventional courses, especially in those against which the average healthy boy has for generations rebelled.

They excel in others, as President Hall indicates, because these courses appeal to their tastes. The girls compete for outworn prizes, and will complete a useless piece of work with a care and patience which a boy will rarely show on better material.

It has been feared that the admission of women to the university would vitiate the masculinity of its standards, that neatness of technique would impair boldness of conception, and delicacy of taste replace soundness of results. It is claimed that the preponderance of high-school educated women in ordinary society is showing some such effects in matters of current opinion. For example, it is claimed that the university extension course is no longer of university nature. There is nothing ruggedly true, nothing masculine left in it.

Current literature and history are affected by the same influences. Women pay clever actors to teach them, not Shakespeare or Goethe, but how one ought to feel on reading "King Lear" or "Faust." Such studies may be good for the feelings or even for the moral nature, but they have no elements of that "fanaticism for veracity" which is the highest attribute of the educated man.

Current literature reflects the taste of the leisure class. The women with leisure who read and discuss vapid books are not representative of woman's higher education. Most of them have never been educated at all.

In any event, this gives no argument against coeducation. It is thorough training, not separate training, which is indicated as the need of the times. Where this training is taken is a secondary matter, tho I believe with the fulness of certainty that better results, mental, moral, and physical, can be obtained in coeducation than in any monastic form of instruction.

Finally, does not coeducation lead to marriage?

We need not worry over this, because it is in fact not true, and because if it were, its effects would be of little consequence in the development of the race. Love and marriage and parenthood will go on normally whatever our scheme of education.

No doubt university training of women, as distinguished from college training, postpones marriage, and probably the majority of the women taking advanced training have in some degree placed some other ideal, at least as a present aim, before that of matrimony. Some of these women are perhaps "agamic" or "agenesic" by nature; and, if so, doubtless they ought not to marry under any circumstances. But there is not the slightest evidence that highly educated women are necessarily rendered sterile or celibate by their education. The best wives in the world belong to this class.

It is true, no doubt, that cultivated women are more exacting than other women. They are less likely to marry for convenience, and they expect more from their husbands. For these same reasons, their marriages are less likely to prove unhappy.

The woman who finishes credibly the undergraduate course in a well-regulated American college, coeducational or otherwise, has accomplished no *tour de force*, and has performed no dangerous feat of mental gymnastics. She has lived for four years an essentially normal life under wholesome and uplifting conditions.

Nor is the future of our race dependent on having every woman bear the largest possible number of children. In so far as education is genuine, it helps a woman to rear an increasing proportion of the number she bears.

The mental activity necessary to a successful college course is not intense enough to interfere with fecundity. If it were so in individual cases, there is not a ghost of a reason for believing that such a condition is hereditary. We need not fear that college education on a large scale means progressive race sterility.

CŒUR D'ALENE, STRIKES AT: Some of the most violent industrial disturbances in the United States have taken place at the Cœur d'Alene mines in Idaho, especially in the years 1899 and 1902. In 1899 mining industrial troubles developed widely in Idaho. At Wardner a mill of the Bunker Hill mine was blown up. It was never proved by whom, but the striking miners were accused. The mine-owners telegraphed to Washington for federal troops. Brigadier-General Merriam was dispatched with troops, some of them colored. He at once declared martial law in Shoshone County. He reported that there were no signs of resistance, but made a thousand or more arrests. The prosecuting attorney pro tem. for the county, who was also an attorney for the Bunker Hill & Sullivan Mining Company, had the courts suspend the writ of habeas corpus. Hundreds of the arrested men were cast into a discarded bull or cattle pen, with straw in the stables to sleep on. The food was bitterly complained of and served, some said, in large pans from which the prisoners had to dip with their fingers. They were certainly treated inhumanly, and the evils and injustices of the "bull pen" have rankled in the minds of organized labor in the U. S. It is claimed, however, by the capitalists that the declaration of martial law was a necessity and that the arrested men who were

innocent were not detained long, being released as soon as their innocence was established.

On the other hand, it is charged against the union miners that in the strike of 1902 they marched on the Cœur d'Alene mines, shot fleeing non-union miners, so that nearly fifty were shot or drowned, took possession of the town, and committed other lawless acts. See WESTERN FEDERATION OF MINERS.

COFFEE-HOUSES: Coffee-houses as rivals of liquor taverns have been favored almost from the beginning of the active temperance agitation. As early as 1830 and 1831 there was a coffee-house movement in Scotland, under the auspices of temperance societies, resulting in the successful operation of such establishments in nearly all the principal towns and cities, but many of them at that time sold the lighter alcoholic beverages as well as tea and coffee. It was in protest against this practise that the Dunfermline Society, Sept. 21, 1830, formed itself into the "Dunfermline Association for the promotion of temperance by the relinquishment of all intoxicating liquors," and passed a resolution agreeing "to give no encouragement or support to any coffee-house established or receiving countenance from any temperance society, for the sale of intoxicating liquors" (Dawson Burns's "Temperance History," vol. i., p. 48). In 1844 (*ib.*, p. 248) "the coffee-houses of Glasgow, conducted on strict temperance principles, and provided with news rooms, etc., were in some respects much superior to the coffee taverns and palaces of the present day."

But it is more recently, and in England especially, that the coffee-house has become a prominent feature of the temperance movement. Liverpool, Birmingham, Bradford, and other large cities in England are plentifully supplied with these places, while in London,

In England where the development has been slower, a large number of establishments have been opened by the Lockhart Coffee-House Company, with the prospect of a rapid increase in the number. Two weekly newspapers in London, the *Temperance Caterer* and the *Refreshment News* (the latter the organ of the Coffee-Tavern Protection Society), are especially devoted to the coffee-house movement and its interests. In 1872 Rev. Charles Garrett conceived the idea of a coffee saloon in Liverpool, which should combine every attraction of the liquor saloon except the bar. A company was formed, and such a place, with reading-room attached, was opened near the docks. Refreshments were served at the cheapest rates. The enterprise was so successful that there are at present in Liverpool more than sixty of these cocoa rooms, as they are called, while the British Workman's Cocoa-House Company, of Liverpool, which has them in charge, has in no year paid less than 10 per cent dividends. Coffee-houses were established in Bradford after their success had been manifested in Liverpool, and the Bradford Coffee-House Company has opened twenty places in that city and its suburbs. Birmingham also is plentifully supplied with coffee-houses, or coffee-house hotels, and they are successful from a business point of view, as well as influential in molding temperance sentiment. The coffee-house movement has extended into Canada and Australia, but has made little progress in the United States. Probably the nearest approaches to the English coffee-house to be found in this

country are the temperance restaurants established in various cities by enterprising or philanthropic persons, those opened and very successfully managed by Joshua L. Bailey, in Philadelphia, being especially worthy of mention.

Another form of the coffee-house work is found in the rooms opened in Boston by the New England Department of the Church Temperance Society. The emphasis is placed in these rooms upon the social aspect, very little attention being paid to the sale of food and drink.

The Boston Coffee-House Pool tables and other games are provided, smoking is allowed, and the aim has been to afford all the freedom of the barroom without the slavery, which is the penalty that has to be paid in places where social freedom means social drinking. In each of these rooms a program of entertainment and instruction is provided once a week; and the great success of this kind of work is demonstrated by the fact that a number of cultivated men and women come to talk about anything which interests themselves, and in the ever-increasing attention and appreciation on the part of the young men who frequent the rooms. Now and then the talk will be a religious one, but, as a rule, these are not preaching places.

There is always plenty of water, for those who visit these rooms are thirsty people. As a rule they prefer water to coffee. The rooms are smoky; tobacco is not sold, but there is no restriction upon smoking.

General good order prevails; when parties get turbulent beyond control the doors are labeled "closed for a week on account of disorder," and in every instance the disturbers, missing their privileges, have returned and apologized.

The general idea is, of course, to make the rooms as nearly like a liquor saloon as possible, without the liquor. But good reading matter (illustrated papers, etc.) is provided in abundance.

The mere fact that, at the lowest estimate, the attendance in the Boston coffee-rooms has averaged during some seasons over 300 young men each night, is a sufficient argument for going on with the work; for this average of 300 a night means an attendance during one month of 7,800; during six months, of 46,800; during four years, of 187,000.

After twenty years of this kind of activity, the workers in it feel every year a stronger conviction that it is a good work, and right in line with the sanest temperance sentiment of the day. Tho the Boston coffee-house is not supported by any endowment, there is a constantly increasing sympathy with the work on the part of an always lengthening list of subscribers. A monthly program of the lectures and entertainments is sent to something over 600 people. In case of special need of financial help a simple statement is made of the facts, and the responses are always speedy and generous.

S. H. HILLIARD.

COGHLAN, TIMOTHY AUGUSTINE: Acting agent-general for New South Wales in London since Feb., 1905; born at Sydney, N. S. W., 1855; educated in the grammar-schools of that city. He was appointed to Public Works Department in 1873; became assistant engineer of harbors and rivers in 1884; and officiated as government statistician 1886-1905; and as registrar of friendly societies 1892-1905. From 1896 to 1900 he was a member of the Public Service Board; and he

served on three royal commissions: (1) to inquire into the Marine Board, 1896; (2) to inquire into the cause of the decline of the birth-rate, 1903; and (3) to subdivide the State of New South Wales into electorates, 1904. He was president of the Conference of Austin, and is president of the Australasian Association for the Advancement of Science. Among his works may be mentioned: "Wealth and Progress of New South Wales"; "The Seven Colonies of Australasia"; "Childbirth"; "Notes on the Financial Aspect of the Australian Federation"; and, jointly with T. T. Ewing, M.P., "Progress of Australia during the Nineteenth Century." Address: Office of the Agent-General, London, England.

COGNETTI DE MARTIIS, SALVATORE: Italian sociologist and economist; born at Bari, Italy, 1844. In 1868 he became professor in the Institute of Technology of that place; the next year he accepted a similar position in Mantua, and in 1876 he was called to take the chair of political economy in the University of Turin. Professor Cognetti, according to Cossa, may be classed with the Italian sociological school. He has especially studied the economic functions of animal and savage life, and by investigations in philology, etc., has thrown much light on the origins of socialism in antiquity. He has, however, studied modern economic conditions, and particularly those of the United States. He is the author of: "Delle Attinenze tra l'Economia Sociale e la Storia" (Florence, 1866); "Le Forme primitive nell' Evoluzione Economica" (Turin, 1881); "Il Socialismo negli Stati Uniti d'America" (Turin, 1887); and "Socialismo Antico" (1889).

COHN, GUSTAV: German economist; born at Marienwerder, West Prussia, 1840; studied in Berlin and Jena; Fellow of the Royal Statistical Seminary of Berlin, 1867-68, afterward at Heidelberg and the Polytechnic at Riga. In 1873 he visited England, and as a result of his studies published his "Untersuchungen über die englische Eisenbahnpolitik." In 1875 he was called to the Polytechnic at Zurich, and in 1884 as regular professor to the University of Göttingen. One of the foremost economists in Germany, his writings have been numerous. Perhaps his best-known works are his "System der Nationalökonomie" (1886), in which his chapters on cooperation, the normal labor day, and freedom of industry are of special value; and his "Finanzwissenschaft" (1889). He has written on the woman question (1897), besides various historical studies. Address: Göttingen, Germany.

COIT, STANTON: American ethical lecturer; born in Columbus, Ohio, 1857; was graduated at Amherst, 1879, and took the degree of Ph.D. at Berlin, 1885. Studying social conditions, and living himself in a tenement among the poor, he founded the Neighborhood Guild in the tenth ward in New York City in 1887, and became one of the founders, and for two years head worker of the University Settlement in that city. He was for several years lecturer with Professor ADLER of the New York Society for Ethical Culture. In 1888 he succeeded Mr. Moncure D. Conway, in London, as lecturer of the South Place Ethical Society, and instituted a Neighborhood Guild in London, and later founded and became head of the West London Ethical Society. He was one of the founders of the *International Journal of Ethics*.

His main works are "Neighborhood Guilds"; "The Ethical Movement in Religion," issued in Germany, and several lectures in one volume, translated into French and published as "La Religion basée sur la Morale." Address: 30 Hyde Park Gate, S.W., London, England.

COLBERT, JEAN BAPTISTE: French statesman; born at Rheims, 1619. He rose from office to office, till he became one of the greatest ministers France has ever had. In 1661 he became controller-general. His first reform was to reduce the *taille*—a direct property tax—and to establish a departmental office. He was especially noted for his love of system and regularity in industry and commerce. Frequently his regulations were strict even to severity. His economic method was to organize industry, sustain it by custom-house regulations and protection, and to create model manufactures by grants of money or privilege. All financial dishonesties he strove with laudable severity to check. His mind was not sufficiently profound to establish a complete system; he dealt with immediate difficulties, and overcame them by his energy and good sense. He interested himself in the shipping trade and in the arts and sciences, encouraging the arts by liberal presents and pensions. In 1663 he founded the Academy of Inscriptions and Belles Lettres, and in 1668 the Academy of the Sciences. He died in Paris, 1683.

COLINS, JEAN GUILLAUME CÉSAR ALEX-ANDRE HIPPOLYTE, BARON DE: French soldier and sociologist; born at Brussels, 1783. He entered the French army at an early age, and won many honors. In 1833 he settled down to a quiet life, and pursued at Paris his scientific and social studies. In 1835 he issued his first work, entitled "Le Pact Social." In it he advocated collectivism, and declared that "immovable property belongs to all." Numerous other works on social questions followed, and he continued to write until his death in 1859.

Colins and his disciples called their system Rational Socialism. They believed in spiritualism and atheism, denying the existence of a God, while at the same time affirming the immortality of the human soul. Morality, they say, is sufficiently based upon personal immortality. All men are equal, free, moral, and therefore responsible beings. M. de Laveleye, in his "Socialism of To-day," gives the following concise account of their economic doctrines:

Originally there existed only man and the earth on which he lived: on the one hand, labor; and on the other, the soil or raw material, without which all labor would be impossible. But from the joint action of these two elements of production there soon came into being wealth of a peculiar kind, in which labor was, as it were, accumulated, which was movable and separate from the soil. This was capital. Labor is free when the raw material, the soil, belongs to it; otherwise it is enslaved. Man therefore can, in fact, only exercise his energy with the permission of the owners of the raw material; and he who requires the authority of another before he can act is clearly not free. In order, then, that all the members of the community should become permanent proprietors of the national soil, the soil must be collectively appropriated.

The collective appropriation of the soil implies, in the first place, that it should be at the disposal of all who wish to utilize it; and secondly, that the rent, paid by the tenants to the community, should be expended for the common benefit of all.

The above relates to the production of wealth. Let us now consider the way in which rational socialism regulates its distribution.

When labor is free—as is necessarily the case when the land is accessible to all—every one can live without being obliged to accept wages from anybody. In that case, a man would work for others only if they offered him, as wages, more than

he could gain by working for himself. This situation is expressed in economic terms by saying that then wages would tend to a maximum, and when it exists, the distribution of wealth is so affected that the larger share of the product goes to labor and the smaller to capital. But when labor is enslaved, the laborers are forced, under pain of starvation, to compete with one another in offering their labor to those who possess land and capital; and then their wages fall to what is strictly necessary for existence and reproduction; while if the holders of wealth do not need labor, the unemployed laborers must disappear. Wages, then, tend to a minimum, and the distribution of wealth takes place in such a way that the greater part goes to the landowners and capitalists, and the smaller to the laborers. When labor is free, every man's wealth increases in proportion to the toil he has expended; but when labor is enslaved, his wealth grows in proportion to the capital he has accumulated.

From these two opposite modes of distribution flow, according to Collins, the two following consequences, each of which has reference to one or other of the two systems of holding land above described: When land is owned by individuals, the wealth of one class of the community and the poverty of the other increase in parallel lines, and in proportion to the growth of intellectual power; but when land is collectively appropriated, the wealth of all increases in proportion to the activity of each, and to the advance of civilization.

Collins has developed also some original views on the history of communities, which have been reproduced by M. L. de Pottre in his "Dictionnaire Rationnel."

COLLECTIVISM: A term sometimes used in the United States and in Great Britain, but frequently in France, to denote socialism as distinguished from anarchism or communism, both of which are sometimes, tho wrongfully, included under socialism. Collectivism is also used sometimes to indicate the general sociological scheme of socialism, as distinct from any particular form of or plan for carrying out its ideas.

COLLECTIVIST SOCIETY: Organized in New York City, 1902. Its principles are set forth as follows:

We believe that the true principle of production and distribution is expressed in the dictum: "From each according to his ability; to each according to his needs." This principle requires that all should have the opportunity of useful work, and that all should engage in useful work under the penalty or public disgrace; that all should receive comfortable incomes except those who will not work, and that none should receive excessively high incomes, as the latter are morally injurious both to the recipient and to the community. The ultimate operation of this principle will be toward the ideal of practical equality of incomes.

We believe that this principle can be made effective only by the people acting as a whole through governments truly democratic.

We believe that this is no far-off ideal, but is in all civilized countries an attainable rule to be embodied, step by step, into law, custom, and habit.

We believe that the establishment of this principle will require the transfer of the means of production and distribution into the hands of the community; and that every transfer of this nature should be accompanied by full provision for those expropriated on the basis of their needs.

We believe that our governments, national, state, and local, are worthy of hearty allegiance, as in the main good institutions, far more free and beneficent than governments in past times. We believe, however, that they can be made vastly more beneficent through changes for which the present time is ripe.

We believe that in those cases where the powers of government are now used for private gain to the detriment of the people at large, it is because the energetic demands of private interests are not met by an enlightened and united opposition.

We believe that this evil—the exploitation of the powers of government for private gain—should be abolished and our government made fully responsive to the people's will, through the establishment of direct legislation, proportional representation, and the power of recall.

We believe that the measures, other than the last named, which at present promise best results are:

Legislation to secure work to the unemployed; to establish a maximum day and a minimum wage for all workers; and to provide pensions for the aged.

The taxation of franchises at their full value, and the graduated taxation of land values, incomes, and inheritances.

The assumption by city and state governments of enlarged

and new activities for the common benefit, including the ownership of public utilities.

The assumption by the national Government of the telegraphs, railroads, and mines.

The organization works mainly by publishing and circulating tracts carefully prepared on evolutionary, scientific, and Christian socialism, and by holding meetings and conferences in New York. Secretary, Miss M. R. Holbrook, P. O. Box 1663, New York City.

COLORADO COOPERATIVE COMPANY, THE: Organized and incorporated in Colorado in 1904, to reclaim by irrigation desert land on Tabeguache Park, whereon to found independent homes for its stockholders. This tract of land in Montrose County, southwestern Colorado, consists of 30,000 acres, two thirds of which is arable and fertile. It is specially adapted to fruit growing and general farming. Timber, coal, and building stone are in close proximity, as well as large deposits of the more precious metals. To reclaim the land an irrigation canal, more than twenty miles in length had to be built, costing at least \$300,000. To accomplish this work, stock subscriptions were taken in shares of \$100 each, payable in cash, labor, or products of practical use to the company. The source of supply is the San Miguel River, a never-failing stream.

None but stockholders are employed, each of whom receives thirty cents per hour, payable in stock and food supplies from the company's store. There are about 400 stockholders, holding varying numbers of shares. The land holdings range from a town lot to a quarter section, tho a forty-acre tract is the usual claim of each stockholder. Each share of stock entitles its owner to draw a *pro-rata* share of water flowing in the canal, and on full completion it is estimated that a share will properly irrigate four acres. The unclaimed land may be still homesteaded or otherwise entered at \$1.25 per acre. There is as yet no railroad, but surveys are being made, and the prospects for one are fair.

Under the title of The Nucla Town Improvement Company the colonists have incorporated a town company. The stock is divided into shares of \$10 each, and each share entitles the holder to a lease of one business lot, or two residence lots, for ninety-nine years, with privilege of renewal. A block of four acres is the maximum holding of any shareholder. The organization is based on the Henry George single tax idea. (See FAIRHOPE.) Nucla town site already embraces 400 acres, nearly all of which is under lease, and more land is expected to be soon ready for platting into lots and blocks. Those appreciative of magnificent scenery, a mild and healthful climate, and an intelligent and progressive community, will find it at Nucla.

F. B. LOGAN.

COLWELL, STEPHEN: American merchant and economist: born in Virginia, 1800; admitted to the bar in his native state, but gave up the profession of law to become an iron merchant in Philadelphia. He studied and wrote much on political economy, being a protectionist; and he was a frequent contributor to the periodicals of his time. His best-known work is "The Ways and Means of Commercial Payment" (1858), in which he attempts to give a full analysis of the credit system, and contends that error has always been made in not distinguishing between

money of gold and silver, and forms of credit. His work is valuable also because of its historical inquiry into the growth of the credit system; and throughout it reveals independence of thought and research. He refused to accept the view that the quantity of money is the controlling factor in determining prices. In 1865 he was appointed a member of the revenue commission, and in the year following made a valuable report on taxation. He died in Philadelphia, 1872. Among his more extended writings may be mentioned: "The Relative Position in our Industry of Foreign Commerce, Domestic Production, and Internal Trade"; and an American edition of Frederick List's "National System of Political Economy," for which he wrote a preliminary essay. His other writings of economic interest are: "The Claims of Labor, and their Precedence to the Claims of Free Trade"; "Gold, Banks, and Taxation and State and National Systems of Banks," "Expansion of the Currency, the Advance of Gold, and the Defects of the Internal Revenue Bill of June, 1864."

COMMERCE (from Latin *com*, together, and *mercari*, to trade) is sometimes used for the interchange of any goods or property, but more correctly for the interchange of goods on a large scale and between different countries or different portions of one country.

The first race to carry on commerce on a large scale was the Phœnicians, first in Tyre and Sidon, and then in the Phœnician colony of Carthage. Much of the commerce of Rome was tribute rather than trade. With the breaking up of the Roman Empire commerce languished till the rise of the free cities of Italy, Venice, Florence, and Pisa. Commerce was also much quickened by the crusades. The free cities of Germany and the Netherlands, which formed the Hanseatic League, created a still greater commerce. The introduction of the mariner's compass into Europe in 1303 and the discovery of the New World and of the Cape of Good Hope vastly developed commerce, particularly in Spain, Portugal, and England, and later in the Netherlands. By the seventeenth century Spain and Portugal had lost their prestige, and England had become the great commercial nation of the world. In medieval times commerce was greatly restricted by dues, taxes, and laws. After the discovery of the New World, governments tried to favor commerce by granting monopolies, trading privileges, etc., often doing more harm than good. Since the beginning of the nineteenth century *laissez faire* has been the general policy. But see PROTECTION.

Enormous strides have been made recently in the development of commerce. At the beginning of the nineteenth century men still lived to a large extent in isolated communities. Only a few good roads existed. Even in England rivers rather than roads were the channels of commerce. It took many days to go from Edinburgh to London in the speediest way. When the battle of Waterloo was fought (1815) it took three days for the news to arrive in London. Dr. Atkinson as late as 1847 was eight months in going from New England to Oregon. Foreign commerce was largely limited to voyages made by ships fitted out or chartered for the special trip, and often a commercial venture of the captain himself. Each nation and each section of the nation had to raise its own food. Hence the failure of a crop in one locality meant a famine, and famines were numerous. To-day the world has become a single market. The use of steam as a motor power on land and sea, and the use of electricity for conveying intelligence has revolutionized commerce. Merchants in England make purchases in India the same day, and on the next day the purchased goods start on their journey. The Suez Canal has reduced the voyage between London and

Calcutta to thirty days instead of 200. It has destroyed 2,000,000 of tonnage (see PANAMA). Fresh fruit, raised in California, is sold in London. Fresh meat is carried from New York to Liverpool for one cent a pound. Boxed meats have been carried from Chicago to London at one half a cent a pound. The productions of North America, South America, Australia, Russia, and Egypt battle for the world's markets. It has been calculated that railways have added to the power of the human race a force somewhat greater than that of a horse working twelve days for every inhabitant of the globe. Statistics, however, best show the growth of commerce.

FOREIGN COMMERCE OF PRINCIPAL COUNTRIES

(Compiled from U. S. Statistical Abstract, 1906) Statistics for 1905 except as stated

NOTE.—United States equivalents of the following monetary units: Argentina: Paper peso (1905)=42.5 cents. Bolivia: Boliviano (1905)=44 cents; (1906)=47.7 cents. Brazil: Milreis (1905-6)=30.4 cents. China: H. tael (1905)=73.6 cents. Costa Rica: Colon (1905-6)=46.5 cents. Greece: Paper drachma (1905-6)=15.7 cents. Haiti: Paper peso (1905-6)=25 cents. Honduras: Silver peso (1904-5)=43 cents. Nicaragua: Peso curr. (1905)=17 cents. Paraguay: Paper peso (1906)=8 cents. Portugal: Milreis curr. (1905)=99.2 cents. Salvador: Peso (1905)=44.7 cents. Siam: Tical (1905-6)=30 cents. Spain: Peseta curr. (1906)=17.1 cents. Turkey: £T = £4.40 .

GREAT BRITAIN

IMPORTS AND EXPORTS OF MERCHANDISE OF THE UNITED KINGDOM
(Compiled from the "Annual Statement of the Trade of the United Kingdom")

The values of the imports represent the cost, insurance, and freight; or, when goods are consigned for sale, the latest sale value of such goods. The values of the exports represent the cost and the charges of delivering the goods on board the ship, and are known as the "free on board" values.

COMMERCE AND LABOR, DEPARTMENT

OF: This department was formed by the act of Congress of Feb. 11, 1903, and constitutes one of the nine executive departments of the general government. It is in charge of a secretary who is a member of the Cabinet, and who also receives the same salary (\$8,000) as the other Cabinet officers. This department was created with a view to the furthering and developing of trade both in the United States and also with foreign lands; of the different industries connected with the fisheries, mines, and manufactures; of matters respecting labor and the working people; of the bettering of the means of transit by coach, railway, and steamboat; of the overlooking of matters regarding the various kinds of insurance. Within the department are several bureaus, the Lighthouse Board and the lighthouse establishment, the Steamboat Inspection, the Bureau of Corporations, the Bureau of Manufactures, of Labor, of Navigation, of Standards, of Statistics of the Treasury, of Foreign Commerce, of the Census, of the Fish Commission, of the Corporations, of the Coast and Geodetic Survey, of the Shipping Commissioner, of Immigration, of the Fulfilment of the Exclusion Acts against Chinese. The Fish Commission has oversight of the salmon and other fisheries of Alaska and the hunting of the fur-seal. The Bureau of Corporations is intended to have control of the different trust and trade combinations. There is a Commissioner of Corporations who receives a salary of \$5,000, whose duty it is to look carefully into the organizing, getting up, and managing of all stock companies trading whether in the U. S. or abroad, with the exception alone of the common carriers who come under the Interstate Commerce Act. It is his duty to collect information and embody it in a paper to the president. He has the power to call upon and to subpoena witnesses to give testimony.

The first secretary under the act was Mr. George B. Cortelyou, of New York, appointed

Feb. 16, 1903. After him came Mr. Victor B. Metcalf, of California. The present incumbent, appointed 1907, is Mr. Oscar S. Straus, of New York.

COMMERCIAL RELATIONS (United States):

The friendly sentiment which exists between nations, while due in many cases to descent from a common stock and to the presence in one country of many former citizens of another, is also due to the existence of that other commercial factor, invested capital. The friendly sentiment existing between the United States and all English-speaking nations is, of course, the result, to a great extent, of a common parentage and the use of a common language as a medium of intercourse. In the case of our dealings with the Germanic nations there is not only the close relationship between the Anglo-Saxon and the Germanic, but also the presence in this country of millions of representatives of those nations.

The number of immigrants admitted into the U. S. from Germany alone since 1820 exceeds 5,000,000 and the number of natives of that country residing in the U. S. at the present time is nearly 3,000,000. The number of Austrians residing in the U. S. at the date of the last census was over a quarter of a million; natives of Holland over 100,000; and of the natives of Norway and Sweden and Denmark over 1,000,000; while of the natives of the United Kingdom the total in 1900 was 2,500,000 and of Canada more than 1,000,000.

The latest available statistics indicate that the number of natives of the U. S. now residing in the United Kingdom is approximately 30,000. The German census of 1900 showed the presence of practically 18,000 of our citizens residing in Germany. The Mexican census showed nearly 16,000 Americans residing in Mexico in 1900, and the Canadian census of 1901 showed about 41,000 natives of the U. S. residing in Canada. Sub-

sequent Canadian records show a migration of from 25,000 to 45,000 per annum from the U. S. to Canada, which suggests that the number of our own people now residing in the Dominion is probably over 100,000.

Our consul-general in Mexico reported some two or three years ago that over \$500,000,000 of American capital was invested in that country, and persons well acquainted with the movements of investments out of the U. S. are of the opinion that this sum has been increased since at the rate of perhaps \$100,000,000 per annum, and that the total American capital invested in Mexico approximates \$800,000,000. Reports from our consuls in Canada and other available sources indicate that the investment of American capital among our neighbors on the north is also to be measured by hundreds of millions.

Our consul-general in Cuba has indicated that, in his opinion, the amount of American capital there invested is between \$100,000,000 and \$200,000,000, and a study of this subject recently made by the Bureau of Statistics develops the fact that probably \$100,000,000 of American capital have been invested in the Hawaiian Islands, and from \$10,000,000 to \$15,000,000 in Porto Rico. In the great countries of Europe, where capital is plentiful, American inventions and American skill in manufacturing and management have combined with local capital to develop great industrial enterprises, which have strengthened the cordiality of sentiment existing between the two peoples.

There is no difficulty in proving that the existence of these factors—sentiment, immigration, and invested capital—has been followed by the maintenance of cordial commercial relationships. The United Kingdom, having with us a common language and of whose people we had in 1900 2,750,000 in the U. S., and to which we have sent 30,000 of our own people to become permanent residents in its communities, is the most important customer for American exports.

Germany is next in importance in both our export and import trade. Of German people we had in 1900 two and two thirds millions, and today have perhaps as many as 3,000,000, and in that country 20,000 Americans now reside. Canada follows, and of her people we had in 1900 over 1,000,000, and she has 100,000 former citizens of the U. S. In Canada are invested large sums of American capital. Still another country with which our trade relations have grown with wonderful rapidity is Mexico, which takes two thirds of its imports from us and sends three fourths of its exports to us. In that country probably 20,000 former citizens of the U. S. reside and hundreds of millions of American capital are invested, while the number of former Mexican citizens now residing in the U. S. is over 100,000.

There is negative proof to add to the positive proof that sentiment and good-will between nations needs immigration and invested capital for the growth of trade relations. Indeed, there is a reverse side to the picture. Our friendship for France is a matter of history. Altho our relations have always been cordial, we have often wondered that our trade grows so slowly and that we supply only about 10 per cent of its imports, while to Germany we supply 14 per cent, to the United Kingdom 25 per cent, and to Canada 60 per cent of their imports. While this apparently anomalous condition is doubtless due in part to the restrictive policy of France, may it not also be due

in some degree to the fact that the total number of French residing in the U. S. in 1900 was but 104,000, as compared to the millions of the United Kingdom, Germany, and Canada?

To prove my proposition further, the surprisingly rapid growth of our trade with Italy in recent years is but an additional argument supporting the theory that the closeness of relationship between the peoples of the two countries is an important factor in the development of commercial relations. Our trade with Italy in recent years has expanded from practically \$40,000,000 in 1896 to nearly \$90,000,000 at present, and at the same time the number of Italians in the U. S., which in 1900 was nearly 500,000, has grown with phenomenal rapidity in recent years, with a correspondingly gratifying enlargement of our trade relations with that country.

The number of Russians in the U. S. in 1900 was nearly half a million, and the increase since then has been very great. The value of our exports to Russia has more than doubled in the last decade and the value of our imports from that country more than quadrupled. We have wondered and with reason at the slow growth of our exports to South American countries and especially at their small value when compared with the large amount represented by our imports from that section of the world. But possibly we do not take into consideration the fact that the South American countries are peopled by races less akin to us in nationality than those previously mentioned, and that American citizens and American capital are seldom found in those communities. The South American countries are generously populated with Europeans and are enjoying the beneficial effects of their capital. The number of South Americans residing in the U. S. in 1900 was less than 5,000, as compared with the 100,000 from Mexico.

The conclusions to be drawn from these facts and figures are clearly that the sentiment of friendship as well as that of cordiality has accompanied the development of commerce with those countries with which our commercial intercourse is greatest and most satisfactory and that it should be continued and fostered.

There can be no doubt that the presence in the U. S. of capital from foreign countries and the presence in such countries of American capital does strengthen commercial relations between the nations, while the presence of industrious citizens from other countries has been of great aid in developing the many industries that have made us the most wealthy and prosperous nation in the world, as well as the greatest manufacturing nation, and placed us in the front rank of exporters of domestic products and of manufactures.

For the purpose of properly expanding and enlarging our trade relations, it is of the highest importance that the executive branch of our Government charged with the cultivation of friendly relations with foreign countries shall not be hampered by any narrowness or short-sightedness on the part of our lawmakers, either national or in the separate states, for every obstacle that is put in the way of friendly international relations is bound to reflect and act as a check upon our foreign commerce, and at the same time upon our wage-workers, of whom so many are employed in industries and manufactures engaged in exporting. As it has been shown that the movement of population from one country to another is one of the forerunners of international trade, as well as a

great factor in promoting it, we must have a care not to put unreasonable checks on immigration.

So long as the exclusion law was clearly understood to apply only to the coolie class our trade with China grew with rapidity. Her merchants and travelers and representative people visited this country freely and sent their sons to be educated in our schools, colleges, and universities. In like manner Americans visited China freely, and the number of our people residing in that country increased from less than 1,300 in 1894 to over 3,200 in 1904. Our exports to China grew from less than \$5,000,000 in 1895 to over \$50,000,000 in 1905, and while we believe that the loss of over \$20,000,000 shown in the returns for 1906 was due, in some degree, to the fact that the trade of 1905 was abnormally large, there can be no doubt that it was due in some part to the recent trade boycotts, resulting from the feeling on the part of the Chinese that their representative people do not receive proper treatment when they apply for admission into the U. S. So apparent was this fact that President Roosevelt, in a message to Congress a year ago, urged the enactment of a Chinese admission law.

The individual merchant or manufacturer knows that he cannot expect to hold customers whom he openly offends or brutally insults. The same is true of a nation. It cannot offend another nation and hold the trade of its people. International courtesy is as essential to international good-will as is a similar relationship between individuals, and the consequences in the former case are far more serious and permanent. The merchants and manufacturers of our country can perform no more valuable service to the nation and to the promotion of foreign commerce than in strengthening public sentiment to support the government in cultivating these friendly relations with other nations which are so essential to good-will and good trade relations.

Our trade with Japan has shown a surprising growth in recent years, during which time a feeling of deep friendship has developed between that remarkable race and our own. Her people have been welcomed to all the privileges and immunities enjoyed by the most favored nation, except actual citizenship. The privileges of Americans residing in Japan, the number of whom has nearly doubled in the past decade, have correspondingly increased.

Our great silk manufactories, which employ thousands of working men and disburse over \$30,000,000 a year in wages, have drawn largely for their raw material upon Japan, sending her nearly \$40,000,000 for raw silk in the year just ended. Japan in turn has purchased freely of the products of our farms and factories, so that our exports to that country have grown from less than \$8,000,000 in 1896 to over \$38,000,000 in 1906. In view of these flattering commercial relations with the dominant power of the Far East, it is a matter of serious regret that recent incidents in a single community of our country—a community that has profited largely through the enlargement of our trade with Japan—should have endangered the cordiality of relations under which that trade has developed.

While this occurrence is too recent to have had as yet a perceptible effect upon trade relations, it requires no stretch of imagination to foresee that unless these deplorable incidents are satisfactorily adjusted they will have a disastrous effect upon our future trade with that country. On this sub-

ject I believe the President voiced the sentiment of the great mass of our people when he said in his message to Congress:

Not only must we treat all nations fairly, but we must treat with justice and good-will all immigrants who come here under the law. All we have to question is the man's conduct. If he is honest and upright in his dealings with his neighbor and with the State, then he is entitled to respect and good treatment. Especially do we need to remember our duty to the stranger within our gates. It is a sure mark of a low civilization, a low morality, to abuse or discriminate against or in any way humiliate such stranger who has come here lawfully and who is conducting himself properly. To remember this is incumbent on every American citizen, and it is especially incumbent on every government official, whether of the nation or of the several states.

Altho the question of ethics in the growth of international commerce may at first sight prove novel, there is really nothing new about it other than that the nations of the world are growing more enlightened, because the basic principles of honesty and courtesy in individual business naturally extend to the larger enterprise of international trade relations. As I have traced out, the growth of trade relations is attributable, in some degree at least, to cordiality of international relationship and of relationship between our own people and those of the nations with which we come into business contact. The future success of our manufacturers and exporters rests in their own hands.

Our government can do certain things. It can, for instance, maintain a great department, such as that of Commerce and Labor; it can record the movements of articles into and out of the country, and the names of countries from which imports come and to which exports go; it can show the growth of exports of various articles, the demand in a given country for the same; it can send its consuls and special representatives to the various nations of the world to learn what markets exist for our goods, and how they must be made and packed and sold to meet the requirements of those markets—but it cannot bring to our manufacturers and exporters that close personal relationship with the people of these nations that is so essential to them if they are to maintain the greatest measure of success.

By sending special representatives to solicit trade, by establishing banking and other facilities therefor, and by cultivating and maintaining friendly relations the exporting nations of Europe have obtained their success in the markets of the world. And when I say special representatives I mean men representing the manufacturer, and so familiar with his own individual methods of production and with commerce that they can present to him the details of the existing trade opportunities and the processes to which he must adapt his own existing methods in order to make his goods salable in the communities in question. These are the things the government cannot do for the manufacturer and the exporter—things they can do only for themselves.

In round numbers the world's imports of manufactures now aggregate \$5,000,000,000 in value, and of that amount we are at present contributing but \$700,000,000, or about 14 per cent, altho we are the world's greatest producers of all the important articles used in manufacturing, such as cotton, iron, copper, timber, and coal, the last of which furnishes the power necessary to transform the others into the finished products.

We also have the world's greatest system of railways with which to assemble these raw ma-

terials and carry them to the water's edge. Whether our government shall aid in building a great merchant marine for carrying these products, already cheaply transported, from the water's edge to the principal foreign markets, or whether such aid should be confined to those sections with which our trade has shown little development and to which foreign capital is offering us no direct system of transportation, is a matter yet to be determined.

But certain it is that, whatever the government may do in aid of our foreign commerce, or in collecting general information regarding trade opportunities in foreign countries, the real opportunity for success in those markets rests with our producers and exporters, who, by sending their personal representatives among these people, will not only obtain for themselves the information necessary to that trade, but will, at the same time, aid in developing that international sentiment and close relationship which have proved so important a factor in our commercial relations with the countries where our greatest success has been attained.

OSCAR S. STRAUS,
Secretary of Commerce and Labor.

COMMONS: Commons, or land held in common by a village, town, or community, play a large part in the history of land tenure. This is true of Great Britain among other countries, but for the treatment of the subject in general and also in Great Britain, see **LAND**; **PRIMITIVE PROPERTY**. The subject is here treated in regard to the United States. The first colonists of America divided land among themselves in proportion to the size of their families; and in some parts of New England according to rank. In Plymouth, however, pasture lands were for many years assigned by lot in town meetings, and wood was cut down and hauled in common. The forests were for more than a century known as "commons." In 1710 Plymouth comprized over 30,000 acres of common land, and to-day there are still over 200 acres of "town land," chiefly forest.

In the old town of Sandwich there is still a parcel of land known as the "Town Neck." This is owned by a company of twenty-four proprietors, the descendants or heirs of the first settlers of the town. Originally the Town Neck, like other common lands, belonged to the whole town. In the town records, under the date May 22, 1658, stands the following note: "If an inhabitant wanteth land to plant, hee may have some in the Towne Neck, or in the common for six years and noe longer." Later, April 6, 1678, townsmen are given liberty to improve Neck lands "noe longer than ten years, and then to be at the townsmen's ordering againe." In the year 1695 the use of the Town Neck was restricted to the heirs of original proprietors, and the land was staked out into thirty-eight lots. The lots were not fenced off, and the whole tract continued to lie as a common field, under the authority of the entire body of proprietors, like the arable lands of a Germanic village community. On April 4, 1695, it was agreed that the Town Neck should be improved for the future as a common field, until the major part of those interested should see cause otherwise to dispose or improve the same. The common fence was to be made up, and a gate to be provided by May 1st. A field-driver or hayward was to keep the Town Neck clear of creatures, and to impound for trespass. In 1700 it was voted that the Neck be cleared of creatures by April 16th, and that no part of the land be improved for tillage other than by sowing.

Lately, it has been proposed to sell this land to a private company for the Cape Cod Canal, a proposal which the Massachusetts Nationalists have strongly opposed. The above is only one instance of the survival of communal lands in New England. In Salem there were ten fields which belonged each to a number of proprietors, who had individual rights, but were subject to communal authority, a majority vote being supreme. They were tilled, sown, reaped in common. And this was only a part of their communism. The forests around Salem were long kept "for the commons of the towne, to serve it for wood and timber." No townsman could make

profit by exporting the logs or lumber, but every man was free to take all he needed for fencing, fuel, or building purposes. Like many other towns, Salem had large tracts of meadow land, where every man had liberty to mow. After the grass crop had been gathered, the cattle of the town were turned into the meadows to graze. Along the Connecticut River this custom continued until quite recent times. Boston Commons was thus used for many generations. The Town Neck in Salem, which is now a public pleasure-ground, remained a common pasture for milch cows until lately. At present there are 300 acres of common land, called the "Great Pastures," being the last remnant of a tract of 4,000 acres. It is owned by the descendants of the original commoners. In 1640 the town voted that "none of the commons within the cattle range should be granted to any individual use." Generally, however, the increase of population led to the gradual breaking up of the system of communism. It was, however, only after a long contest that the landless citizens triumphed over the village patricians. The immediate result of the abolition of common lands was very beneficial to the interests of the community, as the number of small landowners was increased.

It is not only in New England that traces of the early land communism appear, but in all English or Dutch settlements. There were commons in Nantucket, New York, New Jersey, Delaware, Pennsylvania, Maryland, Virginia, and the Carolinas. Almost everywhere in the South certain communal customs prevailed. Forests, streams, and foot-paths are generally regarded as common to all. The court greens in Southern towns are as free as village greens or commons. Annapolis has a town pasture which is typical of scores of others. In the Southern parishes the glebe lands are only an ecclesiastical phase of the original communism, separated and administered by church boards for church purposes, similar to the town lands of New England, which yielded support to the schools and clergy.

Allen, in *The Nation*, Jan. 10, 1878; *Johns Hopkins University Studies in Historical and Political Science*, vol. i., No. 2, on *The Germanic Origin of New England Towns*, and Nos. 9 and 10, on *Village Communities of Cape Ann and Salem*.

COMMONS, JOHN ROGERS: Professor of political economy; born at Hollandsburg, Ohio, 1862; educated in public schools and at Oberlin College; studied political science at Johns Hopkins University, 1889-90 (A.M., 1890). He was successively tutor in economics at the Wesleyan University, and professor of political economy at Oberlin (1891-92), Indiana University (1893-1895), Syracuse University (1895-9). He was expert agent of the United States Industrial Commission in 1901; and assistant secretary of the National Civic Federation, 1902. Since 1904 he has been professor of political economy at the University of Wisconsin. Commons was one of the founders of the **AMERICAN PROPORTIONAL REPRESENTATION LEAGUE**, and has been active in numerous social-reform movements and organizations, particularly, recently, in the National Civic Federation, and as a director of the American Bureau of Industrial Research at Wisconsin University, in which capacity he made special studies of trade-unionism and kindred subjects for an industrial history of the United States, now in course of preparation. He belongs to no one school, except as holding to the so-called ethical view of political economy. He favors the referendum and initiative, proportional representation, arbitration and conciliation, trade-unionism, the nationalization and municipalization of natural monopolies, and the complete governmental control of currency. He is the author of: "Distribution of Wealth"; "Social Reform and the Church"; "Proportional Representation"; "Trade-Unionism and Labor Problems"; "Races and Immigrants in America," besides numerous articles in magazines and economic journals. Address: Wisconsin University, Madison, Wis.

COMMUNE, COMMUNALISM, AND COMMUNARDS: A commune (from Latin *communis*, common) is in general a community organized, or the

government of such a community. Under the Roman Empire every province appears to have had its own provincial diet or assembly, called a *concilium* or *commune*, and these are held by some to have been the first attempts at representative assemblies. But see COMMUNISM; MIR, etc. In the Middle Ages many cities and towns formed confederacies of citizens, and all such confederacies of towns or provinces were called communes. We read of the Commune of Florence, the Commune of Paris, etc. In France especially these communes at one time developed very considerable power and obtained large rights which they gradually lost under the centralizing tendencies of the government of the Louis. Beginning with the Revolution, however, there has been a constant agitation for, and some serious insurrections in order to gain, the supremacy of the old *communes*. This has led to a theory particularly popular in France, which would make the commune the political and social center, and do away with all central government save a loose federation of communes. This was the ideal of BAKOUNIN, and is the view of most anarchist communists. (See ANARCHISM, section "Anarchist Communism.") It was this theory that largely led to the rising of the PARIS COMMUNE in 1871. One who advocates this view is sometimes called a *communiard*, tho this phrase has been particularly appropriated for the supporters of the Paris Commune. Prof. R. T. Ely and other writers, however, prefer the word *communist* for the believer in this theory. (See also COMMUNISM; PARIS COMMUNE.)

COMMUNISM: The economic theory which advocates the total or partial abolition of the right of private property, actual ownership being ascribed to the community as a whole or to the state. Says Palgrave's "Dictionary of Political Economy":

Communism is the theory which teaches that the labor and the income of society should be distributed equally among all its members by some constituted authority. For an example of what communists mean by equal division of labor and income, the following explanation may suffice: "Here equality must be measured by the capacity of the worker and the need of the consumer, not by the intensity of the labor and the quantity of things consumed. A man endowed with a certain degree of strength, when he lifts a weight of ten pounds, labors as much as another man with five times the strength when he lifts fifty pounds. He who, to satisfy a burning thirst, swallows a pitcher of water, enjoys no more than his comrade who, but slightly thirsty, sips a cupful. The aim of the communism in question is equality of pains and pleasures, not of consumable things and workers' tasks." (Buonarroti, "Conspiration de Babeuf," i., 297.)

Says John Stuart Mill ("Political Economy," book ii., chap. i.):

The assailants of the principle of individual property may be divided into two classes: those whose scheme implies absolute equality in the distribution of the physical means of life and enjoyment, and those who admit inequality, but grounded on some principle, or supposed principle, of justice or general expediency, and not, like so many of the existing social inequalities, dependent on accident alone. At the head of the first class, as the earliest of those belonging to the present generation, must be placed Mr. Owen and his followers. M. Louis Blanc and M. Cabet have more recently become conspicuous as apostles of similar doctrines (tho the former advocates equality of distribution only as a transition to a still higher standard of justice, that all should work according to their capacity, and receive according to their wants). The characteristic name for this economical system is communism, a word of continental origin, only of late introduced into this country. The word socialism, which originated among the English communists, and was assumed by them as a name to designate their own doctrine, is now, on the Continent, employed in a larger sense; not necessarily implying communism, or the entire abolition of private property, but applied to any system which requires that the land and the

instruments of production should be the property, not of individuals, but of communities or associations, or of the government.

This is probably the best use of the word, tho there is some authority for using the word "communism" simply as identical with extreme and radical socialism. It is unnecessary, however, to use two words for the same thing, and communism is being limited more and more by the best writers to apply to that school of Socialists who believe in holding all property in common except the merest personal effects, and giving to every man equally, in contradistinction to Socialists, who would only have capital, or the means of production, in common. Concerning communism in general, the best brief discussion is still undoubtedly that of Mill, from whom we therefore quote at length. He says:

Whatever may be the merits or defects of these various schemes, they cannot be truly said to be impracticable. No reasonable person can doubt that a village community, composed of a few thousand inhabitants cultivating in joint ownership the same extent of land which at present feeds that number of people, and producing by combined labor and the most improved processes the manufactured articles which they required, could raise an amount of productions sufficient to maintain them in comfort; and would find the means of obtaining, and if need be exacting, the quantity of labor necessary for this purpose from every member of the association who was capable of work.

The objection ordinarily made to a system of community of property and equal distribution of the produce, that each person would be incessantly occupied in evading his fair share of the work, points, undoubtedly, to a real difficulty. But those who urge this objection, forget to how great an extent the same difficulty exists under the system on which nine tenths of the business of society is now conducted. The objection supposes that honest and efficient labor is only to be had from those who are themselves individually to reap the benefit of their own exertions. But how small a part of all the labor performed in England, from the lowest paid to the highest, is done by persons working for their own benefit. From the Irish reaper or hodman to the chief justice or the minister of state, nearly all the work of society is remunerated by day wages or fixt salaries. A factory operative has less personal interest in his work than a member of a communist association, since he is not, like him, working for a partnership of which he is himself a member.

Another of the objections to communism is similar to that so often urged against poor laws: that if every member of the community were assured of subsistence for himself and any number of children, on the sole condition of willingness to work, prudent restraint on the multiplication of mankind would be at an end, and population would start forward at a rate which would reduce the community through successive stages of increasing discomfort to actual starvation. There would certainly be much ground for this apprehension if communism provided no motives to restraint equivalent to those which it would take away. But communism is precisely the state of things in which opinion might be expected to declare itself with greatest intensity against this kind of selfish intemperance. Any augmentation of numbers which diminished the comfort or increased the toil of the mass would then cause (which now it does not) immediate and unmistakable inconvenience to every individual in the association; inconvenience which could not then be imputed to the avarice of employers, or the unjust privileges of the rich. In such altered circumstances opinion could not fail to reprobate, and if reprobation did not suffice, to repress by penalties of some description, this or any other culpable self-indulgence at the expense of the community. The communistic scheme, instead of being peculiarly open to the objection drawn from danger of overpopulation, has there commendation of tending in an especial degree to the prevention of that evil.

A more real difficulty is that of fairly apportioning the labor of the community among its members. There are many kinds of work, and by what standard are they to be measured one against another? Who is to judge how much cotton-spinning, or distributing goods from the stores, or bricklaying, or chimney-sweeping, is equivalent to so much plowing?

Difficulties

The difficulty of making the adjustment between different qualities of labor is so strongly felt by communist writers, that they have usually thought it necessary to provide that all should work by turns at every description of useful labor: an arrangement which, by putting an end to the division of employments, would sacrifice so much of the advantage of cooperative production as greatly to diminish the productiveness of labor. Besides, even in the

same kind of work, nominal equality of labor would be so great a real inequality, that the feeling of justice would revolt against its being enforced. All persons are not equally fit for all labor; and the same quantity of labor is an unequal burden on the weak and the strong, the hardy and the delicate, the quick and the slow, the dull and the intelligent.

But these difficulties, tho real, are not necessarily insuperable. The apportionment of work to the strength and capacities of individuals, the mitigation of a general rule to provide for cases in which it would operate harshly, are not problems to which human intelligence, guided by a sense of justice, would be inadequate. And the worst and most unjust arrangement which could be made of these points, under a system aiming at equality, would be so far short of the inequality and injustice with which labor (not to speak of remuneration) is now apportioned, as to be scarcely worth counting in the comparison. We must remember too that communism, as a system of society, exists only in idea; that its difficulties, as present, are much better understood than its resources, and that the intellect of mankind is only beginning to contrive the means of organizing it in detail, so as to overcome the one and derive the greatest advantage from the other.

If, therefore, the choice were to be made between communism with all its chances, and the present state of society with all its sufferings and injustices; if the institution of private property necessarily carried with it, as a consequence, that the produce of labor should be apportioned as we now see it, almost in an inverse ratio to the labor—the largest portions to those who have never worked at all, the next largest to those whose work is almost nominal, and so in a descending scale, the remuneration dwindling as the work grows harder and more disagreeable, until the most fatiguing and exhausting bodily labor cannot count with certainty on being able to earn even the necessities of life—if this, or communism, were the alternative, all the difficulties, great or small, of communism would be but as dust in the balance. But to make the comparison applicable, we must compare communism at its best with the *résumé* of individual property, not as it is, but as it might be made.

The perfection both of social arrangements and of practical morality would be to secure to all persons complete independence and freedom of action, subject to no restriction but that of not doing injury to others; and the education which taught or the social institutions which required them to exchange the control of their own actions for any amount of comfort or affluence, or to renounce liberty for the sake of equality, would deprive them of one of the most elevated characteristics of human nature. It remains to be discovered how far the preservation of this characteristic would be found compatible with the communistic organization of society. No doubt

this, like all the other objections to the socialist schemes, is vastly exaggerated. The

Freedom

members of the association need not be required to live together more than they do now, nor need they be controlled in the disposal of their individual share of the produce, and of the probably large amount of leisure which, if they limited their production to things really worth producing, they would possess. Individuals need not be chained to an occupation or to a particular locality. The restraints of communism would be freedom in comparison with the present condition of the majority of the human race. The generality of laborers in this and most other countries have as little choice of occupation or freedom of locomotion, are practically as dependent on fixed rules and on the will of others, as they could be on any system short of actual slavery; to say nothing of the entire domestic subjection of one half the species, to which it is the signal honor of Owenism and most other forms of socialism that they assign equal rights, in all respects, with those of the hitherto dominant sex. But it is not by comparison with the present bad state of society that the claims of communism can be estimated.

It is yet to be ascertained whether the communistic scheme would be consistent with that multifarious development of human nature, those manifold unlikenesses, that diversity of tastes and talents, and variety of intellectual points of view, which not only form a great part of the interest of human life, but by bringing intellects into a stimulating collision, and by presenting to each innumerable notions that he would not have conceived of himself, are the mainspring of mental and moral progression.

For contrary views, see ANARCHISM; INDIVIDUALISM.

We give here a summary of the history of communism in general, down to the nineteenth century, referring the reader to separate articles for details, and especially to the article COMMUNITIES IN AMERICA, for a sketch of the important development of American communism.

Communism has always existed, to more or less an extent. According to LAVELEYE (see also PRIMITIVE PROPERTY) and many other sociologists, communism was the earliest known

form by which property was held, as evidenced in existing conditions among the North American Indians and most savage, and as witnessed to by the Russian *Mir*, the Javan *Dessa*, and many other Asiatic and European survivals from primitive forms.

Early History

This has been strenuously denied by some authorities, notably by Fustel de Coulanges, but the denial is more apparent than real, since they admit that property was held by some great chief or strong man for the community fraternally or feudally rather than in the ordinary sense of private property. The Buddhist monasteries, where the devotees renounced marriage and property, are another early communistic attempt. Pythagoras, Plato, and Aristotle and other Greeks largely favored communism. (See PLATO; ARISTOTLE.) Some of the Jews, the Essenes, and Therapeutæ taught and practised communism. (See ESSENEs.)

The early Christian Church was, in places at least, undoubtedly largely communistic. (See CHURCH AND SOCIAL REFORM.) We are distinctly told of the first Christian Church at Jerusalem, that they had all things in common. It was, however, a perfectly voluntary communism. Christians were not required to renounce private property. Peter said to Ananias of the price of his land, part of which Ananias had kept back—"While it remained was it not thine own, and after it was sold, was it not in thine own power?" Yet the fact remains that, led by the power of love, some early Christians did practise communism. After the third century the Church became a much more worldly power, but in the fourth century the communistic tendency developed into the communistic monasticism of the anchorites and monks. Ever since there have been various communistic orders and sects appearing in the Christian Church—the Humiliates; the Beghards and Beguines; the various mendicant orders of the Middle Ages; the Brethren of the Free Spirit, in the thirteenth century; the Adamites, during the Hussite wars. This last order advocated the community of women, and some of the other sects and orders degenerated into disorder and excesses; but, on the whole, considering the ages in which they appeared, they usually stood for the purest and most vital Christianity of their times. Often these communities of brotherly love were the only spots of quiet in the darkness and bloodshed of lawless ages. (See MONASTICISM AND MIDDLE AGES.)

The Reformation developed a new impulse toward communism, as indeed has been the case with every new religious movement. The Peasant War in Germany was largely an outcome of the communistic idea working out among the peasantry, but the influence mainly appeared in the organization of the Heavenly Prophets, by Storch, the Anabaptists in Münster, the Libertines of Geneva, the Familists of Holland and England, and the Buchanites of Scotland. The communistic principle is also present in a purer form among the Herrnhuters (Moravians) and in some communities of Auvergne. In Germany many communistic sects arose in the eighteenth century. (See ANABAPTISTS; PEASANTS' WAR; MORAVIANS, etc.)

The eighteenth century also saw a wave of communistic thought in France. MORELLEY in his "Code de la Nature" (1755), taught that man naturally possesses every virtue, and is only depraved by bad institutions, the chief of which is

The Eighteenth Century

private property. He declared that it would be "in conformity with the intentions of nature," if every citizen contributed to the resources of the State, in accordance with his strength, talents, and age, and in return were wholly maintained at the public expense. MABLY, who was a brother of Condillac, endeavored to show, in opposition to Mercier de la Rivière that private property in land is not the natural and necessary basis of society. On the contrary, he said, society could exist without property, as is proved by the cases of Sparta, the Jesuits in Paraguay, and the monastic orders; while the establishment of property in land and inequality of condition has been the great source of avarice, ambition, and vanity.

BABEUF and his fellow conspirators of 1796, calling themselves the "Equals," were the most remarkable representatives of this thought. In the Utopia of Babeuf, as described by Buonarroti, every one is allotted two different occupations, the one light and the other hard. To give variety and change of scene, all are employed by turns in the transport and postal services. Those who will not work are treated as thieves. Education, carried on in vast boarding-schools, subordinates the family to national life. Distribution is to follow the strictest equality. In England Robert Owen was the great teacher of communism; but for his views, see OWEN.

For the Communists of Paris in 1871, see PARIS, COMMUNE OF. (See also ANARCHISM; BABEUF; CHURCH AND SOCIAL REFORM; COMMUNITIES IN AMERICA; COOPERATION; PROPERTY; PROUDHON; SOCIALISM.)

A., continuation of appendixes, 1858; *Outline of the Various Social Systems and Communities which have been Founded on the Principle of Cooperation*, by M. Hennell, 1844; *History of Cooperation in England*, by G. J. Holyoake, vol. i., 1875, vol. ii., 1879

COMMUNITIES IN AMERICA: Communism implies common ownership; and hence, strictly speaking, there should be included under this term only such settlements, colonies and societies, based on common ownership of property, as have been subjected to the test of practical experiment in America. It is usual, however, to group the communities, the Fourieristic phalanges of half a century ago, the commonwealths, and the joint-stock and cooperative associations of recent date, all together as "American Communities" or "Communitistic Societies"; and this grouping is at least partly justified by the fact that in their practical life these various organizations have all had communistic features, all being, as the author of "American Socialisms" affirms, to a certain extent compromises between communism and some form of individual ownership. Then, too, the communists, associationists, and other builders of social colonies have had similar high aims, well expressed in the threefold motto of the Fourierists: "Union of man with man in true society, union of man with God in true religion, union of man with nature in creative art and industry." Their plans and methods, also, have had much in common, alike involving the elimination of class distinctions based upon wealth and special privileges, the substitution of brotherly cooperation for competition in the affairs of life, the erection of large unitary dwellings as centers of attractive social life.

The principle of common ownership, far from being of the modern origin supposed by many, antedates the individual holding of real estate, as exemplified in the village communities of India, Russia, Germany, and England, confirmation of which may be found in the works of Sir Henry Maine of England, Maurer of Germany, and Laveleye of France.

"These three eminent writers," says Roswell D. Hitchcock, D.D., in his work on socialism, "are agreed in the conclusion, after independent and great research, that common property in land was, in many parts of the world, perhaps everywhere, undoubtedly the original form of ownership." But the antiquity of the principle of common ownership, and the fact that the record shows that it was favored by both the Old and the New Testament, it may be urged, do not prove that communism is to be the final status of society; and it may be fairly asked, What good purpose have the communitistic societies served? And what sufficient reason is there for supposing that communism in any form will play an important part in the world's future? It must be admitted that these American communities, considered with reference to their numbers and wealth, have thus far been comparatively unimportant; but it is, on the other hand, affirmed by the communists that their history is of transcendent importance, in demonstrating by more than a century's experience the practicability of forms of society dominated by the Golden Rule. For example, the Shakers, who established their first community 131 years ago, now make the astounding claim that during all these years they have lived prosperous, contented, happy lives, and have not spent among themselves a penny for police, for lawyers, for judges, for poorhouses, or for penal institutions.

Who shall measure the value of such a record for good in the world's history? If, as we read in Proverbs, "he that ruleth his spirit is better

than he that taketh a city," what shall be said of the 1,700 Amana Communists that for three-score years have lived such a life of peace that no lawyers or constables or courts have been required to maintain order in their midst, and in such prosperity that during all these years not a mendicant has been seen in the streets of their seven villages save such as have come from the outer world? Consider, too, the example given by the Separatists of Zoar, who maintained their community organization for seventy-nine years, and proudly boast that during that time no member was ever charged with crime, and that they had no disputes they could not settle among themselves, no divorces, no scandals, no controversies over property.

Whether the principle of communism will play an important part in the ultimate condition of society will depend, the communists assert, upon the inherent character of society in the distant future. If individual selfishness shall become more rampant and dominant as the centuries roll by, then communism may be wholly ignored in the final social fabric; but if, on the other hand, the principles that have wrought since time began for the elimination of strife, ignorance, superstition, cruelty, injustice, and all forms of wickedness, and fostered the growth of all that tends to make mankind unselfish, altruistic, brotherly, just and noble, and that have built up institutions for the amelioration of human conditions, shall continue to be operative and become predominant and all-controlling, then surely, they say, the principle of communism will eventually become the most important factor in society.

In considering the principle of communism as exemplified in the communitistic societies of the United States, and as likely to be more fully exemplified as mankind more fully realizes the unspeakable blessings that result from altruistic unity, a clear distinction should be kept in mind between the voluntary, peaceable, conservative communism so exemplified, and which abhors every form of compulsion, and the political communism that was exhibited in France in 1870, and now is occasionally heard even in the United States, demanding that society shall be reorganized on the basis of equality of conditions and privileges, and which aims at controlling all the functions of government, and compelling everybody, *volens volens*, to become communists. With such communism, whether French, German, European, or International, communism as sought to be realized in the communitistic societies of the United States, and properly termed American communism, has scarcely anything in common, either in aim or method.

The colonies and settlements thus collectively called American communities may be classified as: (1) the religious; (2) the non-religious; (3) the transcendental; (4) the Fourierists; (5) the Spiritualists; and (6) the commonwealths, brotherhoods, etc., of recent date. The religious communities head the list because first in point of time, first in longevity, first in general success. The most important of these are:

The Labadist Community of Protestant Mystics, numbering 100 members, and owning 4,000 acres of land in the northern part of Maryland, founded 113 years ago, and which has long ceased to exist.

Blessings of Altruistic Unity

Principle of Common Ownership

Classification of Commu- nities

The existing Community of German Seventh-day Baptists, founded 175 years ago at Ephrata, Pa., by Conrad Beisel, and at one time having 300 members and considerable property, both the membership and property being now greatly reduced.

The Shakers, founded in 1776 at Watervliet, N. Y., at one time having a membership of over 5,000 and large landed properties, and now having fifteen separate societies in eight states, but with much reduced membership.

The community founded in 1805 by George Rapp in Butler County, Pa., afterward removed to Posey County, Ind., and later to Economy, Pa., possessing at one time property of the estimated value of more than \$1,000,000, and numbering 1,000 members, of whom very few now survive.

The community founded by Joseph Bimeler at Zoar, Ohio, in 1817, and at its greatest period of prosperity numbering about 500 members and having nearly a million dollars' worth of property.

The Perfectionist Community founded by John H. Noyes at Putney, Vt., in 1836; transferred to Oneida, N. Y., in 1848; numbering at one time with its branches over 300 members, and having several prosperous businesses; transformed in 1880 into a joint-stock corporation.

The Amana Community, founded near Buffalo, N. Y., in 1843, removed to Iowa in 1853-64; now numbering over 1,700 members, and having seven villages, all under one control and all having a common interest.

The Bethel-Aurora Community, founded by Dr. Wm. Keil in Shelby County, Mo., in 1844, and in Aurora, Ore., in 1856, and numbering together at one time about 1,000 souls, neither now existing.

The Swedish Community, founded by Eric Janson, at Bishop Hill, Ill., in 1846, having over 1,000 members and existing for sixteen years.

The Bruderhof Communities of Russian Mennonites in South Dakota, which have existed for many years, and aggregate over a thousand members.

The Koreshan Community of Estero, Fla., numbering over 160 members, and apparently prosperous.

The Community of Israelites at Benton Harbor, Mich., having 700 members, and growing.

The more important of the distinctly non-religious group are:

The community founded by Robert Owen at New Harmony, Ind., in 1825, which had 900 members, and which led to the formation of eighteen other communities of similar character; and the French community founded by Etienne Cabet in northern Texas in 1848, transferred to Nauvoo, Ill., in 1849, to Corning, Iowa, in 1857, and having at one time 500 members.

The Brook-Farm Community, founded by George Ripley at Roxbury, Mass., in 1842, and Fruitlands, founded by A. Bronson Alcott and others at Harvard, Mass., in 1843, constitute the transcendental group, tho often classed with the Fourieristic settlements, one of which Brook Farm became in its later years, but it owed its origin to the transcendental movement in and near Boston, and particularly to the Transcendental Club, an organization of cultured people formed in Boston in 1836.

Of the Fourieristic colonies nearly thirty were formed within five years in eight different states, with an aggregate membership of about 4,500, and a longevity ranging from a few months to seventeen years.

Of the several spiritualistic communities those founded by Thomas Lake Harris at Brockton, N. Y., in 1867, and at Santa Rosa, Cal., a few years later, are the most important, unless we include in this group the Shakers, who have abounded in spiritualistic phenomena during their long career, and claim to have been the first to introduce spiritualism into this country. Several smaller communities owe their origin to spiritualism.

It may be stated in this connection that no classification of the communistic societies of the United States which may be made will prove entirely accurate, there being, for example, religious people in the non-religious and Fourieristic societies, and vice versa.

Of the communities, commonwealths, brotherhoods, and cooperative settlements of recent date may be mentioned: The Koreshan Community at Estero, Fla.; the Christian Commonwealth of Georgia; the Ruskin Commonwealth of Tennessee and Georgia; the Cooperative Brotherhood of Burley, Wash.; the Equality Colony, Equality, Wash.; the Industrial Single-Tax Association, Fairhope, Ala.; the Colorado Cooperative Company; the Freeland Association of Washington; the Mutual Home Association of Washington; the Straight-Edgers of Staten Island and New York; Shalom, or "The Children's Land," of New Mexico; and the Woman's Commonwealth of Washington city.

These settlements are all of too recent origin to furnish noteworthy examples of success; but they all emphasize the longing desire filling the hearts of thousands for a life free from the contention and competition so universally prevalent.

There have been but two widespread movements in this country resulting in the establishment of communistic societies: that in 1825, when Robert Owen, of New Lanark, Scotland,

electrified the nation with his grand schemes of social amelioration; and again in the decade between 1840 and 1850 when Fourierism was heralded by the New York *Tribune*, Horace Greeley, Chas. A. Dana, Albert Brisbane, and a score of other able writers and speakers, as the great social panacea—the one system that was to bring in the era of universal brotherhood and justice. The first movement produced, as we have seen, nineteen societies which survived for a few years only; the latter produced about thirty, some of which were of much longer duration, but none exceeding seventeen years.

The present status of the community movement in the United States is less favorable than it was in former years, undoubtedly owing in part to the fact that several of the prosperous religious communities have been unable to fully maintain their organization and prosperity after the death of their founders, and have either modified their property arrangements or dissolved; and partly to the fact that political socialism now absorbs much of the attention that would otherwise be given to experimental communism, its advocates claiming that only through state and national aid can the objects which communists have so much at heart—true and just relations of man to man and man to society—be realized. Still there exist to-day: (1) the Ephrata Community (after 175 years), (2) the fifteen Shaker Communities (after 131 years), (3) the Harmony Community (after 101 years), (4) the Amana Community (after 64 years), (5) the Oneida Community (after 59 years, tho transformed into a joint-stock company after 32 years), (6) the Koreshan Community, and (7) the Straight-Edgers; in addition to various brotherhoods, cooperative colonies, and other societies of recent date; and such experiments continue and seem destined to continue despite all discouragements and failures.

COMPETITION: In social science this term denotes the strife of the individual or of a group of individuals to gain the utmost possible profit, rent, or wage in free rivalry with other individuals or groups of individuals. It is defined in Palgrave's "Dictionary of Political Economy" as "the free action of individual self-interest." But this is not enough. The free action of individual self-interest may lead a man into cooperation or socialism, the opposites of competition. The distinctive characteristic of competition is in its being the free action of self-interest in fair rivalry with some other individual or group of individuals. One man cannot compete. He must compete with somebody. This is seen in the derivation of the word, from *com* and *petere*, to seek together.

Competition, so conceived, is held by most to be to-day the supreme law of trade. As such it is defended by believers in present industrial methods, is bitterly condemned by Socialist reformers, while perhaps the majority of minds, and almost all political economists to-day, see evils in unlimited competition, and would modify its free play, but not supplant it by any other principle.

Still another school of thought denies that we have free competition to-day, and declares that what is needed to save us from our present industrial ills is not less competition, but more competition. We notice these four views:

I. The believers in competition usually assert first that it is the law of nature, and they sometimes add that it is "the law of God." "Theorists and sentimentalists may talk as they will," say the believers in competition, "of abolishing the strife for self or the struggle for existence, the play of self-interest; but the fact remains that this principle always has existed in the world, always has ruled the world, has produced and exists most in the most progressive civilizations."

The Argument for Competition

"Progress," says Professor Flower ("Reply to an Address by the Trades' Council," Newcastle, September, 1889), "has been due to the opportunity of those individuals who are a little superior in some respects to their fellows, of asserting their superiority, and of continuing to live, and of promulgating as an inheritance that superiority." "To formulate this as the immutable law of progress since the beginnings of life has been," Mr. Benjamin Kidd tells us ("Social Evolution," p. 34), "one of the principal results of the biological science of the century." "It is," says Professor Flower, "the message which pure and abstract biological research has sent to help us on with some of the commonest problems of human life" (*idem*). "It is," Mr. Kidd adds (*idem*, p. 37), "an inevitable law of life among the higher forms, that competition and selection must not only always accompany progress, but that they must prevail among every form of life which is not actually retrograding." Socialism, therefore, which aims "at the final suspension of that personal struggle for existence," cannot, according to Mr. Kidd, "in any case avoid progressive degeneration" (*idem*, p. 210). This is the main argument urged in a hundred forms by the believers in competition. Competition is the source of progress. We must, therefore, have competition in order to have progress.

But, secondly, competition is defended as working on the whole for the good of all classes. Most orthodox economists take this position. Professor Fawcett ("Political Economy," book ii., chap. ii.), says of competition: "The poverty of the poor is often attributed to it; but we shall have reason to show that it is no enemy to the working classes. Without it, their poverty would be rendered doubly severe; for it is an active spirit of competition which maintains the capital from which the wages of the laborers are paid. Competition befriends the working classes in other respects; it cheapens commodities, and insures that the maximum of wages shall always be paid. Competition is not confined to one class; it may be as fierce among buyers as among sellers, or among the employers as among the employed. Individuals who have goods to sell are anxious to realize as large profits as possible; but when there is competition, a trader cannot be paid more than what is termed a fair price for his goods, because if he attempts to obtain more than the ordinary price he will be undersold by other traders. When buyers compete with each other they are anxious to secure the greatest gains, or, in other words, to buy upon the best possible terms; and thus when buyers are each intent on purchasing on the most favorable terms, a commodity is sure to realize what it is worth. It therefore follows that if, on the one hand, competition prevents a trader obtaining exceptionally high profits, on the other hand it insures to him a fair price for his goods. Some, perhaps, may think it unfortunate that employers, stimulated by a desire to realize the largest gains, should seek to engage their laborers on the lowest possible terms. But such conduct upon the part of the employers inflicts no injury upon the laborers; for whenever there is activity of competition, an individual manufacturer or trader is powerless to get laborers to work for him at less than the ordinary wages as he would be to buy cotton at a cheaper rate than his fellow manufacturers. The price of cotton is maintained because there are those who are anxious to purchase it; the rate of wages is also maintained by those who are anxious to purchase labor. Competition, consequently, exerts no tendency to reduce profits or wages; the tendency is rather one of equalization."

Wages

Another form of the same argument is to say that competition works for the good of all because it tends to make each individual and each nation do what they can do best. Where each individual and each nation is striving in a free market, that individual and that nation that can do given work or produce a given commodity the best will win. We thus have the survival of the fittest. But there is something which each man and each nation can do best. Therefore under free competition each man and each nation will do what he or it can do best, and all be benefited by the exchange.

Thirdly, believers in competition say nothing can be substituted for it. Palgrave's "Dictionary of Political Economy" says: "It is difficult even to imagine upon what other principle certain complicated transactions of modern trade and industry could be regulated."

"The difficulty of finding any adequate substitute for it (the motive of self-interest) is an almost invincible obstacle

in the way of reconstructing society on any but its present individualistic basis" (Sidgwick).

Jevons says: "Scientific Primer," chap. vii.): "There is no way of deciding what is a fair day's wages, outside competition."

Lastly, the believers in competition defend it on the ground that it tends to make individuals self-reliant, independent, inventive, alert, quick to conceive, strong to execute, ready to dare. They point out that the most progressive nations are those where competition has had the greatest development.

II. Coming to the views of those who disbelieve in competition, they, in the first place, deny that competition and the struggle for existence is the only cause or progress. Says Charles Kingsley: "That self-interest is a law of human nature I know well; that it ought to be the root law of human society I deny, unless society is to sink down again into a Roman empire and a cage of wild beasts." "Competition," said F. D. Maurice, "is put forth as the law of the universe. This is a lie. The time is come to declare it a lie by word and deed."

That competition and the struggle for existence have entered into and do still enter into the progress of the world, no one denies; it is simply denied that it is the only way of making progress. Mr. Kidd's "Social Evolution,"

that lauds competition as "the immutable law of progress," is full of instances of progress in civilization made by the spirit of altruism and self-sacrifice. Even animals (like the beaver and the ant) progress by cooperation. Human society has progressed immeasurably by organization, by combination, by cooperation.

It is not true that those states are the most progressive where competition is the least controlled. One chief function of the State is to limit competition, and when the State has reached the fullest development, as in Germany, England, and America, then civilization is the best. Biology, if it asserts that competition is the law of progress, has studied the lower forms of life more than the higher. It is almost more true that progress is proportional to man's escape from competition. Competition patterns after the brute; cooperation patterns after the nobler instincts of humanity.

It is not, however, claimed by the disbelievers in competition that competition has no place in society. They simply argue for an evolution of competition. Competition does tend to the survival of those most fit to compete in the form of struggle in which the competition takes place. The primitive competition was purely physical. Men fought with bare hands, with clubs, or with spears, poisoned arrows, etc. It produced physical giants—Agamemnon, Hercules, Nimrod. "There were giants in those days." But by the gradually developing combination of law, order, and State, the competition of force was checked, and replaced by a competition more intellectual. Did the race deteriorate? No; it simply developed a higher form of leaders, the Alexanders, Hannibals, Cæsars, Napoleons of society. To-day cooperation, combination, arbitration are replacing the competition of conqueror; competition is now industrial. It is developing leaders in that form of competition—"Napoleons of finance"—the Rothschilds, Carnegies, Rockefellers, etc. What the disbelievers in industrial competition ask is not that competition be done away with, but simply that it be lifted up to a higher level. As the State now in the main prevents physical competition and protects the life of the weakest citizen, so they would have the State replace industrial competition by fraternal cooperation, and set men free to compete in art, in science, in learning. This, they say, will produce not degeneration, but a higher type of men. They deny that industrial competition produces the best citizens. It exists nowhere so fiercely as in the United States."

What is the result? Smart business men—the "smartest" in the world. But are these the highest type of men? Says Mr. Bryce ("American Commonwealth," part iv., chap. 81): "In no country does one find so many men of eminent capacity for business, shrewd, forcible, and daring, who are so uninteresting, so intellectually barren, outside the sphere of their business knowledge." "Industrial competition produces a survival of the industrially smart, with little reference to their morals. Morals do help to a slight extent, but very slight. Says John Stuart Mill (*Forfeited Review*, Feb., 1879): "If persons are helped in their worldly career by their virtues, so are they, and perhaps quite as often, by their vices; by servility and sycophancy, by hard-hearted and close-fisted selfishness, by the permitted lies and tricks of trade, by gambling speculations, not seldom by downright knavery. Energies and talents are of much more avail for success in life than virtues; but if one man succeeds by employing energy and talent in something generally useful, another thrives by exercising the same qualities in out-generaling and ruining a rival. It is as much as any moralist ventures to assert, that, other circumstances being given, honesty is the best policy, and that with parity of advantages an honest person has better chances than a rogue. Even this, in many stations and circumstances of life, is questionable; anything more than this is out of the question. It cannot be pretended that honesty, as a means of success, tells for as much as a difference of one single step on the social ladder. The connection between fortune and

Competition does not Produce the Best

Competition does not produce the best. It is not true that those states are the most progressive where competition is the least controlled. One chief function of the State is to limit competition, and when the State has reached the fullest development, as in Germany, England, and America, then civilization is the best. Biology, if it asserts that competition is the law of progress, has studied the lower forms of life more than the higher. It is almost more true that progress is proportional to man's escape from competition. Competition patterns after the brute; cooperation patterns after the nobler instincts of humanity.

conduct is mainly this, that there is a degree of bad conduct, or rather of some kinds of bad conduct, which suffices to ruin any amount of good fortune; but the converse is not true; in the situation of most people no degree whatever of good conduct can be counted upon for raising them in the world, without the aid of fortunate accidents." As for what competition means to the working classes, says Louis Blanc, quoted by Mill in the above review:

"What is competition from the point of view of the workman? It is work put up to auction. A contractor wants a workman; three present themselves. 'How much for your work?' 'Half a crown; I have a wife and children.' 'Well; and how much for yours?' 'Two shillings; I have no children, but I have a wife.' 'Very well; and now how much for you?' 'One and eight pence are enough for me; I am single.' 'Then you shall have the work.' It is done; the bargain is struck. And what are the other two workmen to do? It is to be hoped they will die quietly of hunger. But what if they take to thieving? Never fear; we have the police. To murder? We have got the hangman. As for the lucky one, his triumph is only temporary. Let a fourth workman make his appearance, strong enough to fast every other day, and his price will run down still lower; there will be a new outcast, a new recruit for the prison perhaps! . . .

"Who is so blind as not to see that under the system of unlimited competition, the continual fall of wages is no exceptional circumstance, but a necessary and general fact? Has the population a limit which it cannot exceed? Is it possible for us to say to industry—industry given up to the accidents of individual egotism and fertile in ruin—can we say: 'Thus far shalt thou go, and no farther?' The population increases constantly; tell the poor mother to become sterile and blaspheme the God who made her fruitful, for if you do not the lists will soon become too narrow for the combatants. A machine is invented; command it to be broken, and anatomize science, for if you do not, the 1,000 workmen whom the new machine deprives of work will knock at the door of the neighboring workshop, and lower the wages of their companions. Thus systematic lowering of wages, ending in the driving out of a certain number of workmen, is the inevitable effect of unlimited competition. It is an industrial system by means of which the working classes are forced to exterminate one another."

If it be answered to this that such is not the fact; that the working classes are not exterminating each other; that their condition has steadily risen through the century, and that the higher workmen of England and America, for example, do not fear the competition of China and India, it is to be said: "Yes, it is true that wages have risen; but is this the result of competition? Is it not because competition has to no little extent been limited in England and America by trade-union combination and factory legislation? Have not higher wages and shorter hours as a rule been forced from unwilling employers by organized labor and by legislation?" Until trade-unions were developed, and before there were efficient factory laws, when competition was unrestrained, wages were lower and conditions more terrible among working men than ever in English history. In the Middle Ages competition was somewhat restrained by feudalism, and later by monopoly grants. Only in the latter part of the last century, and first of this, has competition been at all unlimited. Now of this period, Thorold Rogers says ("Work and Wages," 63): "I am convinced that at no period of English history for which authentic records exist was the condition of manual labor worse than it was from 1782-1821, the period in which manufacturers and merchants accumulated fortunes rapidly, and in which the rent of agricultural land was doubled."

The trouble with competition is that it puts even those manufacturers and employers who would be just at the mercy of those who are willing to do anything for gain. Says Prof. Henry C. Adams, Ph.D. ("An Interpretation of the Social Movements of Our Time," p. 11):

"Without legal regulation the struggle between men for commercial supremacy will surely force society to the level of the most immoral man who can sustain himself. The fittest to survive unregulated competition will be he who is morally the least fit to live. For purpose of illustration, suppose ten manufacturers competing with each other to supply the market with cottons. Assume that nine of them, recognizing the rights of childhood, would gladly exclude from their employ all but adult labor. But the tenth man has no moral sense. His business is conducted solely with a view to large sales and a broad market. As child labor is actually cheaper than adult labor, he gives it a decided preference. What is the result? Since his goods come into competition with the goods of the other manufacturers, and since we who buy goods only ask respecting quality and price, the nine men whose moral instincts we commend will be obliged, if they would maintain themselves in business, to adopt the methods of the tenth man, whose immoral character we condemn. Thus the moral tone of business is brought down to the level of the worst man who can sustain himself in it."

As for the assertion that competition is necessary to produce independence, self-reliance, and individual exertion, the Socialists who would supplant competition by cooperation do not argue for paternalism. Says a Socialist writer: "Socialists are the opposite of paternalists. The Socialists of Ger-

many, for example, recently cast 1,500,000 votes against the so-called paternal socialism of the emperor. It is the wealthy Carnegies who would manage all business and give of their fortunes for the good of working men, who are the real paternalists of the day. Under democratic socialism the people would be the government, and work and manage for themselves. It would be the very 'open sesame' of character. Each man would then have to work. No drones here; no beggars living on the rich; no wealthy parasites fattening on the poor. If any man refused to work he would be left to starve, yet with no one to blame but himself, for *every man would then have an opportunity to work*. By simply doing a few hours of honest work each day for a few years of his life (each man choosing his own kind of work, the more disagreeable kinds of work being favored by less hours being demanded in them, so that men would be found to choose even them), every man would be sure of an honest competence. Does any man assert that this would not produce better and more independent character than we have to-day? No sycophancy of employee to employer; no dependence of professional men upon patrons; no servility of men of genius to men of money. There would still be competition, but for honor, not for money. Men would battle to see who should best serve the community, and so be honored by their fellow-men; they would not be forced to battle as men are forced to battle to-day, however much they hate it, to undercut their rivals, or enter into 'combinations' against the public. Competition for honor would alone be appealed to, as that alone would mean success. Mrs. Annie Besant well says: 'It is instructive to notice that these very forces may already be seen at work in every case in which subsistence is secured, and honor alone supplies the stimulus to action. The soldier's subsistence is certain, and does not depend on his exertions. At once he becomes susceptible to appeals to his patriotism, to his *esprit de corps*, to the honor of his flag; he will dare anything for glory, and value a bit of bronze, which is the 'reward of valor,' far more than a hundred times its weight in gold. Yet many of the private soldiers come from the worst of the population.

"She continues: 'Or take the eagerness, self-denial, and strenuous effort thrown by young men into their mere games! The desire to be captain of the Oxford eleven, stroke of the Cambridge boat, victor in the foot-race or the leaping—in a word, the desire to excel—is strong enough to impel to exertions which often ruin physical health. Everywhere we see the multiform desires of humanity assert themselves when once livelihood is secure.'

The final argument of the opponents of competition to-day is, that competition cannot endure, that competition inevitably leads to combination, and that, therefore, the only

Competition Develops Combination

question is not a choice between competition, or combination, but between different kinds of combinations. Starting with competition, the few strong competitors find that it pays to combine. They therefore combine and establish a private monopoly. The problem thus for the people becomes, not whether they shall compete or combine, but whether they shall submit to the rule of private combinations or democratically combine themselves through the State. It is a question of monopoly vs. monopolies, of democracy vs. the worst kind of an oligarchy, the rule of the plutocrat. The choice comes, they say, not between socialism or individualism, but between socialism and plutocracy.

III. Many minds to-day and most protest political economists would not abolish industrial competition, but simply limit it. Says Professor Trevor in the last chapter of his "The State in Relation to Labor": "The subject is one in which we need above all things—discrimination. Restrictions on industry are not good nor bad *per se*, but according as they are imposed wisely and with good intentions, or foolishly and with sinister intentions. *Prima facie*, indeed, restriction is bad, because Providence is wiser than the legislator—that is to say, the action of the natural forces of evolution will insure welfare better than the ill-considered laws of the prejudiced and unskilful legislator. But reason is a Divine gift, and where upon the grounds of clear experience interpreted by logical reasoning we can see our way to a definite improvement in some class of people without injuring others, we are under the obligation of endeavoring to promote that improvement. The greater part of the interference of trade societies is objectionable, because, tho directed toward the welfare of a part, it is directed against the welfare of the rest of the community. All other industrial problems must be solved by similar careful estimation of the total utilitarian results.

Political Economists

"If such be a true view of the case, it is clear that there can be no royal road to legislation in such matters. We cannot expect to agree in utilitarian estimates, at least without much debate. We must agree to differ; and tho we are bound to argue fearlessly, it should be with the consciousness that there is room for wide and *bona fide* difference of opinion. We must consent to advance cautiously, step by step, feeling our way, adopting no foregone conclusions, trusting no single science, expecting no infallible guide. We must neither maximize the functions of government at the beck of quasi-military officials, nor minimize them according to the theories of the very best philosophers. We must learn to judge each case upon its

merits, interpreting with painful care all experience which can be brought to bear upon the matter."
